No wonder Vice President NIXON has soberly warned: "For the administration or for Congress to support continuance of a program which will pile up surpluses and result inevitably in the destruction of millions of dollars' worth of foods would be the height of irresponsibility."

If the farm program was that bad, who was for it?

Not Charlie Shuman, president of the American Farm Bureau, biggest farm organization in the United States. Nor the majority of AFB's 1,623,000 families, who in the past several years have voted consistently for less Government rather than more. Shuman reminds us that unmanageable surpluses were relatively unknown until Government replaced the free market with politically administered prices.

Not Herschel Newsom, master of the National Grange, oldest and second-biggest farm organization. Says Mr. Newsom: "We should have a system that encourages private trade rather than State trade."

Not Secretary of Agriculture Ezra Benson, who must administer the farm program Congress gives him. In the past 3 years he has fought a courageous battle on the theory that "you can't solve economic problems with political tools." He contends that "the dead hand of surpluses, built up by unwise price policies of the past, is the main barrier today to farmers participating in our general prosperity."

If these men and most farmers were not for it, then who was? Who is?

Well, the National Farmers' Union thinks farm-support prices should be even higher than they are. It's the smallest but most vociferous of the three farm organizations, with former Democratic Secretary of Agriculture Charles Brannan leading its lobby.

Really responsible for the farm program—past, present, and future—is Congress, of course. Congress makes the laws.

Two years ago the administration put through Congress a program designed to stop accumulation of further surpluses. But the administration had inherited, in 1953, a ticking time bomb in the form of 2 more years of high, rigid price supports. So the administration's flexible price-support program to discourage farmers from producing unneeded crops had no chance to go itno effect until this past year. Now important voices in Congress want that changed.

Meanwhile, President Eisenhower has outlined to Congress a positive approach which will attempt to hold this line, plus providing some spot relief. The program includes:

1. A vigorous campaign to get rid of surpluses at home and overseas.

2. Encouragement to farmers to produce for the market instead of for Government storage.

3. Recognition that it's better to build up our soil-fertility bank than needlessly to exhaust this precious resource at taxpayers' expense for unneeded food and fiber.

4. More research for new crops, and for development of new uses for old crops.

5. Fewer controls, with Government cooperating, not dictating.

6. More efforts to help the family farmer help himself, on the theory that he can do more on his own farm than Government can do for him.

This is a sound program for the farmer, and a fair one for the taxpayer. But it will take statesmanship of the highest order to resist the temptation to try to unravel the farm problem on the basis of political expediency. If Congress makes a bid for votes, it will hurt the very people Congress is trying to help. And the taxpayers, which means all of us, will get it in the neck.

Postponing the Farm Problem

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include the following editorial from the New York Herald Tribune of March 21, 1956:

POSTPONING THE FARM PROBLEM

The Senate has passed a patchwork farm bill which will do little to correct the basic ills afflicting American agriculture. The main measures requested by President Eisenhower—a soil bank plan and flexible price supports—were approved, but contradictory amendments neutralized them to a large extent. The bill still has to go to a Senate-House conference and then be approved in final form by both Houses.

The administration had sought to strike at an important root of the farm problem: the existence of the giant crop surplus which not only costs the taxpayers a million dollars a day but permanently depresses the agricultural market. How can this surplus be reduced or eliminated without inflicting undue hardship on the farmers? The President wanted to cut down the acreage of basic crops by paying farmers to put a proportion of their lands into grass and conservation reserves. At the same time, flexible price supports would discourage farmers from producing the most abundant commodities.

In the course of 19 days' debate, the Senate tacked on 41 amendments which took the heart out of this program by setting up a variety of intricate, artificial dodges. For one thing, the Senators voted to set aside large percentages of the surplus in making price support calculations—that is, they agreed to pretend that the surplus is substantially smaller than it is so that the farmer can get a higher support price for the particular crop concerned.

They also approved two-price plans for wheat and rice, and dual parity for six basic crops, all intended to create loopholes in the flexible support system.

Senator GEORGE D. AIKEN, of Vermont, a spokesman for the administration, called the bill "tortured and battered" and said there was enough in it to warrant a veto. It is of course extremely difficult to put together an all-embracing farm bill of this kind which would be satisfactory to everyone, particularly in an election year. The conflict of pressures and interests is tremendous, and the continued decline of farm income makes quick financial relief more attractive than long-term remedies.

Thus the solution of the farm problem has just been postponed. What Congress, like all Americans, must appreciate is that this is a national problem which calls for a national approach. More than the surplus is involved; we shall have to develop a policy founded on a coordinated domestic and foreign trade program, more crop diversification, research into new uses. That requires statesmanship, not the shallow partisanship in evidence now.

Crisis in the South

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, March 21, 1956

Mr. LEHMAN. Mr. President, I have received from the Reverend Leland B. Henry, executive director of the council of the diocese of New York, a copy of a statement recently made and circulated by the council of the diocese of New York in its Christian Social Relations Bulletin.

This statement is entitled "Crisis in the South" and deals with the crisis we face in the entire Nation on the segregation issue and the issue of law and order throughout the country.

I ask unanimous consent that this statement, which appeared in the February issue of the bulletin I have named, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CRISIS IN THE SOUTH

That there is in the South a crisis of national and international significance is obvious to the most casual reader of the press. In this tense, emotion-packed situation there are two distinct issues involved.

1. THE ISSUE OF THE RACIAL INTEGRATION OF THE PUBLIC SCHOOLS

Integration has been ordered by the Supreme Court of the United States in its historic decision of May 17, 1954. In discussing the decision it is helpful to recall the composition of the Court. Seven of its members were appointed by President Roosevelt or President Truman, two by President Eisenhower. It is bad history either to claim credit for the decision or to attack the decision on partisan grounds. As a matter of fact, three of the Justices who concurred in the unanimous decision of the Court were Justice Black of Alabama, Justice Reed of Kentucky, and Justice Clark of Texas. The decision was neither partisan nor sectional, and under the Constitution it is the law of the land.

Basic to a calm discussion of the decision is the further fact that the Court did not order immediate integration. The Court recognized the differences between the situation in the States of the deep South, the middle South, and the border States. Keeping these differences in mind, the Court ordered integration "with all deliberate speed," and remanded enforcement of the order to the Federal district courts. This means that, given the will to comply, each locality will be granted the time necessary for an orderly program of integration. There is no need for the people of the South to fear the use of force by the Federal Government in States where an honest effort is being made to implement the decision. The whole difficult problem is one that can be approached calmly and reasonably by men of good will. For example, many fears might be allayed by establishing separate schools for boys and girls in place of the present pattern of coeducational schools.

2. THE ISSUE OF THE MAINTENANCE OF LAW AND ORDER

Here the situation is quite different. It would seem that at least two Negroes have been killed in Mississippi because they had registered to vote, and that in neither case was any serious effort made by the authorities to bring the murderers to justice. A young woman Negro student was mobbed on the campus of the University of Alabama and only by great good fortune escaped with her life. Businessmen, both Negro and white, who signed petitions favoring integration are being subjected to economic boycott. A United States Senator has been quoted as saying, "On May 17 (the day of the desegregation decision of the Supreme Court) the Constitution of the United States was destroyed. You are not required to obey any court which passes out such a ruling. In fact, you are obliged to defy it." The citizens councils, taking the Senator at his word, seem quite clearly to be illegal conspiracies to defy the Supreme Court of the United States.

Here is an issue that must be squarely faced. Murder and riot cannot be condoned. Police, district attorneys and juries have a sworn obligation to enforce the law impartially. When, by incitement to conspiracy and by conspiracy, Federal laws are violated, the law enforcement agencies of the Federal Government have a duty to act.

What is at stake here is a broader, more fundamental issue even than that of the integration of the schools. At stake is the whole structure of our Constitutional liberties. At stake is the prestige and power, not only of the Supreme Court, but of the Federal Government itself. And, for the Christian, there is at stake the whole Christian doctrine of man. Upon this issue there can be no compromise that does not do violence both to democratic government and to Christian faith.

This is not a problem for the South alone. Every citizen, whatever his color, and whatever his State has an interest in the due processes of law and in the maintenance of public order. When these are threatened or destroyed, he has not only the right but the duty to protest. The duty is the more urgent when, as in the present instance, what happens in Alabama or Mississippi has worldwide implications. Two-thirds of the people of the world are nonwhite. China has already gone behind the Iron Curtain. The Bandung Conference demonstrated clearly the sense of unity of the peoples of Asia and Africa and the Pacific. The United States is spending billions of dollars on defense and on economic and military aid. We are keeping millions of men under arms. Yet all will be to no avail if we lose the friendship of the presently uncommitted nations of dark-skinned peoples.

The Supreme Court decision was hailed throughout Africa and the East as proof that America was sincerely devoted to the principles of democracy which she professes. One does not need to have a very vivid imagination to guess the effect in these areas of the news that is currently emanating from the South. The security of all the country, and the fate of the free world is at stake. Surely, it is not asking too much to urge that these issues be met in a way which does not jeopardize the safety of the United States.

Making such a suggestion is not the act of a busybody, interfering in other people's affairs. It is a duty placed upon every responsible citizen.

The churchman shares this civic responsibility with his fellow citizens, and, because he is a churchman, he has additional, special responsibilities of his own. These are stated clearly in the Report of Lambeth 1948, which was reaffirmed by General Convention 1955. Lambeth says:

"In our belief, race prejudice or discrimination solely on the ground of racial differences is inconsistent with the religion of Jesus Christ. Men of all nations and races are members of God's family * * *. As far as is humanly possible there should be equality of opportunity for all men regardless of race or color both in trades and professions, in travelling and housing facilities, in education at all stages, and in schemes of social welfare. We call upon all Christians

everywhere to recognize their brotherhood in Christ as being stronger to unite than are race and color to divide."

It is in this spirit alone that the problems confronting us, both North and South, can be solved.

A Mangled Farm Bill

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the New York Times of March 21, 1956. It points out, among other things, that unusually heavy responsibilities will rest upon the conferees if we are to have a defensible farm bill. Since speedy enactment of suitable legislation is desirable, we all can wish the conferees well in an unusually difficult task.

The editorial follows:

A MANGLED FARM BILL

The Senate completed action late Monday night on its election year farm bill. Even in the form in which it emerged from committee a fortnight ago this bill was a catch-all measure, which included the President's recommendation for a soil bank and then proposed to nullify the potential effectiveness of the latter by reinstating the discredited expansionist device of high, rigid price supports.

In its final version the measure is just as amorphous and just as self-contradictory as the version sent from the Committee to the Senate floor. But the addition of more than 40 amendments, most of them calculated to undermine the basic philosophy of the administration's program, has added a new note of confusion and chaos to the comparatively uncomplicated inconsistency that marked the original.

While the details of the havoc wrought by the Senate in this attempt to replace the economic approach to the farm problem with the political approach are complicated, the general pattern is simple to the point of transparency.

The first major test of the administration's basic policy came with the vote on the issue of restoring high rigid supports and on this test the administration was upheld. The opposition forces—consisting of Democrats and wheat-State Republicans—then resorted to an alternative strategy. Without again raising the issue of rigid supports, as such, they succeeded—by a series of alliances—in obtaining the passage of a number of devious amendments which, when added together, are calculated to produce the same destructive effects as would high, rigid supports themselves.

There are perhaps a score of these, all told, including a "2-price" system for wheat and rice, a return to the "2-pronged" system of parity; the freezing of acreage allotments for cotton, the narrowing of the range of discretion at the disposal of the Secretary of Agriculture for purposes of establishing supports on dairy products, the raising of acreage allotments on corn from 41 millions to 53 millions, and a provision for huge additional set-asides for cotton, corn and wheat, a proposal that would make a farce of the formula which, at present, determines the relationship between supplies of a given surplus commodity and its support price.

The last-named brain child of those master minds, Democratic Senator HUMPHREY of Minnesota and Republican Senator YOUNG of North Dakota, is so typical in its spirit of this whole group of irresponsible amendments that to describe it is to tell, in essence, the whole story of this unsubtle attempt to destroy the President's program And the story of the set-aside can be summed up in the single example of wheat.

The present law provides that between 400 million and 500 million bushels of wheat may be set aside for emergency purposes, which means that it doesn't figure as part of the supply in the supply-support equation. The amendment just passed raises the total of the set-aside arbitrarily to 750 or 800 millions, or about double the figure presently allowed. In other words, by waving a wand (in the form of an amendment) the authors of the provision have caused 350 million bushels of wheat to vanish into thin air.

The table that is built into the law has indicated that with wheat supplies at a given level the support price should be fixed at a given percentage of parity. Proceeding on the basis of this formula, Secretary Benson has already set the "peg" for wheat at $1.81 a bushel, or 79 percent of parity. The practical effect of this revised set-aside in the Senate bill would be to raise the support price of this commodity, whose world oversupply is already the greatest in history, to $2.13 a bushel.

The Senate bill has been described as "major political year victory for the Democrats." Conceivably that is the case; but in the evil event that it should become law in its present form it would be a major economic defeat for the American people, including the American farmers. Unless we have completely misread the evidence of the last 3 years, we cannot conceive of the administration accepting it in anything like its present form, which Senator AIKEN has correctly described as a bill "warped and emasculated beyond any visible resemblance to the program recommended by President Eisenhower."

The next move is up to the Senate-House conference. Unless this group can rid the measure of its major political excrescences, there would seem to be only one course left—namely, to scrap the measure in toto and start all over again.

An American Success Story: Secretary of the Air Force Donald A. Quarles

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. OSMERS. Mr. Speaker, the fourth Secretary of the Air Force, Mr. Donald A. Quarles, has been on the job almost 7 months. By now, he is as well liked as he is well known both in the Pentagon and on Capitol Hill. His face is by now familiar to millions of American citizens because the press and television have carried his features to them. Through his many able public addresses he has revealed himself as an intelligent, thoughtful, and loyal administrator. He needs no introduction to Members of the Congress.

As Secretary of the Air Force, Quarles is a new kind of Defense Department Secretary. He is the first person to rise through scientific laboratories to head up one of the armed services. So far, he has been a noncontroversial Secretary. In his quiet and conscientious way he has gone about doing his job and won the respect of all who work with him. He has long since dispelled any doubt as to whether the best interests of the Air Force were primary with him.

In the current issue of the Saturday Evening Post there is a revealing report on Secretary Quarles that emphasizes the human qualities of the man as well as the abilities of the public administrator now charged with the biggest operating job in the world. This magazine article is no adventure story. It is no mystery story because Secretary Quarles' rise to national eminence was by logical and predictable steps. It is, however, an American success story. The man who made himself the best informed man in the country today on the development of military electronics in communications, fire control, missile guidance, and navigation is a man who can be safely trusted with the administration of an outfit with $60 billion in assets, currently operating on a $16 billion budget.

Mr. Speaker, under unanimous consent I insert in the CONGRESSIONAL RECORD the personal, heart-warming and revealing account of Secretary Quarles from the March 10 issue of the Saturday Evening Post, as follows:

BOSS OF THE BIRDMEN: A REVEALING REPORT ON DONALD QUARLES, THE ONETIME ARKANSAS SCHOOLTEACHER WHO NOW HEADS THE DEPARTMENT OF THE AIR FORCE

(By Paul F. Healy)

When Secretary of Defense Charles E. Wilson began looking around for a new Secretary of the Air Force after the forced resignation of Harold Talbott, he sighed and quipped that he wanted "a man who sits next to God, has mechanical and financial experience, and can be confirmed by the Senate."

Wilson soon chose Donald Aubrey Quarles, who had been relatively anonymous as Assistant Secretary of Defense in charge of the cloistered area of research and development. It could be demonstrated that Quarles had mechanical and financial experience, and as Assistant Secretary he had already been confirmed by the Senate once. Only the first of the qualifications listed by Wilson must indefinitely await confirmation, by an authority even higher than the Senate.

Actually, as Wilson well knew, he was getting much more than he asked for. Quarles is a new kind of top man in the Pentagon. For one thing, he is the first person to rise through scientific laboratories and head up one of the three armed services. From this viewpoint, his selection was logical, now that the Air Force is entering an age of fantastic pushbutton technology.

But Quarles' other qualities were equally important in his selection. In personality and background, he is quite unlike the Air Secretaries who preceded him, the handsome and ingratiating W. STUART SYMINGTON, now a United States Senator; the corporation lawyer and geopolitical dreamer, Thomas K. Finletter; and the bull-voiced, table-pounding Talbott. In its 8 years of existence, the Air Force had been happy to have its Secretary functioning primarily as a political and public-relations operator. But today there is a feeling in the Pentagon, shared by many in the Air Force itself, that our newest military arm is past the stage where it needs to be ballyhooed.

Seeking a new Secretary, Wilson first considered a list of nationally known names, ex-

governors, lawyers, businessmen and engineers. He rejected them when it occurred to him that he had the best man for the Air Force job right under his nose.

"Don Quarles is my kind of guy," Wilson explained recently. Like Wilson, Quarles began his career as an electrical engineer, and Wilson had noted that Quarles has "an engineer's respect for truth and facts." Among other things, Wilson also had been deeply impressed with Quarles' skill in handling news correspondents' questions in the highly technical and secret field of military research and development.

For 20 years Quarles has been intimately acquainted with the invention of the most advanced weaponry and electronic systems. He had been a key research official, and later, vice president, of Bell Telephone Laboratories, which has become in effect an experimental branch of the Defense Department; and in 1952–53 he was president of the Sandia Corp., the Western Electric subsidiary which develops and manufactures atomic- and hydrogen-bomb ordnance for the Atomic Energy Commission. Somehow he also had found time to acquire bedrock political experience.

All this background makes Quarles a supermodern managerial type, with extra dimensions. This is fortunate, for running the Air Force is now the biggest operating job in the world. The $16 billion the Air Force is spending this fiscal year is roughly equal to the spending level of the Army and Navy combined. Its $60 billion in assets dwarfs the world's largest manufacturing company, General Motors, whose assets amount to a mere $5,300,000,000. Furthermore, the Air Force labors under the tension of keeping itself in a constant state of readiness for instant retaliation against an aggressor.

The new boss of this swashbuckling colossus is known as the least pretentious official in Washington. Physically, he is not overpowering. Quarles is a slender, slightly round-shouldered man with blue eyes, graying hair and a leathery face. But the adjectives "frail" and "wispy" that have sometimes been applied to his 5 feet 8 inches and 140 pounds are inaccurate. Now 61 years old, he looks somewhat gaunt, but he has the wiry toughness of a tennis player and cross-country runner, two sports in which he once excelled.

Quarles is not a polished public speaker, but he creates an impression of such wholesome integrity and such intimacy with his subject that he has little trouble holding his audiences. His mind is as orderly as a multiplication table and he chooses his words with almost mathematical exactness. Two months after he was in office, he made a favorable impression in Washington when he addressed the Aviation Writers Association on the role of the Air Force vis-à-vis the administration's disarmament philosophy. James Reston, Washington bureau chief of the New York Times, wrote that Quarles was "emerging as one of the clearest spokesmen of United States policy."

By this time, Quarles also was getting telephone calls from air-minded Senators, and his political education was standing him in good stead. It was an elementary education, begun when he was councilman, council president, and later mayor of Englewood, N. J., and chairman of the Bergen County, N. J., sewer authority—a job in which he was obliged to master politics at its basic level.

Perhaps the best proof that Quarles is no ivory-tower scientist is the fact that he helped elect a Republican to Congress in Florida. In the 1954 congressional campaign, when high officials in the Eisenhower administration were expected to come to the aid of their party, Quarles agreed to do his bit in the first Florida district, where young WILLIAM CRAMER was making a mighty effort for the GOP.

Satisfied that CRAMER would make a first-class Congressman, Quarles pitched into the campaign with his customary energy. In 2 busy days he made 6 major speeches and many minor ones. He also stood on street corners with CRAMER to shake hands with the populace and tell what he knew about the Eisenhower administration and why he was sold on it.

"This is an atomic age," said the Defense Department's atomic expert, "and we need atomic candidates. I think BILL CRAMER is an atomic candidate." CRAMER'S election made him the first Republican Congressman from Florida since 1875. He is convinced that Quarles' jet-propelled campaigning had a great influence in his close race.

Besides his immense knowledg of razzle-dazzle technology, Quarles has a photographic mind coupled with analytical ability. Air Force officers have found that this man is soft-spoken but nonetheless dynamic. They have learned to be carefully prepared when they go before him with plans, statistics or recommendations.

His no-nonsense decisiveness was illustrated in his first week on the job. He was confronted with the security case of an airman in the Reserve who stood accused of associating with his father—who allegedly once had been a Communist. Quarles reviewed the case and promptly cleared the airman, rather than let the case go to an appeals board. It was the first of the so-called guilt-by-kinship cases to be summarily disposed of by 1 of the 3 service heads, and Quarles was editorially applauded.

Subordinates have sometimes complained that once Quarles' mind is made up, it is impossible to change it. In his official relations, he is as impersonal as an electronic robot, yet he always displays fairness, frankness, and good manners.

"It takes training to know when he's mad at you," says one former associate, "and you have to be real sharp to know when he's bawling you out."

Although he never raises his voice, Quarles, when irritated, may toss a pencil on his desk in disgust, throw a cold glance or simply pause and say meaningfully, "I heard you." Then it's time to get out and leave him alone.

An executive who has known Quarles for 30 years says, "I don't know anyone who is so forceful who is so quite." His talent for courteous persuasion was once described by a colleague as "sweet reasonableness." Instead of bulling his ideas through, he brings people around by giving them second thoughts. One Pentagon associate points out that Quarles will give from 25 to 45 minutes of his time to a person actually worth only 5 minutes. But Quarles believes this pays off.

"What is important is the willingness to listen to others," he explained recently. "Not just as a technique but because that is really the way to find out what the question is and develop wisdom about it. I believe one of the main things people want is the chance to be heard and understood. Once that is done, you are dealing with the problem objectively rather than worrying about personalities, and it is not hard to bring people's points of view together."

While heading the Sandia Corp. at the atomic center in New Mexico, Quarles once set out to change the minds of a battery of atomic energy officials on an important matter of procedure. After 2 days of discussion, in which everyone lost his temper but Quarles, his viewpoint was adopted.

Quarles answers all his mail personally, sometimes writing warm and chatty letters in longhand to strangers. When a columnist for a weekly newspaper in Arkansas wrote Quarles for some biographical information, the then assistant Defense Secretary replied that "it certainly is flattering to have you propose to write a column about me." He then gave the columnist more personal data than he had ever divulged to the Defense Department public-relations staff.

Heading up Research and Development, Quarles even took the trouble to reply to would-be inventors who sought to interest him in Buck Rogers ideas. Sometimes unusual tact was required, as in the case of the man who insisted he could fly like a bird. Quarles discovered that the quickest way to sidetrack these crackpots was to ask for an immediate demonstration. But he had a habit of leaving his door open, and some of them managed to lug their weird contraptions into his office.

"One fellow," he recalls, "brought a machine into my office, a ray device, supposedly a kind of divining rod for minerals. He claimed that if you pointed it toward any kind of mineral you could feel the mineral in your hands. The trouble was, he said he couldn't explain to me how I could feel the nickel, or uranium, or whatever he was pointing at."

Since Quarles' head is stuffed with the most confidential sort of classified information, people at cocktail parties often try to get him to drop hints from his world of secrets. He has developed a pleasant technique for dealing with such situations.

"Most of the people who ask such questions are not well versed in the subject," he explains, "so you can safely tell the lady some elementary facts you know the Russians already understand, but she doesn't."

A naturally taciturn person, Quarles possesses a reserve which is sometimes mistaken for shyness. One former neighbor, a gabby female who remembers Quarles at parties in Englewood, recalls him as "the kind of a person who's always standing behind you." But Quarles enjoys himself with people and on occasion has even outlasted his wife, Nona, at official Washington functions. In the informal atmosphere of Albuquerque, N. Mex., a few years ago, Quarles loosened up so far as to sit on the floor and accompany folk singers on his guitar.

Basically, however, Quarles is an undemonstrative person. Only within his family circle does he betray sentiment. Thus it was a milestone when, after being sworn in as Air Secretary, Quarles kissed his wife repeatedly for the benefit of scrambling news photographers, causing giggles among the invited guests.

"He hasn't done anything like that in years," Mr. Quarles said with a laugh. "I think they should have these ceremonies more often."

Subsequently, during a televised press conference, Quarles was asked whether, in view of his wife's remarks, he was carrying on a continual campaign along these lines.

"I'm afraid that's classified information," Quarles said.

Among his friends, Quarles has a reputation for dry humor. When he was asked by a reporter last summer what kind of a golf game he played, he answered that "there are those higher in Government who play better."

Another time, talking about the importance of mapping in planning the trajectory of guided missiles, Quarles drew a laugh from Pentagon correspondents when he said that a pertinent question was "how accurately we know the distance from Washington to Moscow—just to take two places without any particular significance."

Quarles is an original do-it-yourself man. He starts each day at 6 a. m. by cooking his breakfast of prunes and oatmeal in his own way. Obviously, he is no epicurean. His favorite drink is hot water, he abstains from coffee and tea, and he has almost entirely foresworn liquor—"for reasons other than moral." He has always shined his own shoes, and he shines his grandchildren's shoes every chance he gets. Before he began working 12 to 15 hours a day in Government, he used to do all his own maintenance

work around the house, doubling as painter, plumber, and electrician.

Back in Englewood, he once rewired the living room of his next-door neighbor, Dean Frank McCloskey, of New York University, thus permitting McCloskey the fun of boasting that he had been rewired by the vice-president of Bell Laboratories. More recently, in Washington, he sweated all one Sunday afternoon in the basement repairing the washing machine of a Defense Department official, while other guests relaxed at the party upstairs.

Quarles is descended from English settlers who migrated west from Virginia and South Carolina. His paternal grandfather, owned a plantation near College Hill in Mississippi, was captured by Union soldiers during the Civil War and died in a Federal prison hospital.

Robert Warren Quarles, the Air Force Secretary's father, was 12 years old when war came to the South—and to the Quarles plantation. When Gen. William Tecumseh Sherman's troops took over in northern Mississippi in 1863, Sherman made the plantation his headquarters. Donald Quarles recalls that after his father moved to Van Buren, Ark., then a typical Southern-planter town, and established himself as a dentist, "he refused to fight the Civil War all over again. He believed in Mr. Lincoln's desire to pull all sections of the country together again, and he was all for doing everything possible to bring the South back into the Union. This was remarkable, because his own life had been hurt badly by the war."

Robert Quarles married a Northern girl, a Miss Minnie Hynes, whose father owned a newspaper in Watertown, N. Y.; she had come to Van Buren to visit an uncle. Donald was born in Van Buren on July 30, 1894. He had 1 brother and 2 sisters.

Mrs. Quarles had a strong spiritual influence on her children. She and her husband were devout and active members of the local Episcopal Church. Quarles' father lived to be 82 years old and his hair was just beginning to turn gray when he died. He had practiced dentistry in Van Buren for 50 years and was favorably known as a civic leader and for his skill with his hands, particularly in wood carving. He taugh his sons to be self-sufficient, and encouraged in them an interest in the liberal arts.

Quarles dates his interest in studies from a convalescent period after a bad bout with typhoid when he was 12 years old. He became fascinated with mathematical problems and began to read up on the physical sciences. In fact, he got such a big jump on his school courses that summer that he graduated from high school when he was 15 years old. The following autumn he went back to the same school and taught mathematics. Most of his students were older than he was. One of them, a good friend of his, was the late Bob Burns. Quarles recalls him as a very talented boy, but not as one of his star pupils. But if Burns could not master the Quarles equations, he later astonished his former teacher by the fame he gained as a bazooka-tooting entertainer on the radio.

During his teaching career Quarles took summer courses at the University of Missouri, and tutored other students for 10 cents an hour. He enrolled fulltime at Yale University when he discovered that he could earn $2 an hour tutoring there. In fact, Quarles tutored his way through Yale. He made the Sigma Xi honorary scientific society and Phi Beta Kappa—two keys he has refrained from dangling on his vest—and was graduated a bachelor of arts in 1916.

The following year Quarles entered officers' training camp. Upon being commissioned, he was sent to France to study French artillery methods at the Fontainebleau School. He saw some action during 2 months at the front with the famous Rainbow Division, but then was brought back to help start the first American field artillery school in Gondrecourt. Promoted to captain after the Armistice, he did occupation duty with the 1st Division near Coblenz, Germany.

Back in New York in 1919, Quarles landed a $39-a-week job with the Western Electric engineering division, which in 1925 was to become Bell Telephone Laboratories. To steep himself in mathematics and physics, he studied nights for 4 years at Columbia University. In the laboratories, he was placed in charge of larger and larger groups of researchers.

During the twenties, Quarles worked on experiments in transmission engineering, which dealt with the theory of signal transmission and became the mother art for radio and television. While heading Bell's outside plant development division from 1929 to 1940, he was in charge of the development of the coaxial cable for multichannel telephony, which later paved the way for national-network television. He also directed researchers who made major contributions to automatic long-distance telephone dialing.

During World War II, Quarles' talents were devoted to the new military electronics systems. After the war Quarles served as chairman of the Electronics Committee of the Government's Joint Research and Development Board. He is perhaps the best-informed man in the country today on the development of military electronics in communications, fire control, missile guidance, and navigation.

All this time Quarles had been equally active as a father and citizen. In 1921 he had married Miss Carolyn Whittemore, a Smith College graduate. They had two daughters and a son. In 1937, after several years of separation, they were divorced. In 1939 Quarles married his present wife, the former Rosina Cotton, a New York insurance agency executive who originally was from Lakeland, Fla.

In Englewood, across the Hudson River from New York, Quarles found himself involved in civic affairs. After serving on the local board of adjusters, as chairman of the planning board and as councilman, he was elected president of the council for 1944–45 and mayor for 1945–47. As mayor, drawing $100 a year, he had to spend nights and all his weekends running the police and fire departments and handling complaints from Englewood's 18,000 population.

He was a startlingly conscientious mayor. Once, during a heavy snowstorm, a widow telephoned Quarles at midnight that she had to have her driveway cleared in the morning so she could take a sick relative to the hospital. At dawn, the woman saw the city snowplow moving into the driveway, with Mayor Quarles sitting next to the driver and giving directions.

Quarles' administration was known for its efficiency, its planning for the future, and its nonpartisan character. He had become a registered Republican "because my kind of Democrats in Arkansas were Republicans in New Jersey," but he did not hesitate to appoint qualified Democrats to jobs.

Quarles declined to run for reelection as mayor, but he already had been drafted for the unenviable job of chairman of the newly created North Bergen County Sewer Authority. The problem was to build a $1,300,000 sewage trunkline and disposal plant to protect the Hackensack River. It was up to Quarles to persuade 10 towns besides Englewood to act collectively and put up the necessary funds. It took 2 years of persistent, face-to-face salesmanship. But he learned something from the experience: all the resistance to the project resulted from local political situations. He also learned some financial lessons in the course of issuing bonds and letting contracts to get the big plant constructed.

In 1949, when Quarles was made vice president of Bell Laboratories, his responsibility included liaison with the Sandia Corp., which is under contract to the Atomic Energy Commission to design and develop the nuclear weapons for its tests. When Sandia ran into some trouble with the military personnel conducting the tests, Quarles was made president of Sandia and sent to New Mexico to straighten things out. It was the biggest administrative and technological job he had yet tackled, but he was eminently suited to the task. By this time, he had dealt with hundreds of scientists and engineers, and thousands of supplier groups. He was then president of the American Institute of Electrical Engineers and he had had a wide acquaintance with military leaders.

In August 1953 Quarles was called to Washington with the expectation of being named General Manager of the Atomic Energy Commission. It turned out that Defense Secretary Wilson also had had his eye on Quarles for the new post of Assistant Secretary of Defense for Research and Development. An unseemly tug of war was averted when Wilson and Rear Adm. Lewis Strauss, Chairman of the AEC, agreed to let Quarles decide. Quarles took the Defense job, though he regretted leaving the atomic field.

As Assistant Defense Secretary, he was in charge of a $2-billion-a-year program of weapons development, including projects relating to chemical and biological warfare, as well as rockets and guided missiles. He also had a hand in the Government's plan, announced in 1955, to release an earth-circling satellite. And he was permitted to labor in comparative obscurity. As one Defense official put it, "He works in things nobody understands, anyway, so we might as well leave him alone."

When he went into the Defense Department, Quarles had given up a $40,000-a-year salary for less than half of that. He once remarked that "if I can do anything in Government to help make the world safe for my grandchildren, it's worth it."

But how has Quarles' low-key personality affected the flamboyant "fly boys" under him?

"Well," he mused not long ago, "Air Force officers are not quite like scientists, but we all behave like human beings. It is a young organization, built by aggressive people. In fact, their aggressiveness is one of the strong points of the organization. I always thought the Air Force had a fine gang of people, but now I've also developed a great loyalty toward it. I suspect that before many more months I will get to looking more and more like a fellow who follows the Air Force party line. This is subconscious, really. You don't mean to do it. It just comes naturally."

The Thirty-seventh Anniversary of the American Legion

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. KEATING. Mr. Speaker, it is with a great deal of satisfaction that I salute the American Legion on its 37th birthday. Along with my more than 3 million fellow members, I look back with understandable pride upon these years of distinguished service.

The ranks of the Legion today include more Purple Heart veterans and more decorated combat men and women than all other veterans' organizations com-

bined. These veterans, from all walks of life and all ethnic origins, have blended together to form an effective force for the public good.

Much has been made of the good times enjoyed by us in the Legion. That is true, but it is only a small part of the story. Less well known are the great number of fine works done by this organization.

The Legion has consistently supported and worked zealously for the benefit of the widow and orphan of our deceased comrades and for the disabled in our ranks. Due in large part to the Legion's agitation, the Veterans' Administration was established and the fabulously successful GI bill of rights became a reality.

In defense of our national institutions, in combating the evil forces of communism, and preserving our national security, the American Legion has a record second to none. It has constantly reminded us that we must remain prepared if we want to stay free.

In its occupation with the present, the Legion has not forgotten the fine heritage which this country so proudly bears. It has made special contributions along these and other lines to the youth of America. Great success has been enjoyed by its oratorical and other school programs, its child-welfare projects, and the junior baseball leagues.

The Legion has repeatedly warned that the real hope of our Nation lies in the strength of our moral and religious principles. Through the medium of its most worthy God's Day and other projects, the Legion has proven a powerful factor in turning the attention of peoples of all creeds and faiths back to God.

The American Legion has amply demonstrated that its motto, "For God and Country," really means something to the members. It has served with fortitude and conviction in time of war and continues this proud tradition in time of peace.

Under leave to extend my remarks, I am inserting a portion of a fine editorial from the National Tribune—The Stars and Stripes. This publication is filling a definite need and doing an outstanding job of keeping the veteran segment of our population informed of news of particular interest. In this editorial, which appeared in the March 15, 1956, issue, they have embodied some very good thoughts concerning the American Legion:

BIRTHDAY GREETINGS

"For God and country, we associate ourselves together for the following purposes: To uphold and defend the Constitution of the United States of America; to maintain law and order; to foster and perpetuate a 100 percent Americanism; to preserve the memories and incidents of our associations in the great wars; to inculcate a sense of individual obligation to the community, State and Nation; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of freedom, justice, and democracy; to consecrate and sanctify our comradeship by our devotion to mutual helpfulness."

That is the preamble to the constitution of the American Legion, which is this week observing the 37th anniversary of its birth at a caucus of members of the American Expeditionary Forces of World War I in Paris, France, March 15–17, 1919. Something over 1,000 delegates attended that meeting which cradled the Legion. They, and the early leaders of the movement had conceived the possibility of continued activity as a group for the good of all Americans. They had donned the uniform of their country and had participated actively in a crusade to preserve it against foreign aggression, and they wish to imbue their people with a greater respect for the liberties they enjoyed but which had been so recently saved at an awesome cost in lives, in precious resources, and in lifetime disability for many thousands of their comrades in arms.

In Paris, an ideal was created. Less than 2 months later at a further caucus in St. Louis, Mo., it was put into words and during the following November on the first anniversary of the signing of the armistice that brought an end to the First World War, the governing laws together with the Legion's purpose in being were adopted at a first national convention in Minneapolis, Minn. During the course of the present week this preamble will be recited over the country's major air networks. It will be heard by many millions of listeners who will then know a litte more about the largest of all organized groups of war veterans, and how it grew and prospered as a nonpolitical society because of a set of principles by which it dedicated its unselfish services to others. The people will be told that the Legion on its 37th birthday is composed of nearly 3 million members in 58 departments and 17,200 posts throughout the world with an equally prosperous and effective million-member auxiliary. They will learn $150 million has been paid in dues by veterans of the two World Wars and the Korean conflict; that the organization is a corporation worth $300 million in its own right; that half of its posts own their own homes; that 34 State governors and hundreds in high public life are associates in this vast enterprise for good, and they will better understand the American Legion when they ponder over the model of words that attended its creation.

And it is hoped and believed that during the days ahead the average person who reads as he walks may, as a result of the marking of this anniversary, know more about the work of this and other great veterans' organizations—of the vast rehabilitation and legislative divisions that have contributed so greatly to the care of all veterans and their dependents through benefits, laws, and hospital, medical, and domiciliary provisions; of their agitation and labors for the national security; of continually expanded child-welfare programs; of dozens of Americanization projects and thousands upon thousands of community activities, youth betterment proposals and plans to emphasize religion in the daily family life. As the Legion enters upon its 38th year of national service, it may well point with pride to accomplishments that have saved much for two generations of Americans, that have improved the lot of millions of veterans and their next of kin, that have constructed a sturdier national defense, and that have put understandable force behind a will to resist all attempts to weaken a firm foundation of government by the masses through infiltration of alien codes. The Legion has done great things in firming up America for Americans. * * *

There are now in excess of 22 million veterans in this country. All of them are under attack even though far too few realize it. They will be further assailed by individuals and by highly organized groups, some of whom have at stake selfish desires while others of younger years and lesser experience are motivated by what they sincerely believe are splendid principles. If any of those who think their motives are pure will but read hurriedly the above-quoted Legion preamble and then will take the time to investigate the Legion's works over the past 37 years, their worries will vanish into thin air. This and other organizations of veterans are building, not wrecking. Their history has been rich in sacrificial devotion to the high ideals for which they were initiated. Their achievements are recorded in the book of progress and should be an inspiration for others to follow because they constitute a monument builded by ordained men and women for practical good, all found within the framework of a set of ideals that defined in 1919 a purpose from which the membership has never deviated.

As another page is turned in the Legion's book of good deeds, this newspaper congratulates a great body of comrades bent upon a program that has been tested and found true. It extends the hand of fellowship to an organization dedicated to preserve America and to serve its citizens. It commends a society that has a first regard for those who compose its membership, and it salutes a courageous commander who has demonstrated, as have few others, a willingness and firm desire to fight for high principle, come what may, and who meets the criticisms of his adversaries with the clarion call "The command is forward." Our best wishes go out to the American Legion in this new year of service to God, to country, and to fellow man.

Speech of Ambassador Douglas Dillon

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, perhaps too little is known about United States policy with respect to north Africa. The disorder in that area is, however, of real concern to all of us. A greater understanding of the nature of the problems in that part of the world is important. For that reason, I feel that the following excerpts from a speech by a distinguished constituent of mine, the United States Ambassador to France, C. Douglas Dillon, will be of great interest.

Excerpts from the speech, delivered in Paris on March 20 to the French Diplomatic Press Association, follow:

I am glad to have the opportunity to speak to you today. Recently I have noticed in France an increasing misunderstanding of United States policy toward north Africa. Such misunderstanding is a matter of serious concern to us all and should not be allowed to continue. In an attempt to clarify this situation I am going to describe briefly the basic views of my Government regarding the problems which France is facing in that area. * * *

The United States has consistently supported France when north African subjects have been discussed in the United Nations. The most recent instance was our strong support last fall of the position that Algeria is an internal French problem and therefore not appropriate for discussion by the U. N. In addition, when last year the important question of helicopters was brought to our attention we responded promptly and favorably to the requests of the French Government. * * *

FAULT ON BOTH SIDES

With this background, how is it possible that so much misunderstanding should have arisen? Misunderstanding between peoples almost inevitably means that there must be some fault on both sides. I have looked hard at the American position in this matter and

I think that I may have found one of the causes. That is that until now there have been very few public expressions of United States policy in this area. On the one hand, we have felt that Algeria was primarily a French affair and on the other that the relationships between France and Morocco and Tunisia were matters to be settled between the French Government on the one hand and the Moroccan and Tunisian Governments on the other. We thought that public expression of our views would be considered to be undue interference in other people's affairs and accordingly we have kept silent. While we have repeatedly given assurance in private to the French Government that we supported their efforts to reach liberal and mutually acceptable solutions in the area, our policy of avoiding public expression of our views may have contributed to a misunderstanding of our position. * * *

ELABORATES ON POLICIES

Now let me elaborate a little on our policies. First, let us look at Tunisia and Morocco. With these two countries the French Government, animated by the liberal traditions for which France is justly famous, has concluded agreements. In the first agreement, that with Tunisia, a long step was taken toward independence. There followed the recent agreement according full independence to Morocco and we have just learned that new negotiations perfecting the independence of Tunisia have been successfully completed. * * *

I am certain that the Tunisian and Moroccan people must realize that they owe their remarkable economic and social development of recent years to French initiative and to French investment. * * *

UNITED STATES ANTICOLONIALIST

You have all heard that the people of the United States are anticolonialist by tradition. That is true and we are proud of it. But what does this mean? It means that we believe, as I am sure the people and Government of France believe, that the less favored peoples of the world should be brought forward as rapidly as possible to a state of freedom in which they can freely and rationally choose their own destiny. Such freedom of choice can take many forms. It by no means requires a rupture between the peoples that have newly acquired their freedom and those that have led them along the path to this freedom. * * *

Now let me turn for a moment to Algeria. Here the problem is quite different and the solution must undoubtedly be different. The four departments of Algeria are French territory. There are 1,200,000 Frenchmen living in Algeria alongside 8 million Moslems and this co-existence in itself poses a most complex and difficult problem.

AWARE OF PROBLEM

While my government has been, and is, well aware of this problem, it is fair to say that public opinion in the United States has not been adequately informed regarding the French community in Algeria. The size of this community, the extent of its participation in all phases of Algerian life, and the length of its history in Algeria are now becoming better known to the American people, and with this knowledge is coming greater understanding and sympathy for the problems you face in Algeria. * * *

The French Government has solemnly promised free elections. * * * But we all know that elections cannot take place while disorder reigns. Hence, we in the United States fervently hope that peace and order will come soon to the Algerian countryside so that progress can be made toward the liberal solution sought by the French Government. My countrymen have always been shocked by blind acts of terrorism and those who take part in such activity should not for a moment imagine that they have the support of my Government or of any segment of our public opinion.

EXTERNAL INFLUENCES

We recognize that there have been external influences at work trying to undermine the French position throughout North Africa. I hope that what I have just said will be of help in enabling the people of France to differentiate sharply between her friends and her foes, between the friends and allies who support her in her search for liberal and fair solutions, and those who have sought to destroy every possibility of a continuing relationship between France and the Moslem communities throughout North Africa.

More About Automobiles

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. MULTER. Mr. Speaker, I desire to call to the attention of our colleagues the following letter that I received from Mr. Wallace A. Kitchen, of Columbus, Ga., in regard to his purchase of a new automobile:

COLUMBUS, GA., *March 12, 1956.*
Hon. ABRAHAM J. MULTER,
House of Representatives,
Washington, D. C.

Dear Sir: As a newspaperman and a member of the Georgia bar, I would like to commend you on the fine job you are doing as a Member of Congress. According to the March 12 issue of Automotive News magazine you suggested that every auto maker should be required to road-test each vehicle for a minimum of 500 miles and issue a certificate of fitness with each car. This suggestion, among the others at the current Monroney committee hearing, is the most outstanding inasmuch as it is of the utmost importance to the general welfare of the automobile buyers of America.

I recently purchased a new Ford car, which to date has been in the shop 14 times in order to correct defective workmanship. Among other things, the steering gear stuck on the car when I had only driven it 500 miles. Fortunately this happened when I was driving around town at slow speed. If it had happened out on the highway I could have had an accident, killing myself and family.

In the mad competitive race between auto makers today, cars are being thrown together with total disregard for the buyer. He does not get a fair return for his money and in a great many instances such as mine, he is endangering the safety of himself and others.

I wrote the Ford Motor Co. officials about the defects found in my car. They were unconcerned in the matter and said that it was being referred to the district manager of customer relations, who in turn would discuss it with the dealer. All this official did was write the dealer a letter. I ask you, Is it the dealer's fault if the cars are being thrown together in such haste that they are defective and a danger to public safety?

Each time I have taken my car back for repairs I have found others doing the same thing. I now have a long list of buyers of new Fords who found the cars faulty in workmanship. I know in a State as large as yours the number of buyers who bought so-called "lemons" would be tremendous if it was investigated. A man buys a new car thinking he will get thousands of miles of service without the need for repairs. If he does not do so he is not getting what he paid for with his hard-earned dollars besides the possibility that he may endanger the lives of his family and others.

I do hope that the Congress will follow your suggestion and require the makers to road-test each car. If not I hope that some public-spirited gentleman like yourself will see that a buyer has some recourse under the law. As you know the pure food and drug laws were enacted to protect the safety and welfare of the American people. I know that if the same sort of protection is given to the buyers of new cars it would win the undying gratitude of millions of Americans as well as the National Safety Council, newspapers, magazines, and anyone else interested in seeing that the buyers of this country get value received for their money and safety for their families.

Very truly yours,
WALLACE A. KITCHEN.

Vice President Richard M. Nixon

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1956

Mr. SCUDDER. Mr. Speaker, two wonderful things happened last week to a fellow Californian whom I hold in high esteem.

I am referring to Vice President RICHARD NIXON, who was warmly endorsed by President Eisenhower, and who stole the show at the New Hampshire primary election. The spontaneous and unsolicited support accorded our Vice President by the New Hampshire voters is most certainly an indication of public confidence in DICK NIXON.

I should like to include with my remarks the following editorial from the San Francisco Examiner of March 16, 1956, entitled "Ike for NIXON":

IKE FOR NIXON

President Eisenhower spectacularly cleared the air at his press conference Wednesday of whatever doubts existed, or had been manufactured, of his regard for Vice President NIXON as his running mate in the 1956 campaign.

To make his endorsement as strong as possible, the President took the unusual action of permitting direct quotes, which follow:

"Anyone who attempts to drive a wedge of any kind between DICK NIXON and me has just as much chance as if they tried to drive it between my brother and me.

"We are very close. I am happy that DICK NIXON is my friend. I am happy that DICK NIXON is my associate. I would be happy to be on any political ticket in which I could be a candidate with him."

In effect, the President has chosen. In effect, he has ended all speculation about this year's Republican team.

We think in the interests of party unity and party purpose it was a wise move for the President to speak so plainly and strongly, so as to scotch rumors that if prolonged and provoked could have created serious dissension.

In this respect we think it would have been even better if the President had spoken as plainly at his press conference a week ago when his somewhat ambiguous statement that he had asked NIXON to "chart his own

course" gave strength to rumors that the Vice President might be dumped.

The President's endorsement came on top of the astonishing write-in vote NIXON received in the New Hampshire primary Tuesday, indicating a deep and strong grassroots admiration for a man who has impressed himself upon the voter of both major parties as a fighter against communism and a vigorous and loyal American. There is no way of telling yet how far this grassroots regard extends, but there is reason to surmise that it is as wide as it is deep.

The President expressed his views to NIXON on Tuesday, before the primary results were known. As is his custom, the President was expressing his own convictions.

And he spoke wisely and well.

A Nation of "Haves"

EXTENSION OF REMARKS
OF

HON. GEORGE H. BENDER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, March 21, 1956

Mr. BENDER. Mr. President, few men have moved from the field of business and industry into the realm of government with the distinction and skill demonstrated by our Secretary of the Treasury, George M. Humphrey.

I am particularly happy to submit, for insertion in the Appendix of the RECORD, Mr. Humphrey's address delivered at San Francisco, Calif., because Mr. Humphrey is an honored citizen of the State of Ohio and of the Greater Cleveland community. His talk, entitled "A Nation of 'Haves' ", is one of the most forceful replies to the prophets of gloom and doom ever presented to our people. It should be good reading in every American home.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A NATION OF "HAVES"

(Remarks by Secretary of the Treasury George M. Humphrey, San Francisco, Calif.)

It is an often-neglected fact that within the last half century this Nation has gone through an economic evolution that makes pale any other in the long history of man's efforts to achieve a better life.

The result is that this Nation is today a Nation made up of small to medium savers and investors. This means that today this is a Nation of "haves" and not a Nation of "have nots." We have been in a tremendous and beneficial evolution, peacefully bettering the lives of most of us.

We in this administration have hitched our wagon to this rising star of a "have" nation to make sure of its continued rise; to keep making "have nots" into "haves." We are admirers of and believers in this uniquely American growth and progress. But on coming into office we found that this great day-to-day American evolution from the bottom up was in danger. In fact, we found that it had not even been properly recognized by economic policymakers of the last two decades. They were too busy fighting the ghosts of a "have not" nation, a nation that had even then already ceased to exist.

As a result, we found the economy blown up with the hot air of inflation to a point where there was real danger that it might burst, letting us all down with a crash that would have maimed us as a nation, and dropped the free world's defenses invitingly low.

We found the economy's growth hampered and hobbled by a tangle of successive layers of regulations, controls, subsidies, and taxes imposed in past emergencies. The economy was being twisted into the shape of things past, when it should have been reaching freely for its rightful future.

In addition, we found defense spending being used partly to buy defense, and partly as a crutch to support an unsound economy, thereby endangering both defense and the economy.

In other words, we found an economy in danger of going stale, out of step with the times and out of step with the Nation it had to serve, an economy fearful of the ghosts of bygone crises, living precariously on the treacherous dodges of inflation, subsidy and excessive crash-and-crisis Government spending.

We have been reshaping this Government's economic policies into the policies required for a strong and forward-looking Nation, its economy firmly footed and self-supporting; an economy that will pump a continuous new flow of nourishment into the day-to-day American evolution of self-betterment; an economy that will constantly generate new and better paying jobs for an ever-growing population. At the same time our economy must provide an ever-higher standard of living, plus the social services the people want and need, as well as the men and the weapons the Nation must have for its defense.

All hands in our Nation—labor unions and the employer, the rich and the poor, both major parties, the farmer and the city man, the woman at home and the man at his job—all have had a part in making our new productive way of life.

The point now is that the peaceful evolution has resulted in a tremendous upheaval of this Nation's whole economy that really has created a different kind of Nation, a unique Nation of haves that needs an up-to-date way of thinking about itself, and up-to-date policies, in keeping with its strength and growth potential.

Let's look back to the turn of the century and see what has been happening, economically, since then.

Our total national production of goods and services now approaches $400 billion. That is just 20 times as much as our national output in 1900. When you make allowance for price rises since the turn of the century, today's national production is still about 7 times what it was in 1900. Our population has more than doubled since 1900, but our national output per capita—production per man, woman and child in the Nation—is 3 times what it was then.

Our national income is now over $320 billion. After allowance again for price changes, this is 7 times what it was in 1900, and our income per man, woman and child in the whole population is, like production, 3 times as much as in 1900.

Here is the important thing about that income change since 1900. The lower and middle income groups have received the greatest share of our increased income. Early in the century, only 1 out of every 10 American families earned as much as $4,000 a year in terms of today's prices. Now almost half of our families earn more than $4,000 a year. Those with inadequate incomes for a decent living are becoming fewer and fewer, and more and more of them are becoming "haves"—people who have enough money not only to live adequately, but to save besides. That is the basic economic development in this country which we are trying most fervently to keep going, and to continually improve.

Let's see just how widespread and important this flow of purchasing power to the broad base of our economy has been and will continue to be.

One of the most common methods of savings is the purchase of insurance. At the turn of the century, people in this country had taken out 14 million life insurance policies. Today, with the population only slightly more than doubled, and with many people owning several policies, the number of life insurance policies has increased nearly 18 times, to about 250 million.

Ownership of individuals in their life insurance has increased from under $2 billion in 1900 to more than $85 billion.

Small investors' holdings in United States savings bonds, total the huge amount of $50 billion. No such investment existed in 1900.

Let's see some other ways in which the average man on the street in this Nation has been making himself over into an investor—a man with a real financial stake in the future such as no other average citizen anywhere ever had before.

Nearly 10 percent of all American families today own stock in American corporations. At the turn of the century, this was just getting underway.

In 1900, individuals had liquid savings of all types amounting to less than $10 billion. Now such savings of individuals in this country total more than $235 billion.

Last year alone, Americans bought equipment for themselves and their homes of almost $30 billion. This included things unknown to the homeowner of 1900, like 7 million radios, 7 million television sets, nearly 3½ million washing machines, and a million air conditioners. These are mass investments in a better life only a Nation of "haves" could make.

About 25 million families own their own homes today, compared with only 7 million homeowners half a century ago, which population has only a little more than doubled in that time. About 55 percent of our families now live in homes of their own. Nearly all others want to. And ways and means of helping them to do so are of greatest concern in present Government policy.

Labor unions to which many American workmen pay dues, are also investors. Not so many years ago, union treasuries were low. Today many of them bulge with huge sums. They own banks and buildings, bonds and stocks, and investments of many kinds. These are investments belonging to—and benefiting—the men in overalls.

Today more than 15 million Americans have more than $30 billion invested in pension and retirement trust funds. This represents an investment of almost $2,000 per worker. Such retirement plans were practically unknown in 1900.

You can see from these few examples what has been happening to the ordinary individual and the ordinary family in our wonderland economy. We need a completely new set of standards in thinking about ourselves. We are a Nation of "haves," not of "have nots." This Nation's economy has grown right over, and has left behind in the dust, both socialism and communism.

The consequence of this brilliant human achievement in our Nation is that the basic interests of the man in the overalls are today the same as the basic interests of the man in the business suit.

Both men have current earnings and probably savings in one form or another. That means that both are interested in seeing the dollar keep its purchasing power. To the extent that inflation develops, both men are robbed.

If you had $1,000 saved up in 1939, which you did not draw out to use until 1953, you really took a beating. Inflation had sneaked into your savings during those years and made off with $478. How? Because inflationary price rises during that time cut the purchasing value of the dollars you were saving, every minute of every day. When

you drew out your $1,000 savings, inflation had stolen away with all but $522 of the purchasing power your dollars had when you put them aside in 1939.

The man in the overalls and the man in the business suit often try, by purchasing insurance, to build up some security to leave to their wives and children in the event of untimely death. It is a terrible thing to have the purchasing power of his insurance—the time that it will pay the rent and set the table or help with the education for those that are left—cut nearly in half in the short period of just 15 years.

It is a heartbreaking thing for a man and woman who put aside savings in a pension or retirement trust fund as they work during their lifetime to find on retirement that inflation has robbed them of nearly half of what they had invested to live on in their declining years.

We in the Eisenhower administration have made the halting of inflation one of the principal goals of our administration. In the last 2¾ years, the value of the dollar has changed only one-half of 1 cent. This means that we have kept inflation's hand out of your savings almost entirely. We want to keep inflation locked out, so that when you save—by putting money in the bank, by buying a savings bond, by buying insurance, by contributing either work or money to a pension fund or fraternal order or in any other way—you will get from your investment the same value that you toil now to put into it.

The man in the overalls and the man in the business suit have at least an equal interest in this fight. But, if there is any difference between them, it is the man in the overalls who most needs protection. He can less afford to lose.

Now, it is growing more and more to be, that it is the vast sum of the many smaller savings of the man in the overalls on which our industrial and commercial system depends for its financing. The sum of all the little savings is funneled mainly into big investments by the savings banks, the building and loan associations, the insurance companies, investment trusts, pension funds, union and fraternal organizations, and others handling the savings of the man in the overalls.

Business in this country is pouring nearly $28 billion of new investment into its plants and equipment this year. That tremendous amount must come from somebody's savings. Without it, the future's new jobs will never be born, nor will we get tomorrow's increase in productivity, as the result of new and better tools of production, bought by new investment.

Saving is important to the Nation and must be encouraged, not discouraged, because it strongly influences the security of the job you have and your hopes for ever-better pay through continued increase in your productivity. Thus you can see how inflation can rob you not only of your personal savings but, in addition, steal away your pay increases and perhaps even your jobs.

We must have policies that put solid ground under our day-to-day evolution of continual betterment from the bottom up. Such policies must aim at everyone, spreading the riches throughout the land. There is only one way to have everyone have more and that is to produce more. The Nation's treasures of goods and services must constantly increase, by continually increasing individual productivity, so that they can be spread ever deeper and broader throughout the whole economy.

Our strong economy must—and can—carry the costs of fully adequate defense, and of indispensable public services, and at the same time continue its healthy growth. But it will only be able to do so if we balance the load correctly so that it can be carried, and carried indefinitely, without a breakdown.

We have devised policies to fit our new situation and we are balancing the load.

We are not the slave of any particular aspect of our flexible policies. We regard inflation as a public enemy of the worst type. But we have not hesitated, either, to ease or restrict the basis of credit when need was indicated. Under the new cooperation that exists in this administration between the Treasury and the Federal Reserve, the full force of monetary policy has been made effective more promptly than ever before in the Nation's history to better respond to natural demands.

We found when we came to office an overblown economy. It was hobbled with all sorts of artificial controls, dangerously dependent upon the uncertainties of defense spending, and inflationary pressures. It was borrowing from tomorrow's production and income at a prodigious rate, with unsound confiscatory taxation that still failed to provide for the profligate spending. This resulted in huge deficits that were passing the heavy burden of our excesses on for our children and grandchildren to bear. And sooner or later it was sure to result in complete downfall.

Under the Eisenhower administration, the whole economy, the livelihood of all the people, has been made more safe. This has been done by the timely use of monetary policy and credit in response to actual demand; by the return to the public of purchasing power through the biggest tax cut in the history of the Nation, by cutting unjustified government spending; and at the same time by timely encouragement to construction, home building, and needed improvements. By the prompt and vigorous use of all these measures we have made the difficult and delicate change from a dangerously artificial economy to a healthful one, with every effort exerted to the utmost to involve the very minimum of cost in terms of unemployment.

In turning our faces resolutely from inflation, and unrealistic spending, what have we turned toward?

We have turned with full confidence to a people that have demonstrated that you are industrious, saving, inventive, daring, progressive and self-reliant to an unprecedented degree. We believe in your capacity to go on providing yourselves with an ever better life, if we in government support your efforts where the general welfare calls for such support, and do not load you with unnecessary burdens, or take from you by excessive taxation the increase in your income that you might otherwise earn and save, or allow you to be robbed by inflation.

We will be rising on the solid ground of these things:

Savings protected against shrinkage by a stable dollar;

Increased production and increased wages and earnings made possible by the investment of those savings in more, new, and better tools of production;

Wide use, by Americans who are both workers and investors, of these tools of production for the creation of more jobs and new, better, and cheaper goods, with ever-widening distribution among an ever-growing number of consumers as their earning power increases and the cost of the goods decline;

Use of the increased income from this increased production of the things you want, not to pay the bill for unneeded or unwise Government spending, or as tribute to inflation, but for the creation of a better life for all.

The United States is now enjoying plenty, in peace. Americans are breaking all records in the number of people with jobs, the high wages they are receiving, and in the production of goods for people to enjoy. And they are enjoying this high prosperity while successfully resisting pressures toward inflation.

We hope for continued prosperity based, not on war scares or artificial Government stimulants, but on steady spending by consumers, and investment by business. It has a broad and solid base. We have laid to rest the myth that a free-enterprise system can thrive only in war. We have shown that free men in a free world can provide an abundance, can provide plenty in peace, far above the capacity of the government-run economies of the world.

America's Social Binge

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mrs. ST. GEORGE. Mr. Speaker, the following excellent and thoughtful article has just appeared in the Catholic World.

In this year of campaigning, when the air waves are ringing with campaign oratory, when the idea of solitude and reflection seem to have been completely abandoned, this article may remind us that only in quiet and in meditation can we find the road to achievement, and also the way of peace. It is very true as Anne Morrow Lindbergh says in her wonderful book Gift From the Sea:

The world today does not understand in either man or woman the need to be alone. If one sets aside time for a business appointment, a trip to the hairdresser, a social engagement, or a shopping expedition, that time is accepted as inviolable. But if one says,"I cannot come because that is my hour to be alone," one is considered rude, egotistical, or strange. What a commentary on our civilization, when being alone is considered suspect; when one has to apologize for it, make excuses, hide the fact that one practices it—like a secret vice.

The article from Catholic World follows:

AMERICA'S SOCIAL BINGE

(By Priscilla O'Brien Mahoney)

The successful man today seems to be the one who belongs to the greatest number of clubs and societies. And when such a one dies, his obituary contains a detailed account of his numerous tribal activities, as if these were proof positive that the deceased was a "man of distinction." Strange that a person like this should be compelled to die alone. So out of character with the social mindedness of most Americans.

Although it is still possible to find an occasional soul who enjoys his own company, we are often inclined to think he is mentally afflicted or may be engaged in subversive activities. No wonder a fellow like this frequently feels guilty when he withdraws from the crowd to read a good book or just to think his own thoughts. Eventually he is driven to question whether or not he really is normal.

However, psychologists are agreed that a normal and well-balanced individual is able

to enjoy his own company as well as the company of others. It is only the extremes that are held suspect. In this era it seems that we are more likely to meet with the extreme of the oversocialized person rather than with that of the solitary, who at least maintains his individuality, if not his social standing.

The fact that too much socializing can affect mental health was demonstrated in Cosmopolitan magazine, by Jay C. Calhoun. Speaking of "The American Weekend," he notes that the long weekends in this country are turning great numbers of our population into weekend neurotics. He believes this situation is the result of people being pressured into social activities that have the same aggressive and competitive relationships they experience during their business week.

Among other kinds of neuroses brought on by this compulsive kind of social life, Mr. Calhoun observes that a turning to alcohol on the part of so many is especially noticeable. The reason for this, he says, is that alcohol "quickly gives an artificial 'we' feeling in a group whose members would hate each other if they allowed themselves to sober up."

Why should so many persons feel literally compelled to walk a social tightrope in their off hours as Mr. Calhoun and many others say they do? Why do economists believe this state of affairs to be definitely fostered by the changing conditions of business and industry?

No doubt, because with the advent of the machine age, industry has gradually become so mechanized that very little skill or training is now required of employees. Often a worker is hired only for his ability to pull down a lever or to press a series of buttons all day. Even so, this same man may be made to feel that he will not be able to keep his job unless he proves himself a "Good Joe": able and willing to bowl on Thursdays with the boss, and to fraternize uproariously at shop or office parties on Sundays. In addition, he can expect that his promotions will usually be effected by a weekend poker party with his boss and coworkers.

If business and industry, then, are beginning to demand social assets as primary qualifications for prospective employees, education (especially that known as "Progressive") may be said to be grooming future citizens to meet this demand.

One has only to observe how personal giving way to a more collective manner of initiative in the classroom is gradually thinking and acting. A case in point is the rising popularity of the project method of teaching. Here it is that children might be introduced to American history of means of a joint class endeavor to build a papier-mâché Indian village. This could take anywhere from a month to an entire semester to complete.

In the meantime, there is the possibility that not only will the continuity of American history be slighted, but that the completed Indian village will also be the work of but one or two ambitious children. Just the same, the others in the group can claim the same credit as those who actually did the work because their merit is gained from group identification and not from any individual enterprise.

From this it can be seen why the traditional system of numerical grading of report cards is being abolished in many of the so-called progressive schools. It would, indeed, be difficult to estimate the work of a single child when his identify has been lost in the meandering confusion of too many class projects. Hence, parents whose children attend this type of school must be content to receive from time to time lengthy dossiers which, for the most part, appear to discuss merely their child's ability or lack of ability to socialize well. It follows that promotions are made independent of scholastic achievement. This automatic moving along from grade to grade is professionally known as social promotions.

When the child enters a secondary school of the more progressive type, he happily perceives that the curriculum has been pared down to make room for a plethora of clubs and social activities. And when he is finally graduated, he has little difficulty today in locating an American college that will admit him with no other entrance requirements than proof that he was engaged in a sufficient number of extra-curricular activities while in high school.

Conditions such as these have led sociologist John R. Seeley to describe a school in a certain community as "a gigantic factory for the production of relationships."

Since so many educators are thus overstressing the importance of social relationships, we can expect to find this same tendency echoed in the home. Only the other day a mother confided to me that she was worried about her 9-year-old son's absorbing interest in science. "Whenever his playmates are not around," she confessed, "Robert doesn't seem to be in the least bit disturbed. He just reads his books on elementary astronomy or he peers at bugs and ants through his microscope. I'm afraid this means he is becoming antisocial."

This mother, like so many others, was apparently so indoctrinated with the spirit of the times that she was unaware of her son's achievement of self-reliance through the cultivation of his own inner resources. And so, throughout the land, parents are being sold on the idea that the best guaranty of their children's future success in life is to keep them steadily engaged in as many corporate activities as their leisure time will permit.

Time and again we are reminded of this parental preoccupation with the social development of their offspring. Maybe that is why we now hear of so many children being rushed off to take ballroom dancing lessons even though they may be no more than 3 years old. Or maybe it is also why it is not unusual to hear a father boasting that his 10-year-old son hasn't a minute to himself or his family because all of his spare time is being taken up with Little League baseball, swimming excursions, Boy Scout jamborees, and the birthday parties of his chums.

It is not that any one of these things can't be very much worth while. But, like the proverbial pilltaker who poisons himself because he believes that if one pill improved his health, a handful will make him a superman, so also the parent who engages his child in too many group projects will assuredly make him a howling success in life with little Willie's howling being cared for by men in white jackets.

It usually happens that these same parents are those most likely to wonder why their children cannot settle down to read a good book, and why they are generally unable to amuse themselves for even a half hour. It probably doesn't occur to them that their youngsters have been overtrained in group reliance to the detriment of self-reliance.

In these times those who can appreciate the strength and enjoyment that come from a measure of solitude are strangely in the minority. One who has recently lifted her voice against this prevalent American attitude toward the inherent values of solitude is Mrs. Anne Morrow Lindbergh in her latest book, Gift From the Sea. At one point she declares, "The world today does not understand in either man or woman, the need to be alone. If one sets aside time for a business appointment, a trip to the hairdresser, a social engagement, or a shopping expedition, that time is accepted as inviolable. But if one says, 'I cannot come because that is my hour to be alone,' one is considered rude, egotistical, or strange. What a commentary on our civilization, when being alone is considered suspect; when one has to apologize for it, make excuses, hide the fact that one practices it—like a secret vice."

Mrs. Lindbergh, like most of the rest of us is convinced that the greatest contributions to human welfare had been made by those who insisted on their right to spend some time alone. Indeed, we are all quite ready to admit that the great artist does not acquire his skill with a mob peering over his shoulder. Nor could we imagine a saint who became so without the need to recharge his spirit from time to time in the solitude of prayer. Neither would we believe the scientist capable of uncovering the secrets of the universe if he feared the loneliness of his laboratory. In fact, we would heartily agree with the words of the famous inventor, Nikola Tesla, who said, "Be alone—that's the secret of invention. Be alone—that's where great ideas are born."

Yes, we would easily agree with all this, but in our agreement, we would except ourselves because we would know that contemplation and self-communion are not considered social assets today.

The extent to which this country has so rapidly embraced the "let's-do-everything-together-spirit" is somewhat like our notable penchant for fads. Awhile ago we were clearing the West with Davy Crockett. Next year we may all be wearing rings in our noses because some television star might be wearing one in hers. Perhaps we are like this because we are still a young nation which, like the adolescent, wants to be doing only what the crowd is doing.

On the other hand, fads are usually harmless because they are here today and gone tomorrow. But by tomorrow we are assured that leisure time will be more extensive than it is today. For this reason many industrialists as well as educators are all for the present trend toward socialized living because they believe it is the best preparation we can make for a future where labor will no longer be required of men but of robots.

But what about the possible danger to the individual as well as to the Nation when too many people think and act collectively? If such should ever be the case, then there is a strong chance that we will have brain-washed ourselves from the lessons so ruggedly won in the past. This could happen if, no longer accustomed to think and act as individuals, we shall have acquired the habit of mouthing only the dictums of the groups to which we belong. From this point on we would be easy dupes for mob dictation even as to our creed and Government.

And so the question arises as to whether we might already be undergoing a kind of softening up process whereby we can more easily be switched from a democracy based on the privilege of individual enterprise to a society of collective mediocrity. For one thing, preparation for such a change was thought to be already underway in the field of education according to the statement of the late British political scientist and Socialist leader, Harold Laski when he said of progressive education here in America, "It is an educational program for a Socialist America. It could be implemented in a society only where socialism was the accepted way of life; for it is a direct criticism of the ideas that have shaped capitalistic America."

Could it be that these words, so ominously describing the goal of progressive education, apply with equal force to our present all-out national binge on collectivist living? It would take a pessimist to think so, but then, pessimists, too, must have some reason for being. Maybe that reason is their habit of forever reminding the optimists that they are being hypnotized by their blissful contentment with things as they are. After, all, even an optimist knows that thieves make easy entrance when a household is asleep.

H. R. 6376: The Alaska Mental Health Act

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. BARTLETT. Mr. Speaker, many Members have had letters expressing opposition to H. R. 6376, the Alaska Mental Health Act. Indeed, one Member told me only today that he had more mail on this subject than any other since he has been a Member of Congress.

It is my unswerving belief that the principles set forth in H. R. 6376 are commendable. I know that the existing situation in Alaska in respect to the mentally ill is in desperate need of improvement. In her Washington Letter for March 1, 1956, Mrs. Marjorie Shearon takes a position that "undue alarm and misapprehension" are being expressed regarding this proposed legislation. I quote from Mrs. Shearon's Washington Letter:

A form of frenzy has swept the country regarding the several mental health bills Congress has been considering. Wild statements have been circulated about railroading patients, Siberia, United States of America, and the shipment of political adversaries to Alaska on trumped-up charges of mental illness. We see no foundation for such statements, nor do we view the bill with alarm.

Perhaps a calm statement about the background of the bill, the necessity for congressional action, and the provisions of the bill may dispel some of the doubts and misapprehensions presently existing. That the sponsors of the bill are part of an international plot is fantastic.

The purpose of H. R. 6376 is to substitute modern methods of commitment to mental institutions in place of the archaic laws now controlling Alaska. The bill "provides for the establishment of modern legal procedures for the commitment and hospitalization of the mentally ill in Alaska, for the administration of the Alaska Mental Health Act by the Territorial government, for the gradual assumption of financial responsibility for the program by the Territorial government * * * and for constructing and equipping a hospital or hospitals and related facilities." It would put an end to the barbaric treatment now accorded the mentally ill and retarded in Alaska.

REPRESENTATIVE GREEN, OF OREGON, DENIES H. R. 6376 WOULD RAILROAD MENTAL CASES FROM UNITED STATES TO ALASKA

In order to be able to speak with some degree of authority, we have read with great care the voluminous, unpublished testimony on H. R. 6376 and the report published last session when the House Committee on Interior and Insular Affairs approved the bill (H. Rept. No. 1399, 84th Cong. 1st sess., committed to the Committee of the Whole House, July 25, 1955).

There has been nothing precipitate about congressional moves to come to the aid of the mentally ill in Alaska. Bills were introduced in the 81st, 82d, 83d, and 84th Congresses. Abundant testimony was heard. During the present Congress Representative EDITH GREEN, Democrat, of Oregon, introduced H. R. 6376 which was finally passed by the House on January 18, 1956, and which is the bill now before the Senate committee. However, the House committee also considered an identical bill, H. R. 6334, introduced by Representative LEO W. O'BRIEN, Democrat, of New York, and similar bills, H. R. 610 and H. R. 3991, introduced by Delegate BARTLETT of Alaska, and two other bills introduced by Representative GREEN of Oregon.

Legislative procedures have been leisurely. All witnesses who asked to be heard have been heard. There has not been any attempt to jam the bill through on the sly.

Thus far the American Medical Association has not testified on H. R. 6376, though it did testify favorably on an earlier bill. We understand the AMA will probably have a representative to testify at reopened hearings. Senator MURRAY, Democrat, of Montana, chairman of the Senate Interior Committee, has invited the AMA to send a witness. Such testimony, it is to be hoped, will help to clear up present misapprehensions.

One wonders who started the incredible "Siberia" rumors and what was the object.

HOUSE COMMITTEE LAST YEAR SAID COMMITMENT METHODS IN ALASKA WERE ARCHAIC AND INHUMANE

According to the House report on H. R. 6376, "The history of Federal responsibility for the care and treatment of the Alaskan mentally ill dates from the act of Congress, June 6, 1900, which provided that the Governor of Alaska should contract for the care and custody of persons legally adjudged insane."

In 1905 the powers of the governor were transferred to the Secretary of the Interior by an act of Congress. Another act (June 25, 1910) provided for the construction and operation of detention hospitals at Nome and Fairbanks. The Nome hospital was never constructed. A two-story frame detention house was built at Fairbanks. It was used to hold patients until they could be shipped to a private mental institution, the Morningside Hospital, in Portland, Oreg. Some 25 years ago the frame building burned down. Since then there has not even been a detention home in Alaska.

Patients have been kept in jails pending shipment to Oregon, some 1,500 to 2,000 miles distant, far from home and family. Commitent has been by jury trial, without necessary medical recommendation. The hearings brought out that a 17-day-old baby had been adjudged insane and railroaded to Portland, Oreg. An Alaskan mother wrote urging passage of the bill, not to save her own child, but possibly some other child. Her own child, 2 years old, had been committed to the Portland hospital. She had visited the girl once, but, not being able to afford a second trip, she did not expect to see the child alive again because of its condition when she left.

The mental health procedures in Alaska have been described as "archaic" and "barbaric." They have been that way for 50 years without a frenzy of protest sweeping the United States. As we read the laws and the testimony of competent witnesses, it seemed to us the present situation, which H. R. 6376 would correct, should be referred to as "Siberia, U. S. A.," for the mentally ill of Alaska are being ruthlessly railroaded from their homes to a United States hospital ("Siberia" for them) 2,000 miles distant, far from family, isolated, without adequate treatment. Commitment procedures have indeed been barbaric for a long, long time without there being a nationwide protest until an effort is made to correct the long-time injustices and cruelties. The chief question is: Will this bill benefit the Alaskans? They seem to have been forgotten by the opponents.

AFTER ALASKAN SURVEY OVERHOLSER COMMITTEE MADE RECOMMENDATIONS EMBODIED IN H. R. 6376

"Congress has specifically denied to the Territorial Legislature authority to amend or repeal the existing Federal law pertaining to the commitment of the mentally ill (48 U. S. C., sec. 24). Alaskans have consequently been committed to a mental institution pursuant to a Federal statute (48 U. S. C., sec. 47), and they have been cared for and treated in a private hospital under contract with the Department of the Interior (48 U. S. C., sec. 46). The Federal Government bears the total cost of the commitment, transportation, care, and treatment of Alaska's mentally ill." (House Rept. 1399, loc. cit., p. 3.)

The number of patients cared for at Morningside Hospital in Portland, Oreg., in recent years has been about 345. The Federal Government has paid $184 per patient per month, the annual bill being about $800,000. At the hospital there has been one psychiatrist (not a board psychiatrist) and for at least part of the time there was only one registered nurse.

The proprietor of the hospital took a yearly fee of $30,000. The profit above that was $69,000. He has strongly opposed the bill which would terminate the contract. Patients received little care, nor did they even have customary recreation. There was, apparently, little incentive for the proprietor of the hospital to cure and release his patients. The contract has been held by this hospital since 1910, the present 5-year contract expiring on June 30, 1958.

In July 1949, the Department of the Interior appointed a committee headed by Dr. Winfred Overholser, superintendent of St. Elizabeths Hospital, the Federal mental institution in the District of Columbia. This committee studied the mental-health problems of Alaska, spending 3 weeks there and holding public hearings in Juneau, Sitka, Palmer, Anchorage, Nome, and Fairbanks. The committee report, submitted February 10, 1950, recommended:

1. Development of a comprehensive mental-health program under the Territorial Department of Health;

2. Emergency treatment and observation centers in most of the general hospitals to be operated by the Territorial Department of Health;

3. Drafting of model legislation for Alaska; and

4. Amalgamation and unified direction of all public mental-health services under the Territorial Department of Health.

ALASKAN MENTAL CASES UNDER PRESENT LAW ARE RAILROADED 2,000 MILES TO HOSPITAL IN PORTLAND

In addition to the foregoing recommendations, the Overholser Committee also proposed that: (1) a modern mental hospital be built in Alaska; (2) a 50-bed treatment center be established at Sitka, Alaska; and (3) arrangements be made whereby the Territorial government would take over and operate the completed facilities.

It must be realized that commitment, care, and treatment of the mentally ill of the Territories are generally regarded as inherent responsibilties of the respective Territorial governments. Hawaii, for instance, is responsible for its own mental cases, but such has not been true with Alaska because, in the beginning, Alaska did not have a local government. The Federal Government assumed the responsibility and passed laws prescribing the manner in which commitment and care should be carried out.

"Congress specifically denied the Territorial legislature authority to amend or repeal the existing Federal law pertaining to commitment of the mentally ill (48 U. S. C., sec. 24). * * *

"The commitment methods are archaic and inhumane and the care and treatment methods leave much to be desired." (House Rept. No. 1399, p. 4.)

H. R. 6376 has been drafted for the purpose of carrying out the recommendations of the Overholser Committee made in 1950.

Now for a brief review of the provisions of the bill. Section 1 serves as a table of contents, dividing the bill into 3 parts: Title I, hospitalization procedures; title II, financial and land grants; and title III, miscellaneous provisions.

Section 2 states the general purpose of the bill to be to transfer from the Federal to the Territorial government responsibility for the hospitalization, care, and treatment of the mentally ill of Alaska. To accomplish this purpose provision is made for assistance in the construction of needed facilities (1 or 2 hospitals as well as diagnostic and treatment centers). A land grant is authorized to provide funds for the long-range administrative program by the Territorial government, and a 10-year grant-in-aid program is provided to help Alaska get started.

Section 3 authorizes Alaska to appropriate the necessary funds to assume administrative responsibility for carrying out the provisions of the bill and to enact laws relating to commitment and hospitalization as experience is gained.

ONE MILLION ACRES LAND GRANT TO ALASKA BY UNITED STATES IS SMALL COMPARED TO GRANTS TO ARIZONA AND OREGON

H. R. 6376 is a bill dealing with the mentally ill in Alaska. The only way a person could be committed to a hospital in Alaska, after it is built, is to become mentally ill in that Territory. If such person were not a resident of Alaska, there would be reciprocal arrangements made with the governor of the State in which the patient normally resided. The State would either pay the costs of the hospitalization in Alaska or would accept responsibility for care on the return of the patient to his home. There is nothing in the bill that would authorize sending a mental patient from any of the States to Alaska.

The bill relates only to residents of Alaska and to persons domiciled there temporarily. Archaic laws which now bind Alaskans are repealed in H. R. 6376. Mowern, model commitment methods are proposed. There is no more reason to get excited about the bill than there would be if Nevada or Maryland were to pass bills to improve its commitment and other procedures.

With respect to grants, Alaska covers an area of 365 million square miles. Over 99 percent of the land is owned by the United States. There is no way for the Territory to raise taxes. Consequently, the United States, following a custom instituted after the Revolution when the Northwest Territory was opened to settlers, proposes to set aside part of the public domain to provide funds, either through sale or from mineral rights, to develop and operate a well-rounded mental-health program.

The land grant of 1 million acres is modest, representing three-tenths of 1 percent of the area of Alaska. We heard no hue and cry when the United States granted over 10 million acres of the public domain to Arizona, nearly 9 million acres to California, 24 million acres to Florida, 16 million acres to Minnesota, and 7 million to Oregon.

The bill proposes a direct appropriation of $6.5 million to build 1 or 2 hospitals for mental-disease patients and facilities for mentally retarded children, as well as needed clinics. Another $6 million is authorized to be paid over a 10-year period, at the rate of $1 million a year for 2 years, then $800,000 a year for 2 years, and so on for 5 bienniums, the money to be used for developing an integrated mental-health program in Alaska.

One important provision omitted by the House should, we think, be restored. It is the section providing penalties for maliciously contriving to commit a person who is not mentally ill.

H. R. 6376, ALASKA MENTAL HEALTH BILL, WOULD END BARBARIC LAWS IN TERRITORY

Unquestionably the least understood part of H. R. 6376 is title I which spells out the provisions for commitment of mental patients in Alaska. Section 103 states that the head of any hospital designated by the Governor of Alaska "may receive for observation, diagnosis, care, and treatment any mentally ill individual on application by the parent or his guardian or the written application of an interested party [i. e., legal guardian, spouse, parent or parents, adult children, other close relatives, or an interested, responsible adult friend], health or welfare officer, the Governor, or the head of any institution in which the individual may be, provided the application is accompanied by a certificate of a licensed physician stating that the individual is mentally ill and is (1) likely to injure himself or others if allowed to remain at liberty, or (2) in need of care or treatment in a hospital and is incapable of making application for admission in his own behalf."

If a person is violent and deemed likely to injure himself or others, he may be temporarily placed in a mental hospital in Alaska for observation and medical certification. He must, in that event, be examined within 5 days. If he is not examined he is to be released forthwith without need of application. He is also to be released if the examiner fails to certify to the head of the hospital that in his opinion the patient is mentally ill and either is likely to injure himself or others if allowed at liberty, or is in need of care or treatment in a hospital and because of his illness is incapable of making application for admission.

If commitment proceedings are started, the patient, his counsel, or any member of his immediate family may request a jury of six adults residents to hear and consider the evidence concerning the mental condition of the proposed patient. Writ of habeas corpus is guaranteed to any individual detained under the provisions of the bill.

The procedures seem reasonable and appear to provide adequate safeguards for all individuals who may become mentally ill in Alaska. There might well be some rechecking of these provisions of the bill to see if they conform with standard practice in the States. In any event, they surpass the provisions of the present law and are acceptable to the only people concerned—the Alaskans.

FEDERAL LEGISLATIVE PROCEDURES ON ALASKAN BILLS HAVE BEEN IN THE PUBLIC INTEREST

Responsible and competent witnesses have testified in favor of H. R. 6376. The Delegate from Alaska strongly urged enactment of the bill. Representative GREEN, in testifying, said that witnesses from Alaska had all approved the bill and pleaded for its adoption and that every psychiatrist who appeared was in favor. She reiterated that the bill is only for the care of patients in Alaska. "We have no intention," she said, "of shipping up any of the people from any of the States to Alaska." Representative GREEN said that at the House hearings not a single witness appeared against the bill except the owner of the Morningside Hospital in Portland, Oreg.

Protesting over the inference that people could and would be railroaded to Alaska, Representative GREEN stated: "I can find nothing in the bill, I can find no reference, no statement, that would imply in any way that any citizen of any State would ever be sent up to Alaska for the care."

Delegate BARTLETT said: "To my knowledge there is not one Alaskan who is opposed to this bill." Later, after a witness had called the bill part of a world Communist plot, Mr. BARTLETT said: "I submit in the very strongest language that this is no Marxist plot, this is no treasonable effort, this is no communistic endeavor to undermine the safety of the United States of America."

Mrs. Paul A. Hartz, representing the 50 federations of the General Federation of Women's Clubs, stated all 50 had voted unanimously for the bill.

Careful study of the bill itself, of the House Interior Report, and of the testimony of competent witnesses indicates that here is a bill which would right the wrongs of 50 years in Alaska. We see nothing sinister in it. Dr. Overholser, whom we have known and respected for many years, and who has a fine reputation as a psychiatrist and administrator, headed the committee which made the recommendations for the Alaska health program.

Mental disease is conceded to be a problem which must be met with public funds. Instrumentalities of government must guide and control the program. H. R. 6376 may need some refinements, but we think it is a good bill, that it is not sinister, and that it should be enacted.

Has Anyone Bought a New Car?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. MULTER. Mr. Speaker, during the course of my testimony on March 7, 1956, before the Subcommittee on Automobile Practices of the Senate Committee on Interstate and Foreign Commerce—CONGRESSIONAL RECORD of March 13, 1956, at page 2280, et seq.—I called attention to the unfair practice on the part of some automobile dealers in selling as new automobiles which have been towed or driven from the factory or used as demonstrators. A clear illustration of this bad practice appears from the following letter which a purchaser forwarded to the American Motors Corp., of Detroit, Mich., on March 6, 1956. In setting forth the letter, which follows, I have deliberately deleted the names of the dealer and the purchaser:

MARCH 6, 1956.

AMERICAN MOTORS CORP.,
Detroit, Mich.

GENTLEMEN: This is to lodge a formal protest and complaint of unethical practices against your dealer, ———. There are ample grounds for my belief that said dealer will not make any adjustment unless you, as the manufacturer, think more of your reputation than he does of his.

On December 3, 1955, I negotiated the purchase of a Nash station wagon; the Cross Country, model 5518–2–55 (a6), with serial No. D–219443. The sale was made with a definite understanding that this was a new vehicle. A reduction of $800 from the purchase price was offered me because it was then the close of the year and they wished to clear the floor. Another $800 was paid as downpayment on that date, leaving a balance of $1,881.36 on the transaction.

The vehicle was in fact not new; it had been registered at the bureau as being in use since the previous March. The dealer eventually admitted this with a shrug and comment to the effect "So what?" The

speedometer was broken, for one instance; the upholstered portions were worn in spots; the tires checked at five-thirty-seconds worn.

This is but a sampling or indication of the complete misrepresentation involved. Repeated requests of the dealer to give me satisfaction have met with insulting disregard of my complaints or wishes. The time has come for more specific action on someone's part. You, as the manufacturer, who keep such a dealer under franchise, certainly must be conscious of this inexcusably shabby treatment of a customer. Will you be good enough, please, to advise me of what course of action you suggest at this point? The only thing I can think of at the moment is to turn this over to an attorney with the proofs I have secured from the bureau of motor vehicles and other most reliable sources. However, being a reputable businessman myself I still believe a manufacturer will stand back of his own good name regardless of the faults of his dealers.

Very truly yours.

On the Threshold of Space—A Great Achievement of Spyros P. Skouras

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. SHORT. Mr. Speaker, I was one of many Members of Congress who accepted the invitation of the Air Force Association and Twentieth Century-Fox to attend the preview of a great new motion picture in Washington on Monday night, March 19. This picture, On the Threshold of Space, was made by Twentieth Century-Fox to tell the real life story of the flying scientists of the United States Air Force. It tells in part a story told by Time magazine in its issue of September 12, 1955, which emphasized the great achievements of an Air Force medical doctor, Lt. Col. Paul Stapp, who is the first man to ride the rocket sled at a rate faster than the speed of sound. The picture, in fact, reenacts Colonel Stapp's experiments with the transonic sled with amazing accuracy, thanks to the cooperation of the United States Air Force.

The picture also reproduces other Air Force tests with the downward ejection seat, which permits pilots to escape from aircraft going at transonic speed, and with the specially equipped balloon the Air Force is using to probe the secrets of outer space.

Coming out of the theater, I heard a young lady ask, "But why is the Air Force doing this? Why does anyone need to go so high?" The answer to her question, of course, is one that is not stated in the picture. The Russians are probing outer space even as we are; and the nation that is most successful in its research is the nation that may determine the future of life on this earth.

This thrilling and beautiful picture was created under the inspiration of Mr. Spyros P. Skouras, as a tribute to the Nation that gave him the opportunity to rise to the top of a great industry and as a vehicle to express his conviction that a free America is the greatest country in the world.

Maj. Gen. Joe W. Kelly, United States Air Force, who served as master of ceremonies at the preview, stated the purpose of Air Force experimentation effectively when he said that On the Threshold of Space is not an adventure story of space cadets and of men from Mars:

It is a serious but dramatic portrayal of the research necessary if men are to fly the high-performance aircraft this Nation's security requires.

On the Threshold of Space is a story of a very special kind of courage. It is a kind of courage which research airmen, going out into the unknown, demonstrate repeatedly. It is the kind of courage of which Mr. Skouras, a native of Greece and now a prominent and distinguished American citizen, is an outstanding example. America rewards courage, initiative and vision. With such courage, the United States Air Force and its scientists and men in American industry are working to guarantee the freedom and the security of the United States.

Mr. Speaker, I ask consent of my colleagues to insert in the RECORD a copy of the remarks made by General Kelly in introducing three Air Force research scientists whose own courageous activity has contributed so much to our security and which indeed made possible the picture that followed General Kelly's introduction. General Kelly's remarks also include a well deserved tribute to Mr. Skouras, who has given the Nation this stirring picture and who was our host at the invitational preview. General Kelly's remarks were as follows:

REMARKS BY MAJ. GEN. JOE W. KELLY, UNITED STATES AIR FORCE, AT INVITATIONAL PREVIEW OF ON THE THRESHOLD OF SPACE

Members of Congress, distinguished guests, ladies and gentlemen, the moving picture we have come to preview through the courtesy of 20th Century-Fox and the Air Force Association dramatically portrays one small phase of Air Force activity today. That is the effort to acquire necessary scientific knowledge and operating know-how as we shake off the limitations of the past and step into the world of space.

This picture, On the Threshold of Space, is not, however, a story of space cadets and of men from Mars. It is a serious but dramatic portrayal of the research necessary if men are to fly the high-performance aircraft this Nation's security requires. Before we see this realistic and beautiful picture, I want to introduce to you some of the Air Force officers whose devotion to duty and disregard for personal safety have made this research possible.

First, I want to express the regret of the Air Force that Lt. Col. Paul Stapp was unable to be present this evening, Colonel Stapp was the first man ever to ride the transsonic sled and is the original of the character so ably portrayed in this picture by the late John Hodiak. Colonel Stapp, winner of the 1954 Cheney award for his achievements, is busy carrying on other tests today. I am sure he regrets as much as we do that he is not with us tonight.

Next, 1st Lt. Henry P. Neilson. Lieutenant Neilson is doing excellent work in connection with both the downward ejection seat and the balloon ascension tests.

Next, Capt. Edward G. Sperry. Captain Sperry was winner of the Cheney award in 1953 for his test of the downward ejection seat from a B–47 aircraft flying at the speed of 390 knots. Captain Sperry is currently involved in balloon ascension tests. Any resemblance of Captain Sperry to Guy Madison is purely coincidental.

Finally, Col. Arthur M. Henderson. Colonel Henderson performed the first downward ejection in the test series and has since directed the test program. He and Captain Sperry have both served as technical advisers for Threshold of Space.

These three officers and others like them have many times performed the thrilling feats you are about see depicted. The Air Force is proud of them.

It took a particular kind of courage for these men to go out into the unchartered areas of space. When you can tell a soldier or an airman that somebody has done such and such a hazardous thing before him, has gone through it and survived, you appeal to one kind of courage. When you ask a man to do something particularly hazardous that has never been done before by any man known to history, you appeal to another kind of courage. That kind of courage is the theme of this picture.

The airmen whose roles are depicted in Threshold of Space are not daredevils—they are research scientists, skillfully trying to probe an area about which there is only the most limited knowledge. The Air Force goes as far as it can in equipping them as well as possible for all foreseeable contingencies. When the Air Force has done that, the men are strictly on their own. But because of their courage, the Air Force is able to provide you with the air defense needed to guarantee our national security.

This evening would not be complete, however, unless I acknowledged that throughout America, and especially in industry, the same kind of courage is being demonstrated in day-to-day actions. There is in this audience tonight a man who demonstrates that same kind of courage in high degree. He is our host, Mr. Spyros P. Skouras. Mr. Skouras is an outstanding example of the success with which America rewards courage, initiative, and vision. He has risen to the top of one of the greatest American industries. And with the ability and courage that carried him to the top, he has created a motion picture of a sort rarely seen on any screen. It is a picture of the special kind of courage the Air Force and America will always require if America is to remain free.

We are very grateful to Mr. Skouras and thank him for making this picture and this preview possible.

Mr. Speaker, I wish every American could see this powerful picture, On the Threshold of Space. It would give him new courage, increased knowledge, deeper appreciation of America and the fine, brave men who unselfishly risk their lives to defend it.

Petition for Separate Pension Program for World War I Veterans

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include a petition which I have received urging the enactment of a special-pension program for World War I veterans. This petition has been signed by 43 of my constituents, and I am pleased to present it for the attention of the Congress.

The petition follows:

This petition is addressed by the undersigned to the President and Congress of the United States, urging immediate enactment of a separate and liberal pension program for veterans of World War I and their widows and orphans. We submit that aging World War I veterans are deserving of consideration and treatment on an equal basis with the aging veterans of previous wars in our Nation's history, and in line with established American traditions.

Willis Simms, Cabin Creek, W. Va.; Stanley Pascavis, Reed, W. Va.; Norman Proctor, Blount, W. Va.; C. S. Patchell, Howard Robinson, Tad, W. Va.; S. S. Patchell, Cabin Creek, W. Va.; Mose Layton, Reed, W. Va.; Morris Burk, Coal Fork, W. Va.; R. C. Cox, Tad, W. Va.; Dan Burk, Coal Fork, W. Va.; H. Johnson, P. T. Flesherman, Sammie O. Brown, Tad, W. Va.; Walter Bulmer, Coalburg, W. Va.; Phil Massey, Dry Branch, W. Va.; Ned Bowles, Coal Fork, W. Va.; H. Thomas, Orvil Bowles, Tad, W. Va.; Chester Norman, Cinco, W. Va.; Emery Gunner, Rensford, W. Va.; E. Watson, Tad, W. Va.; E. Bowles, Coal Fork, W. Va.; Noah Wentz, Ronald Wentz, Cline Wentz, E. Robinson, Arnold Robinson, J. Stone, Tad, W. Va.; E. V. Stone, R. Stewart, B. Kirby, E. Hackney, R. Garten, Cinco, W. Va.; John Kelley, Earl Layton, Tad, W. Va.; Robert Layton, Reed, W. Va.; Tod Dunlapp, Will Pierson, Don Perry, Van Raylor, James Stone, H. C. Patchell, Tad, W. Va.; P. Croft, Coal Fork, W. Va.

Interest Conflict Case Is Reported

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to Mr. Drew Pearson's column in the Washington Post for March 21, 1956:

INTEREST CONFLICT CASE IS REPORTED

(By Drew Pearson)

Ezra Taft Benson may not know of it, but a conflict-of-interest political blowup is simmering right under his nose. It involves Carl O. Hanson, State director of the Farmers' Home Administration in Montana.

The Farmers' Home Administration is supposed to spend its entire time on the difficult problem of helping the small farmer. It is supposed to go right into the farmers' homes and aid with their economic problems. Especially, it is supposed to help the small farmer in time of drought. However, there is conclusive evidence that instead of helping small farmers, FHA State Director Hanson has been asting as a wool-buyer for the Draper Co., of Boston, also helping direct the affairs of radio-TV station KOOK in Billings, and charging up political long-distance calls to the Government.

He was also spending part of his time and some Government money in an abortive effort to elect Wesley D'Ewart to the Senate in violation of the Hatch Act. Government officials are banned by the Hatch Act from engaging in politics unless they are of Cabinet or "little cabinet" rank.

WHY FARMERS GRIPE

The activities of Carl O. Hanson are highly important not merely because of irregularity in Benson's Agriculture Department but because they throw light on one reason why farmers are so sore at the Secretary of Agriculture. They recognize that he has very difficult crop-surplus problems, and they would be more sympathetic with crop surpluses if it were not for the manner in which Benson's officials have spent their time politicking and helping big companies rather than small farmers.

For instance, Secretary Benson himself, on October 9, 1954, personally and publicly demanded the defeat of Senator JAMES MURRAY, of Montana, and the election of GOP Congressman Wesley D'Ewart. Immediately Benson's boys in the Agriculture Department took the cue and went into high gear—not for the farmer and his difficult problems, but for candidate D'Ewart.

This was during the tragic drought of 1954. Despite that, Farmers Home Director Hanson made more than 100 long-distance calls for private or political purposes and allowed them to be charged up to the taxpayer. This column has obtained a record of Hanson's supposedly official phone calls at that time, and they show that he even phoned D'Ewart at the Royal Hawaiian Hotel in Honolulu, December 16, 1954. Cost to the taxpayers: $15. This, incidentally, was after D'Ewart was defeated.

It was also at a time when Hanson should have been working his head off to help farmers borrow money to meet the drought disaster.

WOOL BUYING

Instead, he was employing persons whose services he used for unofficial and political purposes, including his personal and private business. John Costello, appointed by Hanson, acted as chauffeur and errand boy, including wool-purchase duties for Hanson. Darrell Coover, appointed by Hanson, served for 1 month, not on FHA business, but purely as a political organizer.

Mrs. Katherine Carter, Hanson's private secretary, reported that on some days she "wrote as many as 14 letters not pertaining to FHA official business."

The personal letters she wrote for him on office time included letters "to Mr. Malcolm Green, president, Draper Co., Boston, as well as letters to Charles Crist, his radio business partner; and typing wool contracts on FHA time."

Mrs. Carter had quite a difficult time trying to divide her boss' Government business calls from the personal and political calls and naturally took the commonsense step of asking her boss which was which.

This made Hanson sore and he told her, in effect, to mind her own business.

Miss Kathleen Roche, the secretary who succeeded Mrs. Carter, also had a tough time sorting out Hanson's phone calls. Sometimes calls came in collect from such people as A. P. Davies, lobbyist for the American Meat Institute, and wool producer Ed McReynolds.

CAREER DIRECTORS FIRED

On one occasion after Hanson had placed about 15 long-distance calls to various persons with whom he discussed his wool-buying business, Mrs. Carter asked him how he could get away with private business while in Government service.

Hanson replied that his superiors in Washington knew about his private business and condoned it, and that his wool-buying netted him three time as much as his Government salary.

The Farm Problem

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following two editorials, one from the Los Angeles Times of March 1, 1956, and the other from the Washington (D. C.) Daily News of March 13, 1956. Both of these editorials, I think, will make sense to open and fair-minded people and especially to the real friends of the American farmer instead of the cheap political demagogue who appeals to prejudice and ignorance:

[From the Los Angeles Times of March 1, 1956]

ILLINOIS FARMERS STICK WITH BENSON PLAN

The speakers in Congress who have represented the farmers of the Middle West as unanimously in revolt against the administration farm policies are apparently not telling the whole truth, if the recent meeting of the Illinois Agricultural Association, largest single unit of the Farm Bureau Federation, is an indication. For at this meeting, at Peoria, the embattled farmers were almost unanimous against high, fixed price supports and for the Benson plan of a soil-bank coupled with flexible supports.

Speakers declared the two parts of the farm bill as reported by the Senate Agriculture Committee were mutually contradictory; that the soil bank would work against the high rigid supports and vice versa and that their action would result in the further liquidation of farmers.

The meeting was expected to attract at most 2,000 to 3,000; the attendance was 11,000 and while no vote was taken various polls indicated about 90 percent agreement with the flexible price support point of view.

As explained by the Chicago Tribune, this attitude represents the corn farmer, as opposed to the wheat farmer and the cotton farmer. Acreage limitations do not apply to the corn crop because the bulk of it never leaves the farm as grain, but is fed to stock, and policing the limitation would be almost impossible. The corn belt does not regard the allotment plan favorably because when land is taken out of wheat or cotton, it is likely to be planted to corn and thus the price of corn is driven down by competition.

The Farm Bureau Federation, generally, has been a strong supporter of Secretary Benson's program and the attitude of the Illinois group will tend to strengthen this position.

[From the Washington Daily News of March 13, 1956]

CROPS AND VOTES

It is anybody's guess how the fight over the farm bill in Congress will come out.

But the long and bitter Senate debate has made one thing fairly plain—that getting a constructive bill through Congress in an election year is tougher than disposing of the farm surplus.

Considering that so many Congressmen have tied their hopes at the polls to what they think will most please farmer voters, it is striking that the Eisenhower administration has managed to win as many points as it has. If Ike hadn't already said he would run again, there is good reason to suspect his farm policies would have lost much more ground in the Senate.

Even some of the loudest champions of high rigid crop supports, we suspect, are fully aware of the foolishness in perpetuating that system. They are quite aware that it is the huge surpluses, built up by high rigid supports, which brought on the price weakness in farm products.

But this is an election year, and they figure quick remedies—or legislation which appears to offer quick remedies—are better vote-getters than a long-range program which might get the farmer out of his plight in due time.

Secretary Benson's program is long range. In the end, it would help both farmers and taxpayers. But it is ultimate, not immediate. The politicians in Congress want magic—even if it isn't magic, but only looks like magic.

This, mainly, is the basis on which the farm bill is being debated.

Address of Msgr. Bela Varga Before the Meeting of the Christian Democratic Union at West Berlin on March 22, 1956

EXTENSION OF REMARKS
OF
HON. JAMES G. DONOVAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. DONOVAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

Let me begin by saying what a privilege it is to be in Berlin, the city whose spirit has twice in the past few years electrified the whole free world. First, the courage of you in West Berlin during the airlift days when you steadfastly refused to be engulfed by the Red sea around you; then, in East Berlin, the uprising, against insuperable odds, of the workers who thus exposed the myth of a workers' paradise and plainly showed the world that East Berlin lies heart and soul in the camp of the West. These sacrifices and sufferings have not been in vain for they have had the greatest moral effect on the uncommitted world, which might be tempted to give credence to the unremitting stream of propaganda glorifying the Communist way of life.

It is also a privilege and an inspiring task for me to make a public address in West Berlin, this fearless outpost of western civilization and Christianity. I wish to express my warm thanks to the Nouvelles Equipes for giving me this opportunity to speak to such an interested audience assembled in this beleaguered island in the East-West conflict. I am certain that your experience will form the proper background for my recounting of events which have led to the downfall of my country and its eventual absorption in the Communist world empire. You will clearly discern the dark forces which are eagerly at work to prepare a similar fate for you.

For only a week ago, ladies and gentlemen, Party Boss Khrushchev threw down an open challenge to the free world. In one breath he warned that Soviet Russia has the atomic power to destroy that world; in the next, as a proponent of peace, he blandly stated that "war is not fatalistically inevitable" to bring about the "world-transforming * * * complete triumph of communism." This, he confidently proclaimed, could be achieved by parliamentary methods; by working through what he called "the mighty camp of socialism with its 900 million members," the working class could rally round itself the peasants, the intelligentsia, and all the patriotic forces to capture a majority in Parliament and—and again I quote—"transform the latter from an organ of bourgeois democracy into a genuine instrument of the people's will."

Thus Khrushchev has openly declared the tactics that have been used covertly for many years in many parts of the world. These are the tactics of collaboration with popular fronts with nationalistic movements; of the temporary espousal of liberal causes and reforms. This is "the Yenan way" used in China under the guise of a movement for "agrarian reform" and for abolition of feudalism, which in its early stages won sufficient support from the peasants, liberals, and intellectuals to facilitate the ultimate Communist takeover. The same strategy is being tried out in Latin America where the Reds are building up "national liberation fronts" as vehicles to alienate the countries of South and Central America from the free world and later to seize control as they did in Guatemala. In Asia and the Middle East the forces of legitimate nationalism are being inflamed to hasty action, and hatred and suspicion of the West is being carefully nurtured to foster the neutralism which leads to the Communist camp.

But today I am here to tell you how these tactics were used in my country, Hungary, as in the other countries of central and eastern Europe, under the threat of Red guns, even as today they are openly announced as a program for the entire world under the threat of atomic war.

Hungary has belonged spiritually to the community of western Christain nations for a thousand years and has maintained throughout these centuries very close cultural and political relations with the German Christian community. In fact, it was an army sent by western Christianity, but consisting mostly of central European troops, that more than 250 years ago liberated Hungary from the Turkish yoke. This was a mighty crusade which tied us even closer to the West in the defense of which my nation had shed so much blood and is still shedding it, at the present moment left to its own limited resources. I feel that in speaking in Hungary's behalf I can relate to you how my nation in her stand against another eastern invasion succumbed to a clever combination of force and guile and how these same tactics, which brought down not only Hungary but a number of other nations behind the Iron Curtain, now endangers the entire world.

My task as I see it consists of expounding four points. First, what methods did the Soviets use in subjugating these countries. Second, what is the situation at the present moment in these countries. Third, what should be done in order to keep the faith in the future alive behind the Iron Curtain and fourth, what should be done by way of helping the West in its struggle against communism and in its effort to liberate our countries.

These four points, ladies and gentlemen, constitute a vest program and all I can do is to relate partly my personal experiences as an eyewitness, and partly to give a brief account of my impressions which I have gained recently here in Europe and in the United States.

When the Russian troops arrived in Hungary the political, economic, and cultural measures they caused to be introduced by the provisional government setup under the shadow of their bayonets were, comparatively speaking, mild. Of course, I am not referring to the barbarous conduct of their troops. That is best passed over as unspeakable. I refer rather to the insidious measures used in the political takeover of my country, which were initially not very radical. In the first Hungarian Government set up behind the Russian troops, there were 3 generals and 1 count and the rest consisted of middle-class elements with only 2 Communists and 1 fellow traveler. It might seem strange to you that the Communists in the hour of their triumph would tolerate a government composed of the representatives of the old order. But the Communists always wore a mask and it is one of the basic rules of their tactics that the mask might change but the force behind it is eternally the same: Anti-Western, antireligious, and anti-individualistic. The mask hides a cruel determination to conquer, subjugate, and rule with a merciless despotism. In this unrelenting drive for conquest, the Communist world force, whether it operates on the banks of the Danube, the Nile, or the Mississippi, will first infiltrate, then stabilize, and finally, it will liquidate all opposition. The Romans called this process divide et impera, but the Romans were naive beginners in comparison to this huge scientific apparatus which is reaching out at the present moment, wearing a mask of misleading smiles to encompass in its deadly embrace the entire world. But how did they do it in Hungary? Comrade Rakosi, the satrap of the Kremlin whose task was to carry out this policy of gradual absorption, has cynically referred to the process as salami tactics. He meant thereby that as you reduce a piece of salami by cutting off thin slices at a time, so the Communists eventually reduce the resistance of the old order by such slicing tactics.

Announcing a large-scale land reform they temporarily appeared to be the friends of the land-hungry peasantry. Of course, years later they forced the same peasantry to join the kolkhozes and give up their individual holdings. Of course, the peasantry never gave them credit for the land reform.

Another of their initial steps was the infiltration and gradual seizure of the police and of the army. By 1949, that is within 5 years, the legislative power of the country ceased to function or rather it was reduced to a mere arm of the dictatorship. Similarly, they seized the administration, the judicial system, and public education. The fact that they still allow a few religious schools is merely the proverbial exception that proves the rule. For propaganda purposes it is of extreme importance to them that they may point to such showpieces of their liberality. It should not mislead us though. The faculty of these religious institutions are prisoners of the Communist system. Cardinal Mindszenty's trial also proves the Communists' relentless drive to reduce religious resistance. The church is helpless in the face of this pressure, the more so, as she is not allowed to defend her position or to refute the charges leveled against her.

The question might arise: Is there any resistance left at all? The answer is "Yes," but what kind of resistance? It could certainly not be visible or organized because it would immediately be liquidated by the enormous police state. Nor could resistance be individual because, as you know, human life is very cheap under communism. The resistance which still exists and is very powerful—and I am not speaking only of Hungary—must necessarily be nameless and collective. Its spirit resides in society itself, its sources are the deep traditions going back to centurie and centuries of all the cultural heritage of Europe. It may be characterized briefly in this way: Communism came wearing a mask to hide its bestiality and brutality. Its victims quickly put on a mask themselves showing conformity, the only way to survive, but this mask hides behind its facade the western Christian European who still deeply and eternally hopes for eventual liberation. This European behind the mask of conformity still considers the Communist system as a temporary imposition and takes it accordingly. He refuses to take it as a final verdict of history.

These observations, I might say, practically answered not only the first but also the second question, that is, How did Communist absorption take place and what is the present situation in the subjugated countries. One more word in regard to the second question. Aside from spiritual resistance put forth by the churches, the greatest single social layer resisting most effectively is the peasantry. This is a general phenomenon throughout communism from China to Germany. The Hungarian peasant is especially able in passive resistance due to his strong individualistic bent

of mind and ability to adopt himself to changing conditions. The Hungarian peasant is most adept in conforming outwardly to the dictates of an alien ruler, but inwardly preserving his mores and traditions. The peasants' passive resistance is the greatest roadblock in the way of collectivization. In Russia Comrade Krushchev had to admit recently that in agriculture Russia has not proceeded very far from conditions prevailing at the beginning of the 5-year plans. And as far as the number of livestock are concerned, the country is today where it was in 1928. If the Russian peasant could accomplish such a feat of passive resistance I do not doubt that my countrymen will not stay behind too far. If the Russian peasant after almost 40 years of violence and oppression can still hold his own, I have every reason to look hopefully in the future. I base this optimistic outlook to the magnificent political demonstration of anti-Communist sentiment of my country during two national elections. In 1945, 83 percent, in 1947, because of increased terror and intimidation, 77 percent voted for non-Communist if not for anti-Communist parties. Only in 1949 could the Communist puppets of the Kremlin force a unified voting list upon the electorate.

But one might ask what is the attitude of the industrial proletariat, who so to speak, has always been considered to be the vanguard of the Marxist revolution and the elite corps in the transformation of society from private enterprise to collectivism. This may have been true in a theoretical sense. But when the Hungarian industrial proletariat experienced the transformation at first hand in the early days of the Communist takeover, its disappointment was deep and bitter. It found out that no matter how hard the workers toil, no matter how obedient they were in fulfilling the stakhanovite norms, their standards of living failed to rise. The enormous new industrial plants built by the merciless Communist rulers were not going to make the Marxist Communist paradise they had heard so much about, a reality. Instead they found out that all these efforts were new proofs of the sad fact that Hungary and all the other satellite nations were gradually being reduced to the status of colonies whose lifeblood was being sucked out by the Communist octopus eastward in the direction of Russia in order to serve the Kremlin's fantastic world-conquering plans. To give you only one example, the famous shipyards of the company whose original founder was a Hungarian citizen of German extraction, the famous Ganz-Danubius shipyard, has so far launched 69 large oceangoing vessels of which only 2 are flying the Hungarian flag, the rest have been taken over by the Soviets. And this, ladies and gentlemen, goes for everything else. East Germany is importing food from Hungary and as you well know is forced to produce the most complicated machine tools and scientific instruments for supplying the Red army with the very last word by way of engines of destruction.

All the satellite countries thus have been reduced to a colonial status and subordinated to a vast scheme which aims at world conquest. The Hungarian industrial proletariat knows that and deep in their hearts they are nursing a bitter resentment at being reduced to such slavery. Their resistance manifested itself in a strike at the munitions plant of Csepel as early as 1945 as a protest against Communist practices. The strikers were immediately rounded up and with the help of the Russian Army deported to Siberia. The June 17 resistance of the East German industrial workers in 1953 found great sympathy among Hungarian workers, leading to waves of sabotage and slowdowns, and if there had been hope of help from the West, the East German uprising would have spread, I am sure, like prairie fire all over the Iron Curtain.

Confident of their system of slave labor, the Communists now throw down the challenge of competitive coexistence. That is a challenge the West can and will accept without qualms. For slave labor can never compete successfully with the labor of the free world where a man can choose his job and take pride in his work. Nor can the system of agricultural collectivization win out over the production yielded by soil tilled by its owner who loves his land whether it be a little plot in eastern Europe or the vast acres such as a man may amass in the Western Hemisphere through his own initiative and toil under the free-enterprise system. I come from a small Hungarian village in a farming district and I well know the loving care the farmer lavishes on his own livestock and his own vine and fig tree.

So let us maintain hope in the inherent strength of our civilization which for the first time has confronted bolshevism in all its soul-destroying totalitarian aspects in all the different fields of human endeavor. However, I would not say that we have any reason to rejoice. I just refuse to admit that communism is an invincible force and that Western civilization is doomed. It will be doomed only if it abandons its ancient spiritual basis and will search for countermeasures in a purely materialistic and mechanistic orientation.

And that leads me to the third question: What should the world do in order to keep alive the faith and hope of the subjugated nations? First of all I should say, by an example of unity. This I can easily explain on German soil. As long as the German empire was divided in its Kleinstaaterei into innumerable small units, it was unable to resist foreign influences. As long as the free world will indulge in a similar Kleinstaaterei and in local squabbles, the infiltration and stabilization by the forces of communism will proceed rapidly. Signs of it are visible all over. The same means we have witnessed behind the Iron Curtain are spreading chaos throughout the world. Promises and intimidation and emphasis on the weaknesses of our free world and a playing down of its strength and of its moral values. A new drive to introduce popular-front governments. A new drive of peaceful cooperation with non-Communist left-wing parties. A loud protestation that coexistence is possible with the West, a hypocritical drive to abolish the vanishing colonialism of the past century which cannot compare to the colonialism practiced by the Soviet Union in the captive countries, and an undue encouragement of local nationalism.

Coexistence? Have not we been forced to coexist with them in Hungary, in Poland, in Czechoslovakia, who were, unlike Hungary, on the side of the victorious allies. And see what the end of this coexistence has become today. And of colonialism? Why don't the Communists end their own vast colonial empire? Why, they are treating their own Russian population worse than the most rapacious colonial system has ever dared to treat its subjects. The emphasis on local nationalism and self-government. Just look how cleverly they suppress local cultures in Russia, how they russianize the non-Russian population, how they extinguish whole ethnic groups by the dastardly methods of genocide. Peace and coexistence are the most insidious, most dangerous means of infiltrating and neutralizing the West, unless the West realizes that it is the mask worn by the rulers of the Kremlin to mislead the West about its true intentions of tryranny and slavery.

In its struggle against world communism, the West must realize that propaganda is the greatest single product of that vast area which now contains one-third of the human race. In prison, behind watch towers and barbed wire thousands of special schools are maintained from which are sent graduates speaking every tongue under the sun and trained with meticulous care in spreading the new gospel of false promises of material advancement toward the Communist paradise.

How should we combat this attempt which is more dangerous than all the armies of Russia and China and of all their satellites? It is more dangerous than all that because it is the most ambitious and so daring that the West can hardly comprehend it. First of all, it aims at fashioning the very thinking of its own subjects so that they will identify their individual aims and their personal ambitions with the purposes of Soviet society so that the total culture of it will turn into a gigantic propaganda apparatus. It is a worldwide struggle waged with new weapons. We in the West are little prepared for it. In its essence, it is a race between two vast groups of societies to win the faith and confidence of the world's peoples. Russia realizes that she cannot beat us in the production of automobiles, machinery, food, clothing, and all that goes into the raising of material standards. So she proposes to win with her uniformly trained manpower and with her false monolithic ideology. Never has the Western World faced such a challenge.

However, the West can accept this challenge. Even as a unified West need have no real fear of competitive coexistence in the fields of industry and agriculture, neither need it fear the propaganda of communism for we possess the one weapon to vanquish it—truth. Our task then is to harness truth, to spread truth on both sides of the Iron Curtain and throughout the world, for truth alone can vanquish lies. We must reveal to the uncommitted world the falsity of Communist claims of utopia and tell them of the honest efforts being made in the free world to overcome the age-old evils of poverty, diseases, and inequality.

Fully appreciating this great challenge, I wish to assure you that the Hungarian National Council representing the oppressed people of Hungary, is today moving forward with all its forces to express the aspirations and the will of our people who are today unable to raise their voices.

But to prove the material superiority of the free world system is not enough. In my search for an answer to this my fourth problem, I found a very inspiring document put out by the Bonn Government quite recently, entitled, "A Conflict of Ideologies." May I quote from its vigorous language as a fitting conclusion of my talk:

"Are we ready for this spiritual competition? Do we understand the system of thought, belief, and ideology of the East? Do we have any certitude about the basis of our lives and of our faith? Ideological faith in the collectivist idea makes the Soviet man capable of achievements and sacrifices that surpass human strength. Only a faith that is in no way dependent on material events, that does not live in expectation of future well-being, can resist this ideology. This faith, this conviction must inspire western man to risk his life for the ultimate values that cannot be abandoned: Freedom, personal dignity, the lives of other men, the truth of religion."

And I do not mean merely a defensive attitude which gives ample time to the aggressive propagandists of the Kremlin to find out the weaknesses in our armor. I believe that the West has enough spiritual values which are worth reexaming and retelling in a vigorous language to the whole world. But we cannot sit and exist from day to day in a fool's paradise which the Communists call coexistence. We have to take stock again and again and face the terrible alternative that unless we return to the ways of our Maker, communism as a terrible scourge of His wrath will be sent upon us.

Ever since the end of the First World War, the nations of Europe, great and small, have been living dangerously. Some of them survived; some were overwhelmed. But the danger has always persisted, until today it is once again at a point of historical climax.

Paradoxically and contrary to previous European history, it has suddenly reached this climax through soft words rather than harsh. That is the essence of the danger. That is the novelty of the danger. That is the danger of the danger.

Will we of the West be able to muster the combination of universally acceptable moral position, the diplomatic effectiveness, the economic coherence, the military deterrence, and the human communication, to present ourselves as the true citadel of right to those millions whose frontier begins just a few hundred yards from where I am speaking in such a way that they will derive hope in what could appear to be a hopeless situation, strength in what is daily an exhausting life, and faith when all around them the forces of godless evil appear smilingly triumphant?

These may be big words, but they are not rhetoric.

Furthermore, and most important, close to 100 percent, if not 100 percent, of the responsibility rests on us here in the free world. This is not one of those situations when we can or should look to the other fellow to meet us halfway. He is a slave—and we are free. Through the discharge of our responsibility, he will be free again—or we will join him as a slave.

Brotherhood by Air

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of an advertisement which appear in the Pittsburgh Courier in connection with Brotherhood Week which was observed from February 19 to 26. Sponsored by Pan American Airways, the advertisement points up the contributions of low-cost tourist air tarvel to promotion of brotherhood throughout the world:

An airline seeking larger markets through lowered costs and better services does its part, too, in furthering the objectives of Brotherhood Week—the Unity of Mankind. There are many implications behind the prosaic words, "Tourist rate." The cheaper fares mean that hundreds of thousands more Americans can afford to go overseas and of these how many—1 out of 50, 1 out of 10, 1 out of 5?—will make a friend abroad.

A firsthand look at the customs and problems of our fellowmen in foreign lands does more than anything to bring about that sympathetic understanding without which international amity cannot thrive. And so Pan American World Airways, which has done more than any other airline to make its far-flung routes available to the average man, helps to achieve the great ideal, to enliven the efforts to make all mankind brothers.

Out of one friend will grow many. In time, and with the opportunity to foster it, there will grow a solid bond of friendship across the seas. By winging swiftly overesas the thousands anxious to see and to understand, by giving more and more Americans the chance to make a friend abroad, Pan American brings people closer together, and nations closer together.

Special School Milk and Brucellosis Eradication

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. SHORT. Mr. Speaker, the complex and difficult farm problem that confronts our Nation will be solved not by emotional appeals or by hungry politicians eager to get votes by waving a magic wand, but by sticking close to the hard, stubborn facts of life.

All of us know that the value of dairying and dairy products is the biggest branch of agriculture and in fact, the greatest industry in our country. Dairying is bigger than United States Steel or Standard Oil or any other single industry.

We are now called upon to vote as to whether or not we shall extend for 2 years the program relating to the special school milk and brucellosis eradication, and for the use of dairy products—milk, butter, and cheese—in veterans hospitals and by the members of our Armed Forces.

I welcome the opportunity to vote for the 2-year extension of all these programs, not merely because I represent a great dairy district, but I think it is in the interest of all the farmers and citizens of our entire Nation.

While the vote may be close, I am confident that these worthy programs will be continued and with the help of Democrats who place the welfare of country above party, I believe we will win this fight. Under permission granted me, I include an important notice from Hon. LESLIE ARENDS, the Republican whip of the House of Representatives, and various telegrams and letters—only a few of the many that I have received—from my constituents whom I have the honor to represent.

Mr. Speaker, we should, by all means, pass this bill to give 33 million schoolchildren in the United States—in 62,000 schools, the nourishment they need and to eradicate the brucellosis disease, in order to bring production and consumption of dairy products into better balance, and to insure our dairy farmers a fair return for their hard and strenuous labors. It will also take care of the millions of our schoolchildren, veterans in our veterans hospitals, and the men and women serving in all branches of our armed services all over the world.

The material referred to follows:

IMPORTANT NOTICE

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 19, 1956.

DEAR COLLEAGUE: It is planned that the conference report on H. R. 8320, relating to the special school-milk and brucellosis-eradication programs be called up for consideration early in the session on Tuesday, March 20.

The conference report eliminates provisions for the extensions of these programs beyond June 30, 1956, when they will otherwise expire.

If we can defeat the conference report the House will then be in a position to accept the Senate amendments, which provide for a 2-year extension of these programs, and also the veterans' hospital and Armed Forces milk program.

A rollcall will be asked for on the conference report.

It is hoped that every Republican will vote against the conference report and then vote for the motion to concur in the Senate amendment. The bill will then be complete to go to the White House.

Sincerely yours,

LES ARENDS,
Republican Whip.

SPRINGFIELD, MO., *March 17, 1956.*
Congressman DEWEY SHORT,
Care House of Representatives:
Greene County, your largest milk producing county, asks your support of bill H. R. 8320 for the extension of milk for school lunch and brucellosis program for 2 years instead of 90 days.

GREENE COUNTY FARM BUREAU,
C. F. SWAN, *Legislative Chairman.*

OSCEOLA, MO., *March 21, 1956.*
DEWEY SHORT,
Congressman, Seventh District,
Washington, D. C.:
I urge support bill H. R. 8320 Senate version for 2 years in addition to the 90 days.

Mrs. ROBERT C. SMITH,
Legislative chairman, St. Clair County Farm Bureau.

SPRINGFIELD, MO., *March 18, 1956.*
Hon. DEWEY SHORT,
House of Representatives,
Washington, D. C.:
Request your support of bill H. R. 8320 extension for 2 years instead of 90 days.

Mr. and Mrs. R. J. UNDERWOOD,
Legislative committee, Greene County Farm Bureau.

CARTHAGE, MO., *March 19, 1956.*
Hon. DEWEY SHORT,
Member of Congress,
Seventh Missouri District,
House of Representatives,
Washington, D. C.:
Jasper County Farm Bureau urge you support Senate version for 2 years in addition to 90 days on brucellosis and milk for school lunch.

J. L. BENSCHOTER,
National Affairs Chairman,
Jasper County Farm Bureau.

JEFFERSON CITY, MO., *March 16, 1956.*
Hon. DEWEY SHORT,
House Office Building,
Washington, D. C.:
Earnestly urge you give support to Senate version of brucellosis and milk for school lunch program, providing for an extension of 90 days and an additional 2 years of both programs. This is highly important to Missouri farmers.

H. E. SLUSHER,
President, Missouri Farm Bureau Federation.

DADEVILLE, MO., *March 19, 1965.*
The Honorable DEWEY SHORT,
House of Representatives,
Washington, D. C.

DEAR SIR: The Dade County Farm Bureau hopes you will see fit to use your influence in getting the 2-year extension on the school milk program through this session of Congress.

Thank you in advance.

Very truly yours,

E. L. SHORT,
Chairman of Legislative Board,
Dade County Farm Bureau.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, ———, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, ———, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.

Appendix

Air University Institute of Technology

EXTENSION OF REMARKS
OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 22, 1956

Mr. IVES. Mr. President, on March 13, 1956, Dr. William S. Carlson, president of the State University of New York, delivered the commencement address at the Air University Institute of Technology. This is a most significant address, worthy of the consideration of every thoughtful American, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AIR UNIVERSITY INSTITUTE OF TECHNOLOGY

(Graduation address by William S. Carlson, president, State University of New York, March 13, 1956)

Few groups going through traditional graduation exercises this spring hold so much promise for the people of the United States as does this class. You are among the top members of a top profession. You are destined to rank with its leaders in the critical years to come, when the quality of the leadership which our Air Force possesses will determine the fate of all of us—as much as will the strength of our airpower itself.

As a former member of the Air Force back in the days when—some of you will remember and some won't—it was the AAF, I offer you my heartiest congratulations. You have successfully completed a most difficult course, devised to aid you in meeting the stringent tests which may be put to you under circumstances far more demanding than even the Air University Institute of Technology has asked of you.

As you leave here to return to your next posts of duty, you may go not only with the satisfaction of a job well done here, but with the knowledge that your countrymen are solidly behind you in their support of whatever mission you may be called upon to perform. Surely the realization is generally—almost unanimously—abroad in this country that our destiny, our survival, rests largely with the Air Force and how well it does its task under the command of you and your fellow officers.

But, unfortunately, appreciation is not always accompanied by the kind of support which is the due of the man who is carrying the burden. As a Nation, I am afraid, we are far from providing the kind of backstopping which you might desire. This lack manifests itself in many ways—some large, some small.

For instance, the entire American aviation industry—including, of course, the military portion of it—is dependent upon scientists and engineers to keep our airpower equal to that of any nation. Yet we seem to be afflicted with a complacency which can only lead a thoughtful person to wonder whether we—as a Nation—will snap out of our free and easy ways in time.

Some 3 years ago the National Science Foundation warned us that the critical shortage of scientists in the United States could be expected to grow worse. The prediction has come true—and still is valid. But, as a Nation, we are as far back of the goal line as we were years ago. We have no national policy on the preparation of scientists. The urgency with which the situation is regarded can be found, for example, in recent addresses by Admiral Strauss, who points out that we aren't even providing science training in many high schools. There is a vicious circle of failure to prepare, followed by a lack of prepared persons who are increasingly unable to prepare others.

In my own State of New York, our State university proposed this winter to establish a science center which would emphasize a college to prepare teachers of mathematics and science, and a college of engineering. New York, incidentally, is the only State among 48—and we must add Hawaii, Alaska, and Puerto Rico, too—which does not have a State-supported engineering college. Our studies indicated that within 10 to 15 years just 2 counties of Long Island would require places for some 4,000 more engineering students than existing colleges can handle. In the face of such data and the national need, our proposal was unanimously deplored by the existing private colleges within the State.

So it is with some feeling that I say again that complacency seems to be the order of the day.

In 1955, engineering colleges in the United States graduated only about 15,000 engineers—while the Soviet Union turned out 50,000. And too many of our graduating engineers do not see their way clear to continue advanced studies, so that we are in real peril of falling farther and farther short of really topflight men. This is an item of national concern—but we don't seem able to do anything about it, as yet.

A corresponding shortage plagues us as to scientists being trained to do the basic research. And do not forget that it is basic research upon which so much of the applied scientific advances rests. As the National Research Foundation has termed it, this basic research should be "a defense in depth which is essential to establishment and maintenance of technological supremacy." But we aren't getting the basic research men—and some day that may have very serious consequences for the Air Force.

Surely the attitude of some of our leadership in Washington is not conducive to correcting this situation. You will recall the derisive comment, some time ago, about pure research made by one of our top officials testifying before a congressional committee. By what method does he think we discovered our most potent weapon—the atomic bomb? Or the proximity fuse? Or microwave radar? Wasn't it also the much maligned myopic professor of physics who showed us how to achieve supersonic speeds? And it is he, utilizing the results of basic research, working in his laboratory, who will guide us into the hypersonic regions.

The demands of our military have been—by and large—the determining factors in aviation research. This type of research is expensive, but it should not be measured solely in terms of dollars and cents. We are all beneficiaries. Adequate support of aviation research may be the key to our survival.

Government does have responsibility for supporting basic research as well as for applied research. And I believe that a government can afford—and should afford—to measure fundamental research activities, not in years or even decades, but in terms of a human lifetime. We destroy the spirit of the search for truth when we insist on harnessing it to an assembly line. We should not force it to push aside interesting sideline investigations. In a word, fundamental research is not limited by production schedules. This means—among other things—that fundamental research is flexible. In a given situation we can modify it and adapt it to changing needs.

I am not, for a moment, minimizing the importance of applied or so-called practical research. Nor do I minimize its pressing need under the impact of immediate national-defense requirements. I recognize, also, that scientific pioneering is—in large measure—the responsibility of universities. Please do not misunderstand me. I do not assert that worthwhile discoveries have not come from industrial laboratories. They have. But I do assert that—in most of those laboratories—emphasis often is necessarily placed upon relatively short-term investments.

This is also true of research financed by Government. I fear a tendency to expect the research scientist to arrive at definitive conclusions in a specified time. Budgetary fiats too often limit long-range investigations.

To be sure, responsible Government officials must report on the results obtained from the money they expend. Perhaps this is what worries certain leaders in Washington. However, a thorough understanding of the true nature of fundamental research may well encourage investigations that only Government can afford.

The stormy resignation of Assistant Air Force Secretary Gardner may disquieting in many of its implications—but we may find it a blessing if it leads to greater attention to research policies in terms of our general welfare. We can find some comfort, too, in the attitude of Air Secretary Quarles—who surely came to his job with many eminent qualifications—but we can only hope that he will have some real influence on the Secretary of Defense. The number of scientists who continue to leave Government service—positions from which they can ill be spared—hardly seems reassuring evidence of much success on Mr. Quarles' part to date.

I have been speaking of interest in research, particularly as it applies to aviation. I regret that our schools and colleges continue also to be remiss in what should be normal attention to aviation progress. This industry is outstripping all others throughout the reaches of history. No other industry ever has made so much progress, or so vitally affected world economy, in so few years. But the universities neglect aviation's important part in national and global strategy and economy. A vast gap yawns between your knowledge and that of almost the entire balance of the country's citizens.

I mention these items as national shortcomings, unfortunate ways in which we, as a people, are not living up to the sacrifices we expect of men in uniform. But they must be marked up to the debit side of a free life in a free land. Perhaps part of the difficulty rests in the belief—to which so many of us cling—that free inevitably means no cost. We have refrained, so far, from pressing young men and women into services as engineers, or chemists, or perhaps some of the supporting jobs in aviation, for example. This remains true even though we find it necessary to draft young men into uniformed service. We are willing to draft for the short-term objetcive—but not for the long haul.

Perhaps there is a logical explanation, but I doubt it. Until we decide to take this further step, we must make up our minds to hazard the chances with our happy-go-lucky policy. Meanwhile, it is not easy—particularly for the man in uniform—to accept and understand.

Those closest to the challenge and the peril often can see most clearly the indicated defense or cure. In any event, the man taking the brunt of the burden sincerely believes that he knows the answers. He probably thinks, too, that—by seeing the answer—he can demand its acceptance.

In some cases, this may be feasible. But I believe that the man in uniform—whether he serves with the Air Force or with any other branch of the Armed Forces—must concede the right and power of civil authority. Although I am out of uniform today, I speak sincerely—I assure you—from the viewpoint of one who has been proud to wear it in the past. Therefore, I weigh my words carefully when I say that, no matter how vital the Air Force to the welfare of our country, there must be a higher authority over its destinies than any officer within it. Ours is a civilian land, not a military one; we are governed by civil law, and the highest offices of the land are filled by men who act as civilians.

Therefore, although we may agree that the maximum strength for the United States Air Force is an absolute necessity for the welfare of this country, we must concede the right of the civilian government to participate in the decision.

Sometimes, in our eagerness, we are prone to forget this point. No man in uniform is superior to the vested civilian authority, even though he may wear five stars on his shoulders.

At the same time, I believe that the uniformed services may insist upon a concomitant recognition, by civil authorities, of the responsibilities of the military. Acts which tend to bypass or ignore the views of competent military men—as expressed through the Joint Chiefs—will sooner or later push civilian control of defense matters into areas where civilians are not the most qualified to pass judgment.

In other words, it is the men who really possess the knowledge, backgrounds, and outlook which entitle them to determine the basic military strategy and consequent force levels requisite for the defense of the United States, to whom we must look for ultimate guidance on that strategy. Let us hope that this country does not reach the point of selling-short the experience and wisdom which it possesses in the leaders of the uniformed forces.

This recalls a somewhat parallel experience through which we suffered prior to World War II and during the war. It was on a considerably smaller scale, but its lessons are lessons which apparently we are still learning. There were some men, not many, but a few, who knew, a score or more years ago, of the strategic value of the far north. But the country as a whole preferred to ignore their advice and to remain blissfully ignorant of the problems of the north.

Ignorance in an individual is sometimes amusing; ignorance in a nation is disastrous. Ingenuousness in an individual may be refreshing; but ingenuousness in a nation is catastropic. Our only northern possession, Alaska, has been the victim of both national ignorance and ingenuousness. Some 15 years ago, our frontier of the North lived through a unique and perilous experience which brought it close to the edge of calamity.

That Alaska did not fall into Japanese hands during the war, was a miracle. The miracle was compounded of typical American ingredients: inspired planning in the face of threatening disaster, a liberal dash of luck to give time to that planning, the weight of the world's greatest might, but—above all—a powerful resurgenee of the frontier spirit that has never gone out of American life.

The men who saved our northern frontier went to do battle with two strikes against them. They went into the North under the dark shadows of American ignorance and isolation—ignorance of the nature of the frontier they were first to defend and later to strike from—isolation, that drugged national quality which left the northern door to America pathetically defenseless.

Until World War II threatened to engulf Alaska and its islands, most of us Americans were indifferent to our northern possession, Alaska was a forgotten stepchild—militarily, politically, economically. All that most of us knew about the country were grotesquely distorted tales of romantic writers, picaresque stories of lawlessness, of fearsome hardships, of an inhospitable and dreadful environment. At best, in the American mind, Alaska was pictured as a quaint and useless land of Eskimos, igloos, polar bears, glaciers, sledge dogs, and totem poles. For more than 70 years, Alaska remained to most Americans a geographical dead-end—the unknown and drear shingles of the continental North, a forbidding "Nowhere." This "most wonderfully misunderstood country in the world," a wind-swept, frozen wasteland, seemed hardly worthy of attention, and certainly not worth defending.

Our failure to grasp Alaska's geographic significance was matched by an equally striking indifference which prevented recognition of its military significance.

All the reasons for the military unpreparedness of Alaska are complicated and interrelated. Certainly, ignorance of the geographic significance of our north frontier was one reason. Ignorance of the strategic significance of the Territory was another. In the course of time our military leaders learned their lesson, and well. You know of their testimony.

This is the late Gen. H. H. Arnold: "If there is a third world war, its strategic center will be in the North Pole." Gen. Carl A. Spaatz is speaking: "Through the Arctic, every industrialized country is within reach of our strategic air. America is similarly exposed. We are, in fact, wide open at the top. Gen. Curtis LeMay sums it up: "Our frontier now lies acros the Arctic wastes of the polar regions." How strongly they echo, these voices heard long ago crying in the wilderness.

In a litter of a Japanese tent on captured Attu, an American officer picked up a curious document. Here in translation were words written more than 40 years earlier by that prophetic little hunchback, Homer Lea. Because Lea understood the importance of Alaska, the Japanese had read him well. They knew these words by heart: "As far as this Republic (the United States) is concerned, Alaska is as insular as the Philippines, and sovereignty over it is determined by the same factors."

You know well another voice that sounded strongly, but without avail, for 15 years—the voice of Brig. Gen. Billy Mitchell. You know of his unflagging demand for more airpower, but perhaps you don't know so well of his concern for Alaska. As a young captain in the Signal Corps in 1915 he helped solve communications problems in the Territory. Later, he was among the first to foresee the potential might of airpower. In 1920, as assistant chief of the infant United States air service, Mitchell declared that through airpower "he who holds Alaska, holds the world." He preached this doctrine tirelessly until his death in 1935. Now, two wars and many hard years of experience later, Arctic regions are projected into the spotlight of a new world strategy. The change in the strategic shape of the world has come about principally through the development of long-range weapons and increased range of aircraft. Truly, the Arctic—formerly so difficult of access—has become the world's aerial crossroads.

At last we seem to have come to realize that the predominant direction of all great cities of Europe and Asia from here is neither east nor west, but north. The Arctic is not a great ocean, but rather—as Stefansson has said—a great Mediterranean Sea separating North America from the Old World. Ninety percent of all the people in the world live in the northern half. The world is literally at our door.

You know only too well the extent to which we are thinking in terms of air logistics. You know that a realistic, strategic globe must take into account Arctic airpower planning. Gen. Orvil Anderson was expressing a widely held view when he remarked that "the potential foes we see today are on the other side of the Arctic."

We know that the Arctic is a feasible air operational area. We are beginning to test the advice of engineers that "airbases capable of accommodating at least fighter aircraft can be successfully constructed on the ice masses of the Arctic." You may find yourself landing and taking off on steel landing mats placed on the surface of ice. The polar region has surface conditions that provide for decisive airpower, and "the polar region would be exploited by a foe—if we developed one."

Your superior officers share the view that our national defenses must be extended through the Arctic. Mapping from the air, establishing meteorological stations, cold weather testing of equipment, and supplies have been the first steps. Other defense steps logically follow—"the plane, the rocket bomb, and the atom bomb have made them necessary."

But in the air future of an American north, with its immense potentialities in a world of peace, we may find our greatest good. Over the air routes that will melt the barriers of time and space, can come the winged commerce of a brotherhood of free nations, carrying with it an intercourse of understanding, an exchange of the ideas, the aspirations, and the climate of freemen that may—more than a charter or a treaty or a conference—help forge a lasting peace.

Editorial Criticism of the Farm Bill

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Wednesday, March 21, 1956

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Legislative Hash," published in today's issue of the Washington Post.

I also ask unanimous consent to have a few more "complimentary" editorials printed in the Appendix of the RECORD.

An editorial entitled "Legislative Goulash," from the Wilmington News Journal, of Wilmington, Del.

An editorial entitled "The Measure of Failure" from the New York Journal of Commerce.

An editorial entitled "Farm Bill Invites a Veto" from the Chicago Tribune.

An editorial entitled "Now the Third House Gets the Farm Bills," from the Baltimore Sun.

And an editorial entitled "Postponing the Farm Problem," from the New York Herald Tribune.

All these editorials were published today.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 21, 1956]

LEGISLATIVE HASH

In the last hours of its 4-week debate on the farm bill, the Senate hit upon a new device for raising farm prices by hypnosis. When legislators had previously faced the naked issue of returning to rigid support prices for basic farm commodities, a majority had rejected that discredited scheme because of the boost it would give to surplus production. On Monday, however, the Senate waved a wand at the price-depressing mountains of surplus crops, proclaimed that they were isolated and adjusted price supports as if the surpluses no longer existed. Of course, this form of self-hypnosis deceives no one, but it seemed to ease the senatorial conscience enough to get the higher support prices into the bill.

It is true that the Humphrey-Young amendment was patterned after the set-aside provision in the administration's Farm Act of 1954. That law withdrew large quantities of basic commodities from the surpluses to be considered by the Secretary of Agriculture in fixing support prices on the theory that the Nation should retain stocks of food for any possible emergency. Some observers felt at the time that the reserve thus set aside was excessive. Certainly the new additions to those stocks of corn, wheat, and cotton would make a farce of the set-aside program. The amendment is a patent excuse for boosting price supports without seeming to do so.

The real question now is whether Senate-House conferees can strip enough of the shabby padding from the bill to induce the President to sign it. As Senator AIKEN has said, it contains enough detrimental provisions to justify 3 or 4 vetoes. The President is very eager, however, to extend additional aid to the farmer this year. He may accept a compromise if this deceptive gesture toward rigid price supports and the return to the old basis of computing parity can be dropped. Otherwise it is difficult to see how he could sign the bill.

As it stands, the bill is a hodgepodge of confused ideas. The adoption of 40 amendments was virtually equivalent to writing a new bill from the floor. Extensive amendment was encouraged, to be sure, by the unacceptable bill reported out by the committee. Nevertheless, it is virtually impossible to shape legislation on so important a subject in a large body like the Senate. This throws a great burden upon the conference committee to make the best possible compromise of the House and Senate versions, with the object of getting the final product signed into law.

[From the Wilmington (Del.) News-Journal]

LEGISLATIVE GOULASH

There is not much point in analyzing the farm bill which was finally approved by the Senate last night, for the simple reason that it is such a goulash of conflicting provisions that no one really expects it to be enacted into law in its present form. The vote of 93 to 2 by which it was adopted is no real measure of the Senate's attitude. Few of those who voted for it are happy over the bill. It was approved chiefly because the Senate is so divided by the pressures of election year farm politics that it has given up trying to improve the legislation and is ready to turn the job over to a joint Senate-House conference.

In the month of debate the Senate has added 40 amendments to the bill turned over to it by its Agriculture Committee. The measure now bears no recognizable resemblance either to the administration's proposals or to the committee's program. In the view of Senator AIKEN, of Vermont, the chief spokesman for the administration during the debate, it contains enough material to warrant 3 or 4 vetoes. In its present form, he feels, it would demoralize our farm economy and it would be better to struggle along with no new farm legislation at all than to adopt it

A Senate-House conference committee, if one is named, will have its work cut out for it. The Senate bill bears scant resemblance to the measure approved by the House nearly a year ago. The same political forces which fouled up the efforts of the Senate leaders will be at work within the committee. However, there is an even greater pressure urging the lawmakers on. That is the resentment which the Farm Belt will be sure to feel if the tussle for the farmer's favor wrecks the efforts to provide him with some reasonable solution to his problems. That may, and we hope will, sober Congress enough to produce some kind of acceptable compromise.

[From the New York Journal of Commerce]

THE MEASURE OF FAILURE

By the astonishing vote of 93 to 2 on Monday evening, the Senate virtually admitted that it is incapable of voting a purposeful farm bill, much less a good farm bill, at this time.

Let no one be deceived by the overwhelming nature of the vote. From the chaotic manner in which literally dozens of amendments were cast into this legislative maw of confusion in swift succession, it is quite clear that a majority of those supporting the measure were not voting to approve a bill, but voting to get rid of one. We doubt that as many as a dozen Senators could be collected who had any clear idea of what was actually in the bill when the final voting began.

For of all the major pieces of legislation that have emerged from either House of Congress since the war, we doubt if any has been as riddled with contradictions, cross-purposes, and downright opportunism as this one. This is perhaps not surprising when it is considered that it is the product of a spree of political logrolling unmatched since the launching of the Hawley-Smoot Tariff, 26 years ago, but this does not excuse the final result. In the simple parlance of the school system, the Senate has flunked out.

What, specifically, has the Senate wrought?

The answer is as extraordinary as the vote of enactment. First, and most remarkable among 41 amendments, is a requirement that processors of farm products certify that they have paid either the support or the parity price for their agricultural products. This is not only a mischievous requirement. It is a malevolent and highly dangerous one.

Its ultimate effect would be to destroy whatever is left of the free market for farm products and force the Government to take over the entire marketing of crops. How many Senators grasped this significant point when they voted to approve the measure? The answer will correspond directly to the number who are so desperate for the farm vote that they are willing to sacrifice almost anything else in the economy to obtain it. For in effect what they have done in this instance is to vote the repeal of the law of supply and demand.

The Senate has done no better with the administration's soil bank plan. The chief and perhaps only virtue of this plan has been that it offers a way to get smaller, less efficient farmers out of production. Now that the Senate has voted to make it mandatory, it threatens to apply to all farmers, efficient as well as inefficient, thus imposing an almost impossible handicap on agricultural progress.

The same shabby fingerprint of political opportunism is smeared all over the Senate's decision to approve the insulation of surpluses for the purpose of raising support levels to farmers. Higher supports, after all, can only lead to bigger surpluses, and if the Senate has not learned this yet, one can only despair of its profiting by any economic disaster. And bigger surpluses can only be disposed of through dumping abroad, which means forcing down world price levels further to raise the domestic level of farm prices, with all the grief this means for our foreign relations.

But even these few examples do not measure the full extent of the political irresponsibility demonstrated in the Senate Chamber on Monday night.

The 95 legislators who voted "yes" on the farm bill conducted themselves as though their individual and collective futures hinged on one factor alone—the farm vote. In particular, they consigned the consumer to total oblivion. This was a mistake, and unless the full Senate is now rescued by some sober second thoughts by Senate-House conferees, or by a Presidential veto, some of those who took what looked like the easy way will pay dearly for it.

Senator ELLENDER, chairman of the Agriculture Committee, gave a hint of what may have been on many senatorial minds when he expressed the hope that the conferees will write a bill somewhat more acceptable to Congress and to the President than the one the Senate itself has approved.

Maybe so. But it is difficult to see how Senate conferees can agree on behalf of their House to a sensible measure when 95 of their number have explicitly rejected anything short of the bill as it stands. Anyway, it is not and should not be the job of conferees to draw up major legislation. Their job is solely to compromise the differences in similar bills passed by House and Senate. In this case they have been given the impossible job of compromising not only the differences in the bills passed by the House last year and by the Senate this year but the well-nigh hopeless contradictions of the Senate bill itself.

If the conferees fail in their task, the only thing standing between sanity and a chaotic agricultural policy is President Eisenhower's veto. We do not see how, in the circumstances, he could withhold it.

Perhaps that is what congressional Democrats have been counting on, for they have been the prime movers in the shredding of the Senate's farm bill. They have threatened to put Mr. Eisenhower in a very difficult spot, and may succeed, but all this cannot be blamed on the Democrats alone. They do not, after all, control 95 Senate votes.

It is ironical that this should have happened just as certain Senate quarters are attempting to revive a modified form of the Bricker amendment which, in effect, would transfer certain prerogatives of the White House in foreign affairs to Congress. Demonstrations such as that which took place in the Senate on Monday night will hardly convince the public that it can more safely entrust its security to the legislative than to the executive arm. The Senators who have voted to sacrifice all other economic interests to the farm vote, including the

consumer, and those who voted for the bill merely to get rid of it, cannot dodge responsibility for their actions. They have done the national welfare a bad turn. This is the true measure of their failure.

[From the Chicago Daily Tribune]

FARM BILL INVITES A VETO

The farm bill as it passed the Senate Monday night is so perfect an example of logrolling and vote buying that it is hard to see how President Eisenhower can avoid a veto. The bill still has to go to a conference committee of the two Houses; the probability is that it will emerge worse rather than better.

A recent computation indicated that more than half of the net farm income this year will consist of Government subsidies, while less than half will come from the sale of crops. Net income of all farmers for the 1955–56 crop year will be less than $11 billion, it is estimated. Various forms of Federal largess would reach six billions if all of the provisions now in the bill are enacted.

Six billion dollars is more than the taxpayers of this country can afford to let politicians of both parties bid for the farm vote. It is also more than the farmers of America dare accept if they want to continue the management of their own land. The price they will pay for the benefits provided by the farm bill will be complete dictation from Washington of what they may plant, and how much they shall plant, and what they must do with the land they will be forbidden to sow to their usual crops.

In these days of muddled national issues, there is a distinct difference between Republican farm policy and Democratic farm policy. The Republican policy is gradually to restore free enterprise in American agriculture. Agriculture Secretary Benson has worked steadfastly toward this objective, to the end that eventually the farmer will get a fair price for his products without the need of Government subsidies and Government interference in the market place.

The greatest obstacle to his program has been the surpluses that resulted from the vote-buying programs that constituted Democratic farm policy, and still do. Farmers were paid to raise more than the Nation could consume or export, and their excess production ended up in Government hands, to hang over the market and defeat efforts to restore free enterprise.

The only Democratic offering toward solution of this problem has been a continuance of the very evils that got us into the mess. The bill for flexible price supports and the soil bank that Secretary Benson and President Eisenhower offered as a means of cutting farm production to fit demand has been perverted by amendments, often conflicting, that have the sole purpose of convincing farmers that the Democrats and some Republican farm bloc Senators love them, and will be happy to support them forever.

When Congress reconvened it seemed likely taht farm policy in this election year was going to be dictated by politics rather than economics or any sense of the ultimate well-being of farmers and the Nation. But even the most pessimistic observer could hardly have anticipated the absurdities that the Senate managed to crowd into the bill.

Not since Mr. Roosevelt tried to laugh off the mounting national debt with the quip that "we owe it to ourselves" has there been a defiance of reality like the set-aside provision for the unwieldly surpluses that previous Democratic farm acts inflicted on the Nation. Hundreds of millions of bushels of corn, wheat, and other grains and millions of bales of cotton are supposed to vanish like the little man who isn't there.

Because Congress decrees that they aren't to be marketed, their existence is supposed not to depress the prices of current crops. There was method in this folly, however, provisions for lowering the guaranteed prices as surpluses accumulate will be nullified. Farmers will get higher support loans, just as if the surpluses didn't exist.

Another provision requires the Secretary of Agriculture to support the prices of cottonseed and soybeans at levels that will keep these products competitive. Cottonseed and soybeans compete with each other as sources of vegetable oil and of meal that is fed to stock. Mr. Benson now is expected to spend your money to boost the price of cottonseed, and then spend more of it to boost the price of soybeans comparably. If he didn't support either, the two products would still compete, and oleomargarine and beef would cost you less.

Congress finally discovered that logrolling made it impossible to write a rational tariff measure on the floors of its two Houses. The Senate has done its best to prove that it is equally impossible to write a rational farm bill there.

[From the Baltimore Sun]

NOW THE THIRD HOUSE GETS THE FARM BILLS

A sensible farm program would aim to accomplish several things. It would reduce or eliminate present mountainous surpluses of food paid for by the taxpayers and needed by no one. It would establish a price system that would tailor farm production to the demands of the market—thus preventing future surpluses. It would encourage marginal farmers—who contribute to present surpluses while not making a decent living—to get out of farming. And it would provide devices for easing the blow and buffering hardships.

The Benson farm program aims to do these things. Such a farm program is bound to be complicated and hard to understand in its details. But the farm bill as passed Monday by the Senate simply defies description. It is not a faithful legislative reflection of any sort of farm program. It is a senseless hodgepodge that would cure no present evils. The Senate voted for it 93 to 2. It did so, pretty clearly, out of disgust with its own work and a faith in the third house of our tri-cameral legislature. This is, of course, the conference committee, picked from both Senate and House and charged with reconciling differences between House and Senate versions of a given measure.

Sometimes a conference committee has nothing more to do than iron out a few technical differences. At other times, such as the present, it receives as raw material bills that are so far apart, so confused, and so nearly irreconcilable that it must begin all over again. Conference committees do not always succeed in doing a good rewrite job. But in a surprising number of cases when one or the other or both Houses have wound up in a hopeless snarl, they have succeeded in bringing back some logic and order into bills that have lost these qualities.

We can only hope that the conference committee on the farm bill will rise to the occasion, and the chances seem fairly good that it will. A bill such as that passed by the Senate would almost certainly earn a Presidential veto.

[From the New York Herald Tribune]

POSTPONING THE FARM PROBLEM

The Senate has passed a patchwork farm bill which will do little to correct the basic ills afflicting American agriculture. The main measures requested by President Eisenhower—a soil-bank plan and flexible price supports—were approved, but contradictory amendments neutralized them to a large extent. The bill still has to go to a Senate-House conference and then be approved in final form by both Houses.

The administration had sought to strike at an important root of the farm problem—the existence of the giant crop surplus which not only costs the taxpayers a million dollars a day but permanently depresses the agricultural market. How can this surplus be reduced or eliminated without inflicting undue hardship on the farmers? The President wanted to cut down the acreage of basic crops by paying farmers to put a proportion of their lands into grass and conservation reserves. At the same time, flexible price supports would discourage farmers from producing the most abundant commodities.

In the course of 19 days' debate the Senate tacked on 41 amendments, which took the heart out of this program by setting up a variety of intricate, artificial dodges. For one thing, the Senators voted to set aside large percentages of the surplus in making price-support calculations—that is, they agreed to pretend that the surplus is substantially smaller than it is so that the farmer can get a higher support price for the particular crop concerned.

They also approved two price plans for wheat and rice and dual parity for six basic crops, all intended to create loopholes in the flexible support system.

Senator GEORGE D. AIKEN, of Vermont, a spokesman for the administration, called the bill "tortured and battered" and said there was enough in it to warrant a veto. It is, of course, extremely difficult to put together an all-embracing farm bill of this kind which would be satisfactory to everyone, particularly in an election year. The conflict of pressures and interests is tremendous, and the continued decline of farm income makes quick financial relief more attractive than long-term remedies.

Thus, the solution of the farm problem has just been postponed. What Congress, like all Americans, must appreciate is that this is a national problem which calls for a national approach. More than the surplus is involved. We shall have to develop a policy founded on a coordinated domestic and foreign trade program, more crop diversification, research into new uses. That requires statesmanship, not the shallow partisanship in evidence now.

Celebration of Woodrow Wilson's Centennial

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I would like to include an article from the March issue of the Woodrow Wilson Centennial Newsletter. The scope and variety of celebrations in President Wilson's honor should lend encouragement to others who may wish to participate.

The article follows:

HUNDREDS OF WILSON PROGRAMS SCHEDULED IN UNITED STATES, ABROAD—STATES, CITIES, SCHOOLS, CLUBS, LIBRARIES ACTIVE

Although only 2 months of the centennial year have passed, more than 300 programs and special events have been held or are known to be scheduled in honor of Woodrow Wilson during 1956.

Almost all of the 48 States, several United States Territories and foreign countries are participating in the celebration.

Twenty State governors, and those of Guam and Hawaii, have officially proclaimed 1956 as the Wilson Centennial Year and requested the people of their areas to observe

the centenary. So far 30 communities have established committees to arrange local programs.

Virginia, Wilson's home State, and Staunton, his birthplace, have arranged numerous special programs throughout the year. So have Wilmington, N. C., Atlanta and Augusta, Ga., and New Jersey, places where Wilson spent many years of his life.

Thirty-six national organizations, representing almost as many facets of national life, are cooperating with the Commission in arranging events dedicated to Wilson.

The Woodrow Wilson Foundation reports more than 110 libraries, including the Library of Congress, have scheduled Wilson exhibits and 124 universities and colleges, led by Princeton where Wilson was president, have planned lecture series and seminars devoted to study of the 28th President's contribution to the development of the Nation and world peace.

Representatives of foreign countries, led by Sir Anthony Eden, Prime Minister of Great Britain, have paid tribute to the enduring significance of Wilson's leadership. Several countries are scheduling memorial events.

Nearly a dozen new books on Wilson's life and works are scheduled for publication during the year. Professional and learned journals are publishing papers on Wilson. Several national magazines are preparing articles on Wilson.

In addition to reporting news of centennial programs as they occur, the Nation's newspapers and radio and television stations and networks are devoting time and space to special Wilson programs and articles. In the first 6 weeks of the centennial, 141 newspapers featured editorials noting the centennial.

Churches in all sections of the country and at United States armed services posts throughout the world are holding memorial services.

The United States Needs More and Better Engineers, Warns Gen. Thomas D. White, United States Air Force

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the continuing increase in the technical abilities and achievements of the Soviet Union are of great concern to an ever-growing body of informed citizens in the United States today. It is a problem that should be of concern to each and every one of us, particularly since the advance of Russian technology is not matched by the United States. This is particularly true insofar as this increase depends upon a growing body of skilled technicians, scientists, and engineers. The Soviet Union has been graduating vast numbers of highly trained men in all these fields and, if present indications are correct, will continue to do so in the future.

Many outstanding men in Government and in the sciences have pointed out the growing discrepancy, but as yet we have done little or nothing to overcome our disadvantage. In recent months, many men in leading industries have also attempted to alert the Nation to its danger in this field. The concern with this problem shown by American industry is well illustrated by an editorial appearing in the General Electric News, a publication issued in Trenton, N. J., by the home heating and cooling department of General Electric. I should like to include the editorial as a part of my remarks, both for the information of my colleagues and because of the intrinsic value and interest of the editorial. It follows:

DISMAL PROGRESS REPORT

The United States needs more and better engineers and scientists to develop superior weapons for the Nation's defense if we are to meet the threat of the U. S. S. R., according to Gen. Thomas D. White, Air Force Vice Chief of Staff.

The Soviet Union, General White warned in a recent nationwide address, has come from a period in which most of the population was illiterate to a point where their present output of scientists and engineers exceeds that of the United States, and they are now showing signs of technological maturity. Even though many of their spectacular successes have been the results of duplicating basic equipment taken from the free world nations, the Soviets have accomplished many things that our experts said they could not do. Even more surprising, some of the things the Russians were supposedly unable to do at all, they not only did, but did in a hurry.

As examples of this, General White cited:

The B–29—It was thought in this country that it would take the Reds 6 or 7 years to duplicate it. It took them 2.

The jet engine—It was estimated it would be difficult to make a good copy of a British jet engine. Russia produced a better version of this engine in less than a year.

The atom bomb—American experts predicted that it would take from 6 to 10 years to produce a similar bomb, if they were able to produce it at all. The Soviets rocked the world with a nuclear explosion in about 3 years.

General White said that this knowledge is evidence of the modern technology of the Soviets and the advances which are being made by them. America's answer to this growing threat lies in "power for peace," he said, and this power lies in having forces in being and in developing superior weapons systems which will keep the United States ahead of the enemy.—Planes Magazine.

How Strong Are Conservationists?

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Carmel (Calif.) Pine Cone of March 15, 1956:

CONSERVATION ON THE MARCH

(By C. Edward Graves, western representative, National Parks Association)

HOW STRONG ARE CONSERVATIONISTS?

When a general has won an important military victory, he calls his staff together to assess the results and to lay plans for the future. The strength of his present position is the matter of first importance. To overestimate it would be fatal. To underestimate it would rob his army of many of the fruits of victory.

On March 1 the House of Representatives passed H. R. 9122, the Colorado River storage project bill, by a vote of 256–136. Echo Park Dam, which would have invaded Dinosaur National Monument and thus would have violated the National Park Service Act of 1916, had been deleted from the bill. Instead, by advance agreement between the promoters of the bill and the conservation forces of the country a statement was added to section 3 reading: "It is the intention of Congress that no dam or reservoir constructed under the authorization of this act shall be within any national park or monument."

On the basis of that statement the conservation forces withdrew their opposition and remained neutral. They were sorry to see Glen Canyon Dam authorized, because this will ruin one of the finest and most accessible wilderness sections of the Colorado River, but it was not in a national park or monument and so they did not oppose it.

In order to assess results it is necessary to compare this vote with a test vote in the House taken last July, while Echo Park Dam was still in the bill. The Republican and Democratic whips conducted this on a confidential basis and therefore no results were announced officially. However Congressmen close to the situation have made a conservative estimate that the bill at the time would have lost by a margin of some 50 to 60 votes.

It seems clear, therefore, that the difference between the two votes represents the present strength of the completely cooperating conservation forces in influencing congressional legislation. Numerically it amounts to 170 or 180 votes. When a grave threat to the National Park System is posed, the House of Representatives can evidently be counted on at the present time to that extent in opposing it.

Perhaps a popular vote on a conservation issue affords a still better estimate of the strength that conservationists have at the grassroots level. In New York State last November there was such an issue. Stated as simply as possible, it was a proposal to build Panther Mountain Dam in the Adirondack Forest Preserve, the cloest thing that New York State has to a national park. This involved voting on a constitutional amendment and was therefore a somewhat complicated issue. Most of the politicians of the State, including Governor Dewey and Senator LEHMAN, were against the conservationists.

In spite of these odds the voters correctly assessed the situation and rose to the defense of their forest preserve in great numbers. They won this popular vote by a 3–1 margin.

Two such impressive victories in 1 year should serve notice on the would-be despoilers of the public domain that the voters are strongly backing the combined conservation forces of the country. Plans are now being made to celebrate the 50th anniversary of President Theodore Roosevelt's first conservation conference held in 1908. The progress made in public awareness of conservation problems since that time is truly remarkable.

City Boy and 36 Farmers

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the This Week magazine in the New

York Herald Tribune of Sunday, March 18, and which is a well deserved tribute to our colleague, Representative ANFUSO, who has sensed in his opportunity to serve on the Committee on Agriculture the potential of rendering great service to his constituents and to other residents of consuming areas in the country and who has brought to his work the energy and experience that he has gained in his many difficult assignments during peace and war. He has particularly distinguished himself in the international problems that have arisen in the field of agriculture which is to be expected because of his intimate knowledge based on his extensive experience in foreign affairs. He has on a number of occasions been his country's delegate to international conferences dealing with agricultural problems and has applied to those assignments his deep and abiding concern in the welfare of his fellow man. It is unfortunate that in the inserted article it will not be possible to include the pictures that were contained in the magazine of Representative ANFUSO, his wife, and his five fine children, as well as the picture of his personal meeting, while on his recent FAO assignment, taken with His Holiness Pope Pius XII. I would suggest that the Committee on Agriculture and the farmers and consumers of the country have benefited by Representative ANFUSO's service on his present committee.

The article follows:

CITY BOY AND 36 FARMERS

(By Creighton Peet)

The Agriculture Committee of the United States House of Representatives, which has been in the midst of the election-year farm battles, is traditionally made up of 37 dirt farmers. But the 84th Congress boasts something new—a big-city member to represent the consumer.

He is Democratic Representative VICTOR L. ANFUSO, from Brooklyn's heavily-populated Eighth District. Last time he took a breather from Washington, I went to visit him at his red-brick home on Bushwick Avenue to see how things were down on the farm committee.

There is certainly little agricultural about Congressman ANFUSO's environment. Most of the plots of ground in his neighborhood have been cemented over; the Anfuso front yard has a pleasant growth of evergreens and holly. I was told, too, that the family grows a few vegetables at their Atlantic Highlands summer place.

As for livestock, I found the only critter on the Bushwick Avenue ranch was Chiquita the Chihuahua, fed and watered by the children. These things hardly qualify ANFUSO as an agriculturalist, but this doesn't mean he lacks interest. He has been intensively studying food production and distribution since he was assigned to the committee in January 1955. He has even gone abroad for a meeting in Rome of the United Nations Food and Agriculture Organization.

"You want to see seven good reasons why I'm particularly interested in what the consumer pays for food?" he asked me. "Well, take a look." He handed me the picture reproduced above—showing himself, his wife Francis and five children. If a bill he has introduced—with both Democratic and Republican support—is passed, the price of groceries for Mrs. Anfuso and the rest of us who live in cities could drop 5 to 10 percent in the years ahead.

I discussed the bill with him in his tiny office at the end of the hall on the first floor of his house—a homey spot with a desk piled with law books, interspersed with children's gear and a pile of fresh laundry in a cart.

"The first thing I learned when I began to study the cost of food to city dwellers, particularly those in New York, Mr. ANFUSO said, "was that the farmer gets only a small fraction of what the consumer pays. For example, he gets 2 cents for the wheat used in an 18-cent loaf of bread. Only 50 percent of the money city people pay for the food goes to producing it and bringing it to the city line. The other 50 percent goes for transportation and distribution within the city.

"One reason is that in many of our cities we have such extremely poor marketing facilities. Here in New York a great proportion of the fruits and vegetables consumed in the five boroughs has, for generations, been coming into the Washington Street marketing area. Today this is a horribly congested 17 square blocks, with ancient markets on land valued at around $1 million a block.

"Obviously this is pretty expensive real estate on which to store oranges, potatoes, melons, or broccoli for a few hours until buyers pick them up—particularly since only the ground floors and basements are used for this purpose."

YOU DON'T HAVE TO MILK A COW

The Anfuso marketing bill simply offers to loan money to cities to build or relocate markets. It is not concerned with picking the actual locations of markets, although the committee would approve the sites chosen before granting loans. Personally, Mr. ANFUSO has no preference as to where our new central market might be located. All he knows is that if our produce cost less to bring on its final 3 or 4 miles to your table, it should be cheaper.

"Being appointed to the Agriculture Committee certainly was an education for me," Brooklyn's nondirt Congressman commented.

"Some of the people in my district didn't know what to think and asked, 'Why do you want to get mixed up with a bunch of farmers?'

"But I have found it very profitable, very helpful. I have friendly relationships with other members of the committee, and learned much from them about the special problems in their States."

But if Brooklynites were surprised to find their Congressman on a committee with a lot of farmers, a still bigger surprise was handed the 1,365,670 readers of Capper's Farmer, a genuine, down-to-earth farm publication, for in a recent issue Mr. ANFUSO had an article—Why I Voted for High Price Supports.

Right off, the author admits he couldn't tell a field of soybeans from clover, and that he was in Congress "to look after the downtown workingman and his family, who need abundant food at reasonable prices."

Mr. ANFUSO wrote that he had been asked what he knew about farming, and that he had answered, "You don't have to milk a cow to recognize dairy trouble.

"Another thing I learned early in my study of farm problems was that if the cost of a certain food goes way out of reach, the chances are the farmer is receiving very little, if any, of this increase. Whenever I speak to groups in which housewives are included, I always remind them of this. It isn't fair to blame the farmer."

LOST: ONE DISTRICT

Mr. ANFUSO has lived in the Bushwick section since he was 9, when his family arrived from Sicily. His public career dates almost from his graduation from Brooklyn Law School (then St. Lawrence University) in 1927. In the 1930's he formed the Citizens' Welfare Association to help depression-hit Brooklynites and the Italian Board of Guardians to aid delinquent children. In 1943 he went overseas to serve with the Office of Strategic Services (OSS) in the Mediterranean Theater.

After the war he became a special assistant to the Commissioner of Immigration. In 1946, he organized a letter-writing campaign which resulted in 250,000 letters from America to Italy urging Italians to vote anti-Communist in a critical election.

Mr. ANFUSO is known to his constituents as "Judge," because of a term he served as a city magistrate. This is only his second term in Congress. He was elected in 1950, but in 1952 his district disappeared in a reapportionment. This didn't faze Mr. ANFUSO. He ran in the new district in 1954 and was elected.

Tribute to a Lady

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. ROGERS of Texas. Mr. Speaker, the people of the Panhandle of Texas were saddened this week by the death of one of our great and loved pioneer women, Mrs. Olive King Dixon. Mrs. Dixon spanned the years between the days of the buffalo, the covered wagon, the Indian wars to the building of jet planes and atomic energy. She was one of the builders of the West; she was among those who made our great traditions in Texas and in America. The editorial tribute to this great lady in the Amarillo Daily News is, in part, a tribute to all the brave and gracious pioneer women of Texas as well as all those in other States who made the America we know and love. In the spirit of such a tribute to the pioneers, I include the editorial under leave to extend my remarks:

TRIBUTE TO A LADY

There are so few left who can really remember when the whir of wild turkey wings was a hum on the river breaks. When the native plum trees were a cloud of white edging the creek beds. When the prairie grass was thickly waving against the far horizon. When the Llano Estacado was as fresh and new as coin from the Denver mint.

There are so few left who really know the awesome wideness of the range country, and the little communities of men and women who were pioneering a wide and not too friendly country who could remember the thrill of the first piano in first parlor of a brand new town of the first school, and the first church, and the all other firsts that were to be the tendons on which a community fleshed up.

But Olive King, native to Roanoke County, Va., could remember all of these wind-spent, sunswept days when men began to climb the escarpments that guarded the high plains of Texas and to tame this land to their use. Because she married a man much older than herself, who had known even an earlier day when the thundering roll of the buffalo hooves was broken by the shrill cries of the Indian hunters, Olive King Dixon could remember the memories of even older days.

It is difficult to believe that when the spry little woman died here Saturday night only the span of her lifetime separated the sprawling industrial plants of the North Plains from the wide empty land of grass and buffalo and Indian.

She was as typical of the women who really brought civilization to the frontier as if she

had been a prototype. She raised children to sturdy manhood and womanhood. She taught school. She planted trees and flowers. She added to the stream of culture by laboriously gathering the stories from the men who were there at the beginning, the folklore as well as the fact, and set them down for later generations to read.

She was no embattled club woman striving for rights or crusading for reforms. She remained to the last breath of her life exactly what she was at the beginning—Virginia gentlewoman whose business was womanly business; making a home; raising a family; paying decent homage to the continuity of human affairs by keeping the records of her generation for those who came a little after; jerking up the younger generation from time to time on their manners and morals. (You see, we were under her somewhat strict eye here in the Daily News city room, and we toed the mark of certain civilities that Virginia gentlewomen take for granted.)

It didn't occur to Mrs. Dixon that there was a time in life when one wasn't supposed to go about the strict duty of living. She came to her desk nearly every day, missing only a few when the weather was too buffeting for 83-year-old bones. Neither did it occur to her that every day wasn't a blessing and source of sheer enjoyment. She was making plans on the day of her death for the annual luncheon attended by spelling bee champions of the Golden Spread, where as usual she would tell the youth of that first schoolhouse where she taught in what is now Hutchinson County.

She was not unique—that, we think, was Mrs. Dixon's greatest charm. She was only embodiment of the many virtues that American pioneer women brought to the frontier. Those virtues, translated into this age, are a part of American women who too will bridge this day, shortly to be the past, with the future.

L. E.

Hon. William A. Dawson

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. McCORMACK. Mr. Speaker, one of the greatest Americans of all time, and certainly of this trying era, is our distinguished colleague and friend from Illinois, Mr. DAWSON. He is the first American of his race to be chairman of any committee in either branch of the Congress of the United States. Congressman WILLIAM A. DAWSON is the chairman of the important House Committee on Government Operations. He enjoys the deep respect and confidence and friendship of not only his colleagues on the committee, but of all his colleagues in the House of Representatives. He is not only a great man, but a good man. He stands for every ideal that is noble and uplifting. Congressman DAWSON, with understanding mind has done more to brush aside barriers and prejudices than almost anyone I know during my years of service in the Congress of the United States.

As an illustration of the deep respect, in fact, affection, that I have for BILL DAWSON, I mention the fact that in the 81st Congress when my party again took control of the House, and being senior to Congressman DAWSON on the Committee on Government Operations, I stepped aside; as a result of which, being next in line in point of seniority, he became chairman of this important committee. In addition to that, and with pride, I remained a member of the committee, and have been a member of the committee ever since, to show the pleasure and the happiness that I derive in serving under him as my chairman.

In the New York Times of March 18, 1956, there appeared a very fine and deserving news item relating to our distinguished friend. It is with pleasure that I include the news item appearing in the New York Times of March 18, 1956, in my remarks:

DAWSON LAUDED FOR LEADERSHIP—ILLINOIS REPRESENTATIVE, 70, IS ESTEEMED FOR ROLE IN HELPING RACE RELATIONS

WASHINGTON, March 12.—Because of the flow of headlines he creates, many people over the country have the idea that Representative ADAM CLAYTON POWELL, JR., must be the most important and influential Negro in Congress. The Manhattan Democrat is not. The contest is far from close.

That honor belongs to Representative WILLIAM L. DAWSON, Democrat, of Illinois, whose successful career on Capitol Hill seemingly ought to be more of an example nationally than it is in the matter of promoting good race relations.

Representative DAWSON, who will be 70 years old April 26, probably has more political power than any other member of his race in the United States. He is the first Negro chairman of a major committee of the Congress since Reconstruction days. He heads the House Committee on Government Operations. He is vice chairman of the Democratic National Committee. He is undisputed political boss of the five Chicago south side wards that make up his congressional district. He is a respected and popular Member of the House.

The Illinois Representative is as strong in his support of civil-rights bills that come before the House as nearly all southern Members of the House are strong in opposing them. But more than most northern and big city Representatives, Mr. DAWSON understands his colleagues from the South and he keeps whatever differences there are in their views and interests on a high, impersonal level.

He never questions the motives of those opposed to civil-rights bills or issues angry challenges and demands that the Congress or the White House do this or that, or else. Mr. DAWSON is too much of a gentleman to criticize his two Negro colleagues—Mr. POWELL and Representative CHARLES C. DIGGS, Democrat, of Michigan, for their heated remarks on the floor.

But his distaste for the intolerant, negative approach in speechmaking is clear in his explanation: "I use speeches only as an artisan does his stones—to build something. I don't talk just to show off."

When Mr. DAWSON does speak his colleagues listen. More than any other one man, he was responsible for the defeat in 1951 of a draft law provision that would have allowed inductees to choose whether they would serve in a segregated unit. Reminding the House that he had been gassed and wounded in World War I, Mr. DAWSON said, "If there is one place in America where there should not be segregation, that place is in the armed services, among those who fight for this country."

STICKS TO THE MERITS

Mr. DAWSON does not often argue or plead his case as a Negro. He sticks to the merits and assumes that his contentions will be considered on a man-to-man or person-to-person basis. He stands up for his rights, but is not belligerent about it. He does not ridicule or abuse those who disagree with him.

Such respect and regard for his colleagues, naturally, has resulted in widespread respect and regard for Representative DAWSON. Some of his stanchest friends in the House are from the South. A nonsouthern Representative found this out the hard way back in 1949.

When the Democrats took control of the 81st Congress in 1948, Representative DAWSON was by seniority in line to become chairman of the Committee on Government Operations. A jealous colleague tried to enlist the backing of southerners on the committee in a move to bypass Mr. DAWSON. The southerners to a man rejected the suggestion. They felt not only that Mr. DAWSON was entitled to the chairmanship, but that he also was better qualified for leadership than the man who had tried to incite racial prejudice for self-advantage. Mr. DAWSON's record as chairman has justified this confidence.

Woodrow Wilson Centennial

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include two articles from the Woodrow Wilson Centennial Newsletter of February and March, respectively. These articles show the encouraging response, from all over the country, to the Centennial Commission's invitation to participate in this celebration honoring a great American:

COMMISSION ASKS MAYORS TO FORM WILSON CENTENNIAL COMMITTEES

The mayors of all American cities of 5,000 population or over have been asked by the Woodrow Wilson Centennial Commission to appoint committees to plan and coordinate Wilson centennial programs in their communities.

In a letter to more than 2,400 mayors, the Commission noted that it had been established by the Congress for the purpose of developing suitable plans for the observance of the centennial and to invite all of the people of the United States to join therein.

The Commission pointed out that many observances being planned throughout the Nation are concerned with Wilson as world statesman, President, Commander in Chief, educator, or spiritual leader, and suggested to the mayors that they might find particularly valuable committee members in local groups whose interests parallel these subjects—as political science and international relations for the first; patriotic groups for the second; school and library people for the third; and church leaders for the fourth.

The mayors and their committees will be furnished with the Commission's Handbook of Information and Program Suggestions to be published this month. They will also be informed of the activities of national organizations also invited by the Commission to cooperate in the centennial in order that local committees can coordinate these activities in their communities and draw upon the local chapters of these groups for participation in communitywide programs.

Plans in the various communities will be reported in the Newsletter as information concerning them is received by the Commis-

sion. All committees are asked to keep the Commission informed in order that the Commission can be of the greatest possible assistance to the various communities.

TWENTY STATES MARK CENTENNIAL—THIRTY CITIES APPOINT WILSON PROGRAM COMMITTEES

Twenty-two governors of States and Territories and 30 mayors of United States cities have responded to the Woodrow Wilson Centennial Commission's request to call upon the people in their jurisdictions to participate in centennial observances.

The 22 governors have issued proclamations officially designating 1956 as the centennial year, and the 30 mayors have appointed centennial committees to organize programs in their areas. Other governors and mayors informed the Commission that they will take similar action but have not done so as yet.

Following is a list of the States whose governors have issued Wilson centennial proclamations and a list of the cities which have established Wilson committees and the names and addresses of the committee chairmen designated.

STATES

Colorado, Florida, Georgia, Illinois, Indiana, Louisiana, Maine, Maryland, Massachusetts, Michigan, New Jersey, North Carolina, Ohio, Oklahoma, Tennessee, Pennsylvania, Rhode Island, Virginia, Washington, West Virginia, Guam, Hawaii.

CITIES

Alexander City, Ala., J. C. Henderson; Ashland, Ky.; Atlanta, Ga., Curtis H. Bryant, 404 Connally Building; Augusta, Ga., Hugh Grant, Country Club Apartments; L. S. Moody, care of Chamber of Commerce, Post Office Box 901; Columbia, S. C., S. L. Latimer, Jr., editor and publisher, The State; Franklin, N. H., Basil Broadhurst; Goldsboro, N. C., Col. George E. Hood and Col. John D. Langston; Great Falls, Mont., Leo E. Aumell, 210 30th Street, N.; Greeley, Colo., John R. P. Wheeler, 809 Ninth Street; Hackensack, N. J., Emil M. Wulster, People's Trust Co. Building; Henderson, Ky., Odie Duncan; Irvington, N. J.; Kings Mountain, N. C., K. E. Morrison, East Gold Street; Linden, N J., A. J. Frankel, 605 South Wood Avenue; Long Branch, N. J.; Martinsburg, W. Va., Wilson P. Sperow; Mayfield, Ky., C. N. Apperson; Memphis, Tenn.; Middletown, Conn., Prof. Wilbert C. Snow, 473 Newfield Street; Newton, Mass., Harold T. Gold Policy

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. BERRY. Mr. Speaker, the Canadian Government announcement yesterday that it is going on a free-gold market places the question squarely up to the United States whether it wants to stand on the sidelines alone or whether it wants to follow the free-market lead of the other nations.

Those of us who are interested in domestic mineral production have been pressing for this action for some time. The present price of gold precludes the mining of any low-grade ore, resulting in the wasting of our gold resources.

For the past 20 years the price of gold has been pegged by the Federal Government at $35 an ounce. This means that only the most efficient mines could even remain in operation, to say nothing of making a profit for its stockholders.

The time has come when the United States must immediately reevaluate its policy. It must either increase the pegged price or provide for a free market.

The New Isolationism

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. DINGELL. Mr. Speaker, I rise to insert in the RECORD an editorial in the Detroit (Mich.) News of March 19, 1956, which clearly states both the lack of need for the so-called Bricker amendment, and the great danger inherent in that constitutional monstrosity:

BRICKER AMENDMENT, AMENDED: THE NEW ISOLATIONISM

Senator BRICKER is back with a new and neater constitutional amendment to save the United States from combined folly of the President, the Senate and the Supreme Court. The President has agreed to talk over the proposal soon and Senator BRICKER feels sure he won't be able to find any objections. Objections, however, are not really hard to find and are far from trivial.

The 1956 version as edited by Senator DIRKSEN reads as follows: "A provision of a treaty or other international agreement which conflicts with any provision of this Constitution shall not be of any force or effect." End of amendment.

On the surface this seems to mean absolutely nothing. The Supreme Court has always held that no treaty is valid which conflicts with the Constitution. It has never before seemed necessary to amend the Constitution with a provision that it shall not be violated by the officers sworn to uphold it. And of course it is not necessary now. Senator BRICKER and his friends are not such fools or innocents as to waste their time and political reputations on making a change that changes nothing.

The trick is in three little words: "any provision of." Leave them out and the prohibition against a treaty that conflicts with the Constitution becomes redundant nonsense. The effect of including them, Senator BRICKER has explained with a candor that belies his more usual pretense of having nothing at all revolutionary in mind.

The object is to clear the way for repeal by interpretation of one of the provisions of article VI which makes treaties the "supreme law of the land * * * anything in the Constitution or laws of any State to the contrary notwithstanding." The Bricker amendment would reduce treaties to the status of ordinary laws subject to precisely the same constitutional tests as congressional legislation.

The amendment would have invalidated the treaty with Canada for the control of migratory birds and would logically prevent any treaty which encroached in any way on the legislative powers of the several States. This, of course, is precisely its purpose. As such it would shackle American foreign policy in ways which we have successfully avoided for nearly 170 years. It would do so in the name of wholly imaginary dangers and in the service of the new isolationism.

Corporate Profits Shoot Up 30 Percent While Farm Income Falls 30 Percent Under Eisenhower Administration

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, the Capital Times, of Madison, Wis., contained a very interesting and revealing editorial in its issue of March 19, 1956, on corporation profits and farm income. The full text of the editorial and a table of corporation profits are as follows:

Within the past fortnight the United States Department of Agriculture reported that farm income for the year 1955 had fallen off more than a billion dollars from the previous year. In the past 4 years farm income has dropped more than a billion a year and this year is expected to be no exception.

In adjoining columns we reprint a table from the Wall Street Journal, which shows how the large corporations of the country are faring during this period of gathering depression in the farm economy. The table shows that 714 firms averaged a 30 percent increase in earnings over 1954. This is approximately how much farm income has declined under the Eisenhower administration.

The First National City Bank of New York recently reported on 2,439 corporations, showing an increase of 26 percent over 1954. Taken alone, manufacturing corporations showed an increase of 31 percent in the First National City Bank's survey.

These surveys help us to understand what the Republicans are talking about as they roar into the 1956 campaign under the slogan of peace and prosperity. It is not hard to see who is getting the big slice of prosperity. Wages are only 14 percent. Farm income is down 30 percent.

Corporation stockholders received more money from dividends in the second half of 1955 than all of the farmers in the country received from farming.

One of the remarkable things about corporate earnings is that they have increased regularly under the Eisenhower administration, even when business has fallen off. For example, 1954 was a year of business recession, though the one-party press, which now blandly refers to that recession, vigorously denied its existence in that election year.

In that year corporate giants such as General Motors, Du Pont, and others showed a sharp decline in sales, in some cases well over 30 percent. But earnings in that year increased over 30 percent for those same companies.

That prosperity for the corporations was made possible by the Eisenhower tax pro-

gram. The expiration of the excess-profits tax alone accounted for additional millions in net profits over the previous year. Other tax favors were handed out in the gigantic giveaway that has come to be known as the rich man's tax law, which was drafted by big business for big business and passed by the Republican Congress.

There is no question about the genius of the Eisenhower administration in finding ways for big business to make profits, even in recession years. Some of that genius ought to be called upon to do something for the Nation's farmers before their plight causes a general economic collapse in this country.

Corporate profits zoom 30 percent in 1955

		1955	1954	Percent change from year ago
4	Airlines	$39,331,000	$28,137,000	Up 39.8
14	Aircraft makers	193,447,000	193,104,000	Up 0.2
28	Auto and equipments	1,856,545,000	1,126,543,000	Up 64.8
29	Building materials	383,374,000	279,672,000	Up 37.1
18	Chain retailers:			
6	Grocery	46,864,000	45,094,000	Up 3.9
7	Variety	75,296,000	63,387,000	Up 18.8
5	Miscellaneous	13,079,000	9,734,000	Up 34.3
23	Chemicals	858,178,000	660,002,000	Up 30.0
7	Department stores	54,595,000	41,504,000	Up 31.5
5	Distillers	73,098,000	74,334,000	Off 1.6
12	Drug companies	107,388,000	92,641,000	Up 15.9
17	Electrical equipments	294,955,000	318,827,000	Off 7.5
8	Farm equipments	149,669,000	109,378,000	Up 36.8
16	Finance companies	183,614,000	174,622,000	Up 5.1
26	Food products	148,482,000	124,245,000	Up 19.5
29	Iron and Steel	1,039,609,000	604,850,000	Up 71.9
8	Leather	28,478,000	24,713,000	Up 15.3
13	Metals and mining	266,523,000	162,273,000	Up 64.2
10	Movies and movie theaters	29,081,000	25,356,000	Up 14.7
9	Office equipment	95,746,000	76,968,000	Up 24.4
24	Petroleum products	1,576,156,000	1,341,400,000	Up 17.5
23	Pulp and paper	177,908,000	139,329,000	Up 27.7
6	Radio and television	82,690,000	70,884,000	Up 16.6
13	Railway equipments	56,415,000	36,073,000	Up 56.4
12	Rubber companies	214,911,000	164,708,000	Up 30.5
15	Sugar companies	20,778,000	16,047,000	Up 29.5
16	Textiles	101,495,000	60,308,000	Up 68.3
14	Tobacco companies	170,458,000	145,951,000	Up 16.8
31	Tools and machinery	130,770,000	118,754,000	Up 10.1
141	Other industrials	806,878,900	644,168,000	Up 25.2
	Total 571 industrials	9,275,811,000	6,973,006,000	Up 33.0
86	Utilities	1,119,824,000	991,477,000	Up 12.9
57	Railroads	856,666,000	649,936,000	Up 31.8
	Total 714 firms	11,252,301,000	8,614,419,000	Up 30.6

Leave the Farm, Eisenhower Aid Says

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. MARSHALL. Mr. Speaker, some new light has been shed on the Eisenhower-Benson farm policy as the result of a speech made by the President's economic adviser. Our only question is whether his prediction is the result of present policies or the reason for present policies.

Under the unanimous consent of my colleagues, I insert in the RECORD the following report from the Minneapolis Morning Tribune of March 20:

HAUGE FORESEES ABSORPTION OF SMALL FARMS

(By Clark Mollenhoff)

WASHINGTON.—President Eisenhower's economic adviser Monday told a group of Iowa State college students it is inevitable the small farms should fade from the scene.

Gabriel Hauge, administrative assistant to the President, met with the group of students sponsored by the National Student Council of the YWCA and YMCA.

Hauge's talk on an insight to the economic life of our Nation, prompted a number of questions on the farm problems of the Middle West.

Harold Reinhart, general secretary of the YMCA at Iowa State college, stated that although many Iowa farmers are in relatively good financial condition, "there are many small farmers with their back to the wall." Reinhart asked Hauge the administration's position on this problem.

Hauge declared it is inevitable the small farms will be absorbed by larger farms because of technical progress.

He explained he is from Minnesota and has some grasp of the economic problems in the farm area of the Middle West.

He also told the group he has a friend on a farm in northern Missouri who complained he is being crowded out by the current cost-price squeeze on farmers.

"I have advised him to leave the farm, and to go to work in a caterpillar factory," Hauge said.

Florida Paper Declares South Will Not Bow to Force

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I would like to insert in the CONGRESSIONAL RECORD an article appearing in the Nashville Banner on March 20, 1956, under the heading, What Others Say, and entitled "Florida Paper Declares South Will Not Bow to Force," which previously appeared in the St. Petersburg Independent, St. Petersburg, Fla. This is an excellent article with reference to the manifesto recently signed by southern Members of Congress:

FLORIDA PAPER DECLARES SOUTH WILL NOT BOW TO FORCE

The manifesto pledging nearly 100 southern Members of Congress to exercise every lawful means to reverse the Supreme Court edict against school segregation obviously was not conceived as a plan of action.

Instead it is a declaration of constitutional principles concisely setting forth the beliefs of the great majority of the people of the South. As such it is a clear warning to northern politicians, the National Association for the Advancement of the Colored People, and similar groups that the South will not be forced or browbeaten into foregoing its customs and traditions overnight.

It is to be hoped that the document will have the effect of lessening the pressure—which at times has paralleled the fanatical zeal of the old-time abolitionists—and permit the Southern States to work out their own racial problems. Already the crusading effort of outside pressure groups has severely damaged the good racial relations the enlightened people of the South have built up over many years. Further agitation and pressure can do nothing but create additional violence and further disintegration of racial relations.

The manifesto makes it amply clear that the South does not accept the Court's politicaly inspired decree as the law of the land and that it has no intention whatever of integrating its schools at the present time.

Fortunately there is some hope that some of the prominent antisegregationists are beginning to realize ending segregation involves far more than the mere process of enforcing a Court order. In a recent issue of Life magazine, famed southern novelist, William Faulkner, a confirmed antisegregationist on moral grounds, warns the North against further pressure. "If we," he writes, "* * * are compelled by the simple threat of being trampled if we don't get out of the way, to vacate that middle where we have worked to help the Negro improve conditions—compelled to move for the reason that no middle any longer exists—we will have to make a new choice. And this time the underdog will not be the Negro, since he, the Negro, will now be a segment of the topdog, and so the underdog will be that white embattled minority who are our blood and kin."

Similarly Life magazine, which in the past has frequently lashed the South on the segregation issue, now warns against pushing integration too rapidly. Says a Life editorial:

"Amid the excitement of episodes like the Lucy affair we sometimes forget that the supremacy of law, in our Republic, has already worked a profound revolution. Since World War II alone it has brought them a long way toward the economic equality so long denied—the rights to equal jobs, and to skills. With that has come better housing and a rising living standard so that 16 million United States Negroes now earn an annual income of $16 billion (prosperous Canada's 15.7 million people earn about $20 billion)."

But despite this small recognition from the ranks of the antisegregationists that the South may have some good arguments on its side there are forces that assume that the problem is so simple it can be changed overnight by forceful backing of the Court's edict. In other words, if the South refuses to forgo its customs and traditions immediately, then the South must be punished.

If these forces persist then we may well see the beginning of intersectional strife

which will weaken this Nation from within and pull it down to level of immorality and decadence which has engulfed the once-great French nation.

"This unwarranted exercise of power by the Court contrary to the Constitution, is creating chaos and confusion in the States principally affected. It is destroying the amicable relations between the white and Negro races that has been created through 90 years of patient effort by the good people of both races. It has planted hatred and suspicion where there has been heretofore friendship and understanding."

We agree with those who strive through educational efforts and mutual understanding to improve the living standards of our Negro citizens and to ease the friction that exists between the two races. But the spirit of brotherhood cannot be inculcated by rash court decisions and force. These can only result in violence, hatred, and bloodshed.

It is to be hoped that the manifesto of the southern Members of Congress will awaken the northern politicians and the pressure groups to the realization of seriousness of consequences if they insist in pressing their crusade.

Change of Desegregation Decision by Lawful Means Is Improbable

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include herein an excellent editorial appearing in the Houston Post of March 15, 1956, entitled "Change of Desegregation Decision by Lawful Means Is Improbable." This editorial might well be termed "the appeal to reason and logic." It is an editorial of this kind which rises above emotionalism or sectionalism, and contributes toward solution and unity rather than division and disunity. Editorials of this type richly deserve commendation.

CHANGE OF DESEGREGATION DECISION BY LAWFUL MEANS IS IMPROBABLE

Precisely what southern Members of Congress think they will accomplish constructively by their attack on the United States Supreme Court other than win votes in their respective bids for reelection this year in their home States, is as vague as their manifesto itself. Do they honestly think that by denunciation and dissent they can intimidate a majority of the present members of the Court into reversing their position on racial segregation? Or, do they think that they can win enough support from the rest of the country to change the Constitution in such a way that the 14th amendment, in effect, would be repealed? The action of the southern lawmakers can be appraised only in political terms. Undoubtedly one objective was to influence the stand to be taken by the Democratic Party on civil rights in this year's presidential campaign.

The southerners, however, are rushing onto dangerous ground, and there is a very real risk that their action will backfire disastrously. The attitude of a majority of the American people toward the Supreme Court and their resentment of any attack on it was demonstrated only a few years ago during the court-packing attempt of another administration. Southerners were in the vanguard of those who rallied to defend the Court against political pressures.

The declaration which the southern Members of Congress signed avowed a determination to resist implementation of the Court's segregation decisions by all lawful means, but it failed to state what lawful means exist. The fact is that the only lawful means are to get 36 of the 48 States to agree to change the Constitution, to convince a majority of the present members of the Court that they were wrong in their interpretation of the Constitution or to change the membership of the Court in such a way that a majority will reverse the recent segregation decisions. Any honestly realistic person knows that the prospects of bringing any of these changes about is so remote as to be improbable.

Texans can hold up their heads with pride that only 4 of their 24 Members of Congress have become parties to the instrument. The fact that most declined to sign it does not mean that they agree with the wisdom or the soundness of the Supreme Court's decisions. It does mean that they realize that the South's problems cannot be worked out by actions which inflame emotions, encourage violence and invite retaliation in the form of racial legislation.

Any minority group, white southerners no less than members of the Negro race, will accomplish more in winning acceptance of their views if they practice reason, restraint, and forbearance. The reasons given by the Texas Members of Congress who refused to sign the manifesto are those of honorable, sober, experienced, and reasonable men and should be respected as such. Some of those who signed the document were moved by equally honorable convictions. But the language and tone of the document was unfortunate and unwise.

Visit to the Capitol of Men From District 13, United Steelworkers of America

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. SAYLOR. Mr. Speaker, earlier this week, a group of 32 men from district 13, United Steelworkers of America, visited the Capitol in conjunction with their classwork on Federal legislative procedure.

I had the privilege of welcoming them on Monday morning, at which time we discussed the passing of legislation and the many other ramifications involved on how a bill becomes a law. These members then attended a full session of the House Committee on Interior and Insular Affairs, of which I am a member, and left for a noon luncheon where we all had the pleasure of hearing a talk by Secretary of Labor James P. Mitchell. The Secretary remained with us for a question-and-answer period, and I am sure the men enjoyed quizzing him on labor legislation and receiving Mr. Mitchell's frank and interesting replies.

The afternoon session included a tour of the House of Representatives. From there we proceeded to the Senate and met with Senators EDWARD E. MARTIN and JAMES H. DUFF. The legislative group were hosts at a dinner in the evening where brief talks were made by me and my colleagues from the western Pennsylvania districts, Representatives KELLEY and MORGAN.

To me, the steelworkers, railroaders, and others who took part in this study have made a distinct contribution to the principles of our form of government. By familiarizing themselves with legislative procedure, they have become better equipped to adjudge the problems connected with the making of Federal laws. At the same time they have acquired information which can be passed along to the advantage of their families, fellow workmen, friends, and neighbors.

I recommend that this visit be made known wherever possible to various labor, business, civic, and other organizations which may follow the example of this group in finding out just how our Government functions. I am sure we will have a better informed citizenry.

As far as I am able to determine, this is the first time that any group of this type has undertaken such a beneficial project, and to further record this event in the CONGRESSIONAL RECORD, I include the names of the gentlemen who participated:

FROM CAMBRIA COUNTY, PA.

1. Mr. Kenneth L. Bender, legislative director of district 13, United Steelworkers of America, 403 Wallace Building, Johnstown.
2. Mr. Irvin Bartoletti, 424 East Sample Street, Ebensburg.
3. Nicholas C. Borsuk, 335 Strayer Street, Johnstown.
4. Henry A. Emerick, 730 Pine Street, Johnstown.
5. Charles Fesko, 291 Laurel Avenue, Johnstown.
6. Joseph Galagaza, 236 Main Street, Conemaugh.
7. Louis V. Geist, 224 Main Street, Johnstown.
8. John W. Hagins, 182 Blaine Street, Johnstown.
9. Harry E. Hildebrand, 506 Bernard Street, Johnstown.
10. John E. Howe, rural route 4, box 204, Johnstown.
11. Stanley P. Killian, 52 Hazel Street, Conemaugh.
12. R. J. Maley, 17 Cox Street, Johnstown.
13. Rhody L. McCutcheon, 219 Mifflin Street, Johnstown.
14. Sammy McFormick, 652 Linden Avenue, Johnstown.
15. Bill McKendree, 809½ Central Avenue, Johnstown.
16. Kenneth Poorbaugh, 800 Liberty Avenue, Johnstown.
17. Barry D. Richardson, 621 Wynn Avenue, Johnstown.
18. Michael Rizzo, 1336 Saylor Street, Johnstown.
19. Ross Rively, 135 Joseph Avenue, Johnstown.
20. John A. Sukenik, 89 G Street, Johnstown.
21. Thomas Wensel, Carrolltown.
22. Walter Winkler, 246 Spruce Street, Conemaugh.
23. William R. Young, Jr., 333½ Oak Street, Johnstown.

FROM WESTMORELAND COUNTY, PA.

1. Harry J. Sharp, Seward.
2. Alexander Kachmarik, 625 Rostraver Street, Monessen.

FROM FAYETTE COUNTY, PA.

1. Jack Thot, 1104 Henry Street, Belle Vernon.

FROM WASHINGTON COUNTY, PA.

1. Samuel H. Collis, 122 Wellington Avenue, Washington.
2. Edward J. Dombrowski, 432 Franklin Avenue, Canonsburg.
3. Frank Egizio, rural route 1, Canonsburg.
4. Frank Giosta, 436 Cherry Avenue, Houston.
5. Martin Slavonia, 1213 Lover Crest Avenue, Charleroi.
6. John M. Wright, 1030 Bruce Street, Washington.

One Hundred and Thirty-fourth Anniversary of Greek Independence

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, March 22, 1956

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by the Senator from Tennessee [Mr. KEFAUVER] on the 134th anniversary of Greek independence.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEFAUVER ON THE 134TH ANNIVERSARY OF GREEK INDEPENDENCE

On Sunday, March 25, the 134th anniversary of Greek independence from the Ottoman Empire will be commemorated.

It was back in 1821 when the Greek people, after being dominated for over 400 years by the Ottoman Empire, struck for liberty which was symbolic of that era as in the case of the United States and France.

Historically, the Greek nation has fought for liberty and the principles of democracy. It seems that Greece has always fought for freedom. In ancient times Greece protected the advance culture from ruin by invasions from the east. Again in A. D. 407, Greece came to the aid of the civilized world in withstanding assaults from the north. During World War I and World War II, Greece was again an ally of democracy against the enemy.

How thrilled the world was when Greece resisted fascistic, Nazi, and communistic invasions within a period of 10 years. Again, little Greece stood up to the task, but not without paying a price for her victory both in the men and women who lost their lives and in the severe drain on a treasury already depleted by wars.

While the world commemorates Greek Independence Day, there is a sad note in the fact that three of our friendly allies, Greece, England, and Turkey, are disputing over the issue of self-determination for Cyprus. I know that we in this country hope and pray that a just, honorable, and immediate solution to the Cyprus issue will be effected since it is obviously in the interest of the entire free world as well as in the interest of the peoples most directly concerned.

One development in the Cyprus issue that has brought great reaction is the removal of Archbishop Makarios from Cyprus by the British. I have received many telegrams and letters from church leaders of the Orthodox faith in this country requesting that the United States Senate facilitate the archbishop's return to his people.

Archbishop of Canterbury recently spoke out in favor of the immediate return of Archbishop Makarios. Voices in this country have been raised to the same effect.

The world is looking to England to see what her position will be regarding the immediate return to Cyprus of Archbishop Makarios, the highest church official of the Orthodox faith on the island of Cyprus.

Mr. President, I would like to say a word about the Americans of Greek descent in this country who have become an integral part of our Nation and have done much to continue the American way of life. Within the past century we have seen the Greek people who have migrated to the United States emerge as a group of people who follow the democratic principles as were established by their forebears back in the Golden Ages of Greece. Today some of our most prominent business, professional, and civic leaders in public life come from this group.

The record established by the Americans of Greek descent in this country warrants a change of the discriminating immigration quota fixed at 308 per year, which is one two-hundedth of the quota of several other countries in Europe. Certainly such a discriminating immigration quota is not consistent with the American way of justice and equality to our fellow man. Also, there should be an increase in the number of refugees coming to America from Greece and Italy and the abolishing of mortgaged quotas.

Before closing, Mr. President, I would like to point out one thing further, that through the efforts of the United States Senate in S. 106, introduced by Senator SALTONSTALL, of Massachusetts, and supported by me on the floor of the Senate, not only the Greek Americans of the orthodox faith but also other groups of the eastern (Greek) orthodox faith have been permitted for the first time to designate their religious preference in the Armed Forces, which is a privilege previously denied members of the Armed Forces of the eastern (Greek) orthodox faith. This is as it should be, for it embodies one of our most sacred constitutional protections, that of freedom of religion in every manner and form.

To the nation of Greece, that has through the centuries given to this world great elements of democracy, art, literature, science, medicine, education, philosophy, religion, and the noble spirit to fight for freedom despite the odds, I say, "All honor to you and your descendants."

Address by Paul M. Butler Before the Leadership Conference on Civil Rights

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, March 22, 1956

Mr. LEHMAN. Mr. President, on March 5, Paul Butler, Democratic National Committee chairman, representing the Democratic Party, made an address before the leadership conference on civil rights, a conference held in Washington, D. C., to discuss with Members of Congress the critical problems involved in the continued denial to some of our citizens of their civil rights.

Chairman Butler delivered a most interesting speech in which he reviewed the Democratic Party's past contributions in the field of civil rights. It is an impressive record, and I think it should be remembered and brought to the attention our people.

While I would have said much more about the current aspects of the civil rights problem than Chairman Butler said in his speech, I think what Mr. Butler said concerning the civil-rights plank of the Democratic Party's 1952 platform—which I helped to draft—merits being remembered today, in the light of present circumstances.

Mr. President, I ask unanimous consent to have Mr. Butler's address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY PAUL M. BUTLER, CHAIRMAN, DEMOCRATIC NATIONAL COMMITTEE, BEFORE THE LEADERSHIP CONFERENCE ON CIVIL RIGHTS, MARCH 5, 1956, IN THE BALLROOM OF THE WILLARD HOTEL, WASHINGTON, D. C.

I am glad to be here tonight in my capacity as chairman of the Democratic Party to set forth the Democratic Party's record of accomplishment and platform policy in the area of civil rights. I congratulate all of you who are associated in the sponsorship of this highly important conference on civil rights.

We who firmly believe in equal opportunity for all Americans can take pride in the recorded progress in this field. Only the most uninformed would fail to see the gains we have made since 1933 in equal opportunities—gains in jobs and income, housing, education, medical care, and other day-to-day needs of all our citizens.

Within three generations of Abraham Lincoln's proclamation that all men shall be free came the stirring leadership of Franklin D. Roosevelt proclaiming that not only shall all men be free but that they shall have equality of opportunity.

When President Roosevelt was elected in 1932, no one questioned the fact that all men were free. But too many Americans knew only the freedom to live in slums, freedom to go hungry, freedom to line up outside the cold factory gates in our industrial cities looking for jobs, freedom to lose their small plot of land in rural communities, freedom to live in fear and insecurity.

From Lincoln's Emancipation Proclamation to President Roosevelt's Fair Employment Practice was a stark period for many of our fellow Americans who were denied the freedom of equal opportunity.

But just as Lincoln backed up his words with determined action, Roosevelt likewise constantly waged the fight for equal opportunity and justice for all our citizens.

Tonight I would like to speak briefly about that earlier period in the light of recent partisan claims that equality of opportunity has become a fact only under the Eisenhower administration.

It was in 1933 that the Roosevelt administration attacked the housing problem—a basic one in the fight for equality—with special concern for adequate housing for minority groups.

Under the Roosevelt administration, the Housing and Home Finance Agency announced that there would be no discrimination or segregation in any housing that it operated.

Here, then, was a beginning. And in the years that followed thousands of families, trapped in slum areas, have streamed forth into decent, Government-built dwellings.

To the Republican Party in 1933, this was socialism—and it still is to most of them in 1956. But to many American families it was a step up the rung of the ladder toward a higher standard of living—a step toward equality of opportunity.

Again, it was President Roosevelt who took the first national step against discriminatory employment practices in an Executive order condemning discrimination and setting up the first Fair Employment Practices Commit-

tee to receive and investigate complaints and to enforce fair practices in work done under Government contracts. Thus another door toward equality of opportunity was opened.

It was President Roosevelt who followed through with further action in outlawing discrimination in Government contracts and in Government agencies and departments in vocational training programs.

By November of 1940, the civil service rules were amended to include prohibition of discrimination because of race; photographs were discontinued on applications as identification means; and steps were taken to eliminate any reference to race on examination and appointment forms.

Improved medical care and more hospitals, new facilities for education, social security, low-cost housing, unemployment insurance—these were all New Deal programs—under which a higher standard of living and equality of opportunity were made available to all Americans.

President Roosevelt was the first to recognize that actual gains in the extension of human rights could come only through the extension of job opportunities, good wages, decent housing, education, and adequate medical care. He was the first to proclaim and carry out these programs—in a new Bill of Rights, under which, in his words, "a new basis of security and prosperity can be established for all—regardless of station, race, or creed."

"All of these rights," President Roosevelt said, "spell security. And after the war is won, we must be prepared to move forward, in the implementation of these rights to new goals of human happiness and well-being."

These were a part of the 20th century emancipation proclamation conceived and executed by Franklin D. Roosevelt. Upon his passing, Harry S. Truman took up the challenge.

In December of 1945, he ordered elimination of discrimination in transferring workers from temporary war jobs.

In the following year, President Truman ruled out discrimination in making temporary appointments to Federal establishments. His regulations governing fair-employment practices within the Federal establishments held agency heads strictly accountable for carrying out his nondiscrimination policy, with a Fair Employment Board created within the Civil Service Commission to review decisions of department heads and make reports and recommendations directly to the President.

It was in 1948 under President Truman that a Fair Employment Board was created in the Federal Civil Service Commission in order to eliminate any remaining remnants of racial discrimination among civil-service employees.

In 1951 President Truman ordered that all Government contracts contain a fair-practices clause and he established the Government Contract Compliance Committee to implement this program against discrimination under Federal contracts.

The most significant advance in the area of civil rights in the last 24 years has been in the Armed Forces of our country. Beginning in 1945 under President Truman, all branches of the services have moved forward rapidly toward the final goal of a fighting force in which there is no trace of any racial discrimination. President Truman's Executive order of 1948 has been the biggest factor in this advance. It required equality of treatment and opportunity in the armed services without regard to race, color, religion, or national origin. President Truman implemented this order by creating the Committee on Equality of Treatment and Opportunity in the Armed Services to work closely with all branches in executing the order.

In the course of this notable change of climate in the area of civil rights through the use of the executive power of the President came important judicial decisions of the United States Supreme Court affecting human rights. Among the most important were the State forced labor law decision (1944), the white primary (1944), the railroad fireman discrimination decisions (1944 and 1949), the mail clerk discrimination case (1945), the segregation in interstate transportation case (1946), the restrictive covenant decision (1948), the dining car segregation case (1950), several important school decisions from 1938 through 1952, and many other decisions affecting civil rights.

Furthermore, during the 20 years of Democratic administration, six States voluntarily outlawed the poll tax, the civil rights section of the Department of Justice prosecuted violations of individual voting rights, primary elections have been opened to all citizens, and more than a million eligible voters in minority groups were enfranchised in the southern States.

Between 1945 and 1949 eight States passed enforceable FEPC laws against overwhelming opposition by Republican legislators. In 1955 three more States under Democratic governors enacted FEPC legislation.

I would remind you, too, that under Democratic control of the Congress, my good friend and coworker, Congressman WILLIAM L. DAWSON of Illinois, our able Vice Chairman of the Democratic National Committee, was the first member of his race to become chairman of a congressional committee, and he is still chairman of the powerful Government Operations Committee.

In this healthy climate of Democratic leadership in the field of civil rights, old prejudices began to lose their force. Equal opportunity and justice for all citizens were becoming the corollaries of individual freedom.

Now that we have reviewed the 20 years of progress in civil rights under Democratic administrations, let me ask a question. What has been done in the field of civil rights under the Eisenhower administration since 1953?

What new ground has it plowed to further equality of opportunity which it so piously and so loudly espouses?

Last year President Eisenhower, without being specific, said that his administration had advanced far in the field of civil rights.

But on the very same day that the President made this claim—in fact, on the very same page of the Washington Post that reported his statement—the contrast between words and action was, to say the least, astonishingly revealed.

The headline on one story read: "Ike Cites Far Advances in Field of Civil Rights" (August 9, 1955).

But on the same page another story was headlined: "FHA Fires Dr. Horne, Race Issue Adviser."

Dr. Horne, after 19 years in Government service, was fired by Federal Housing Administrator Albert Cole—along with Dr. Horne's assistant, Corinne Morrow. His summary dismissal came as a shock to those who knew Dr. Horne's long and devoted efforts toward knocking out discrimination in public housing. But it came as no shock to those who knew the Eisenhower-appointed Albert Cole.

Mr. Cole, as a Republican Congressman, was the Republican leader of the antipublic housing forces in Congress.

Since becoming Administrator of FHA he has constantly reduced the public-housing program.

The New York State rent administrator, Charles Abrams, a well-known housing authority, has leveled a well-documented charge that Albert Cole is trying to scuttle the Race Relations Service of the housing agency he heads. And the facts substantiate the charge.

I do not have to tell this audience that Frank Horne's fight for racial equality in housing has been the target of the real-estate lobby ever since he helped set up the Racial Relations Service for the Federal public-housing program under Franklin D. Roosevelt. But that meant nothing to this administration as it dumped him and replaced him with a representative of the real-estate lobby to which Mr. Cole is beholden.

A closer examination of the Eisenhower record on civil rights discloses that his 1955 state of the Union message to the Congress did not contain even one word upon the subject of civil rights. This year his message and subsequent Republican speeches have made much ado about civil rights gains under this administration. But where are these gains? What has this administration done to produce any advance in the field of human relations in the past 3 years? Its claims of having abolished racial segregation in the District of Columbia, in the Armed Forces, in Federal contracts, in civil employment, in interstate transportation and in public schools are all a fraud upon the American people. These have been brought about as a result of the tremendous forward strides in the field of human relations under Roosevelt and Truman, by their positive actions, and by the creation of a public attitude and climate out of which the judicial decisions of the past two decades have more or less naturally flowed.

These judicial decisions were not Republican or Democratic. It is no more significant that no less than 7 of the 9 justices of the United States Supreme Court had been appointed by Democratic presidents than it was that the Chief Justice had at one time been a member of he Republican Party. The judicial opinions of our courts are not and must never be the products of partisan minds. Republicans who make partisan claims for credit for judicial action debase the whole system of justice in our country and demean those loyal citizens who hold high judicial posts.

The real story about civil rights and treatment of minority groups under this administration is far different from the one the Eisenhower propagandists peddle for public consumption.

Let us take integration in the armed services, for example. They claim that this administration has abolished segregation at Army post schools. But the fact is that President Eisenhower's directive was simply a device to take credit for a program and policy initiated under President Truman and accomplished almost entirely before the Eisenhower administration took office.

The whole program of eliminating segregation in our Armed Forces was started under President Roosevelt and has been carried on under Presidents Truman and Eisenhower. As the California Eagle has pointed out, President Eisenhower has kept a course charted by his predecessors, but has not been creative in either of these fields, referring to nondiscrimination in the armed services and in Government contracts.

But even keeping this course charted by his predecessors must have been difficult for President Eisenhower. For it must be remembered that he is the same General Eisenhower who, in his long military career as a commanding officer, permitted racial discrimination to exist under his command for many, many years without lifting a finger or raising his voice to protest this inequality and this injustice to his fellow Americans. This is the same General Eisenhower who, in his testimony before the Senate Armed Services Committee in 1948, showed himself to be something less than a champion of equal rights for all citizens. Here is what he said on April 2, 1948, in his testimony concerning segregation of United States troops:

"If you make a complete amalgamation what we are going to have is in every company the Negro is going to be relegated to the minor jobs and is never going to get his pro-

motion to technical sergeant or master sergeant and so on because the competition is too tough * * * if we attempt merely by passing a lot of laws to force someone to like someone else, we are just going to get in trouble."

There is a lot of talk, too, by this administration as to its appointments of minority representatives to Government jobs. But what President and what party pioneered in this? New opportunities in the executive and judicial branches and in the diplomatic field of our Federal Government were opened up for the first time by Presidents Roosevelt and Truman. The Democratic Party is proud, indeed, of the records in public life of such outstanding public servants as:

The late Mary McCleod Bethune, who was Assistant Administrator of the National Youth Administration.

Judge William H. Hastie, appointed as Assistant Solicitor of the Department of Interior, Governor and Federal District Judge in the Virgin Islands, as civilian aide to the Secretary of War, and in 1949 by President Truman as judge of the Circuit Court of Appeals of the United States for the Third Circuit, the first person of his race to be appointed to such a high judicial post.

Judge Irving C. Mollison, named to the United States Court of Customs and Patent Appeals.

Dr. Ralph J. Bunche, whose appointment to the State Department in 1945 marked the opening wedge of a new employment pattern in the State Department. Dr. Bunche's work as United Nations mediator in Palestine in 1948 brought him worldwide fame and the Nobel peace prize, and he has gone on to distinguish himself in other important posts.

Edith Sampson named as United States Alternate Delegate to the United Nations General Assembly, and many others who were appointed by Democratic Presidents to important judicial, diplomatic, and policymaking posts.

Of course, this administration has made some appointments of minority representatives. But progress is not being made in minority recognition in public service when Democratic appointees are being fired and replaced by Republicans and no new posts are being filled by minority representatives. The real Republican record in this administration as to minority groups is revealed in this CIO News report in 1954: "For every Negro appointed to a Government post, the Eisenhower administration laid off another 200 in the Washington area alone."

But not only is there an apparent lack of genuine interest on the part of this administration in the area of civil rights, there is increasing evidence from day to day that that there is an absolute unwillingness on the part of President Eisenhower himself to face up to this very real challenge that confronts our country and all its people. When responsible citizens call upon the President to indicate what course of action he will pursue in the allocation of Federal aid to public schools, they get only deafening silence from the White House. When urgent pleas are made to Mr. Eisenhower to take some action in the field of human rights, you get only the proposal of a study commission to investigate and ascertain the facts. And when the pleas of prominent Americans for an immediate biracial conference to be held at the White House under Presidential auspices are buttressed by the editorial support of many reliable newspapers in the country, including the Washington Post, there is only total indifference.

Where is that dynamic leadership that was promised to the American people in 1952? In what area of executive authority is there greater need today for courageous and unifying leadership for all Americans than in the cause of human rights?

It is high time for the President of the United States to assume the responsibilities of his office in this problem of civil rights before mounting tensions in our Nation do us irreparable harm. As a citizen, I join in the demand of other Americans that President Eisenhower call a biracial conference at once in order to lay the foundations for understanding and justice for all Americans.

Turning from the accomplishments and the progress of the past under Democratic administrations, we look to the future and what remains to be accomplished in the area of human rights. Our party platform is the official statement of policy which guides us at the Democratic National Committee. We, ourselves, have no policy-making authority. Our 1952 platform is the last official statement of party policy on civil rights as well as other matters.

We are committed by that platform to coninued "efforts to eradicate discrimination based on race, religion or national origin" and "to support and advance the rights and liberties of all Americans." These include, among others, "(1) the right to equal opportunity for employment; (2) the right to security of persons; and (3) the right to full and equal participation in the Nation's political life, free from arbitrary restraints."

As chairman of the Democratic National Committee, I am hopeful that certain civil rights measures will be considered and acted upon in the present session of the Congress. First, the poll tax as a condition of voting should be eliminated. Second, the voting rights of all citizens in Federal elections, both primary and general, should be protected. Third, the Civil Rights Section of the Justice Department should be elevated to a division of the Department, headed by an assistant attorney general, with adequate personnel for investigation and handling of all civil rights cases. Fourth, the antiviolence measures for both civilians and members of the Armed Forces should be enacted into law.

All of these measures are supported by the provisions in the 1952 Democratic platform plank which was approved by the delegates to the national convention of that year. But we look not only to our national platform for guidance. We look to the basic charter of our existence as a Nation, the Constitution. And above and beyond that we look to the whole body of Christian-Judaic teaching for what is right and just for men endowed by their Creator with certain inalienable rights. In the eyes of God and in the provisions of our Constitution, all men are created free and equal. From that basic teaching and concept there shall be no divergence by the Democratic Party. There can be none—because ours is the party of the people, the party of human interests, the party with a heart for the rights and needs of all Americans.

National Library of Medicine

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, March 22, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Library of Medicine," published in the Washington Post and Times-Herald of March 20, 1956, and an editorial entitled "National Medical Library," published in the Washington Evening Star of March 20, 1956. Both editorials favor the establishment of a national library of medicine, as is proposed in the bill introduced by the senior Senator from Alabama [Mr. HILL] and myself.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 20, 1956]

LIBRARY OF MEDICINE

It is not widely known here that Washington has the greatest collection of medical literature in the world—a collection that is a treasure house of essential and highly valued information much used by medical men everywhere. It is even less widely known that this priceless and irreplaceable collection is housed in a 69-year-old building that exposes it to fire and other hazards. For years Members of Congress and medical leaders (and recently the Hoover Commission) have urged the need for a new building to house the collection and for the establishment by law of a National Library of Medicine. The collection now is administered by the Army and is called the Armed Forces Medical Library. But it is much more than a library for the military. It is also used extensively by civilian doctors and researchers. The Armed Forces alone do not need such an extensive library; they do need access to it just as do others in medical and health work.

The other day Senator HILL introduced (for himself and Senator KENNEDY) a bill to establish a National Library of Medicine and to authorize the construction of a building estimated to cost between $6 and $7 million. The bill deserves the urgent attention of Congress, for as long as the collection remains in the present building at 7th Street and Independence Ave SW., it is in danger of destruction. By providing express statutory authority and by inviting private contributions for supplemental support, the bill would make it possible for the collection to be more fully utilized in the advancement of medical science. The logical place for the new building would be on the grounds of the National Institutes of Health, across the street from the Bethesda Naval Medical Center and only a few miles from Walter Reed Army Hospital. The library should not be in isolation from actual medical research and practice.

Already, as Senator HILL told the Senate, "it is difficult to exaggerate the important influence this library has had on the advances in the medical sciences throughout the world. It is impossible to gage its value in dollars." Because it is the one complete library in the field, other medical libraries depend upon it heavily, and it lends more than 30,000 volumes a year to them. It fills over 100,000 orders a year for photo duplication of medical articles and reports. Its reference assistants conduct more than 1,000 searches a month for information needed by doctors in this and other countries. The greatest practical use of the library was made during World War II when the collection on diseases of other countries became the guide to service doctors.

The Hoover Commission said that "no other medical agency of the Federal Government serves the future of medical research so intimately and so widely as does this unequaled collection of books, journals and bibliographic services."

It is a collection that ought to be preserved with the greatest care and administered so that it can be used as widely as possible.

[From the Washington Evening Star of March 20, 1956]

NATIONAL MEDICAL LIBRARY

Legislation to convert the Armed Forces Medical Library into a National Library of Medicine, adequately housed in an imposing

new home here, is more important than it might appear at first glance. This is not just a reorganization and rehousing proposal. The bill sponsored by Senators HILL of Alabama and KENNEDY of Massachusetts would rescue a sadly neglected institution from its stepchild role in the Defense Department and reestablish it as an indispensable public-health asset.

As Senators HILL and KENNEDY pointed out to the Senate, the present library many years ago outgrew its original role as a reference center for military doctors. It is recognized today as "the largest and most important medical library in the world"—a description applied by a Hoover Commission task force which deplored the inadequacy of the library's antiquated facilities. The American Medical Association and numerous other organizations have protested the failure of the Government to provide the library with proper housing and sufficient funds. To make matters worse, there have been plans to transfer some of the library's overflow material to a frame barracks, where the irreplaceable volumes would be subject to fire and other hazards.

Congress several years ago authorized the Defense Department to begin the planning of a new building for the library, at a cost of $350,000. But, in the Department's understandable desire to make defense dollars go as far as possible in the arms field, funds which might have been allocated to the library have been used instead for other purposes. This year's military budget, as usual, contained no request for library planning. The Hill-Kennedy bill would end this frustrating cycle by removing the library from the Defense Department and setting it up as an independent agency. The bill also would provide for a $6.3 million building, modernly equipped and staffed. The plan is logical, practicable and in the public interest.

The Face on the 2-Cent Piece?

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I include an interesting comment by Mr. John C. Blackall, of Hartford, Conn., to the editor of the Hartford Courant, which appeared in the February 10 issue. Mr. Blackall calls attention to an incident which occurred here on Capitol Hill some years ago, and which is a fitting example of how the innocent can be made to suffer unjustly.

Incidentally, Mr. Speaker, Mr. Blackall has served in an executive capacity here on Capitol Hill, to Congressman Augustine Lonergan, of Connecticut, and also in a like capacity to Congressman Carl Mapes, of Michigan. Subsequently, after leaving Washington, Mr. Blackall returned to Connecticut where he became a very prominent practicing attorney, and most recently had been the Connecticut insurance commissioner.

The article follows:

THE FACE ON THE 2-CENT PIECE?

To the EDITOR OF THE COURANT:

Your editorial on the 2-cent piece brings back a memory.

Years ago I was secretary to the Honorable Augustine Lonergan, then representing the First District, and former Gov. George P. McLean, of Simsbury, was in the Senate. Each was on the Committee on Banking and Currency. A gentleman in a derby, long frock coat, with stubby rusty beard, and a worn briefcase walked into the office. The following occurred:

"Are you Congressman Lonergan?"

"No. I am just his secretary."

"Isn't he on the Committee of Banking and Currency?"

"He is."

"Does he know that Senator McLean is on the Committee on Banking and Currency.

"He does."

"Does he know that Senator McLean has a bill in his committee to coin a 2-cent piece and put the face of Col. Theodore Roosevelt on it?"

"He does."

"What does Lonergan think about it?"

"I don't know."

"What do you think about it?"

"I heard Teddy Roosevelt speak at Charter Oak Park at Hartford, and I have a high regard for him, and I would like to see his face on a coin of the United States, but, to be frank with you, sir, I have heard of no public demand for a 2-cent piece."

"Young man, you are wrong all the way around."

"Why?" I asked.

"Because there is a demand for a 2-cent piece. Everybody wants a 2-cent piece, but nobody wants Roosevelt's face on it."

Rather intrigued, I asked him why. In substance, the old fellow had a land claim way out West somewhere which had been turned down by the examining agent of the United States Land Office on the spot, by the Land Office in Washington, and later by the Secretary of the Interior. As each step went along, my visitor got more vehement against each official until he learned that pro forma President Theodore Roosevelt had to sign the final papers, and the crescendo of the man's wrath descended on the innocent head of the Sage of Sagamore Hill.

A lot of people like that are still roaming around Washington. Is it any wonder that our Presidents get sick?

JOHN C. BLACKALL.

HARTFORD.

Should the Government Support Housing?

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, March 22, 1956

Mr. IVES. Mr. President, a young constituent of mine, a high-school student in New York City, recently addressed an inquiry to Government officials with respect to the topic The Government Should Not Support Housing.

The Federal Housing Commissioner, Norman P. Mason, in his reply, has outlined concisely the role of Government in the important housing area of our economy. I ask unanimous consent to have printed in the Appendix of the RECORD the text of Mr. Mason's communication.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

FEDERAL HOUSING ADMINISTRATION,
Washington, D. C., March 9, 1956.

Miss SUSAN STOLLMAN,
Brooklyn, N. Y.

DEAR SUSAN: Your letter was not addressed to me personally—but I want to give you a personal answer. I believe in young people knowing their government—knowing that we officials in Washington are here to help our citizens. We are very human. We can even remember when we had to give economic reports in high school.

Susan, do you know that I and the other officials here in Washington are really working for you—and all the other people of our great country? That's the basic philosophy of our Government. Now, the reason I mention this is because in giving your report in economics on "The Government Should Not Support Housing," you have to think about what government should do.

The way President Eisenhower stated the function of our Government just a little while ago was to refer to a quotation of Abraham Lincoln. He said that the function of government is to do for the people what the individual cannot do at all, or do so well for himself, and in all those things which the individual can do for himself, the government ought not to interfere.

Now, Susan, this is good American philosophy. Let's look at it as applied to housing—because that is what you are going to report on in class.

We in America have individuals who are builders—probably the best in the world. We've got bankers and mortgage companies and life insurance companies with tremendous wealth. And, we have millions of fine families who want homes of their own—what they can pay for out of their earnings.

All these elements, or whatever you want to call them, Susan, add up to private enterprise. Private lenders lend the money. Private builders build the houses. Private citizens buy them for homes. That is what the Federal Housing Administration—which is part of your Government—believes in and encourages.

FHA, as you have probably heard it called, just makes it easier for all those elements to work together. We don't support housing, but we encourage private enterprise to do the job by research in housing standards; by studies to get housing within the financial reach of more families; and by insuring loans against loss.

Susan, we've been successful in getting this job done without Government spending any of the taxpayers' money. The amount FHA takes in—fees and premiums—is more than we have had to spend. The figures are impressive and you may want to give them in your economic report. FHA has insured home mortgages and property-improvement loans for a total of $40 billion. Translated into numbers of families, this means that the FHA has helped 1 out of every 3 families in the country to improve living conditions—and we could not even begin to estimate the numbers of workmen, manufacturers, builders, and lenders and others who have participated.

All this has been done by private enterprise, Susan, with the Government—not supporting—but cooperating. All this has been entirely voluntary because nobody has to ask for FHA insurance unless he wants it. The people who use FHA programs pay for them. The Government is like the athletic coach at school helping to get the best out of the whole team.

There's another fact, Susan, you will want to tell your classmates. FHA has found that American families seeking homes of their own are excellent credit risks. It has been proved—losses are only one-twentieth of 1 percent of the total loans made. And there are insurance reserves for losses.

Thank you for writing, Susan. Good luck in your economics report and a whole lifetime of good citizenship.

Sincerely,

NORMAN P. MASON,
Commissioner.

The Anti-Israel Game Must End

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. DINGELL. Mr. Speaker, I rise to again call attention of the Congress and the people of our country to the place where world war III may break out at any minute.

That is Israel and the Middle East. The President admitted in a statement yesterday that the situation is very grave, and the Secretary of State has often recognized that the situation is of the most sensitive nature. Yet our policy is to sit tight, to do nothing, and to hope for the best. Worse, yet, we have even blocked a shipment of 12 Mystere jet fighters which were to be shipped to Israel by the French Government. The French are either unwilling to ship without American clearance or our State Department is deliberately blocking such shipment; either situation is equally bad to a country in the desperate straits which Israel faces.

Arms valued at $250 million are now being shipped to Egypt, whose leader, Nasser, has said that he and the Arab States will not rest "until the Israeli cancer is cut from the Arab heart." These arms include not only conventional small weapons of modern war such as rifles, mortars, and their ammunition, but heavier, deadlier weapons such as heavy guns, heavy tanks, and jet planes and bombers.

As we know, up until recent times the Jewish State did not have absolute superiority in weapons. However, because of absolute maximum utilization of available manpower, Israel was in a position to defend her borders and her sacred soil against all but a suicidal attack by all Arab States. To secure this Israel had to arm even women.

Today, this picture is too rapidly shifting to the point where Israel's strength both as to weapons and manpower is far below that of Egypt alone, or will soon be so. When this point is reached with the arrival of the last of the shipments now en route from Hungary, Czechoslovakia, and the U. S. S. R., Israel can be overrun before aid from America or any of the other Western countries can arrive. The reason for this is simple. Israel is about the size of New Jersey. In warfare using just light weapons such as rifles, machineguns, and mortars, there is sufficient room within Israel's boundaries for her to defend herself. With the introduction of weapons, such as jet aircraft, tanks, and masses of artillery Israel is no longer large enough for her forces to maneuver, or to sustain the impact of a war waged with such weapons.

Even if help should arrive in time to save the Jewish state from extermination, the cities of Israel would be in ruins, her people decimated, and her proud progress toward industrial and agricultural self-sufficiency destroyed.

Time is very short, the Secretary of State must make a strong statement of policy that we tolerate no changes in the status quo. We must ship Israel the arms she needs without delay. America must recognize its responsibility to preserve a foothold of democracy in a hostile feudal land.

The Arabs are not arming themselves for peace. Such arming means only one thing—war. The time to act is now. The price of delay will be too high to bear.

I insert into the RECORD at this point an editorial written by my good friend Mr. Philip Slomovitz in the Detroit (Mich.) Jewish Daily News of March 16, 1956, expressing some of the grave concern shared by all right-thinking Americans over the troubled situation in the Middle East and the grave danger of America's good friend, Israel:

THE ANTI-ISRAEL GAME MUST END

It is the misfortune of the embattled Israelis—the isolated group of true democrats who are surrounded by 45 million sufferers from a medieval feudal system—that Secretary of State Dulles is the partisan in the present crisis, while expressing lip service to impartiality. Nasser Tells All was the subject of an editorial in the New York Post in which an Arab endorsement of the State Department's policies is exposed in all its sinister colors. We wonder whether State Department officials blushed when they read this portion of the Post editorial:

Secretary Dulles has often affirmed the "impartiality of the Eisenhower administration in the deepening Arab-Israel conflict. But the form of America's so-called neutrality is apparently satisfactory to Egyptian Prime Minister Nasser. In an interview with a Herald Tribune correspondent, Nasser has clearly and frankly expressed his hope that President Eisenhower will be reelected.

Nasser's pronouncement is as revealing as it is indiscreet. If Israel's Ben-Gurion were to proclaim his support for a United States presidential candidate, there would be an instant outcry from the American Friends of the Middle East and all the other front-organizations of the Arab propaganda machine. Charges of Israeli meddling in United States domestic politics would flood our press.

Nasser's readiness to issue so tactless a declaration dramatizes the extent to which the Arab chieftains have been emboldened by Washington's rebuffs to Israel.

It is more than a pity: it is a tragedy that the statesmen of the world are blundering so shamefully in their approach to the Middle East problem.

Overnight, as a result of its having been booted out of Jordan, British politicians have changed their tunes. Instead of accusing Israel of acting the role of an aggressor, they now say that the Arabs represent the threatening element in that area. The about-face is in itself an admission by the British of having played a shocking game of power politics which has boomeranged, which has proved to be unwise, which may hurt Great Britain more than Israel.

Our own Government has unwisely supported British policies. Our State Department's spokesmen have resorted to lip service in assuring Israel of friendship, while arming Israel's enemies with weapons for the destruction of Medinat Israel. We call it unwise, because the jittery people who fear the loss of airbases and oil supplies are not aware of the values of American relationships to the peoples involved; they do not realize that no other country on earth can compete with what the United States has to offer—in friendship, in monetary recompense for goods received. We doubt whether any Arab country would sacrifice America's friendship for Russia's promises. But the blackmail tactics of Arab potentates, who keep their peoples in serfdom, has worked wonders in pressuring our State Department into an anti-Israel position. Some American politicians are writing unpleasant chapters into our history. We pray that the evils accompanying their yielding to unsavory pressures intended to destroy a small people should be erased from our records, even if they cannot be erased from our memories.

There is a basic principle, an incontrovertible truth, that is being overlooked in the discussions of the Middle Eastern situation. It is the reality of Israel's existence. In an article in the Twentieth Century magazine, Mary Stocks, while expressing a sense of disturbance over the existence of an Arab refugee problem, while she stated that she does not find it difficult to understand the hatred Arabs feel toward the Jews, nevertheless declared:

"What is less understandable and wholly regrettable is the attitude of those English and American friends of Jordon who are giving devoted service to the cause of Arab social welfare, but withholding one thing necessary to Arab salvation, namely, a sympathetic intellectual leadership in facing the horrid truth that Israel has come to stay, that there can be no return to the abandoned acres, and that there is a cause for the existence of a Jewish national home."

This is the truth that is being ignored either deliberately or blindly, by men who call themselves statesmen; by politicians who pose as diplomats. Else, they would have to recognize the injustice inherent in an attempt to call a small people of 1,700,000 occupying 8,000 square miles of land, encircled by 45 million people living in an area of 3 million square miles, as being the aggressor.

How can we possibly view spokesmen for governments, who encourage suspicion of a small people fighting for its life and asking only for the right to protect itself, as being anything other than endorsers of genocide?

This is our accusation of those who are placing obstacles in the path of Israel's fight for existence. We challenge them to disprove it. We demand of them that they end their unfortunate anti-Israel game before it is too late. The peace of the world is involved, and those who will make it difficult for Israel to defend herself, thereby bringing the Middle East nearer to war, are bringing the entire world nearer to war.

The Nation's Natural Resources

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. BUDGE. Under leave to extend my remarks, there follows a column written by Mr. John Corlett and which appeared in the Idaho Daily Statesman published at Boise, Idaho, on March 17, 1956:

Conflict in the problems of administering development of the Nation's natural resources was stressed recently in a speech by Clarence A. Davis, Under Secretary of Interior.

Davis, a former solicitor for the Department, rose to the Under Secretary job when Ralph Tudor resigned to return to private

business. Davis is a man who is opposed to Federal domination of natural resources, unlike the officials of the Department of the Interior under former President Truman.

Parenthetically, it might be said here that Davis is about as good a candidate President Eisenhower could find to become Secretary of the Interior when Douglas McKay resigns after the Oregon primary in May.

Davis speaks better for himself rather than to be paraphrased. He was addressing a convocation at Shepherd College in West Virginia last week and his topic was The Conservation of Natural Resources.

After outlining the problems of the Interior Department in water and other natural resources development, Davis said:

"The control of water means the control of the land and people which depend upon the water. Availability of hydroelectric power may control not only the location of industry, but through the rate schedules it establishes and the selection of its customers, control the economy of a region.

"The concentration of the control of water solely in the Federal Government, places large areas of the United States under the practical domination of Federal departments. This result, of course, is completely contrary to all of our conceptions of local self-government and individual responsibility. It robs individuals of that opportunity which has always been the hallmark of America, and it substitutes the judgment of distant bureaucracy for that of local landowners and communities."

Then he went on to say that "the storage of water, eqaulization of streamflows, the construction of dams for the amelioration of flood damage, the elimination of water pollution are all matters with which we must proceed continuously."

He told his listeners that the field of natural resources development is one "in which there are many inherent conflicts."

"Things that appear important in the eyes of one group seem utterly unimportant to another equally dedicated group," David said, and continued: "Whatever is done, therefore, will be wrong in the eyes of some people, and since most of these groups are organized with paid secretaries and adequate press facilities, no matter how some of the controversies over resources are resolved, there will be loud complaint from somebody.

"For instance, Interior is charged with the development of irrigation works and hydroelectric power on many of our streams. If you don't build the dam you are failing to develop our natural resources. If you do build it the holding back of the water is apt to be destructive of the fishing interests downstream, or, as in the Northwest, it may prevent the fish from going upstream to spawn.

"If water is held back behind dams for summer irrigation uses, the holding it back obviously interferes with the normal flow of the stream and with the vested rights of downstream landowners.

"The Department can't dam up a canyon to hold back water for hydroelectric or irrigation purposes without affecting the natural scenery, covering up some land, possibly covering up some minerals, and doing an injury to wildlife.

"If the Department tries to hold wildlife refuges completely inviolate, then the oil will be drained out from under some of them by adjacent wells, and the Department will be criticized for the loss of the oil resources. If oil drilling on the refuge is permitted, the wildlife people will complain that it is destructive of wildlife.

"The Department is the protector of migratory birds, but when ducks by the thousands settle over the lands of farmers, it has to make the decision as to whether it will permit the farmers to be ruined or will face up to the accusation that it is permitting the destruction of ducks."

Davis concluded his talk by saying that resource conservation was the job for all, and added:

"We are dedicated to the proposition that all wisdom does not originate in the District of Columbia, and there we congratulate your State (West Virginia) on its forests, its parks, its mines, its fuels, the improvement of its waters, the self government over these matters which you have asserted, and the responsibility you have assumed. We ask only for continued cooperation."

That is a refreshing statement from a responsible official in the Federal Government who refuses to become a bureaucrat and many, many Idahoans will agree wholeheartedly with him.

Only Americans Can Defend America

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. GROSS. Mr. Speaker, Brig. Gen. Bonner Fellers, retired, appearing at a For America rally in New York's Carnegie Hall on February 22, 1956, delivered a speech which I wish every American had the opportunity to read and ponder.

Perhaps through the medium of the CONGRESSIONAL RECORD it will reach a greater number of readers. It is for this reason that I submit for printing the following speech of a great American:

ONLY AMERICANS CAN DEFEND AMERICA

(By Bonner Fellers, brigadier general U. S. Army, retired)

If world war III comes, the decision will come from the sky. It will come quickly. There will be no time to prepare. Trained troops, manning the weapons on hand when the fight starts, will decide our destiny.

A quick decision from the sky is a wide departure from long drawn out past wars. This new concept astonishes many people because it is not well understood. And it must be explained over and over.

SURFACE CONCEPT FALLACY

The western armies cannot defeat the vast armies of the Soviet Union. This fact has nothing to do with communism. It has been true for more than a century.

Napoleon defeated the Russian Army. He captured and sacked and burned Moscow. Then Russia's eternal allies, distance, winter and unlimited manpower turned on Napoleon and he escaped into Europe with 30,000 sick and hungry stragglers. Hitler attacked the Red army with 220 Nazi divisions. He lost 5 million men. And he failed.

Our fleet, larger than the combined fleets of the world, cannot deal a knockout blow against the Soviet Union. Even a complete blockade would not have a decisive impact. The Soviet Union is immune to this traditional form of pressure. Deep within her borders she has all the resources and industrial productivity needed for total war.

This is not to say that we no longer need a modern Army and Navy. They are both essential. But in the light of air power, the missions of the Army and Navy—in a war against the Soviet Union—have changed.

Against the Red armed forces, neither the fleets nor the armies, nor the armies and navies combined of all the Western Powers can be decisive against the Red armed forces.

THE RED THREAT

The United States, thanks to ocean barriers, is safe from a major Red army attack. But the Red air force and submarine-launched guided missiles can strike the United States. These two threats are real, immediate, and inescapable.

The greater of these threats is from Red intercontinental bombers. These bombers—an estimated 1,500 in number—based in the Soviet Arctic, have the capability of flying over the polar cap and dropping nuclear bombs on our military installations, industrial areas, and population centers.

The second threat is from submarine-launched guided missiles carrying atomic warheads. The Reds have some 400 submarines which could surface off our coast and unleash an atomic assault against our coastal cities and harbors.

To meet these Red threats the United States has instituted a number of defensive measures. Most of these, unfortunately, are excessively expensive and hopelessly inadequate.

THE NATO FALLACY

Our leaders have created widespread belief that European NATO forces are essential for the survival of the United States.

A one-time Army Chief of Staff has testified before the Congress:

"Our troops in Europe are not there simply for the defense of Europe. They are really there in defense of the United States."

And only 15 days ago the NATO Supreme Commander, our own General Gruenther, said:

"Our participation in this enterprise (NATO) is a matter of our own survival."

But NATO as a military force, capable of defending Western Europe and thereby protecting the United States is a pure humbug. Red ground forces, facing the NATO defense forces, outnumber them some 10 to 1. The Red Air Force, thoroughly modern—and approaching our own in quality—has five times the numerical strength of the European NATO Air Forces.

We are attempting to hold Europe with a ground force too weak to meet the Red Army. NATO ground forces are supported by a NATO Air Force in Europe too small to defeat the Red Air Force. So great are the odds in power ratio against NATO, that Germany's proposed 12 divisions and 1,300 aircraft—possibly availble in 1959—cannot materially improve the situation.

Our leaders are giving us a distorted estimate of NATO strength. They represent NATO power as continuously increasing. The truth is our European Allies have already passed the peak of their military effort. Content to receive lavish American aid, they rely on us to defend them should the Kremlin strike.

NATO in Europe is not a war deterrent because it is not feared by the enemy. Nevertheless, a successful NATO holding operation along the Rhine—were this possible—would not and could not prevent Red air attacks against the Untied States from Soviet bases in the Arctic. Nor would a success along the Rhine prevent submarine-launched missile attacks against our coastal cities.

The United States cannot look to European NATO even for partial security.

THE COLLECTIVE-SECURITY FALLACY

Collective security sounds wonderful if one does not stop to think. This concept contemplates that each nation contributes what it is best able to contribute. Some are rich in manpower, others in natural resources, still others are industrialized. The collective concept envisages that these resources, someway, somehow, will be integrated into a terrific striking force. In the words of General Gruenther, "Collective security is the only answer."

Collective security was tried in Korea. And except for the South Koreans, the United States provided more than 90 percent of the forces and probably paid all the bills.

However, if world war III comes, decision will be reached from the sky. Manpower

will not be the decisive element. And, if our leaders continue to force the manpower concept upon us, we shall lose, because Red manpower vastly outnumbers us. Of all our allies, only Great Britain has an appreciable air force. And this air force is not large enough to defend the United Kingdom.

Despite the weaknesses of the collective-security concept, it has become the basis of our foreign policy. It appears that our foreign policy is induced by the herd instinct. Our top leaders believe that the more people we have on our side, the safer we will become.

The truth is, manpower, no matter how great, cannot defend us against Red bomber and submarine-launched guided-missile attack. Thus, in reality, our allies constitute and additional American defense obligation.

State Department alliances may have political and economic and psychological advantages, but in war we cannot and we dare not depend upon allies to defend us.

THE LITTLE WAR FALLACY

Ardent propagandists, and even high officials, attempt to resolve our defense problem by urging that we should fight little wars and thereby avoid the big ones. There are five so-called little wars now on the horizon. If any 1 of them should start, we may depend upon Kremlin leaders to kindle the other 4.

One little war may start in Palestine—possibly in March. The consequences of our participation would be disastrous. Aid to Israel would engender the hatred of 400 million—traditionally friendly—Moslems. Our participation might be the signal to the Red army to occupy Iranian and Arabian oilfields where lie more than half the known oil reserves of the world.

Our leaders must awaken to the gravity of this explosive situation. Let us pray that they will have sufficient character to stay out of this one—should it come.

A revolution rages in north Africa. American helicopters and French forces with American equipment from NATO in Europe are killing Algerian and Moroccan patriots who seek the independence we ourselves won in 1776. Here American air bases are endangered.

Another little war may be kindled in southeast Asia. There is fighting in Malaya.

A fourth little war is possible in Korea. On the 38th parallel, fighting could be resumed by either side. In either case the matter is out of our hands—but not the obligation.

A fifth little war could start in the Straits of Formosa. We are pledged to enter—and we should be—and the enemy would be the same Red dragon, with much stronger claws, which we failed to slay to Korea. If MacArthur had been permitted to win in Korea, much of our trouble today would have been ended.

In these turbulent areas, Communist propaganda effectively exploits the tension and turns the population against the United States.

It is possible that while trying to avoid the big war, we might be drawn into all five little wars. Meanwhile, the Red armed forces of the Kremlin, waxing stronger with not a single man committed to battle, might decide the time was ripe to strike the United States. By this time our own losses might have become so great and our effort so diffused that our utter destruction would be inevitable.

All this could come about by fighting little wars to avoid the big one.

THE CONSCRIPTION FALLACY

A 5-million trained United States Reserve is now being created. What this Reserve is for is nuclear. But it is certain that it could neither stop nor influence attacks against us from Red bombers and guided missiles. Should the next world war come, the decision will be reached before the ground Reserves could be mobilized. Let us not be deceived that our proposed 5-million Reserve can defend our country.

THE BASE ENCIRCLEMENT FALLACY

Much publicity has been given to our ring of Allied airbases around the Soviet Union. Magazines publish attractive maps in color showing devastating massive arrows leading from these bases and pointing to the industrial heart of the Soviet Union. It is a graphic presentation of how easily and quickly our potential enemy could be destroyed.

What this map fails to show, is that the Red air force has some 20,000 modern combat planes, instantly ready, and that this is roughly 3 times the number of combat planes in the entire United States Air Force. There is also the dire certainty that this Red air force will strike first. And this air strike may well consist of a sudden and simultaneous all-out effort to drop nuclear bombs over each of the Allied airbases which encircle the Soviet Union.

After the initial air strike, we would be compelled to fight the war with the weapons which survive the first enemy blow.

Moreover, some of our airbases overseas may suffer damage from sabotage. Other overseas airbases will be denied us by powers which seek to remain neutral; others may be captured by the Red army.

The nearer our bases are to the Soviet Union, the more likely they are to be destroyed. It is a certainty that they will suffer great damage. Even the vaunted and expensive floating carrier bases are vulnerabled to Red air force attack. And they would be the natural prey of the Red submarine fleet which stalks them from underwater cover. Thus, the true value of close-in Allied bases is more apparent than real.

Nevertheless, we should retain our overseas airbases until we have a sufficient number of B–52 intercontinental bombers.

THE TRUE DEFENSE

If the Kremlin unleashes an air and guided-missile attack against us, only our own Air Force, if stronger than the Red air force, and our fleet, supported by air power, can defend the United States.

Only air power can deal a knockout blow against the Soviet Union. If war comes, strategic bombers—if sufficient in numbers—can destroy Soviet industry and the Red airbases in the Arctic and elsewhere. And they can deny supplies and munitions to the Red army. Thus, airpower is the true war deterrent because it can destroy the enemy.

Air power can be decisive in war. The United States Bombing Survey, composed of our most eminent civilian scientists, objectively reporting on our World War II air attacks against Germany and Japan, found that:

"Enemy planes enjoying control of the sky over one's head can be as disastrous to one's country as its occupation by physical invasion."

The foregoing is irrefutable. The power which possesses the better air weapons, which can strike the more deadly and quicker blow, can gain the decision, if the next war comes.

What we must never forget in America is that this decision must be won with personnel already trained, manning the weapons on hand, when the war starts.

WESTERN HEMISPHERE SECURITY

From our present bases in Alaska, Labrador, and Greenland, our heavy bombers and medium bombers with inflight refueling, can strike and return from any target in the Soviet Union.

From bases in Labrador, in the United States, and in the Caribbean, heavy and medium bombers can defend our Atlantic coastal frontier.

From bases in Alaska and the Philippines our bombers can dominate the Asiatic coast from the Bering Sea to the Straits of Malacca and thus defend our Pacific frontier.

Bombers of our Strategic Air Command can fly in bad weather and at night. With electronic aids they can hit and demolish their targets. If our Air Force possessed 2,000 bombers of the B–52 class, this threat would so impress the Kremlin that the chance of world war III would be very remote indeed.

And were war forced upon us, these bombers, together with ample fighter interceptors, would give us an invincible defense and a quick victory.

It seems evident that the only bases which can adequately be defended against bombardment, sabotage, ground attack and guided missiles, lie almost entirely within our own Western Hemisphere. And although contrary to foreign policy, our planners are being forced inevitably to come to the only solution to our survival in total war—a Western Hemisphere defense.

Because of these facts, a gradual withdrawal of American troops from the Eurasian mainland is the only sensible course. This would enable us to reduce our Army and Navy.

A strategic reserve of some 10 divisions should be created. Based in the United States and streamlined to be air transportable, this modern air army could be flown where needed, in a matter of hours. Our airbases in Alaska, vulnerable to Red airborne attack, require this type of reinforcement which is not now available.

Our Strategic Air Force is the best in the world, but it is a one-shot air force, limited both by available trained personnel as well as bombers. The advantage it once held over the Red air force is now rapidly being lost. Our 1957 aircraft procurement is a continuation of the steady reduction instituted 3 years ago; it is a reduction of 20 percent over the 1956 budget.

Meanwhile the program for Red air force expansion is being tremendously accelerated. Unless our Air Force program is immediately expanded, we shall have lost our air advantage within 2 years.

To depend upon Western Hemisphere bases means that the Air Force must be allocated funds to procure an ample supply of intercontinental bombers. Planes of the B–52 type are admirably suited for this work but, for lack of funds, they are being produced at an exceptionally slow rate. We should have 2,000 of these superb bombers within the next 5 years. At present, the Air Force procurement funds permit the production of only 25 percent of this number.

This is no plea for increased defense spending. But it is a plea that no defense item should be allowed to take precedence over the creation of a greatly increased strategic air force. This is a plea for an Air Force which can withstand initial losses and have the numerical strength and capability of striking back effectively after the initial blow.

There must be a shift in the emphasis of defense spending. Since our surface forces cannot be decisive, Army and Navy budgets can safely be pared. Foreign aid now has an unexpended fund of $9 billion. No more should be appropriated.

Such a reapportionment of military spending would save billions of dollars. It would all but guarantee peace. It would guarantee the best possible defense and victory, should war come.

The hemisphere-defense concept is not an abandonment of our European and Asiatic allies. Without a strong hemisphere defense, we can support no allies anywhere. Without the assured survival of the Western Hemisphere, without a striking force based principally in North America and capable of

atomic assault anywhere on the globe, the whole free world is doomed.

It is commonsense, that before we can gamble on any overseas military undertaking, we ourselves must have a strategy which will guarantee our survival here at home. This we have failed to do. Despite our vast expenditures, we are not buying adequate defense.

The Soviet Union is the base from which emanate all activities dedicated to world communization. If it is certain that world war III will destroy this base, the Kremlin will scarcely dare to strike.

Only by the immediate creation of overwhelming American airpower can we prevent war—and thereby, save ourselves and our allies.

Only Americans can defend America.

A Lesson in Integration

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 22, 1956

Mr. HUMPHREY. Mr. President, I wish to call to the attention of my colleagues a feature article which appeared in the Minneapolis Star of Tuesday, February 21, 1956. This article entitled "Minneapolis Neighborhoods: Sixth Avenue North—Lesson in Integration," was written by one of our most able and beloved writers and reporters, Mr. Abe Altrowitz.

He, above all others in Minneapolis, understands and knows the people of that great city. Abe Altrowitz was born in Russia. He came to America while yet a boy. His life is a testimonial to the valuable contribution of those immigrants who enriched our land by their cultural patterns, their faith, their talents, and, above all, their devotion to liberty and justice. I have known Abe Altrowitz for at least 15 years, both as a friend and as a reporter. He likes people and they like him. It is because of this love of people—yes, people of every race, creed, color, and national origin—that he is so gifted and talented in telling the story of people.

His article on Sxith Avenue North, Minneapolis, is a moving study in human relations. Sixth Avenue North, Minneapolis, is a little United Nations. People of all walks of life have learned how to live together, work together, and build together. As a citizen of Minnesota, a resident of Minneapolis, and one who was privileged to be the mayor of that beautiful and wonderful city, I take particular pleasure in calling to the attention of my colleagues in the Senate this living and practical lesson in human relations, that is, Sixth Avenue North.

I ask unanimous consent that the article by Mr. Abe Altrowitz be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

This is about the district which can be identified best by calling it Sixth Avenue North, though the thoroughfare itself now is Olson Highway.

Sixth Avenue North has been on the receiving end of enough jokes to make Joe Miller turn over in his grave, but it also has been the locale for some top-notch Cinderella stories.

It was, for instance, the home of a Negro girl named Hilda Moses, who grew up to become the celebrated actress known as Hilda Simms.

It was the home of a Jewish boy born Avrom Hirsch Goldbogen, now known as the theatrical producer Mike Todd.

And it was the home of a tall, slender Swedish lad named Floyd B. Olson, about whom many have said that "had he not died a governor, he might have lived a President." A statute of Olson stands on the highway's center strip near Penn Avenue.

Should a touch of nostalgia creep into this story of Sixth Avenue North, don't blame the avenue. Blame me. It's where I grew up.

In fact, I'm even going to tell a bit about myself, not to flatter my own vanity but because to considerable extent it's a pretty fair pattern for the district.

I was born in Russia, son of Leibish and Rachel Alterovitch, later Anglicized to Altrowitz. Father came to Minneapolis in 1900. A bookbinder by trade, he preferred to become a peddler "on his own" rather than work on Saturday, the Sabbath.

Two years later he was able to send for mother and four children: Sam, Abe, Lillian, Dora. Two children were born in Minneapolis: Robert and Nathan.

The family home for years was at 815 Girard Avenue North, which is a bit more than two blocks from Sixth Avenue. Eldest of the six children went to work before finishing grammar school. But the youngest obtained a bachelor's degree at University of Minnesota and a master's degree at Fordham University.

Change the names, dates, street addresses and—no matter what the creed or national background—the pattern still holds for countless families.

They landed in the district, grew in the district, and then moved their separate ways.

Even the physical picture of Sixth Avenue North isn't what it used to be. Many old structures were wiped out to make room for Sumner Field homes, Federal low-rent housing project. Other structures fell to permit conversion of the streetcar route (Fourth Avenue South and Sixth Avenue North) into a modern divided highway.

Many more structures are slated soon to go for the Glenwood redevelopment project.

Designed for destruction are such old landmarks as the Kistler Building at Sixth and Lyndale, the Church of God and Christ, on Lyndale just south of the highway (which used to be the old Kenesseth Israel synagogue), the wall-and-rubble remains of what once was Sumner School, as well as the oft controversial Rose Bros. Lumber & Supply Co. at 1221 Olson Highway.

(Incidentally, L. S. Rose, company board chairman, said his firm is going to bid on the demolition job for the redevelopment project "and maybe the wreckers will wreck the wreckers."

The Sixth Avenue North district might be said to include the area from Olson Highway to Plymouth Avenue and from Lyndale to Knox Avenues.

Its inhabitants are largely laborers, craftsmen, clerks, and service workers. The last Federal census gave the district's median annual income as $2,291, with rents ranging from $19.17 to $62.27 a month.

Family backgrounds are of wide range. Jewish and Negro form substantial groupings.

In many areas what's called integration is little more than a much-discussed abstract ideology. In the Sixth Avenue North district it's a matter of practical everyday living. It's something readily recognized when talking with:

Henry R. Thomas, head resident of Phyllis Wheatley Settlement House at 809 Aldrich, named after the African-born poetess of American Revolution days, whose tribute to George Washington gave the Nation the now legendary phrasing: "First in war, first in peace, first in the hearts of his countrymen."

Mrs. Donna Shapiro, librarian of Sumner branch library at Sixth (Olson Highway) and Emerson.

The late Miss Adelaide Rood, for years Sumner branch librarian.

Fred A. Hadley, housing manager for Sumner Field homes.

Miss Vivian Ryan, principal of Grant School at 12th and Girard, with its enrollment of nearly 900 pupils, about one-fourth Negro.

Mrs. Joseph (Lillian) Blumenthal, Grant PTA membership chairman, residing in Sumner Field homes just a few feet from the site of Governor Olson's boyhood home at 1013 11th Avenue.

Mrs. James (Ruth) Niman, 800 Irving, editor of Grant School News, a biweekly mimeograph, who refers to the neighborliness as a blending of activity in which no one appears race conscious.

Mrs. Joseph (Sarah) Groll, 811 Girard, 14 times a grandmother.

James W. Posten, 541 Girard, past commander of Johnny Baker Legion Post, with its membership of 150 Negro veterans.

Mrs. Leota Tanner Crockett, 626 Fremont, whose daughter-in-law, Mrs. Theodore Crockett, is a member of the Grant School PTA board, and whose son, Tanner, grieved no end when Governor Olson died.

Mrs. Theodore Dean, who considers it a pertinent commentary on community attitude that she, a Negro, has been elected president of the Grant PTA twice and is now finishing her second term even though the family has moved from Sumner Field homes to 2745 Clinton Avenue.

From all of these persons you get the story of integration. But beyond integration, life along Sixth Avenue has run a full gamut. It has had its heroes and its villains, its drab, and its picturesque.

Brochin's delicatessen store, which drew epicures from all parts of town, used to stand at Sixth and Lyndale.

At Sixth and Dupont, virtually straddling Bassett's Creek, was the Liberty Theater, one of the city's first neighborhood movie houses.

Not the least of its claims to fame was the appearance in Yiddish theatricals of a young man named Weisenfreund, who later gained international fame as Paul Muni.

Over her 37 years as branch librarian, Miss Rood stored up a host of memories of the old Sixth Avenue. She recalled many of them before her death last December.

One of the most vivid in her recollection was an episode involving a neighborhood bad boy. He was the son of immigrant parents, a problem both to them and to the library. Miss Rood called on the parents and suggested that some home discipline might be of value. The mother stared at her and said:

"Oh, but in America that's against the law."

"Against the law to spank a child."

"Oh, yes," quite firmly. "He told us so."

"He—who is he?"

"Our boy."

"Good Lord," said the librarian, and forthwith explained the facts of American disciplinary life.

In the bootleg days Sixth Avenue had its fair share of "moon" dispensers and some became Government "guests." There was great surprise along the avenue 1 day when 1 of the top-rung boys suddenly announced he was all through.

Asked why, he said, "It's gotten so now that if you're going to bootleg you've got to carry a gun. And I'm not the gun-carrying kind."

He shifted into a legitimate business and attained considerable success.

To me, a couple of the most fascinating individuals were a young medical student who lived at 702 Girard—he's Dr. David Ellison, executive vice president of the Twin City Rapid Transit Co.—and a plumber named Adam Meldrun, who lived at 804 Girard, and whose hands looked like leather. Meldrums's hands always fascinated me.

Years later I came upon Meldrum at Sixth and Humboldt. He had just struck a match to light a cigar. But instead of lighting it he began to talk of old times.

"Be careful," I cautioned, gesturing toward the burning match.

"Oh, that," he said.

He put the burning match on a leathery palm and let it burn itself out. All I could do was stare.

Community of Nearly a Million With No Voice in Its Affairs

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 9, 1956

Mr. PELLY. Mr. Speaker, about a month ago a local citizen called on me in my office to enlist my interest in restoring to the inhabitants of the District of Columbia the powers of local self-government. I must confess up until that time I had left this home-rule issue to the appropriate congressional committees; nor had I ever investigated the merit of this matter very closely.

My visitor, advocating the basic privilege of citizenship and the voting franchise, gave me some material and after she left I sent over and obtained a copy of the hearings before the Senate District Committee on S. 669. After reading the testimony and learning the details of this proposed legislation, I decided to become active in supporting this bill. In this connection, I include an editorial which appeared in the Seattle Times of March 18, 1956, which I urge Members to read:

COMMUNITY OF NEARLY A MILLION WITH NO VOICE IN ITS AFFAIRS

Residents of the District of Columbia and the Nation's Capital City have renewed their campaign, on a nationwide scale, for full enfranchisement as citizens of the United States. They want the right to vote, and the right to conduct their own self-government.

The fact that the people of the District of Columbia do not have home rule, and cannot vote for the President who resides in their midst, is an anachronism of long standing. In 1874, because of some municipal debt crisis, Congress took over the municipal government of Washington as a strictly temporary measure. Like many temporary measures, this one has been continued for close to a century. Congress has never been able to agree on a suitable form of government. Voting privileges of the Capital's populace have never been restored.

With a population of 853,000, Washington, D. C., pays almost a billion dollars into the Federal Treasury each year in taxes. There are 25 States of the Union whose people contribute less than that amount to the cost of the Federal Government. District of Columbia taxpayers have nothing to say about how their tax money is spent. They also pay some $112 million a year in municipal taxes, and defray 85 percent of the cost of running their city. A committee of Congress serves as a municipal council under this anomalous arrangement.

Yet the national platforms of both political parties in 1952 included planks favoring home rule for the National Capital. All four of President Eisenhower's messages on the State of the Union have urged that the principle of self-government be extended to the District of Columbia and the right of suffrage be granted to its citizens.

In recent years, the Senate has passed three home-rule measures, and each time the legislation has been pigeonholed by the House District of Columbia Commitee. The latest of these Senate bills, enacted last year, is in the hands of that committee now.

This is a question of chief interest to the people who reside in the shadows of the Capitol and the White House, but it is a matter of concern also to the rest of the country. The American colonies fought the War of the Revolution to escape the burdens of taxation without representation. Almost 2 centuries later, residents of the District of Columbia still are in that undesirable situation.

The House of Representatives will be remiss if it permits the Senate's home-rule measure to expire in the files of a committee. Self-government legislation for Washington, D. C. should be enacted during the present congressional session.

The Portland Art Museum and Thomas C. Colt, Jr., Director

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, March 22, 1956

Mr. NEUBERGER. Mr. President, in my home community of Portland, Oreg., there is great local pride in the Portland Art Museum and its collection of art treasures and exhibits. In view of the great interest in Washington, D. C., in the Finley exhibit and elsewhere in the Nation in other great treasures of art, I ask unanimous consent that a most informative and rewarding article from the Sunday Oregonian magazine of March 11, 1956, about Mr. Thomas C. Colt, Jr., the director of the Portland Art Museum, be printed in the Appendix of the Record.

The article is by Harold Hughes, staff writer of the Oregonian, and deals with the achievements of Mr. Thomas C. Colt, not only in the field of art but also as the commander of United States Marine Corps Air Wings in the South Pacific during World War II.

The article about Mr. Colt and the Portland Art Museum is entitled "Portland's Colt Is Loaded With Art."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PORTLAND'S COLT IS LOADED WITH ART

(By Harold Hughes)

The northern light from a two-story iron-fretted window in the office of the director of the Portland Art Museum shines on the lively colors of two impressionist paintings that hang comfortably in the big easy room.

At a desk in front of the window sometimes sits Thomas Clyde Colt, Jr., puffing pipe smoke in the direction of the two oil paintings. Nothing in the calm outward expression of the 51-year-old director indicates he became Portland's biggest showman March 3 when, in the lexicon of the movie makers, he "world premiered" at the Portland museum $5,500,000 in paintings and $700,000 in sculptures from the Walter P. Chrysler, Jr., art collection.

The catholic range of the 101 paintings and more than 400 pieces of sculpture soars from African primitives to the grand masters of the 16th century and the cubist abstractions of the giants of the 20th century. The drama and scope of the exciting collection are more characteristic of Tom Colt than are the great works of Claude Monet and Camille Pissaro that hang in his office.

The fabulous assemblage of the great art of the ages expresses perfectly the feeling of the Portland museum director that recent art should be placed in context with the past and that those who are wedded to the old masters will benefit from a visit with the moderns.

It is not easy to write about Tom Colt without writing about the art world that enraptures his life. Most of Colt's colleagues agree it is difficult to know a large part of his quiet personality; that the ex-book reviewer of the New York Times expresses himself best when writing.

It has also been suggested that Colt is "really so busy presenting the whole range of the art world that he has no time to preent himself."

Director Colt, with his air of quiet detachment and shy urbanity, presents the believable facade of a museum director as he calmly appraises the unpacking of a Rubens or a Renoir.

It is only when the covering brush work is lifted from the canvas of this man's past that another Colt is found—Colt, the stunt-flying marine pilot; Colt the youthful writer of two unpublished novels; Colt the commander of tactical marine air strikes at Okinawa, Iwo Jima and the Marshalls.

Here is a Colt who harkens back to a distant ancestor, Samuel Colt, inventor of the six-shooter that conquered the West.

The Colt whom Portland knows, however, is conquering the West with a "persuader" that fires slugs of art point blank at the region.

Colt, with 2 other art experts, spent many difficult days in New York selecting the 101 paintings that came first to Portland and which will travel to 8 more museums after leaving here April 15.

The sculpture collection will stay here at least a year. But the paintings will be on the road for more than a year before they spend themselves at the Museum of Fine Arts in Boston in the spring of 1957.

Colt has known Walter Chrysler since their days at Dartmouth College. But having friends in high places does not hang the cultural heritage of western civilization on the walls of the park block museum building.

An incredible amount of planning and hard museuming stands unnoticed behind the traveling Chrysler show, from the smallest painting, a 9- by 8-inch Holy Family painted by Francesco di Guardi in the 1700's, to the largest, the famed Nympheas, a 19-foot-wide canvas painted by the French impressionist, Claude Monet in 1922.

It cost $100,000 and the efforts of the finest minds in the scientific business of art conservation to condition the paintings for travel across the continent to visit 9 major museums. Like people, old masterworks get "tired" if moved around too much.

A 400-year-old painting, once it gets used to dry, hot air, will bubble like a pot of hot porridge if popped into Portland's humid air without acclimatization.

So priceless is the collection now showing in Portland that no insurance firm in the world would underwrite it for much more than half of its full value. Moving vans were used for the trip west to avoid excessive jarring and loading.

Since the journey was to be made in winter when the humidity of the east coast is similar to that of Oregon, it was agreed after long, scientific powwows to dispense with proposed special humidifiers and heating equipment for the vans.

Engineers figured each of three vans would require enough heat to warm two 6-room houses, thus creating a fire hazard. So heat was eliminated and a southern route plotted to avoid extreme cold. A secret route, the alerting of local police along the way, and a wartime security program were cloak and dagger wrapped to discourage highjackers.

Even though much of the collection had never even been viewed by art critics, it had been cataloged and photographed. A thief would find it easier to pass Confederate money than to dispose of one of the pictures.

"Only an insane person would attempt to steal a work," Colt said during the anxious days of the journey west.

The Portland museum director took in stride such sudden problems as the refusal of the insurance firm to move 14 of the paintings the week before the shipment was to leave the Chrysler warehouses in New York. Insurance inspectors feared the 14 would not stand the journey west to Portland or future trips to museums in Seattle, San Francisco, Los Angeles, Minneapolis, St. Louis, Kansas City, Mo.; Detroit, and Boston.

To satisfy the underwriters, all available art conservationists in the New York area were rounded up and put to work sticking down pigment flakes, filling cracks, and strengthening the canvas of the indigent works.

Countless other problems, not the least of which was arranging a schedule for all nine museums, beset Colt once he went after the Chrysler collection.

One Portland museum worker, who sometimes had despaired of ever seeing any 1 of the 14 Dutch-Flemish, 4 Spanish, 5 English, 29 Italian, 22 French, and 27 moderns, arrive in Portland, said happily when the first shipment came in:

"Tom has been full of good surprises."

Colt was the triggerman throughout 2 years of planning for the visitation.

His talent for organization, his political penchant for making concessions of the moment in order to win future Blenheims, an enthusiasm for art that sometimes keeps him happily at work until 3 a. m. and a professional sincerity and integrity are some of the characteristics his admirers believe have helped Colt fan national cultural recognition for Portland.

In 1948 when Thomas Colt came to the park block museum from the Virginia Museum of Fine Arts in Richmond, almost his first act was to demand an operation on the Portland museum, warning that the patient is slowily bleeding to death. He offered in a 20-page report a plan that Dr. R. F. Arragon, then president of the museum board, called bold and constructive. Colt got more money for building repairs and museum staff and began to boost membership.

He promised to make the institution the dominant museum of the West. Recently Colt was asked how close he had come to his goal after 8 years. He said, "We've got a long way to go to make this a great museum," then a smile, which no matter how often seen always comes as a surprise, lit his face as he said:

"But certainly today it is a dominant museum."

He then told a story about a museum director, dissatisfied with his job, who complained to Colt.

"I asked him where he would like to work and he replied, 'Oh, I want to be with a great museum—like the Portland Art Museum.' "

However, Colt did not drop into a cultural void when he came to Portland. He found an art museum that had been exciting the community for more than 50 years. Portland had an edge on many larger cities, thanks to the support of the city's early families.

Pietro Belluschi, later to become world famous as an architect, had designed the museum. Countless contributions from Portlanders had been pouring in through the years when many outsiders considered the city an uncouth port and raw gathering ground for wild loggers.

Colt, a native of Orange, N. J., had hardly arrived on the Portland scene before there was a minor revolt of a group of Oregon artists who accused Colt of "progressivism" and got this reply from the ex-marine:

"A museum director is always walking on eggs. I think the one who does not break a few is not a good director."

Later, Colt was to show an exhibition of sculpture which was under fire from various national art groups. Although the sculptor's work was unpopular, Colt felt it was of high professional caliber. This judgment was later vindicated when most of the major museums of the Nation purchased works by Jasques Lipschitz.

"It took more guts to put the show on than to purchase from it later," a Portland artist declared in recalling the incident.

Although Colt personally selected the 19th and 20th century moderns in the Chrysler exhibit, this collection of "progressive" art represents only about 25 percent of the exhibit. Actually only 10 percent of the total collection is modern, since currently the works of men like Corot, Cezanne, Boudin, Caillebotte, Renoir, Manet, Toulouse-Lautrec, Van Gogh, Gauguin and Degas are considered classicists of the impressionism-cubism periods and are hardly modern any more.

At least some Portland artists believe Colt has made it possible for them to be judged with other artists of the Nation and not just as regional painters.

"He is not only a wise man from the East bearing gifts, but has also been bearing the worth of this area eastward," an artist said of Colt.

Professional artists have generally been appreciative of Tom's efforts to judge their work in the same light as he sees work from other parts of the world, thus helping to put the Northwest artist on an international footing.

This has given the museum a position of prestige and authority and a professional integrity that is in the best interests of the community, a major Northwest artist believes.

An elemental thing, but highly important to the artists, is the fact that Colt has made room for local artists to hang their paintings in the local museum. This happy condition is absent from many United States museums.

But the Portland Art Museum is by no means a one-man show. Actually, juries decide what paintings will be hung in exhibits, and an art committee passes on proposed purchases for the permanent collection. Colt works hard to put over his own points, one museum board member points out; but, if overruled, Colt, like a good marine, carries out his assignment to the letter, not letting his personal judgment get tangled with the decision.

When young Tom Colt got out of Dartmouth in 1926, he went to England with plans to be a writer. When two of his books were not grabbed up by publishers, he was advised to give up writing and get in a related field, such as art. So he joined the Rehn Galleries in New York, his first art job.

A short time later, inspired by an uncle who had been a naval aviator and Charles A. Lindbergh, who had flown the Atlantic, Colt enlisted in the marines and was commissioned a naval aviator in 1930.

SIGHTSEEING FLIGHTS OFFERED

He was sent to Quantico, Va., and attached to Aircraft Squadron East Coast Expeditionary Force, a hard-flying marine outfit that spent most of its time flying Curtiss Hawks in breathtaking acrobatics with the wings tied together.

In a couple of years, Pilot Colt and another aviator were placed on inactive duty. They went to Richmond, Va., and opened up an airport, attempting to earn a living flying sightseers on Sunday. About the time the airport went bankrupt, Colt married a Richmond girl, Martha Bell Patterson Willingham.

Soon the ex-stunt flier became a trustee of the Richmond Academy of Arts. In 1935, the State built an art museum and Colt got the job of running it, a particularly challenging job since the museum had no art. Just 13 years later, the State of Virginia appropriated $1 million for an annex.

"That was a lot of money for art from those Virginia farmers," Colt recalled.

While in tidewater Virginia, Colt was in close touch with Chrysler, who had a fantastically good collection of moderns by this time. Later, when Chrysler bought North Wales, a huge estate near Warrenton, Va., Colt got him to show the collection in Richmond.

COLLECTION BEGUN AT 14

Chrysler, who had begun collecting art at the age of 14, expanded his interests into horseracing and the New York theater, but he never deserted art. Unlike some collectors, who hire experts to pick their art, Chrsyer has been guided by his personal tastes.

Having bought the moderns when they were not yet popular, Chrysler turned to buying 16th, 17th, and 18th century baroque masters while everyone else was seeking the 19th and 20th century impressionists.

Colt believes Chrysler's yen for baroque may have again called the turn on informed public taste, which appears headed for a reevaluation of mannerism and the baroque.

Baroque, whether a post-Renaissance period or a style, brings a flamboyancy, a richness and sometimes an excess of drama to art, while the mannerism period in Italy created curious distortions after the Renaissance and a strange mood that is appealing to more and more art lovers.

PACIFIC BATTLES FOUGHT

During World War II, Colt was called back to the marines. He took flying refresher courses and was placed in command of the bombardiers and air gunners at the El Centro, Calif., base before being sent overseas as tactical commander of Marine Air Group 22, which operated at the battle of Iwo Jima, Okinawa, and Marshall Islands.

Along with art and the Marine Corps, Colt's third interest is his family. He has three children by his first wife, from whom he is divorced. The three are Thomas Clyde Colt III, 20, a student at Portland State; Jon Landstreet Colt, 18, who broke his leg skiing at Dartmouth this winter, and Corinne Patterson Colt, 9.

Colt married Priscilla Crum April 4, 1950, and they have two children, a son, Christopher Clery Colt, 4, and a daughter, Penelope Colt, age 2½ years. At the Colt home on Southwest Mongomery Drive, father Colt spends his spare time working in the garden, puttering about the house, and in general relaxing from the cares of cubists, impressionists, abstractionists, primitivists, and old masters.

Dikes Alone Are Not the Answer

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. GAVIN. Mr. Speaker, under unanimous consent I insert an article from the Derrick, Oil City, Pa., concerning flood control and the proper uses of our natural resources.

The article follows:

TALL AND UNCUT—FOR HUNTERS AND FISHERMEN

(By Steve Szalewicz)

DIKES ALONE ARE NOT THE ANSWER

Weighty words on tax ranks and soil banks, Ike's ills and dike fills on Oil Creek belong in the kit of the thought weavers of the editorial page. But just for today the dikes rest in the same corner with cloddy boots and linty shirts of the conservationist.

The paper you like to read said lately that United States Army engineers have plans to build two dikes on Oil Creek. The first would fringe the Keystone Grounds for 800 feet from the White Bridge on Seneca Street to the Pennsylvania Railroad embankment upstream. The second is placed near McClintockville, about 2 miles from Oil City.

The earth dikes are apparently the Army engineers' ready answer to a flood threat. They would hustle Oil Creek in torrent out of its narrow channel. Should the creek's mouth be blocked by a gorge or by a higher stage in the Allegheny River, the Keystone dike would contain the slack water. It could not overflow onto the lowlands and make a flank run into the city's business district. Oil City property, industry, and lives would be spared in that eventuality.

But there are some among us who can't grasp the Army plan. And there are some more who can't remember when Oil Creek spilled over its banks to flood the Keystone grounds. The two "can'ts" bring to mind three ways in which a job can be done—"the right way, the wrong way, and the Army way."

Disappointed in the Army's way is the layman. He thought that dredging of the mouth of Oil Creek might be the right way to permit a free flow of ice floes and flood into the Allegheny.

The layman saw the creek gorge itself in January and February of 1955. Ice cakes reared up like dominoes. They froze, moved, compressed into a many-piled icicle plug stretching from the Petroleum Street Bridge pier to the refineries on Oil Creek.

To the layman on the State Street Bridge and to the merchant minding pumps and moving stocks from one level to another on Seneca Street, the gorge seemed to be snagged on a gravel bar at the mouth of Oil Creek.

Dredge this channel barrier, said the layman. With a deep hole at the confluence, ice floes would not hang up or build up. The creek would flow faster and freer.

The Army instead said dikes. The layman is disappointed, not in dikes so much as he is in the failure of his native intelligence. He thought he had diagnosed Oil Creek. His was the wrong way.

Disappointed even more than the layman was the conservationist. He is never satisfied with dikes, and dikes alone. Frankly, he thought like the layman. Dredging the barrier would help. And if it didn't, for a time before the hole silted up, it might make good fishing.

The conservationist, even before the layman, saw the bar build up at the mouth of Oil Creek. He remembered a dark October day in 1954 when Hurricane Hazel doused this part of Pennsylvania with steady, scouring rains.

Oil Creek "millraced" into the river like a Saturday morning motorist sneaking a left turn up Seneca against Center Street traffic on the strength of an expiring amber light. The Allegheny would not yield the right of way and waved the creek into its channel. For hours the streams fought. While they did, the sands and soils, shanghaied in the highlands, escaped the turbulence and settled at the creek's mouth.

After the storm the conservationist revisited his favorite trout streams. Hemlock Creek near President was rent and twisted. The mouth of Pithole Creek was puckered into a gravel bar 3 feet high, jutting 200 feet into the Allegheny River. Cherry Tree Run spewed a field of melon-sized boulders, scoured of acquatic organisms, into Oil Creek, so much so that the run and creek underwent a channel-straightening by bulldozer the following summer.

Remembering that the conservationist stood on the State Street bridge watching another gorge pile in the creek last week. He is disappointed in the Army way—dikes. He is not opposed, for they are quick protection of life and property.

But dikes, when they are supplemented with watershed improvement programs, could be the right way to prevent floods and gorges in Oil Creek, for years to come.

The barrier at the mouth of Oil Creek could be a sign that something is wrong with the way we are using the natural resources in the 300 square miles making up the Oil Creek watershed.

Are we permitting the cream of our substance, the fertile soils which yield bountiful farm crops in the upper reaches of Oil Creek in Crawford and Venango Counties, and the tremendous hardwood forests in the western tributaries of Pine and Caldwell Creeks to swirl out of the valley on a silt-laden crest?

Are we ignoring soil-conservation measures like contour tillage, crop rotations, strip cropping, cover crops, green manures, reseeding, proper grazing by beef and milk herds on the farms in Venango, Crawford, and Warren Counties?

Are we managing our forests and woodlots wisely, according to the modern concepts of a consistent yield of timber, pleasure, security, and general well-being?

Are we listening to soil-conservation technicians and forest rangers supplied by State and Federal agencies?

The evidence is that we are not. Exhibits of the misuse of natural resources crop up less than 2 miles away on the east bank of Oil Creek. There stands a balding hill, graying with scraggly maples, a monument to a clear cutting which removed all marketable trees in one operation.

Up the same valley above Rynd Farm, another intense timbering operation is buzzing on the Cherrytree Run. The conservationist wonders whether this cutting will be done selectively to provide a perpetual income, to absorb water and to protect soil * * * or will this be another series of bald ridges and gullied hills?

More and heavier timbering awaits. Our hardwoods in the Oil Creek Valley were cut in the early 1900's. They are maturing. The demand for these hardwoods is expressed by overtures from pulp and paper plants. Today both on the creek and the river, the fisherman winces at the sound of power saws and crumpling timber, baring more steep river hills to erosion.

Isn't it just as wrong to clear cut a steep river or creek hill as it is to strip mine without backfill and reclamation?

If our hills are to remain green, our meadows lush and our waters of Oil Creek clear and within the bounds of dikes, we should be thinking of watershed improvement.

The conservationist thinks the right way to prevent floods in Oil Creek would be to form an Oil Creek Watershed Association. He would enlist the support and interest of all State, local, and Federal soil-conservation agencies, all watershed councils, all granges, all forest services, all fish and wildlife commissions, all industry, all cities, boroughs, villages, townships, all historical societies, all garden clubs, all merchants, all legislators, all citizens who intend to stay in this valley, and all those who know the applause for conservation comes late, if ever, but then is sung by generation after generation.

Acquainting American Youngsters With Free Enterprise System

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, March 22, 1956

Mr. WILEY. Mr. President, I have been pleased to note that almost a fourth of the States of the Union have now enacted necessary legislation to facilitate ownership of American securities by youngsters.

There are few better ways to acquaint our children with the meaning of the free enterprise system than by giving them as gifts securities in American corporations.

Such gifts, when made as sound investments by those who can afford to do so, help contribute to the pool of capital available for the expansion of American companies.

I am pleased that my own State of Wisconsin has been one of the initial States to enact model legislation as recommended by experts in this field, including the distinguished president of the New York Stock Exchange, Mr. Keith Funston.

I send to the desk the text of an editorial from the March 15, 1956, Milwaukee Journal, and append to it an interesting article of questions and answers about one State's version of this law—the Empire State.

I am sure that the Wisconsin law will provide a real stimulus to wider stock ownership in my own State, particularly in a broad variety of Wisconsin corporations.

I ask unanimous consent that the editorial and article be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of March 15, 1956]

MINORS MAY OWN STOCKS

Under the laws of most States when strictly observed, it has been difficult at best to put one's minor children into legal possession of securities.

In fact, many people have had an impression that minors cannot own such property. The Government has helped some to dispel this view by both permitting and encouraging the purchase of savings bonds in the names of children and many youngsters today have their own bank accounts.

The securities business would naturally like to promote both the knowledge that minors can be stockholders, and simpler ways for them to become so. As Keith Funston, president of the New York Stock Exchange, stressed recently: "The free-enterprise system has no minimum-age requirements."

The movement is appealing not only to the profit motive of stockbrokers. It is a way for parents to invest in their children's future. It is a way for teen-agers to gain some understanding of the economic world. And the democratization of capitalism is advanced as ownership of the Nation's business becomes more widely shared.

By a 1953 amendment to the Corporation Code, the Wisconsin statutes took official note that there is no legal bar in this State to minors being stockholders. "Today," said the reviser of statutes, "many infants own shares in and securities of corporations, either by purchase, inheritance, or gift." Since corporations often don't know which shareholders are minors, the amendment was to insure the binding nature of good-faith transactions with them.

Last year Wisconsin went further and was among the first States—eight so far—to adopt a model law that Funston is sponsoring. It sets up a simple, regulated procedure for making legal gifts of securities to minors.

SHARES FOR THE CHILDREN—A STUDY, WITH QUESTIONS AND ANSWERS, OF NEW LAW ON STOCK GIFTS TO MINORS

(By Richard Rutter)

The children's hour has come at the New York Stock Exchange.

Yesterday the exchange mailed to members its interpretation of a new State law regarding gifts of securities to minors. The measure, signed by Governor Harriman on March 3, makes such largesse much simpler. Naturally, officials of the big board are highly pleased.

As Keith Funston, president of the New York Stock Exchange, puts it:

"There is no better way to provide our children with an intimate knowledge of the way our business system works than by giving them an actual ownership interest in one of our leading corporations."

Previously, gifts of stock and other securities to minors were subject to severe legal restrictions. An adult could, it is true, simply register an issue in a child's name—but once done the action was irrevocable. The security had to remain untouched until Junior reached the age of 21. Not even parents could sell, exchange, or otherwise dispose of the security to take advantage of changing market conditions. Legally, dividends also could not be touched, but accrued to the minor.

ALTERNATIVES TROUBLESOME

There were just two ways to get around these barriers. A parent or other stock donor could go to court and get himself appointed a legal guardian. Then, subject to still other restrictions, he could sell and reinvest securities registered in the child's name. Or he could establish a trust and the trustees could then handle the matter. Both methods could involve considerable redtape, to say nothing of legal fees. As a result, many would-be donors wouldn't.

No one knows how many fond parents have bought stock in the past for their offspring or other smallfry, only to discover the legal complications later. No one knows either, commented a stock exchange official yesterday, how many have subsequently forged children's names to certificates of transfer in order to sell or exchange securities.

Under the new law, such subterfuges, innocent as they usually may be, are entirely unnecessary.

The statute makes it possible to make an outright gift of stock to a minor by registering the security in the name of an adult as custodian for a minor. That custodian may be a parent, a relative, or anyone else who makes the gift. Most important, the custodian now has the right to sell the stock, reinvest the proceeds, collect dividends, and in general manage the investment until the owner reaches 21.

The gift is still irrevocable. Any proceeds from the investment must be set aside for the minor. The great advantage, however, is the flexibility that can be applied to handling such an investment. In short, the stock gift is not frozen in its original form—no small consideration in a variable market.

This is the heart of the New York State law. More specific questions, however, may occur to the person thinking of taking advantage of its provisions. For instance:

Question. What securities may be given?

Answer. Any securities, but no cash or other form of property.

Question. How large may the gift be?

Answer. No limit is imposed. The stock exchange recommends, however, that if substantial gifts are contemplated, the donor would do well to consider creating a trust.

Question. How are the securities registered?

Answer. In the name of the giver, as follows: "John Doe, as custodian, for Richard Doe, a minor, under article 8–A of the personal property law of New York."

Question. Is delivery of the stock certificate to the custodian required?

Answer. Yes. This delivery may be made by the donor, the broker as agent for the donor, or by the transfer agent.

ACCOUNTING NOT REQUIRED

Question. Does the giver pay a transfer tax?

Answer. He does.

Question. Is the custodian accountable for his handling of the gift securities?

Answer. When a minor reaches 21 and the stock is turned over to him, no accounting is required. He can, however, demand a formal accounting if he desires.

Question. What about taxes?

Answer. The Internal Revenue Service has ruled that a gift of securities under the new law qualifies for the annual gift tax exclusion of $3,000. That means up to $3,000 in stock ($6,000 for a married couple) can be given in any 1 year without incurring a gift tax. The Revenue people have not yet ruled how the income from a stock gift should be taxed.

Ten other States have enacted similar legislation. They are California, Colorado, Connecticut, Georgia, New Jersey, North Carolina, Ohio, South Carolina, Virginia and Wisconsin. Like measures have been introduced in Massachusetts, Rhode Island, Maryland, Michigan, Kentucky, Louisiana, Arizona, and Mississippi.

This year the stock exchange is engaged in a drive for wider stock ownership among the public. Opening the door to gifts to minors should help.

The Need for Housing for the Middle-Income Group: The Average Citizen

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. RODINO. Mr. Speaker, since I first took my seat in this Chamber, I have urged the passage of legislation designed to promote the general welfare of all of the groups who are a part of this truly democratic country of ours. Today, I rise in the hope that the facts I give you will impress upon you the urgent and continued need for legislation which will give the average citizen—the man in the middle-income bracket of our Nation—a chance to have the kind of home he deserves, at a price he can afford.

There are those who contend that we should not have legislation for public housing or for housing for the middle-income groups. They argue that this is socialism and that legislation of this nature hinders the production of the needed housing rather than increasing it, because it competes with private enterprise. They cite figures which purport to prove that the building and construction industry is producing the housing needed for these groups. Information which has come to my attention would indicate differently.

Most housing experts agree that an average of approximately 2 million new houses per year are needed to maintain a housing inventory sufficient to adequately supply our increasing population. In 1955 less than 1,330,000 dwelling units were started, and in 1954 only 1,220,400 units were begun. Yet, there are some 10 million substandard dwellings in this country which should be replaced by 1960 if every American is to have that decent home. I would say that this can only be accomplished with the cooperation of industry and government; we must work together.

In 1954 there was a gain in the number of 1-family building starts, according to data published by the United States Department of Commerce, but publicly owned units started were the lowest since 1948, and private units in 2-family and multifamily structures were the lowest since 1947. In 1955 relatively more 1-family houses were put under construction than in any previous year, but apartment buildings with 5 or more units were a much smaller portion of new housing in 1955 than in 1954. In the first 9 months of 1955, multifamily structures—of 5 or more units—accounted for about 10 percent of all nonfarm housing starts, or about one-half the proportion it represented in 1949.

At first glance, you might be inclined to conclude that the housing inventory has been increasing in the form of one-family structures, because of consumer preferences, thereby reducing the necessity for producing a larger number of multifamily structures. But let us review these facts in the light of the needs of middle-income families. Prices of the single-family houses started in the first quarter of 1955 averaged higher in all regions of the country than in the same period of 1954; the cost of building materials rose 8.4 percent over 1954 costs. In 1955 there was an 11-percent rise in the median selling prices of new 1-family houses, putting the dream of a "home of my own" beyond the reach of a still larger group of the middle-income families.

The definition of "middle income," as you know, varies from city to city and region to region. Taking that large section of our population—upward of 13 million families—whose income for 1955

ranged from $3,000 to $5,000, according to census data, between 20 and 25 percent of a family's income goes for housing. This figure is usually smaller for the higher income brackets. How many of these families do you think can find housing for less than $70 to $100 per month? How many of these families are able to save up for the large downpayment needed to buy when more than 50 percent of the new houses started in 1955 were in the $12,000 to $20,000 bracket?

A National Housing Conference study indicates that in order for a family to swing a $10,000 house, it must have an income of $126 a week, or $6,654 a year. If a gift of a new $10,000 house were made to a family, monthly expenses could easily total $57.50 for general upkeep, taxes, and utilities. These families should not be required to accept small, substandard dwellings, nor should they be required to go dangerously into debt.

We are in a position to help these middle-income families out of their dilemma by providing workable legislation which will encourage cooperative housing for these families. Little capital is available today for rental housing; there are more attractive investments elsewhere. But cooperative housing, with equity financing furnished, and eventual control of the project in the hands of the cooperators, can help meet this problem. It is still private enterprise and all of the segments of the building industry participate and benefit and the middle-income family gets a decent home. There is no question about the fact that we would serve the best interests of the general economy, the housing industry and the welfare of the Nation, if we assist in providing adequate, livable homes of sufficient size for the average family to live comfortably and economically at monthly payments within their means.

Before I close my remarks, I must pause to stress one important point. We have not lived up to our stated intention to provide guidance and technical assistance to consumer groups interested in forming housing cooperatives. To date the appropriations granted the Housing Agency have by no means been sufficient to furnish the technical assistance and guidance which we so grandly promised. The information brought forth during investigations which have been in progress on the Senate side underscore the necessity for adequate supervision and guidance in all phases of our housing program, and I call upon you to remember this when appropriations legislation is brought before this body.

Someone has said "In a democracy, when we come right down to it, everything begins with cooperation and self-help. Country, small town, suburb, or city—it's up to us." Let us cooperate with the middle-income families who are desirous of helping themselves to have a decent home in which to raise their children, by making available to them the capital and technical assistance necessary to accomplish this.

Congratulations, Shawano Indians Basketball Team

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Shawano Evening Leader, Shawano, Wis., on the victory of the Shawano High School basketball team at the State WIAA tournament on Saturday, March 17, 1956.

The editorial is as follows:

HAIL, OUR INDIANS

One week ago Shawano High school basketball followers were congratulating and admiring our Indians for their magnificent achievement of earning their way to the State WIAA basketball tournament.

And congratulations they had coming indeed. They had conquered five good tournament competitors and put themselves in contention for the State title, being 1 of 8 such teams in all Wisconsin.

Now, one week later, the Shawano High school boys are State champions. It's a reality exceeding fondest expectations. For every Shawano enthusiast, it is almost necessary to pinch oneself to realize that the Indians have really accomplished their difficult mission with singular success.

Our hats are off and our salute is out to every member of the Shawano High school basketball team and their model gentleman coach, John Kenney. Certainly that is the feeling of every Shawano area citizen, basketball enthusiast or not, and what we say here by way of congratulation will surely be the feelings of one unanimous community voice.

One of the pleasant byproducts of the WIAA tourney were the observations of outsiders that the Shawano boys were exemplary in their sportsmanship and outstanding in their conduct. They were the credit to Shawano High School and their community that their friends were sure they would be.

It should not be overlooked in the enthusiasm of victory that this credit which the young men reflected on their community is of immense importance.

We are thankful for their marvelous accomplishment on the basketball court, but very importantly too, we are thankful for their fine conduct, on and off the floor.

They have proved themselves not only good basketball players; they have proven themselves as good boys, the kind mothers and fathers can be proud of. We would offer the view that they typify the Shawano High School student body.

During the last week Coach Kenney and his boys met and overcame the sternest of competitive obstacles, bringing honor, acclaim and laurels to our community.

We recognize the immensity of the task which faced these young men who made the trip to Madison. And we recognize their brilliant history-making accomplishment.

To a man, Shawano Indians and Coach Kenney, we salute you and hail you on your splendid achievement. We are proud of every one of you.

Mr. Speaker, I am indeed proud to represent the congressional district in which Shawano is located. Great credit is due to Coach John Kenney and to the members of the 1956 State championship team, John Cantwell, Loren Wolf, Larry Maltbey, Fred Opperman, Guy Ggignon, Mart Gharrity, Mike Dodge, Bob Hammer, Tom Koslowske, and Manager Fritz Kuckuk. Hats off to the Shawano Indians.

The Right To Vote

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. ANFUSO. Mr. Speaker, I am introducing a bill today which provides that employees of the United States Federal Government be excused from duty, without loss of pay or annual leave, for a period of not less than 2 hours nor more than 8 hours in order to be able to vote in national, State, and local elections, including primary elections.

It is unfortunate that many among us take our rights of citizenship for granted. It is a little disturbing that far too many among us in this great land of ours fail to perform their duty on election day each year and fail to utilize their right to vote as free citizens in a free country. Voting is not only a right but also a privilege which no one should ignore. Past generations of Americans fought for this right, and it is because of their struggles that we can enjoy democracy today, the freedom of expression and the freedom to vote according to our own dictates in the best interests of the American people.

Whereas in many lands today the people are subject to government by bullet, we still enjoy government by ballot and we aim to continue this method through the practice of our right to vote. By maintaining and utilizing our rights of suffrage we help keep this country as a true citadel of democracy. In so doing, we participate in choosing men and women for national, State and city office who are best qualified to do the job, regardless of race, religion, or ancestry.

It is important, however, that the rights of citizenship are scrupulously observed, that every American enjoy equal access to the polls, and that he utilize his right to cast his ballot. In many States throughout the country the people are given sufficient time off for voting in national or State elections.

My bill seeks to obtain the same or similar period of time off to United States Government employees so that they are enabled to perform one of their sacred duties as United States citizens by voting in all elections, whether of a national or local character, and including also primary elections. It is my opinion that the Federal Government has a moral obligation to lead in this field of encouraging good citizenship. Enabling Government employees to utilize their right to vote, through the adoption of my bill, will be a decisive step in that direction.

Supreme Court Decision in Segregation Cases Is Sound

SPEECH
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. JOHNSON of California. Mr. Speaker, I wish to comment on the excellent speech made by the gentleman from New York [Mr. KEATING] concerning the decision of the Supreme Court in the case of Brown against the Board of Education. He made a scholarly and objective argument sustaining the viewpoint of the Court. Also he made it very clear that he respected the viewpoint of the group that seek to have the decision of the Supreme Court neutralized and pointed out that this group, despite their deep feelings about this case, stated that they would use all lawful means to bring about its reversal.

I was particularly pleased with the argument wherein it referred to Chief Justice Warren and the able and skillful manner in which he prepared the opinion that was concurred in by every member of the Court.

I think I may properly state that I am extremely proud of what the Chief Justice did in this case. But it was no surprise to me. Earl Warren and I were fellow students at Boalt Hall of Law of the University of California. In 1938 a group of us, some of whom are now in Congress, helped elect him as the attorney general of California. Here he did a magnificant job. His argument in the tidelands cases were mainly responsible for the decision by the Supreme Court that gave California and other coastal States the title to offshore lands under tidewater. Later, in 1942, he was a candidate for Governor; and some of the same group mentioned above were the ones that got him to seek the offiec. He was elected in 1942 at the same election which sent me to the House of Representatives. In that office he displayed remarkable capacity for getting the State government working smoothly and efficiently.

Also as Governor he displayed his ability to get people of differing viewpoints to reconcile their differences and get along together. He had that remarkable characteristic that we call commonsense.

Perhaps some may decide that the matters which I have discussed are irrelevant. My feeling is that I would like those who are challenging the judgment of the Chief Justice and also the Court should know something of the man who wrote the decision for the whole Court.

In California we have no segregation problem. Since 1908 when President Theodore Roosevelt informed the city of San Francisco tersely and positively that they could not bar Japanese children from their schools we have not had the problem. In these schools of Stockton, where I live, we have pupils of practically every racial strain. They get along well both in the classroom and on the athletic field and in school social life.

I cannot forget a statement that one of our closest friends in Congress made when the segregation agitation began to flare up at frequent intervals. This person, who is a southerner said that if people will simply look back 25 years and see the steady progress that had been made to give Negroes more rights they will realize that if we in the South are left alone the problem will solve itself. Looking back over the various legal steps that have been taken such as the cases that decided that segregation could not be practiced in State universities; also the case that decided that covenants restricting the use of property to only white persons were void; and other steps such as segregation decreed for the Armed Forces by President Eisenhower; the banning of segregation in the National Theater, and so forth.

I am willing to accept without reservation the Court's decision which interprets the 14th amendment as was done in the case under consideration.

Now's the Time To Give Small Business a Break

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. DODD. Mr. Speaker, I am receiving a great many letters from small-business people about H. R. 11. These people are asking that I sign the discharge petition to bring up H. R. 11 and then vote for it. This I will do. But we need help from the Members of this House.

The 83d and 84th Congresses have done a great deal for big business. It occurs to me that we can well afford to do something for small business. This is particularly true when the request which small business is making of us is a quite modest and reasonable request.

In this instance the request that small business is making strikes me as being most modest and reasonable. More than that, it is manifestly a request which serves the interests of consumers, farmers, and, in short, the general public good. All that small business is asking us to do is to provide reasonably effective antitrust laws. Small business is not asking for any subsidy. It is not asking for any giveaway. It is simply asking for antitrust laws which give the small man a reasonably equal competitive opportunity to succeed.

Specifically, the small business people are asking for an antitrust law which will protect them from price discrimination. We all know that price discrimination is a weapon of bigness. The big corporation can destroy its local competition by local price cutting. There is nothing new about this. We all know what it means.

Now we do not object to price cutting when it is done fairly. We object to price discrimination because this is an unfair method of price cutting. The local man inevitably gets squeezed out and the big man survives and prospers. Survival and success in the competitive process is not a result of efficiency—when the weapon of discrimination is used. Then the corporation that survives and prospers is the biggest corporation.

Now why do we need H. R. 11?

In 1936 the Clayton Antitrust Act was amended and strengthened by the Robinson-Patman Act for the purpose of giving small business protection from price discrimination. There is a tremendous legislative history on that amendment. This history seems to make one thing clear, above all others, which is that it was intended to require the supplier to give fair and equal treatment to his wholesale and retail customers. More precisely, the law was intended to require a supplier to make equal prices to competing customers—insofar as he has no differences in costs for supplying his different customers. The law was not intended to give the small merchant any undeserved advantage, or to interfere with any efficiency that may be associated with large-scale marketing operations. The law clearly and specifically states that the supplier may charge his customers different prices up to the full extent that the different prices are justified by cost differences.

The law clearly was intended to stop price discriminations where the effect of these discriminations would substantially lessen competition and tend to create a monopoly.

The majority opinion of the Supreme Court in the *Standard Oil Co. (Indiana) v. F. T. C.* (340 U. S. 231, 1951) however, construes the Robinson-Patman Act in a way which gives small business little protection. The Supreme Court in that opinion held that the supplier's intention, or good faith, is to be the controlling criterion of the law. More specifically, the Court ruled that a supplier is excused from engaging in a discriminatory pricing practice where the supplier is in good faith; and that in such instances there is no power to stop the discriminatory practice, even though the practice substantially lessens competition and tends to create a monopoly. More than that, the Court's opinion went on to hold that a supplier is justified in discriminating to meet the lawful price of a competitor, irrespective of competitive effects. In short, the nub of this ruling is that a supplier is fully justified in engaging in a generally unlawful practice by reason of the fact that his competitor has refrained from engaging in the unlawful practice. This means, in its simplest form, that the big supplier of a nationally-known product can give a selective advantage to the big buyer who is quoted a low price by some small supplier that has no marketing system of its own and cannot, as a practical matter supply the independent merchant. This operates against small business in two ways: First, it cuts out the small supplier who has insufficient capital to expand his operation on a national scale. Second, it cuts out the independent merchant who obviously cannot over-

come his big competitor's buying advantage. The practical result is to isolate and neutralize the competitive forces which both small suppliers and small merchants might supply—for the benefit of consumers. In short, this kind of pricing plays off the disadvantages of small merchants against the disadvantages of small suppliers, and ends up with big suppliers and big chain distributors having all the business.

More realistically, the court's ruling will have to be applied where there are not just two suppliers in the market, but several suppliers. This means therefore, that price quotations offered the chain can gravitate to a low level, while prices offered the independent merchants stay at a high level, and there is no practical way to untangle the sequence of events to determine which supplier, if any, acted in bad faith. This kind of pricing will eliminate small suppliers and small retailers from the competitive system and increase monopoly.

H. R. 11 seems to me a very modest and reasonable solution to this problem. In effect it simply says this: Without regard to any question of good faith or bad faith, it is illegal for the supplier to discriminate in his prices where the effect of such discriminations may substantially lessen competition or tend to create a monopoly. That is all there is to it. There are no qualifications, except of course there is a qualification that the supplier may discriminate to the full extent justified by costs; and there is a qualification that the supplier may change his prices from time to time as often as he likes, just so long as he makes the new prices available to all his customers; and there is a qualification that the supplier is not required to sell to any customer, but is free to sell or reject customers at his pleasure. These qualifications are already clearly in the statute and would not be changed.

I believe that we ought to pass H. R. 11 and pass it promptly. It is no consolation to the small-business people who are going out of business today, to know that we may consider this bill and pass it next month, or the month after that. Passing the bill next month, or the month after next, will not moreover, repair the damages to the free-enterprise system which are being done today.

There is a discharge petition on the Speaker's desk and I ask my colleagues to sign this petition so that the Members of this House may have a prompt opportunity to pass on this legislation which small-business men need and want.

The Russian Educational System

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 22, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three articles discussing the Russian educational system which appeared in our Washington papers. One is a column by Marquis Childs entitled "Reds Gear Schools To Win Cold War," which appeared on February 28, 1956, in the Washington Post and Times Herald; a column by Fred Woltman entitled "Ideas Rather Than Bombs," appearing in the Washington Daily News on Monday, March 5, 1956; and an editorial which appeared in this same paper on the same date entitled "Challenge to Survival."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of February 28, 1956]

REDS GEAR SCHOOLS TO WIN COLD WAR

(By Marquis Childs)

A report based on first-hand observation adds another note of warning that education in the Soviet Union is far outstripping education in the United States.

The massive educational program still expanding in Russia, under which today nearly twice as many students are enrolled above the high-school level as in this country, is one reason for the extraordinary confidence expressed by Soviet leaders at the recent 20th Congress of the Communist Party.

For as the latest warning, from former Senator William Benton, of Connecticut, makes clear, the Soviet educational system is geared to win the cold war.

Benton, who made an intensive study of Soviet education and propaganda last year, says that system is producing a surplus of engineers and technicians who will be assigned to carry out technical assistance in every uncommitted country of the world. While getting their scientific training, they are thoroughly indoctrinated in the Marxist-Lenin line.

There are schools—and this seems to have escaped the attention of even specialists whose business is to know what is going on in Russia—in which all the training from the first grade on is in English, French, or German. Graduates of these schools have a fluent working knowledge of the language they will need when they are sent abroad to do a technical—and propaganda—job.

With a Russian-speaking interpreter and assistant, Benton took a tour of Soviet Russia's universities, technical institutions, laboratories and libraries. In a 30,000-word article for the Britannica Yearbook, of which he is publisher, Benton writes:

"The Soviets are now challenging us frontally at what have historically been two of our strongest points, technology and mass education. The present rate of Russian educational advance is faster than our own, just as their growth-rate in industrial production surpasses ours. The gap in total performance is closing. It is closing rapidly.

"In less than 30 years the Soviets have created a primary-school system rivaling our own in universality, with nearly 100 percent enrollment. Their secondary school system is mushrooming amazingly; by 1960 every Russian youngster is to be given an education at least comparable to a better high-school diploma.

"They have already surpassed us in both the number and percentage of students enrolled in institutions above the secondary level—with 4,300,000—to our 2,700,000."

In two speeches late last year, Adm. Lewis L. Strauss, Chairman of the Atomic Energy Commission, sounded an equally grave alarm. He said it was evident the United States was rapidly falling behind Soviet Russia in the training of scientists and technicians with the "certainty that we are turning out less than one-half the number of scientists and engineers we re require—an alarming statistic by itself."

The deficiency begins, according to Strauss, in the high schools, where science training has long been inadequate and standards of science teaching dropping rapidly. He cited the fact more than half of all American high schools fail to teach physics or chemistry.

In contrast, Benton points out that in the last years of secondary school Soviet students must take 4 years of mathematics, including algebra, geometry, and trigonometry.

The objective, it is hardly necessary to add, is a Communist education—that is, first-rate technical training buttressed by complete indoctrination in Communist dogma. It is the combination of indoctrinated zeal with technical proficiency that is so ominous for the West.

In a recent speech Benton proposed the creation of technical assistance academies similar to West Point and Annapolis, where young men of superior intelligence would be trained as engineers and technicians in every field.

The academies would be attached to and under the supervision of such outstanding institutions as the Massachusetts Institute of Technology and California Tech. In return for their free education, young men would agree to sign up for a certain number of years of service in America's technical-assistance program overseas.

Short of some positive, constructive step such as this, the drift will continue. And if estimates of Soviet progress are even approximately right, the gap will widen and America will fall increasingly behind.

To permit this to happen is hardly less than an admission of defeat. For if we have learned nothing else in the atomic-electronic age, it is that the engineers and scientists of today win the battles of tomorrow.

[From the Washington Daily News of March 5, 1956]

EX-SENATOR BENTON'S BOOK ON RED'S WORLD AIMS—IDEAS RATHER THAN BOMBS

(By Frederick Woltman)

NEW YORK, March 5.—Soviet leaders are succeeding "to an alarming and even terrifying degree" in their aim to conquer the world with ideas rather than bombs.

This conclusion of former Senator William Benton of Connecticut is published tomorrow by the Encyclopedia Britannica's 1956 Book of the Year in a 30,000-word section, The Voice of the Kremlin.

Mr. Benton wrote it after a first-hand study last year of Soviet education and propaganda techniques. He was the first westerner to interview many of the Russian officials involved.

FORMULA

The Russians, he says, seem to have "discovered a formula more dangerous to us than the hydrogen bomb." Namely, combining high quality in scientific and technical training and research along with intensive training in Communist ideology.

In other words, the Russians are turning out more and more trained specialists; and, at the same time by universal education, "loyal and unquestioning believers in the government and in communism."

Mr. Benton calls the process "the most stupendous experiment in psychological manipulation ever attempted" and says it is succeeding with the average Soviet citizen.

REPORTS

He reports also that:

In 1953 Russia employed 375,000 full-time and 2,100,000 part-time propagandists, totaling the size of the United States Army. Another 10 million intellectual and professional workers were expected to propagandize for the Communist Party, 4 times the number of college students in the United States.

Russian students at all levels work much harder than American. Their school week is 6 days. A few years ago, to guarantee 1 day of rest, the Government had to pass a law prohibiting lower grade teachers from assigning homework for Sundays.

Russia has 4,300,000 students in college and universities, nearly double America's 2,500,000. Ninety percent of the Russian student are on state scholarship. Draft deferment is automatic and continues after graduation.

RIGID

So rigid is the science training, that it may take 25 years to get a doctor of science degree. Our doctor of philosophy degree in many universities is by comparison a diploma from a junior college.

The U. S. S. R.'s 7,000 newspapers are all propaganda organs for the glorification of the Communist Party. Its 500 dailies have a circulation topping 43 million; Pravda, the party daily, has 5,500,000 but it could hit twice that if it weren't for newsprint shortage.

It's possible to become an authentic millionaire in Russia. That is if you're a best-selling Soviet writer, such as Konstantin Siminov or Ilya Ehrenburg. But you must be a handmaiden and vassal to the party. You can have cars and chauffeurs, a town apartment and country home, provided you give your client what he wants.

There are at least 550 full-time theatrical companies in the U. S. S. R., several times more than in all nations of the West together.

On radio and TV political propaganda becomes the commercial. But the government can't push it too hard for listeners may turn off their sets, not being a captive audience like the newspaper readers. Consequently, more than 50 percent of the programs are good music.

Although slightly more tolerant toward religion, the Communist leaders have not relented in their millitant atheism. It's just that religion no longer worries the party. Few Russians under 60 go to church.

The Russian people themselves, Mr. Benton found, prefer Red Khrushchev's "Spirit of Geneva" to Stalin's harsher, less flexible "Hate America" theme. The former, at least, "seemed to promise peace."

[From the Washington Daily News of March 5, 1956]

CHALLENGE TO SURVIVAL

The Bolshevik challenge to survival of the free world usually is discussed in terms of military strength. And in the last analysis that may be—God forbid—the real test.

Certainly a militarily weak free world stands no chance of winning the many contests with communism which are short of a military showdown.

The free world is rightly disturbed over the challenges the Bolsheviks are hurling at us in nonmilitary fields—education, science, physical fitness, propaganda, and in economic, social, political, and diplomatic warfare.

The Encyclopedia Britannica's 1956 Book of the Year contains an article which should destroy western complacency about the way the greatest struggle of all time is going. It was written by former Senator William Benton after his own survey of Soviet education and propaganda techniques in Russia last year.

His report agrees with the danger signals American officials have been raising over the Soviets surpassing the United States not only in the training and educating of scientists, engineers, and technicians, but also in our own game—production.

Mr. Benton sets up the following questions: How can the Communists rival our progress if they stifle unpopular theory? Can they indeed develop the needed originality and resourcefulness in science and technology without coming apart as a system? Can they match our productivity and still cling to a dogma that to us is so obviously warped and cockeyed?

Mr. Benton says the answer "yes" to these questions is a distinct possibility because the Soviets are combining high quality scientific research and training with highly successful indoctrination in Communist ideology.

"They may have discovered a 'formula' more dangerous to us than the hydrogen bomb," he wrote. "If they succeed in this, then why should they not believe they can conquer the world with ideas rather than bombs? * * * In my judgment they are succeeding to an alarming and terrifying degree."

The final score of this contest between Bolshevism and freedom may not be in for years—even decades. As Mr. Benton and others have pointed out, the greatest challenge to America is in the field of education where we seem to put more emphasis upon bricks and mortar for school buildings than on brains in teachers and for students.

The outcome of this whole struggle well may be decided in the schools and colleges rather than in the bomber and missile factories.

The Soviet challenge is simple—they maintain that in the long run their system of education "by order" will defeat education "by will."

We can meet and defeat this challenge—but only provided our will is great enough and we wake up to many facts—among them, that a winning football team is the least important part of our education system.

Boy Scout Training is a Major Contribution to National Defense Preparedness

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. DONOHUE. Mr. Speaker, I am pleased to include a most timely and pertinent editorial commenting upon the 46th birthday anniversary of the Boy Scouts of America, which appeared in the February 1 issue of the Waltham, Mass., News-Tribune.

The article follows:

FLOWER OF BOYHOOD

This month the Boy Scouts of America celebrate their 46th birthday anniversary by launching a new 4-year program to be called, Onward for God and My Country.

The goal of the program is to give America's youth wider opportunity to develop physical fitness, self-reliance, a sense of religious obligation, a feeling of personal responsibility, greater willingness to share and to help others, and an understanding of the Nation's democratic processes.

In a day when the path of our youth seems strewn with greater hazards than ever and the performance of American youngsters is under heavy challenge, the Boy Scouts loom large as a tremendous force for sound guidance and development. No movement in America merits more encouragement.

Let Americans everywhere join in making the Boy Scouts' new program the success it deserves to be.

Composition: Hot Strength Diagram of Alloys of the Binary System Nickel-Tungsten

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a full translation in English of an article which appeared some time ago in a Russian scientific journal.

This article brings very forcibly to our attention the fact that Russia is making a concerted effort to solve high-temperature problems. As we all know, this problem of solving high temperatures today is one of our major basic research jobs. I believe that more emphasis should be placed on this area of research if we expect to continue to make advances in the field of propulsion. I do not believe that some of our departments of Government are placing enough emphasis on materials such as tungsten, cobalt, columbite, and others. Personally, I am in favor of stockpiling them to the limit, for I believe that this insertion from the Russian scientific journal is factual evidence of what the Soviets are doing in this important field of high temperatures:

COMPOSITION: HOT STRENGTH DIAGRAM OF ALLOYS OF THE BINARY SYSTEM NICKEL-TUNGSTEN

(By I. I. Kornilov and P. B. Budberg)

The phase diagram of the binary system nickel-tungsten has been investigated by several authors (reference 1–3); however, the variation of physico-chemical and mechanical properties as a function of composition and structure of alloys, especially at high temperatures, has never been determined. In the present work, the hot strength of alloys of the binary system nickel-tungsten (up to 50 percent W) has been determined by the centrifugal method (reference 4–6) at a temperature of 800° C. and with initial stresses of 6.4 kilograms per square millimeter. The alloys were melted in a high frequency furnace in alumina crucibles, under a layer of basic slag. Electrolytic nickel, 99.9 percent pure, and tungsten wire containing 99.2 percent W, served as starting materials. Before pouring, the alloys were deoxidized with electrolytic manganese. Cylindrical specimens for the investigation of hot-strength were prepared by the method of sucking up the molten metal in preheated porcelain tubes (reference 7).

The alloys were subject to a thermal treatment in vacuum according to two schedules: in the first, specimens of all compositions were annealed at 1,200° C. for 24 hours and then quenched; in the second schedule, the alloys were annealed at 1,200° C. for 24 hours, 1,000° C. for 100 hours and at 800° C. for 100 hours, followed by slow cooling to room temperature over a period of 24 hours.

Chemical analysis showed that with the method employed for the alloy preparation, the loss of tungsten did not exceed 0.2 to 0.5 percent.

In the previously conducted investigations (reference 4–6) it was established that the utmost objective criterion of the hot strength of alloys, as determined with the centrifugal method is that of the time necessary for the

specimens to attain a given beam deflection as they undergo deformation due to the action of centrifugal force. The lengthier the time of attainment of a beam deflection, the greater is the corresponding hot strength. The results of these determinations for given beam deflections have been used for the plotting of isothermal hot-strength composition diagrams, one of the metallic system property-composition diagram types, for elevated temperatures.

In figure 1 (not printed) is shown the phase diagram of the tungsten-nickel system, according to the data of our investigations (reference 8). It is evident from the diagram, that the region of solid solubility of tungsten in nickel extends to 28 to 29 percent W at low temperatures, and to 30.5 to 31 percent W at 800° C. It has ben established that with a tungsten content of 34–35 W at temperatures of 840°–850° C., for alloys of the system, a phase B, is present, corresponding to the compound Ni_6W. This investigation also confirms the presence of the previously discovered compound Ni_4W in this system, designated in the diagram as the B Phase.

In figure 2 (not printed) is shown the composition hot-strength diagram for alloys of this system which were (A) quenched from 1,200° C. and (B) in the annealed condition.

As a qualitative measure of hot strength, the time for specimens to attain beam deflections of 3 and 5 millimeters is taken. The shape of the plot of the change of hot-strength as a function of composition shows that the quenched as well as the annealed alloys exhibit a continuous increase of hot strength with increasing tungsten content, in the region of solid solubility. The maximum hot strength in the quenched condition is possessed, at 800° C, by alloys with 28–31 percent W, figure 2A (not printed). Quenched allows containing over 38 percent W (up to 50 percent W) evidently had a two-phase structure, and, characteristically, the least hot strength despite such a high content of such a pyro-refractory metal as tungsten.

The maximum hot strength of annealed allows was reached at compositions of 25–28 percent W. That is, in the region of limiting saturation of nickel solid solutions, figure 1 (not printed). Alloys with maximum hot strength adjoins the boundaries where the two-phase regions exist and correspond to a condition which is completely homogeneous as well as one which is a finely dispersed two-phase structure. Because of an increasing amount of the second phase, and the growth of these particles, the hot-strength of the annealed alloys decreases and exhibits a marked drop in the region of existence of the compound Ni_6W.

It is interesting to note how the compound Ni_4W (43.6 percent wt. percent W) is found reflected in the composition-hot strength diagram. The compound Ni_4W corresponds to the characteristics maximum hot strength at 43–45 percent W, in distinction from the compound Ni_6W (34.2 percent wt. percent W). With further increase in tungsten content (to 50 percent), the annealed alloys are observed to have a second lowering of hot strength.

The investigation shows that the composition-hot strength diagram of nickel-tungsten system alloys after quenching and after annealing are not similar.

This is explained by differences in the physico-chemical conditions of the alloys. As shown in figure 1 (not printed), alloys with a tungsten content of 28–30 percent W correspond to a homogenous solid solution and during the hot strength test do not undergo a phase reaction, independent of their previous thermal treatment. At much greater tungsten contents, the quenched alloys, under the conditions of the hot strength test at 800° C, are subjected to a dispersion reaction (age-hardening), which under the established conditions, causes their strengthing. In this case only alloy compositions situated near the solid solution saturation boundary exhibit maximum hot strength. With increasing tungsten content, the reaction processes are accelerated, promoted by the strained condition of the alloys during the hot strength testing. As a result of the development of diffusion and coagulation processes, the second phase increases the creep of the alloys, causing considerable specimen deformation, i. e. a sharp drop in hot strength.

The investigation shows that the region of maximum hot strength in the composition-hot strength diagram for annealed alloys is displaced in the direction of lower tungsten contents as compared to quenched alloys.

The alloys after annealing according to the adopted schedule (see above) are considerably more stable than after quenching, and as a result, have much greater hot strength.

It has been established that the minimum hot strength in the annealed condition is shown by alloys located in the region of existence of the compound Ni_6W, i. e. the B base. The latter is formed in alloys of the nickel-tungsten system only as the result of prolonged annealing at 800° C. (reference 8).

In the present work, the annealing of the alloys at 800° was not carried out long enough to cause this effect (B formation); therefore the hot strength testing proceeds under conditions of unstable B, phase existence. Considering the diffusion process as one of the factors which increases creep rate, it is possible to explain the drop of hot strength of alloys in the region of the compound Ni_6W.

The B phase based on the compound Ni_4W, in contrast to the B phase, is characterized by a greater velocity of formation. Evidently, with the adopted schedule for alloy annealing, this process has gone to completion, and the hot strength testing at 800° C. of alloys located in the B phase region proceeds under conditions of stable existence of the compound Ni_4W and solid solutions, based on it.

It has been proven earlier, that metallic compounds which form rather rapidly in the solid state exhibit a characteristic maximum in composition-hot strength diagrams (reference 5). An analogous phenomenon is observed for the compound Ni_4W and solid solutions based on it (see fig. 2B, not printed).

In this manner, in contrast to composition-metal system property diagrams determined at room temperature which are investigated in periods of time in which, as a rule, reaction processes do not occur, diagrams of composition-hot strength are able to characterize the complex interdependence of composition, structure, and stability of alloys. In the case where diffusion processes develop during the time of testing, the creep characteristics of the alloys, and consequently, the composition-hot strength diagram are influenced considerably. This is confirmed by the diagrams in figures 2A and B (not printed). The results of the data of the investigation appear to confirm the physicochemical theory for the hot strength of metal solid solutions (reference 4).

Trucking Industry States Position on Revised Boggs Road Tax Bill

EXTENSION OF REMARKS

OF

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of my colleagues a recent statement issued by the American Trucking Associations with respect to the highway bill as well as a letter from the treasurer of the regents of the University of California on the same subject:

WASHINGTON, D. C., March 4.—A statement on the trucking industry's position on the revised Boggs bill as reported by the House Ways and Means Committee to finance the national highway improvement program was issued today by Managing Director John V. Lawrence, of American Trucking Associations, Inc.

The statement follows:

"The American Trucking Associations has vigorously supported the highway program since its inception and was the first user group to volunteer to pay added taxes. We believe that the singling out of a special class of vehicles for excessive taxation as would be done under the truck registration fees finally tacked on to the Boggs bill by the Ways and Means Committee is inequitable and unjustified. Neither engineering nor economics supports such arbitrary weight selection.

"Because this legislation will undoubtedly reach the House floor under a closed rule, the tax provisions cannot be amended on the floor of the House. Therefore, as far as the House is concerned, opposition to this proposal, if successful, would result in all probability, in failure of the whole highway program to be enacted.

"This country needs improved, modern highways so badly that this program must be passed at this session. Therefore, the trucking industry hopes that the House will give early consideration to this measure in order to move it quickly to the Senate. We are hopeful that when the bill comes before the Senate that further consideration will be given to tax equity.

"It is obvious that the whole question of proper share of highway costs as between different users is one which is in controversy. But it should be pointed out that bill H. R. 9075 calls for a definitive study to be made by the Bureau of Public Roads and the Interstate Commerce Commission, and thereafter a report will be made to the Congress. Since Congress has the opportunity to review the financing of the highway program at each future session, it would be unfortunate if, at this session, highly unjustified levies were made on any branch of the user family. If the forthcoming studies should show that any types of vehicles are underpaying, corrections can be made. It could also be asserted that if the study shows overpayments taxes could be cut back or classes of vehicles improperly included, could be eliminated. But unfortunately, everyone knows that historically taxes are rarely, if ever, reduced and reparation seldom made. Therefore, unwarranted levies, if made at this time, as under the present proposal, would tend to be permanent.

"We trust that this year, it has become clear to House Members and to the public, which interests have been dragging their feet or working to obstruct the highway program. It has not been the trucking industry."

DEAR CONGRESSMAN HAGEN: I am sending you this letter in view of the fact that the President's Cabinet bill to revise the Transportation Act and probably a revised highway bill will be before Congress at the next session. As a background for my knowledge of this situation, I may say that the University of California is the seventh largest stockholder in one of the largest trucking companies in the United States, and I am a member of its board of directors.

In regard to the Cabinet's proposal for revision of the Transportation Act, it would appear very definitely that the effect of this will be to change the present proper setup whereby, under the Interstate Commerce Act the inherent advantages and efficient services of each form of transportation are to be maintained.

If the railroads are permitted to make rates without any control by the Interstate Commerce Commission, the immediate effect will be to reduce the rates on articles carried today faster by the truck lines and to put the truck companies out of business or to so hamper their services that the economics of the country will be seriously affected.

As you undoubtedly know, there are thousands of cities and towns in the United States, and particularly in States such as California with large agricultural districts, that are either not at all served by railroads or served on a very limited basis. There are thousands of cities in the United States now absolutely dependent on truck service.

In California, for example, which is far removed from the manufacturing centers of the country, because of the existence of truck lines specialized freight in package form at less than carload lots can be promptly delivered to the merchants and consumers in the State and because of the availability of trucks California merchandise in less than carload lots may be promptly delivered to eastern markets.

The passage of the Cabinet bill would especially seriously affect a State such as California.

In regard to the highway bill, the truck lines have always stood ready to bear a fair share of the cost of the improvement of the highways, but the bill last proposed, which fortunately failed of enactment, placed an inordinate share of this burden upon the truck lines through the excessive tax per pound on rubber in truck tires as against all other highway users and the excessive diesel oil tax.

The truck interests should be protected by elimination of the bills as proposed last year and the substitution therefor of a bill providing for an increase of tax 1 cent per gallon on both gasoline and diesel fuel and a tax of no greater addition in cents per pound on truck tires, than is placed on all tires.

Your earnest consideration of the problems that would face California by undue burdens upon the truck companies will be much appreciated.

Very truly yours,

ROBERT M. UNDERHILL.

The Alaska Mental Health Act

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. BARTLETT. Mr. Speaker, yesterday it was my privilege to insert in the RECORD an article on H. R. 6376, the Alaska Mental Health Act, by Mrs. Marjorie Shearon, of the Shearon Legislative Service. In the March 15 issue of the Shearon Legislative Service there is another article on this subject which I present here:

We believe there would never have been any misunderstanding about the bill or any furor over it if the Alaska Legislature, instead of the Congress of the United States, had had the bill under consideration. H. R. 6376 is a Territorial bill, comparable to a State bill.

Congress, acting in loco parentis, takes the place of the Alaska Legislature in the mental health field. Under a law passed 50 years ago, Congress alone has authority to amend that old statute. Alaska is prohibited from changing the law under which it must live.

During the past half century the States, especially those in the East, have amended their laws repeatedly to make them more humane and particularly to protect the person who is mentally ill.

Careful thought has been given to commitment procedures. Experience has shown that in involuntary admissions to hospitals, the compulsory trial by jury is not only hard on the patient and family but also serves to deter many families from seeking early help.

That is why only one State—Texas—still has commitment by compulsory jury trial. We understand Texas is trying to have the law modernized so that a jury trial will be available if desired, but will not be mandatory. Alaska now has compulsory jury trial, but under H. R. 6376 such trial will be elective. This bill affects people in Alaska and Alaskans in the States, but no one else.

AT LEAST 26 STATES HAVE ELECTIVE JURY TRIAL FOR INSANE; TEXAS ALONE HAS MANDATORY JURY TRIAL

The Council of State Governments in 1950 published a document on the mental health programs of the 48 States which contains a table on page 52 entitled "Legal Provisions Governing Admissions and Commitments of the Mentally Ill, by States, 1949." The following 26 States provide for trial by jury, but only Texas makes this mandatory: Alabama, Arkansas, California, Colorado, Delaware, Florida, Georgia, Illinois, Iowa, Kansas, Kentucky, Massachusetts, Michigan, Missouri, Montana, New Jersey, New Mexico, New York, Oklahoma, Rhode Island, South Dakota, Tennessee, Texas, Washington, Wisconsin, Wyoming.

One reason a jury trial is generally not made mandatory is that mental illness is not a crime and consequently constitutional protection under the due process clause is not applicable. We cite some court decisions:

"Insanity is not a crime and therefore the constitutional guaranty of jury trial is not applicable." (*Barry* v. *Hall* (99 F. 2d 222, 225 (1938, C. A., D. C.)).)

"It has been frequently announced by this and many other courts that due process of law, within the meaning of both the Federal and State Constitutions, does not necessarily imply a trial by jury." (*In re Brewer* (Iowa, 1937), 276 N. W. 766, 768).)

"Since an insanity case is a civil case (*State ex rel. Pepper* v. *Holtcamp* (235 Mo. 232, 138 S. W. 521)), it would seem at least that due process of law does not require that there be a jury trial, whether demanded or not, and we so hold." (*In re Moynihan* ((Mo., 1933), 62 S. W. 2d 411, 413).)

At St. Elizabeths Hospital (Federal) in Washington, D. C., only 16 out of 1,600 patients (1 percent) demanded jury trial.

EXPERTS STROVE IN DRAFT ACT TO MODERNIZE THE COMMITMENT PROCEDURES FOR THE MENTALLY ILL

We cannot in the short space available to us give a detailed discussion of court decisions, State by State, as they relate to protection of the rights of persons who are, or are believed o be, mentally ill. Doubts have been expressed about the various provisions in H. R. 6376 for the picking up, detention, and commitment of the mentally ill (secs. 104–129).

State statutes not infrequently provide for compulsory hospitalization of mentally ill persons, upon medical certification, without prior notice or opportunity for hearing. While courts have differed as to the constitutionality of such provisions, the majority rule seems to be that if a person committed under such circumstances has available to him a statutory provision for determination of his condition, then due process requirements are met (see secs. 110 and 111, H. R. 6376).

It is recognized at common law that a person who is dangerous to himself and might be dangerous to others can be apprehended summarily (*Kelcher* v. *Putnam*, 60 N. H. 30, 1880). The courts have gone so far as to accept hospitalization on medical certification and even continued detention of the patient, by force if necessary, until release at the expiration of a statutory period.

Laws differ from State to State. The trend has been toward greater protection for the patient. Since the Alaska mental health bill is based, insofar as commitment procedures are concerned, on a draft act governing hospitalization of the mentally ill (revised 1952), we have reason to believe that such procedures are as humane as could be devised and protect the mentally ill person.

Drafting of this model bill was started in 1949 at the request of the National Advisory Mental Health Council. Doctors from the National Institute of Mental Health and Dr. Winfred Overholser, Superintendent of St. Elizabeths Hospital, together with attorneys inside and outside the Government, worked on the draft. Dr. George S. Stevenson, Medical Director of the National Association for Mental Health, a man of broad experience dating back nearly 40 years, has this to say:

"The provisions of this Draft Act can be sincerely recommended as a forward step in our handling of the mentally ill and in the maximum utilization of our mental hospital facilities."

Utah in 1953 enacted the model bill into law. Representative DAWSON, (Republican, Utah) spoke glowingly of the new law.

"SIBERIA, U. S. A." CLICHE, STARTING IN CALIFORNIA, SWEPT THE NATION IN 7 WEEKS OF FRENZY

H. R. 6376 is a highly technical bill. Its provisions have been worked over and refined for several years by outstanding psychiatrists in and out of Government. Not a single competent authority has testified against the bill. Dr. Overholser has praised the commitment procedures which represent the best thinking up to this time in a difficult combination of medical provisions bounded by legal protections and limitations.

In view of the fact that Alaskan mental health problems have been under study for many years and legislative proposals have been considered by Congress for 8 years, we were curious to discover where the violent opposition to House Resolution 6376 originated, and when. We found that a Mrs. Leigh F. Burkeland on January 24, 1956, 6 days after the House passed the bill, published an article in the Santa Ana Register in California, entitled: "Now Siberia." It is essentially the article she brought out a little later under the title: "Siberia, U. S. A."

On February 21, when the Senate Interior Committee opened hearings on H. R. 6376, Mrs. Burkeland appeared under the auspices of Dr. George A. Snyder, 644 North Doheny Drive, Hollywood 46, Calif. Dr. Snyder introduced Mrs. Burkeland and two paroled

paranoid dementia patients. All four testified against H. R. 6376.

Dr. Snyder said he came from the health department in Los Angeles. On February 6, 1956, he had circulated a letter which contained the most intemperate language we have ever seen from the pen of a physician. He called the bill perversion of medical integrity, medical fraud, dishonest, treason to America, and the like. His protege, Mrs. Burkeland, admitting she was no expert—and demonstrating it—kept talking about the hospital that's there in Fairbanks, that is, the building erected 50 years ago, which was never a hospital and which burned down 25 years ago.

Mrs. Burkeland evinced no competence to testify. She laid claim neither to professional training nor expert knowledge. The only thing that can be said for her is that she coined a phrase, "Siberia, U. S. A.," that has swept the country in some inexplicable manner. Mrs. Burkeland's vision of Siberia naturally led to thoughts of concentration camps. That idea spread like wildfire. One witness suggested the million acres in Alaska might be sold to Russia. How could this Siberia, U. S. A., gain nationwide acceptance in 7 weeks?

PHS DRAFT ACT GOVERNING HOSPITALIZATION OF THE MENTALLY ILL IS BASIS FOR H. R. 6376 LANGUAGE

Many people have been unduly, and quite unnecessarily, worried about the commitment provisions of H. R. 6376. To begin with, there is nothing unusual about the proposals. Somebody has to apprehend a dangerously insane person. Normally, it is a public official, or several officials, who take the person in charge and place him in a detention house or hospital for observation and medical determination. Members of the family, friends, welfare workers, health officials, or the police may make the first move in the commitment procedure.

In many instances the person who is ill will voluntarily seek medical treatment and possible commitment. Every effort is made in the model mental health bill, on which H. R. 6376 is based, to protect the rights of the patient during the commitment process. Sometimes drastic moves are needed for the protection of society and of the patient.

On March 10, 1956, the following news item appeared in the Washington Evening Star:

"TWENTY WITH TEAR GAS QUELL KNIFE-WIELDING PATIENT

"Twenty Montgomery County (Md.) policemen and tear gas were required to subdue a giant knife-wielding Negro patient who went berserk last night at Cedarcroft Sanitarium in Silver Spring.

"The patient slashed the furnishings of the room with a knife which had been strapped to his leg and kept seven doctors and attendants at a distance with a bed headboard which he wielded as a club. * * *

"Only after police reinforcements had been called and the room saturated with tear gas was the patient, said to weigh about 250 pounds and to tower well over 6 feet, subdued and placed in a straitjacket. He was transferred to a mental hospital * * * by police."

Now we wonder how those who object to the commitment procedures of H. R. 6376 would have handled such a case. Someone has to act. Often the family will not. Then an interested party, a friend, or some public official must intervene. What other way is there?

In dealing with mental illness, the courts recognize the police authority of the State. If opponents to H. R. 6376 would look up the commitment procedures in their own and neighboring States they could easily learn about the customary and necessary measures that are authorized by law. They would also profit by studying the model draft act.

INVOLUNTARY DETENTION PROVISIONS FOR ACUTELY ILL MENTAL PATIENTS ARE SOUND AND REASONABLE

With respect to emergency apprehension and detention of mentally ill individuals on the ground of dangerousness, the common law rule has been that "a dangerous maniac may be restrained temporarily until he can be safely released, or can be arrested upon legal process, or committed to the asylum under legal authority." (*Kelcher* v. *Putnam* (1880) 6 N. H. 30, et al.) For other cases see annotation "Right without judicial proceeding to arrest and detain one who is, or is suspected of being, mentally deranged" (10 A. L. R. 488, 45 A. L. R. 1464).

Provisions authorizing temporary detention of dangerous insane persons are found in the statutes of most States. A compilation which appears in The Mental Health Program of the Forty-Eight States (see supra), indicates that, in 1949, 30 States provided for emergency commitment without court order.

The common law rule, with certain limitations designed to protect the interests of both the patient and the arresting officer, is embodied in section 104 (a) of H. R. 6376. Simply stated, this section says that if a licensed physician issues a certificate that an individual is "mentally ill" and because of illness "is likely to injure himself or others if allowed to remain at liberty," then "any health, welfare, or police officer, or any person deputized by a United States Commissioner" shall have authority, upon medical certification, to take the individual into custody, apply to a designated hospital for his admission, and transport him thereto."

However, there will be times when it is impossible to obtain medical certification. If a person who gives evidence of being mentally ill and seems likely to injure himself or others cannot be medically certified at once, "any health, welfare, or police officer may take such individual into custody, apply to a designated hospital for his admission, and transport him thereto." (sec. 104 (b).)

One opponent to this bill wanted to have this section deleted. We wonder what he would suggest for handling the case of a person who went berserk in Alaska 500 miles from the nearest physician—let alone three psychiatrists as he suggests.

The following States have procedures substantially identical to those under section 104 (a): Idaho, South Carolina, Utah, and Florida. Provisions similar to section 104 (b) are to be found in the laws of Arizona, California, Colorado, Florida, Idaho, Utah, and Missouri.

D'EWART, UNDER SECRETARY OF INTERIOR, REJECTS CHARGE OF "SIBERIAN CONCENTRATION CAMP"

If we turn from the beguiling fantasies of Siberia, treason, and concentration camps to the realities of Alaska and of her mental health problems, this is what we find. Alaska, for reasons lost in history, never has been permitted to pass laws governing the care of her mentally ill. In the Organic Act of the Territory, passed in 1912. Alaska was expressly forbidden to amend or repeal the Federal law passed in 1905 relating to Alaska's mentally ill.

Under that old law, which is in force today, anyone could ask to have a person picked up as insane. A jury of six adults was impaneled to pass on the sanity of the person. Medical certification was optional. Those adjudged insane were shipped 2,000 miles to a proprietary hospital in Portland, Oreg.

Morningside Hospital in Portland has held the contract with the Government for 50 years. Their books have not been audited in all that time. During the past 18 years they made a profit of $1 million. American taxpayers footed the bill which amounts to $800,000 to $900,000 a year. Outpatient care is impossible because of distances involved.

Commenting on the fantasy of a concentration camp, Under Secretary of the Interior, Wesley D'Ewart, formerly Republican Representative from Montana, said:

"Rather than create a 'Siberian concentration camp' or to provide the basis for a police state, it is our desire to provide the most humane and enlightened procedures possible for meeting the problem of mental health in the Territory of Alaska."

The whole purpose back of the bill is to right the wrongs suffered by the Alaskans. The Federal Government wishes to give to Alaska the same control over its mentally ill as the Hawaiians have over theirs. This is clearly shown in section 3 (b) which states: "Notwithstanding the provisions of section 3 of the act of August 24, 1912 [the Organic Act of the Territory] * * *, or any other law, the Territorial Government of Alaska is hereby authorized to enact such laws as it may deem appropirate relating to the hospitalization (including commitment), care, and treatment of residents or persons in Alaska who are mentally ill, and such legislation may supersede any of the provisions of title I of this act."

WE URGE ALL PERSONS WHO HAVE MISUNDERSTOOD H. R. 6376 TO SUPPORT THE BILL WHOLEHEARTEDLY

Thus we see that the Federal Government, far from wishing to stick its nose into Alaska's business, wishes to take its nose out. As soon as H. R. 6376 becomes law, if it does, Alaska will be free to change commitment procedures as it sees fit through the action of its own legislature. Alaska will be on its own, insofar as its mentally ill are concerned. It will receive funds for facilities and will add some money from its own funds. It will be able to build 1 or 2 small hospitals, 1 or 2 homes for senile patients, and establish special classes for the mentally retarded. What Alaska wants to do, and what Congress is trying to help it to do, is to establish a well-rounded mental-health program, with clinics for preventive care and facilities in Alaska for Alaskans and for nonresidents who become ill in Alaska.

Obviously, as soon as Alaska has her own funds and facilities, she will wish to set into motion the customary reimbursement arrangements which all States have for public charges. They are set forth in section 119. And, as we have previously stated, after discussion with competent Federal officials (including the one who drafted section 119 (c) some years ago), subsection (c) confers no additional powers not already given in subsections (a) and (b). Section 119 (c) could be omitted or reworded.

The bill, as is customary, will be gone over line by line. At best, most of it is a temporary set of provisions until the Alaskans can take over.

Anyone who tries to defeat this bill will do a tremendous injustice to the Alaskans. The bill is for them, not for us who are stateside. We find it inconceivable that anyone should wish to perpetuate the present cruelties which we in the States have inflicted on a part of our citizenery which is helpless to act on its own behalf because we have failed to modernize the laws under which they must live.

Now, when the Territory is about to have the Mental Health Act it so greatly desires, its hopes may be shattered because a few Americans have failed to understand that H. R. 6376 is not a national, but a Territorial bill.

Anyone who has wired his Senator opposing the bill owes it to the Alaskans to wire again urging passage of H. R. 6376.

Minnesota County Starts Two-Party Fund Campaign

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 22, 1956

Mr. HUMPHREY. Mr. President, in a recent issue of the Washington Post and Times Herald there appeared a feature article by Mr. Robert E. Baker entitled "Minnesota County Starts Two-Party Fund Campaign." I wish to commend the reading of this article to my colleagues.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Douglas County, Minn., begins a significant political experiment today—the raising of campaign funds from the mass of voters on a bipartisan, cooperative basis.

The plan is designed to provide sufficient campaign funds for the major political parties without having to resort to the heavy contributions of special interests which, in return, might expect special favors from successful candidates.

In these days of fabulously high campaign costs, it would be the small contributions from the many voters, rather than the substantial contributions from the few, which would foot the bill.

The experiment was announced by the Park Region Echo, biweekly newspaper published at Alexandria, county seat of Douglas County.

Byron Allen, Minnesota commissioner of agriculture and veteran advocate of better campaign financing practices, proposed the experiment to the newspaper.

He said it is a composite program of his own ideas and proposals made last year on a national basis by Philip L. Graham, president and publisher of the Washington Post and Times Herald.

This is the Douglas County plan:

An all-party committee will direct the program. It will have three cochairmen: an Independent, a Republican, and a representative of the Democratic-Farmer-Labor Party. Goal is a contribution from every person of voting age in the county, which has a total population of 21,000.

Tentatively, the committee will divide the fund into three parts: one-third to the national committees for the presidential campaigns; one-third to the State committees for the governorship race, and one-third to the local (seventh district) congressional campaigns. Exact details of the distribution formula, taking into consideration the percentage of votes each party collected at the 1954 general election, will be decided by the committee.

Participating will be the official county party committees; the league of women voters; civic clubs, veterans' organizations; clergymen; the chamber of commerce and the junior chamber of commerce.

The Douglas County program generally parallels the plan for a national bipartisan fund campaign, approved by the chairmen of the Republican and Democratic national committees but later abandoned.

It was through Allen's efforts that the 1955 Minnesota Legislature permitted campaign contributions of $100 or less to be deducted in State income-tax returns. A similar proposal is included in the Johnson-Knowland elections bills in Congress.

In announcing the program, the Park Region Echo editorially called it a challenge to the people, adding:

"In this era of fantastically expensive campaigns, the subterfuges used to pass money 'under the table' to needy candidates are legion. This is the greatest danger to our representative form of government.

"When special interests, be they in the form of big business, big labor, or the underworld, contribute heavily to political campaigns, they all too often expect dividends from their investments."

Commented the St. Paul Pioneer Press in an editorial today: "There is no thought that dyed-in-the-wool party enthusiasts who regularly contribute to their own organization will stop this practice. That is not desired. It is hoped that citizens who seldom or never make a political contribution to any party will be brought into the program by a bipartisan approach. This not only would aid party finances, but would increase public participation in politics at all levels."

The Eisenhower Staff

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. MULTER. Mr. Speaker, the New Republic for March 19, 1956, contains an enlightening article on the diffusion of responsibility in the Eisenhower administration. It was written by Mr. Frederic W. Collins, Washington correspondent for the Providence (R. I.) Journal

INSIDE THE WHITE HOUSE—WHO MAKES THE DECISIONS

(By Frederic W. Collins)

We now have Mr. Eisenhower's own word that as a recovered heart patient, he will conduct the Presidency in a different way through the rest of his tenure, including a second term if he is reelected. "In many cases," he said, after cataloging great areas of Presidential concern, "these things can now be done equally well by my close associates." In his first 3½ years, before a shadow lay across his health, he had already introduced significant changes in the method of operation of his office. It is fair to assume that when he leaves it, the Presidency will be something other than what it was when he took it. On his own words and on the precoronary record, it may be expected that in the remainder of his regime, there will be a reliance on the staff system and on delegation of responsibility quite new to American experience. Whether this is good or bad, whether the people want the Presidency altered in that way, is certainly one of the great underlying issues of this election. One feels it will be decided not at the level of surface drama, on catch phrases like "part-time chairman of the board," but deep down in instinct.

To say that the country is going to have even more of the staff system, and even more delegation of responsibility, is to say that the inherent disadvantages of those methods are to be present in greater measure. Having in mind the normal procedures of American politics and Government, the greatest disadvantage is diffusion of responsibility, making it difficult if not impossible for the electorate to assign credit or assess blame for Executive acts and policies. It is a phenomenon of the present, attributable only to a measure of blind infatuation in the popular devotion to Mr. Eisenhower, that he gets off scot-free even when his Government is in trouble, as in the farm areas. A second disadvantage is lack of coordination in the Government, especially visible in foreign policy.

In the Eisenhower administration, these disadvantages are aggravated by special circumstances. One is the addiction of the Secretary of State to tourism. The other is the recurrent physical dispersal of the top echelons of Government during Mr. Eisenhower's rest periods away from Washington.

A third disadvantage, arising principally from zeal for the staff system, is a sort of drying out of the human substance of Government. To borrow a passage from Tocqueville's discussion of the old regime (in an admittedly irrelevant context):

"No doubt many of these men had proved themselves high competent in the exercise of their functions and had a good grasp of all the details of public administration; yet, as for true statecraft—that is to say clear perception of the way society is evolving, an awareness of the trends of mass opinion and an ability to forecast the future—they were as much at sea as any ordinary citizen."

It is perhaps worth noting that when Dulles was asked on February 24 about the weakness of the current government in France, he cited by way of reassurance the indestructibility of the French administrative system.

Except in rare instances, no outsider knows who in the White House or in the Government at large is responsible for a given decision, however diligent his inquiry, and the prospect now is that those instances will become even more rare. The exceptions usually occur when the President exercises his final authority in a dramatic last moment, as in the case of his veto on intervention in Indochina and on hasty mainland involvement opposite Formosa. Indeed, the general public has almost no acquaintance with the men in the White House and in departmental offices below Cabinet rank who are making decisions or contributing to them. They are, in fact, unkown even in Washington. Consider how much excitement would be aroused if one remarked on the street or at a party, "There's Andy Goodpaster." Yet, as nearly as can be established, Col. Andrew J. Goodpaster, staff secretary, is third in line in the staff system, just below Gen. Wilton Persons, retired, who is deputy to Sherman Adams, the assistant to the President, and chief of staff.

Adams, of course, is known by reputation. He does a superb job in performing an indispensable function as an auxiliary lobe on the Presidential brain. Yet the scope of his activity and influence, let alone independent power, defies precise measurement. He rules a staff divided by function among men handling the press, congressional liaison, departmental liaison, Presidential appointments, speechwriting, preparation of documents, legal questions and day-to-day economic questions. To name these functionaries would be to compile a list of persons almost completely unknown to the public, except for James C. Hagerty, press secretary. In the staff structure there are additional functions in the field of politics, patronage, and contact with "minority groups," but they do not appear on the charts. One of Adams' special jurisdictions seems to embrace the so-called independent agencies. Alongside Adams' domain, formally known as the White House Office, there is another, the Executive Office of the President, which takes in the National Security Council, the Central Intelligence Agency, the Council of Economic Advisers, the Budget Bureau, and the Office of Defense Mobilization. Next door is a company of special assistants, wrestling with disarmament, foreign economic policy, atomics, Federal-State relations personnel, foreign-trade policy, and disposal of agricultural surpluses. A new man has ust oined

up, William H. Jackson, to "coordinate foreign affairs."

There is still the Cabinet. Theoretically, it is not a decision-making body. The Eisenhower Cabinet, however, is a special group of men, in that most of them are serving at financial sacrifice, and most of them were too accustomed to great power in their private careers to be unduly bemused by the power attaching to public office. For those reasons, there is unquestionably a minimum of self-interest in their judgment. Aware of that, this President is said to rely on his Cabinet for advice more than have most Presidents. Appended to the main body are a sub-cabinet, a sub-sub-cabinet and a changing pattern of ad hoc committees.

The foregoing summary description of the executive structure brings to mind one of the great faults arising from its overelaboration. Except to political scientists, it is about as boring a subject as can be found in the whole field of Government and politics. It has absolutely no political sex appeal. Because it is so uninteresting, the public has no knowledge of it, and, that being the case, there is no way of making it a good political issue. Bit by bit, the authority of the President can be absorbed into an impersonal, institutionalized apparatus. The process can be carried so far that not even the staff personnel are sure who should take credit or blame. A "what" becomes the substitute for "who" and a "what" is almost inaccessible to popular inquiry and influence. In the end, the appeal of the President's personality becomes a separate and dominant factor in politics, dissociated from the record of the Government he heads.

In the Eisenhower administration, the impersonality and remoteness of the human element in Government is accentuated by the immurement, partly voluntary and partly not, of its people. When a man vanishes into the White House or the Executive Office building at 8 a. m., he is not likely to be seen again until he goes home and gets into bed with his brief case. This is known as dedication. Instead of going out to luncheon and mixing with the populace, the staff members dine with one another at the White House, with heaven knows what results in the inbreeding of thought. Members of higher planning and policy groups, formerly gregarious, are seen no more in outer society, and are actually under strict injunction to be careful in their contacts. This is for security's sake. Sherman Adams is up at dawn and abed with the chickens.

So, who makes policy? Evidently, Sherman Adams contributes greatly to it. His influence seems to vary among the different departments, according to their importance in policy and the strength and independence of the individual department heads. But his closeness to the President and his function as a coordinator give him great opportunities to make his thinking felt. When he is coordinating two conflicting points of view, he can blend them into a new, different, Adams point of view. As nearly as one can learn, Mr. Eisenhower does not want choices presented to him, but rather, an agreed recommendation. When one comes along with the Adams endorsement, it comes pretty close to being home safe. When it is necessary for the President to make a choice among recommendations, the one favored by Adams is said to have the advantage.

Who made the new farm policy? What was the Eisenhower contribution, beyond finally endowing it with his authority? To ask that question is to state the broad issue of where the center of responsibility lies in the administration. One or two things are known. When it was finally recognized that there was real trouble in the farm belt, the formulation of a program to meet it was taken out of the hands of the officer having primary responsibility, Secretary of Agriculture Ezra Benson, and assigned to a Cabinet committee—plus Adams—on which Benson was only one member. That step is said to have been initiated by Adams.

It is useful exercise to compare the recent veto message on the gas bill with a report made a year ago by a Cabinet committee on fuel and energy policy. With respect to natural gas, the report was antiregulation, as was the body of the veto message. The difference is that somebody stirred some politics into the message. Question: Who was it, or, perhaps, who were they? Speculation opens up fascinating vistas. One of the few men around the President with real experience in politics, intensive though relatively brief, is the Vice President. Did RICHARD M. NIXON, of California, home of the Superior Oil Co., advocate the veto? Did he concur in someone else's advocacy? Did he resist? The answer is not available to current history.

There is more than theory behind the proposition that diffusion of responsibility is inherent in the present executive system. There have been several episodes in which it was demonstrated with remarkable clarity, and in 1 or 2 episodes, there has been extraordinary rejection of responsibility at the top.

When the sorry performance with respect to the Salk antipolio vaccine became an issue, the President bucked the responsibility to Mrs. Oveta Culp Hobby, who promptly bucked it to a defenseless bureaucrat, Dr. Leonard Scheele.

When Gen. Matthew Ridgway challenged the President's 1954 state of the Union assertion that military policy had unanimous support in the Joint Chiefs of Staff, the President bucked responsibility for any error in his statement to the Pentagon. Men who have been in Washington since Herbert Hoover's time were astounded. They had never before heard a President pass off responsibility for his own words.

There have been two examples of exceptional administrative disarray in the conduct of foreign policy. Both occurred while the President and Secretary of State were out of town, a fact which carries its own commentary on the soundness and effectiveness of the executive organization. One occurred last spring, when Chou En-lai, at Bandung, made a move for talks between Red China and the United States. The other, very recent, had to do with the shipment of tanks to Saudi Arabia. Both times, as it happened, the two principals were Mr. Hagerty and Under Secretary of State Herbert Hoover, Jr.

The Chou En-lai statement broke on a Saturday morning, Washington time. There were telephone conversations between Mr. Hoover and Mr. Hagerty. There was then a statement by the Department of State having the practical effect of rejecting Chou's offer out of hand. Senator WALTER GEORGE raised his organ voice in dissent in a speech that night. By the first of the week Mr. Dulles and Mr. Eisenhower were back in town, and by midweek they had succeeded in reversing the Hagerty-Hoover policy. But to this day it is a question, even among diplomatic correspondents, where the responsibility lies for the Saturday morning boner, which could have been extremely serious.

The performance on the tanks was almost a reenactment of the springtime flub. Again it is impossible to assign responsibility. It is a fact that Hagerty alone talked face to face with the President before the short-lived embargo was ordered. It is a fact that foreign affairs do not lie within Hagerty's area of special competence. It is a fact that Mr. Hoover, called before the Senate Foreign Relations Committee, and acting in the most manly fashion in accord with a Scout's code of honer, accepted full responsibility. (And it is somehow symbolic that during this ordeal, Mr. Dulles left Mr. Hoover's side and took a place in the spectator seats.) But these facts do not add up to a satisfactory conclusion as to who was really responsible. It is believed in Washington, for example—but not known—that Zionist leaders got in touch with someone at the White House as soon as the story on the tank shipment broke. It could have been Max Rabb, the "minority contact" on the Eisenhower staff. It is supposed that the White House person telephoned Hagerty. But the public has no really solid information about all this, and for that matter, as far as the public record shows, neither does the Foreign Relations Committee.

It should not be forgotten that in neither of these cases was responsibility placed on Mr. Eisenhower. That is how the staff system and the delegation of responsibility work.

There is no legitimate basis in his career or in his makeup for the apprehensions sometimes voiced that Mr. Eisenhower, as a "recovered heart patient" serving a second term, would permit the Presidency to degenerate into a mere ceremonial office. While allotting some of his former concerns to his associates, he said, "in others I shall continue to perform these important tasks." It seems inevitable, however, that the Presidential function is to become more and more restricted to decision, and that decision will become restricted to a narrowing field of highest policy matters. By 1960, should he win reelection, the phrase "Eisenhower administration" may have become rather markedly imprecise, too broad for the actuality, and what has traditionally been a central reference point of American politics may have undergone a disquieting loss of meaning and usefulness.

In the National Welfare, Employment Opportunities Must Be Provided for Able Workers Over 40

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. DONOHUE. Mr. Speaker, one of the most challenging problems increasingly affecting our Christian American society is that of creating employment opportunities for our older citizens.

Paradoxically and unfortunately, although the blessings of advancing medical research and science serve to bestow longer lives in our times, we nevertheless have fallen into the custom, in business and industry, of classifying men and women over 40 as too old. When we realize that a wartime draft embraces men up to 42 years of age, it would be thought perhaps a little humorous to conceive the vigorous maturity of 40 as too old for ordinary employment, if it were not so tragic.

Mr. Speaker, last August I included my thoughts and convictions on this subject in a speech I inserted in the RECORD. At that time, I complimented the Department of Labor and the Health, Education, and Welfare Department on their initiation of research into this grave situation, and at the same time I appealed to them, and other agencies

of the Federal Government and States to expand their program of study out of which might come a cooperative endeavor at the appropriate levels and units of State and Federal Governments to awaken the Nation to the seriousness of this challenge and to remind our industries that in this blessedly healthy age and Nation, life can truly begin at 40.

I am, therefore, particularly pleased that the Labor Department has begun to expand their research into this problem, and I would like to include at this point a very pertinent editorial on this subject which appeared in the January 17 issue of the Worcester (Mass.) Telegram.

The article follows:

THE OVER-45 PROBLEM

Worcester will have a key role in what may be one of the most important sociological surveys ever made by the Federal Government—a study of the problems of workers over 45.

This city is one of seven labor markets where such a survey will be conducted by the United States Labor Department, in cooperation with the State Employment Security Division.

It is a study which could have far-reaching effects in shaping future social-security policies, expansion of facilities to help older workers find jobs, and in convincing employers it is good business to hire oldsters.

Under Secretary of Labor Arthur Larson described the basic purposes of this survey last June to the annual conference on aging at the University of Michigan. Mr. Larson said the Labor Department hopes to make a real dent in the stubborn problem of age barriers to employment.

Secretary of Labor James P. Mitchell has emphasized that by 1975—only 19 years hence—about half of the American population over 20 years old will be 45 years old or older. And unless something is done to give them job opportunities an estimated half of our adult population will be condemned to a life of economic uselessness.

Indeed, more than a fourth of the present population is now over 45—and about 41 percent of the adult working group are above that age. The older age groups are rising faster proportionately because of a decline in the death rate, the decline in immigration, and the population growth. But Jacob Fisher, of the social-security system, has found that the average old person has had a smaller share in total consumer income in each of the years since 1945 than he had in that year. In short, his economic position has been weakening.

There have been previous studies in this problem, but none of the scope now to be officially undertaken. Surveys have been made by the Bureau of Employment Security, the National Association of Manufacturers, and by various private welfare agencies. It is interesting that such surveys invariably found older workers significantly better than younger ones in overall dependability, judgment, and work quality. The projected Government survey will check all these factors.

But it has been no secret that employment age barriers exist for older workers—usually at 45 for men and 35 for women. Those employers polled on this have mentioned health, efficiency and higher pension and insurance costs as the reasons. The rising number of private pension plans has, in fact, discouraged more companies from hiring over 45.

It will be a major service, both socially and economically, if the Government comes forward with the answers to the problems raised by the employability of the over-45 group. Worcester, a city of diversified industries with fine labor relations, is fortunate in having been chosen as a key center for the survey. This city will have the benefit of its own actual facts and figures to meet future problems in the field of geriatrics, the science of helping the aging.

Seventy-fifth Anniversary of New York Board of Rabbis

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. MULTER. Mr. Speaker, permit me to call to the attention of our colleagues the following comments on the New York Board of Rabbis, which appear in the New York World-Telegram and Sun for March 17, 1956:

BOARD OF RABBIS IS NOW 75 YEARS OLD

(By Alice Moldenhawer)

Within the next 2 weeks thousands of Jewish children, young people, and adults in the city's homes and hospitals, shelters, and prisons, will celebrate the Passover. The Haggadah, in pamphlet form, is available to any patient or inmate who desires it, and foods proper to the festival are furnished wherever they are needed, by the New York Board of Rabbis.

The board, which represents orthodox, conservative and reform congregations throughout the State, was founded 75 years ago and will observe its anniversary next month. Throughout its history it has been interested in a ministry to those who are sick and in prison.

This religious duty was formerly performed by groups of laywomen, the "Bikkur Holim Guilds," Rabbi Harold H. Gordon, general secretary of the board, said yesterday. "Today, we are the Bikkur Holim Guild." Backbone of this service is a chaplaincy program employing over 70 rabbis in New York City alone.

GRANT ASSURES CHAPLAINS

Ten years ago, Rabbi Gordon said, the Federation of Jewish Philanthropies made a grant to the New York Board of Rabbis which has enabled them to insure that there will be well-trained chaplains in all institutions, tax supported and voluntary.

When the patients or inmates are confined for long periods, the chaplain is full-time. Part-time chaplains, who are also rabbis of congregations, share the responsibility in other institutions. Where there is not a round-the-clock schedule, these part-time rabbis are on call.

"They may be called out at 2 or 3 in the morning. They know that this is going to be part of their duty when they accept it."

The board has been a pioneer in this field, he noted, and is frequently asked for advice by groups in other cities. In the past such a chaplain was simply a rabbi, priest or minister who happened to have an institutional appointment.

TECHNIQUES LEARNED

"But we have found," Rabbi Gordon said, "that in this ministry good intentions are not enough. There are many techniques that we are not born with and that some perceive more readily than others, but that the rest of us can learn by proper methods."

Most Jewish theological seminaries have no department of pastoral psychiatry; those that do provide only seminars and lectures, he added. "For clinical training the men are sent to us." Instruction is given at Mount Sinai and Bellevue Hospitals and is supplemented by classes and conferences at the board of rabbis headquarters, 10 East 73d Street.

One of the biggest pitfalls for the novice is the initial approach to the patient. He has to learn "to establish a rapport." Entering the room with a "You're looking fine today" and leaving with a "God bless you" doesn't do the trick, Rabbi Gordon observed. "The patient may simply think, "Here's a first-rate phony. What is he doing here?'"

MUST ENCOURAGE, UPLIFT

Rabbi I. Fred Hollander, director of the board's Institute for Pastoral Psychiatry, said that once the chaplain has learned through watching and practice how "to encourage and uplift," his contribution is invaluable, whether he is talking to a frightened child with polio, a disillusioned mental patient, or an embittered inmate of a city or State prison.

"He can help them to see their lives in larger terms, to regain faith in the world and in themselves and can give them the feeling that they have not been forsaken—they still belong."

In this process the message of Passover is especially appropriate, Rabbi Gordon said. It is the festival of freedom, giving a hope of renewal, of release from bondage, whatever that bondage may be, "We were slaves unto Pharaoh in Egypt, and the Lord, our God, took us out from there with a strong hand and an outstretched arm."

An Enduring Peace With Justice

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. BOLAND. Mr. Speaker, President Eisenhower's recommendations on the mutual security program are now being considered by the Foreign Affairs Committee. As he stated in his message to the Congress on last Monday:

Our goal is clear—an enduring peace with justice. To achieve it will continue to require effort, skill, patience, and sacrifice. Toward it we must and will strive constantly by every means available.

Mr. Speaker, this is the goal all the freedom loving peoples of the world are looking to, "an enduring peace with justice." And indeed, its fruition does require skill and patience. Its realization does encompass effort and sacrifice. For one of the means to the end we all seek is that of assistance to the underdeveloped nations of the world in achieving economic and technical enlightenment. This, Mr. Speaker, entails the willingness of our people to continue to join in extending a helping hand to the less fortunate peoples of the world. There is no doubt that there have been some disappointments in what we have done. There is some question in the minds of many in this country and in this Congress on the accomplishments of the mutual security program. But, Mr. Speaker, though at times the reception of our efforts have been disheartening, an objective view of the results inevitably leads to the conclusion that the mutual assistance program must be continued.

Mr. Speaker, I am pleased to submit for the RECORD an excellent statement by the Christian Action Committee of the First Church of Christ, Congregational, of Northampton, Mass. It appeared in the March 12, 1955, issue of the Daily Hampshire Gazette and in my judgment deserves the thoughtful consideration of the Members of the House. In line with this statement, I include Walter Lippmann's column of the Washington Post on March 22, 1955.

The articles follow:

[From the Northampton (Mass.) Daily Hampshire Gazette of March 12, 1956]

CONGRESSIONAL ACTION ON AID TO UNDERDEVELOPED COUNTRIES ASKED BY FIRST CHURCH HERE

The Christian action committee of the First Church of Christ, Congregational, today issued a statement in the form of an open letter to Congressmen representing the people of Northampton and vicinity, calling attention to the "critical situation" in the area of United States economic aid to underdeveloped countries of the world and urging acceptance by Congress of President Eisenhower's expanded 10-year program.

After stating the reasons for its concern the committee called upon Senators SALTONSTALL and KENNEDY and Representative BOLAND to "assume that kind of leadership which alone may meet the present need—leadership which is so bold as to transcend partisan politics."

The statement developed from the committee's study of material prepared by the Council for Social Action of the Congregational Christian Churches and entitled "Christians in a Revolutionary World." It follows in full:

"This is to state that we, members of the Christian action committee of the First Church of Christ, Congregational, in Northampton, are greatly disturbed by reports of failure on the part of our Government to establish a sound and smoothly functioning program in an area which grows day by day in critical importance—the area of foreign economic aid.

"This is also to point out to you and to our fellow citizens the reasons why we are alarmed.

"As Christians, we cannot accept any report of a breakdown in America's good-neighbor policy without—at the very least—a responsive expression of concern. As citizens, we must be aroused when our country falls short of goals set within limits of clearly defined responsibility.

"After careful study, a special committee of the National Planning Association has criticized the administration of the United States technical cooperation program. It has charged, among other things, that the point 4 effort has been handicapped by 'unstable direction, administrative disorganization, and neglect of employees.' It has presented recommendations for remedial action which, so far as we know, have not been seriously considered—let alone adopted—by the appropriate Government authorities.

"At about the same time, the Soviet Union has launched a foreign-aid program of its own, with the obvious intention of outdoing America in this effort and thus gaining world domination.

"Roscoe Drummond (the New York Herald Tribune's able Washington correspondent) stated the situation with great clarity in a report on President Eisenhower's determination to persuade Congress (if he can) to accept his expanded 10-year program. Drummond wrote:

" 'The President is not saying to Congress that foreign economic aid must continue forever. He is saying that the Soviet Union is now using all methods short of war to entice the underdeveloped nations into its embrace. He is saying that the cold war has become bitterly competitive and that unless the United States (wakes up) to its implications, we may lose the cold war itself.

" 'All the President is asking is that Congress join with him in making it clear to the world that America is not engaged in a help-and-run program and that there will be adequate continuity in what we are doing.'

"But the writer noted, there is peril in this presidential campaign year that Congress will not assume its responsibilities, that American leadership will be stalemated 'while American politicians at home tell each other how much the world should distrust them.'

"Our concern, then, is that even the danger of losing the cold war may not be enough to stir your associates in Washington to responsible action.

"Therefore, we are calling upon you to assume that kind of leadership which alone may meet the present need—leadership which is so bold as to transcend partisan politics. In the light of current events and potentials arising from these events, could the demand be any smaller?

"MARGARET BEDELL.
"ATOSSA HERRING.
"ROGER KELLOGG.
"FRIEND KIERSTED.
"WILLIAM UNDERWOOD.
"DURBIN WELLS."

[From the Washington Post and Times Herald of March 22, 1956]

TODAY AND TOMORROW

THE FOREIGN-AID TROUBLE

(By Walter Lippmann)

This is the time when each year the President has to go to Congress, asking it to vote American money for the use of foreign governments. Congress is always reluctant to do this. But it has never been so reluctant as it is now. There are not only those who do not want to give away American money. This year, there are also those who, though they have been supporting foreign aid, are quite unhappy with the way it is now working.

The administration will, it seems to me, do better if, in arguing its case, it takes Congress more clearly and candidly into its confidence. The central fact in the whole business is that the old policy of foreign aid has now to be thoroughly reappraised and drastically revised—that these changes cannot be worked out before June 30 when the time for appropriations expires—and that Congress is really being asked to keep the flow of funds going while a new policy is being worked out. Though almost nothing of the sort is said plainly in the President's message, this is what is implied in the request for greater flexibility.

Congress is, in fact, being asked to give the administration time and opportunity to work out the changes in foreign aid which have become necessary because of the great changes in the world situation. The administration, though it is aware that the policy has to be revised, is not now able to tell Congress what revisions will be. Yet it is not safe to cut off the old program, to stop the flow of funds, and then to start all over again later on when the revised policy has been worked out. I would suppose that to argue the case this way would appeal to the commonsense of those who are not opposed to foreign aid in principle but are unhappy about much of what is now happening.

Our postwar foreign aid policy was originally conceived at the time of the Marshall Plan in 1947–48. Since then there have been very great changes in the world situation. Then we still had a monopoly in nuclear weapons. We now have arrived at a balance of power which has produced a military stalemate. Furthermore, when the United States foreign aid policy was first adopted, the Soviet Union had not yet emerged from its economic isolation to become a competitor in the economic world. There have been other great developments, such as the economic recovery of Western Europe, the reappearance of Germany and Japan as big powers, the rise of China as a great power in Asia, and a very large increase in the power of the peoples of South Asia and North Africa.

We have come to the end of the time when the non-Communist world is willing or is compelled to look solely to Washington for economic aid. We are living in a time when almost all of the countries which have been receiving aid from us feel that we have a competitor in the Soviet Union, and that they are now is a position to bargain with both of the two superpowers.

The military stalemate is having a profound impact on the whole business of military aid, which is, of course, the preponderant part of our existing program. In all the countries which do not themselves have nuclear weapons, and the means of defense or retaliation against nuclear weapons, there is a deep tendency to downgrade their interest in military defense. This is plainly visible in Germany, in France, and in Japan, and there are signs of it even in Great Britain.

The fundamental strategic fact of the world situation—that there are only two powers with truly modern armaments—has produced, as it was bound to produce, various forms of military neutralism in the countries which do not have nuclear armaments. It seems almost certain, therefore, that our emphasis on military aid will have to diminish. The administration's foreign aid estimates to Congress do not show this change of emphasis. But there are already signs of the change in the way Mr. Dulles has recently begun to talk about the Manila and the Baghdad pacts.

The emergence of the Soviet Union as an economic power in the world will require deep changes in our conception of foreign aid. We have thought of that aid as at bottom a contribution to consolidate our allies, and to prevent inflation and economic collapse which Communists would then be able to exploit.

This conception is still, broadly speaking, valid in the countries that are wholly dependent upon us—in South Korea, Formosa, and South Vietnam. But in India, the rest of South Asia, in the Middle East, and North Africa, the situation is radically different. The countries there are not dependent upon us because they now have an alternative supplier of capital and technical aid. The emergence of the Soviet Union as a competitor is one of the great historic developments of our times. It is altering radically the position of the United States and of its European allies, and it is enhancing enormously the power of the native peoples who were once part of the old European empires.

It is necessary to adapt our foreign aid policy, and in fact our foreign policy, to a situation which no one took into account when postwar foreign aid was first conceived about 8 years ago. This is that the uprising against the West, which has been smouldering, has now gotten the backing of the great power of the Soviet Union.

We have to adapt our foreign aid to this competitive situation, which means, among other things, that we shall not be able to attach many military and political strings to our contributions. Yet we shall have to go on with foreign aid. For we cannot refuse to compete, leaving to the Soviet Union by default a monopoly in the underdeveloped countries of South Asia and North Africa.

The President says in his message that his program of foreign aid "is a demand of the highest priority on our resources," and "as

fundamental to our own security and well-being as the maintenance of our Armed Forces." This is, of course, true and it is an essential reason for continuing foreign aid. But it is not the sole reason. Beyond the urgency of obvious self-interest, the United States has, I hold, a moral obligation to the less fortunate people. We cannot justify the enjoyment of our high standard of living without our help, the gap between the richer and the poorer countries is bound to widen.

Although our obligation is humanitarian, it is not only that. We have a deeper moral obligation. With less than 10 percent of the non-Communist world's population, and only 8 percent of its area, the United States is consuming more than half of the non-Communist world's supply of such fundamental materials as petroleum, rubber, iron ore, manganese, and zinc. In 1950, we were consuming 10 percent more materials than we produced; in another 25 years the percentage will be far greater.

At the very least, we owe it to the world to return in some form and in some part the resources which with our greater power and wealth we have been able to command from the underdeveloped regions of the world.

Scuttling a Solution of the Farm Problem?

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. HESELTON. Mr. Speaker, under unanimous consent to revise and extend my remarks and to include certain extraneous matter, I want to summarize as briefly as possible certain information for my own use in replying to inquiries I have received. I hope it may be useful also to those of my colleagues who are receiving similar inquiries. Basically, those inquiries are: What has happened to the President's recommendations for agricultural legislation, what are the reasons for what has happened and what are the prospects?

On May 5, 1955, the House passed H. R. 12 by the close vote on rollcall, 206 to 201. The vote of the New England delegation was 26 against and 1 for passage of the bill. I was paired against the bill.

This bill would provide for the restoration of high, rigid price supports at 90 percent of parity for basic farm commodities.

Since then the matter has been exhaustively analyzed and discussed, has been the subject of numerous articles in periodicals, of nationwide editorial comment, of news comments, forum debates, and special programs on radio and television, and of full treatment here on this floor and through every conceivable medium of public information. Within the last few days, the other body has completed its consideration of the legislation and the next logical step would be a conference.

Obviously, H. R. 12, as it passed the House on May 5, 1955, by a margin of five votes, was in direct opposition to the President's recommendations and contrary to the recommendations of the major, responsible farm organizations. It certainly ignored and violated flagrantly the legitimate interests of the consumers. Since it involved, if it became law, the possibility and even the probability that a large majority of the consumers would demand quite properly a sweeping repeal of much legislation in the field of agriculture, it carried a very real threat to agriculture and I am convinced that the majority of those engaged in agriculture realized that fact.

Because of the rules of the House, I cannot comment here upon what happened in the other body. But I can and do recommend that all those who are interested read the brief statements in the CONGRESSIONAL RECORD which are most enlightening. And I can refer specifically to pages 4495, 4496, 4498, 4503, 4504, 4505, and 4507 of the RECORD for March 16, 1956.

I shall also be glad to furnish anyone requesting it a reprint of an article which appeared in the Washington Daily News, March 17, entitled "Demos Plan Slowdown on Farm Bill," which has also been described as an exposure of the Democratic slowdown on the farm bill.

Yesterday President Eisenhower held a press conference. He referred briefly, intelligently, and reasonably to the situation we find confronting us as to the farm problem. His comments should be made available to everyone who is interested, not only because of their complete validity, but particularly in the light of the anguished and silly reactions which have been published since then. They are too partisan, too dull, and too shallow to warrant any quotation or further comment except to point out that they range from defensive and meaningless expressions of a determination to resist the President's recommendations to the bitter end to empty and bombastic statements alleging some kind of threat or intimidation. The President's exact words are the best and most complete answer to that sore of partisan and dull buffoonery. They were as follows:

Now, with respect to the farm problem, I believe that farmers, as well as others, understand that this administration is working hard to produce a program that gives them 100 percent of parity in the marketplace, and if you try to do that 100-percent parity merely by passing laws to that effect, we are going to pile up trouble that we cannot possibly solve, because it means just piling up of reserves and of surpluses, and the products in which we already are oversupplied.

I believe that the program sent to the Hill on this farm problem is comprehensive, helpful, not only helpful today in helping the farmer with his present problem of giving him some profitable way, some income, out of the business of eliminating acres from production, but in the long term for that man's children and for his children's children, you will have a sound program, and you can't possible have it merely by passing large, rigid price-support laws and say, "We will pay this."

If you would apply this to every product in the country, we would certainly be soon in a very bad hole.

Now, we are, with respect to that bill as it now stands—I don't think it is a good bill. I don't think it is workable. I think it would bury the farmers under surpluses that they couldn't stand, and it would break the prices still further.

But I do point out that there is still a conference to go through, and I think those conferees, looking at this thing sensibly, may write a good bill, and one which can really be helpful to the farmer.

Mr. Speaker, finally, as to the prospects, I am confident that the great majority of the people of this country, including a definite majority of those engaged in agriculture, share the President's hope that the conferees may write a good bill and one which can really be helpful to the farmer. But it is impossible to be certain of that today in view of what has happened and of the mixture of defiance and bravado constantly being trumpeted from certain sources. I realize that it is small consolation to those who are very much concerned as to the prospects that those who play with fire usually burn themselves badly. But I am dead certain that the great majority of farmers are intelligent and that, irrespective of where they may live or what they produce, they will not only resent and repudiate any bold attempts to buy their votes but that they with the overwhelming majority of their fellow citizens, will resent deeply any continuation of virulent and unfounded criticism of the sincerity and integrity of President Eisenhower. And I am confident that they will find quite adequate means of expressing their resentment and indignation as to any further transparent efforts to delay or sidetrack a forthright solution of this vital problem.

The Need for Rural Public Library Services

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. BYRD. Mr. Speaker, public libraries are so much a part of this Nation and its growth we frequently take them for granted. Public libraries are as American as apple pie. They were created out of democracy by freedom-loving people. They can function only in a completely democratic atmosphere. Public libraries are one of the most important agencies in keeping the spirit of democracy alive.

For this reason I am concerned to find out that nearly a fifth of the population of the United States has no library service available to it. Just what does a "fifth of the population" mean? I think the editor of the American Library Association's Bulletin gave us a dramatic illustration of this fact when he pointed out some time ago:

Those 30 million people, for example, would more than populate the country of Spain, they would fill 15 States as populous as Connecticut or 15 cities as big as Los Angeles. If these people without library service were evenly distributed over the continental United States, you would find five of them every square mile. Thirty mil-

lion people could easily elect a President of the United States—Republican, Democrat, or Communist. They could preserve or destroy the freedom to read.

In the interest of this Nation's future development we are obligated to strengthen every source of knowledge and every means of communicating the truth. For this reason I believe that the library services bill should be passed. The public library is maintained by our democratic society in order that every man, woman, and child may have the means of self-education and recreational reading. The library provides materials for education and advice in their use. It diffuses information and ideas necessary to the welfare and future advancement of a community. It strengthens and extends appreciation of the cultural and spiritual values of life. It offers opportunity for constructive use of leisure time. In a 20th century democracy the importance of placing books where they can be used constructively requires no discussion or argument.

The library services bill provides for a constructive, sensible method to strengthen this democratic bulwark of education that will not strain the purse. It will benefit the rural areas of this country and its citizens. It would make available rural library services to many farm families who need books to supplement their information and knowledge. In areas where these services are provided experience has proven their value. One State librarian reports that in farm areas:

> Adults choose not only reading for entertainment, including best sellers, but also books that answer their interests in avocations or hobbies or questions about their daily work. Books covering farming methods—concerning contour plowing and soil conservation and stock-dam building promoted by the county farm agent—are sought and provided.

Through the library services bill, State library agencies will be able to demonstrate library services to rural areas so that these people will have a chance to find out how useful libraries are to communities. Many counties cannot afford to set up rural libraries on their small tax base, but this measure, while proving the value of library services, might also inspire broader horizons and help county officials plan for the support of regional library services, for example.

We are in danger in this country, through disinterest in rural areas, of developing second- and third-rate citizens. I maintain that the enactment of the library services bill will help avoid this danger. As one local agricultural authority emphasized:

> There is the responsibility to society as a whole for the kind of citizens farm people export. For over half of our boys and girls leave the farm—mostly to urban life. Education and knowing how to acquire knowledge is an invaluable asset in the competition of the urban economy. Early access to library service can well be a future lifetime stabilizer.

Rural library service needs to be extended in order that millions of our adult citizens can have access to materials essential to self-improvement; the reading our children do in the classroom can be supplemented. Public libraries broaden the outlook of our citizens and 30 million more need to have this opportunity.

The library services bill is a measure designed to stimulate State and local interest in improving library service. It will aid in the more rapid development of library facilities and services for rural people in all the States. This will be accomplished at slight cost to the Federal Government, but will return large dividends in the extension of a basic educational service which needs to be strengthened throughout the country. We cannot afford to have this Nation weakened because in rural areas both school and public library resources are allowed to be inferior and seriously inadequate to meet the demands of our 20th century democracy. The quality of education and library services should not be dependent upon the chance distribution of wealth and taxable resources.

Federal aid to develop public library services in rural communities is a powerful and inexpensive way to strengthen democracy at home. The value of public libraries to a democracy demands more than lipservice and praise. The passage of the library services bill will do a great deal toward raising the educational level of the American people.

Let us not be the Nation that can build taller buildings, better airplanes, and bigger bombs, but not be able to help our citizens know the meaning of equal opportunity and the value of the ballot.

Which reminds me of a story about the late Will Rogers who said, when dedicating a brandnew stadium at one of our State universities, "They tell me this seats 80,000 people. I would like to remark that they have only 37,000 books in their university library."

This Nation can continue to lead the free world if the people of this country have the means of keeping informed, of finding out the facts for themselves and making up their own minds. The library services bill is a means of attaining this. I urge that it be enacted.

Address of His Eminence Archbishop Michael, Order of Ahepa

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. BOLAND. Mr. Speaker, on Monday, March 19, at the invitation of George M. Parakilas, president of the Altis Chapter, No. 85, of Springfield, Mass., I attended the 12th biennial national banquet of the Order of Ahepa. As usual, this particular affair was one of the best that is held in the Nation's Capital.

Mr. Speaker, I am honored to include in the RECORD the inspiring and thoughtful address of His Eminence Archbishop Michael of the Greek Orthodox Church—the spiritual leader of hundreds of thousands of Greek people in the Western Hemisphere. If there is any doubt, and, of course, there should not be, as to the position of these magnificant and courageous people in the world struggle of today, let it be dispelled by the eloquent words of this distinguished prelate and man of God:

ADDRESS OF ARCHBISHOP MICHAEL

I always feel very happy to be the guest of our great organization, the Ahepa, and this for various reasons which I have explained in many other appropriate opportunities and which I should again like to summarize for your benefit.

It is a well known fact that the order of Ahepa has and continues to render great services to our citizens of Greek extraction; who constitute the membership of the more than 350 Greek Orthodox communities which function so effectively throughout this great country of ours, the United States of America. Incidentally, quite a few of these Greek Orthodox communities began as chapters of the Ahepa and owe their founding and existence to the generous support of your admirable organization.

Our various institutions have also received your enthusiastic support from the very inception of our church here in America; even to the present time. As an illustration, I would like to mention the library of our theological school, in Brookline, Mass., which your auxiliary the Daughters of Penelope, has furnished with the best theological books; also, our St. Basil's academy is the grateful recipient of your most invaluable financial assistance. In addition your laudable initiative has also been instrumental for the erection of new dormitories for our orphan children at St. Basil's academy. For these and many other actions of the Ahepa, I deem it imperative to publicly express, once again, on behalf of the Greek Archdiocese of North and South America, our sincere appreciation for your filial love and devotion to our most holy mother, the Greek Orthodox church.

We are deeply thankful and we express from the very depth of our heart our gratitude to the Almighty and Everlasting God for the truly remarkable progress which has been achieved by the Order of Ahepa. We do not, and cannot, forget, however, that this progress is due to the tenets of real democracy and to the principles of freedom of thought, of speech, and action which constitute the cornerstone of life in this great and beloved country of ours, the United States of America. Our paramount duty as citizens of this Nation, and, also, as representatives of the various religious denominations, is to let no opportunity pass without emphasizing the blessings of the many freedoms that we enjoy in America; in contrast to those unfortunate countries, peoples, and nations that are under the sinister dictatorship of the materialistic and ruthless system called and known as atheistic communism.

Our Founding Fathers, the builders of the great and unique civilization, destined to be known in history as the American way of life, used to value and extol, above everything else, faith in God; and when they were talking about the Almighty God they did not mean anything abstract and merely theoretical that had no relation to everyday life. On the contrary, they believed in a personal Being, our common Heavenly Father, who, for us mortals and for our salvation sent His only begotten Son, our Lord and Savior, Jesus Christ, to help us in our infirmities and to be always with us until the end of the world, according to the solemn promise of our Blessed Lord. This faith in God, as we know, is also being extolled and emphasized in every opportunity by our God-fearing and beloved President, Dwight D. Eisenhower, who has repeatedly told us that where there is such a real and genuine faith in God, our Heavenly Father, there is also a great concern for the human dignity, for God's children—the peoples and nations that constitute the various countries of the world.

Feodor M. Dostoevski, whose 75th birthday is celebrated this year by our Russian brethren, used to say, "The man who does not believe in God does not also believe in God's people." Consequently, where there is no faith in God, there is no interest also in the dignity of man and in the fate of human beings; and in countries where there is no concern for the dignity of human personality people are used and treated as machines, deprived of immortal soul and not entitled to any freedoms. This is what happens today in all the most unfortunate countries behind the so-called Iron Curtain, where a criminal of the largest caliber history has ever witnessed, and for years and years worshiped as a living God, is today condemned and stigmatized as the personification of Satan by his worshipers.

They say and they make every effort to convince us that religion is no longer persecuted either in Russia or in any other country that is under the heel of the sinister regime of communism. Yes, my dear friends, religion is not overtly persecuted in the communistic world; but religion in those countries is, as we know, undermined scientifically, systematically and methodically. It is and it has been emasculated; it is and it has to be subservient to the all-embracing state, the communistic state, which the Communist rulers insist is and has to be the living god for every human being in the communistic countries. And, may I take advantage of this opportunity to declare that I was more proud of the church in the communistic countries when it was persecuted but at the same time, was standing fast to its faith and sacred traditions, than I am today. Because man was created to live free. Because freedom of thought, of speech, of action, of worship is the greatest privilege of every human being. Because in all the miserable countries which are today under communistic domination or influence, all human beings are deprived of every freedom. And the church if not persecuted yet is denied the right either to protest or claim the most elementary right, the most sacred privilege of every human being, that is to say freedom.

This is the reason why I said that we are deeply thankful to the Almighty God for the freedom we happily enjoy as citizens, in this most civilized and Christian country of ours, America. Furthermore, we cannot help but deplore the most lamentable real abduction of his beatitude, the archbishop of Cyprus, and his colleague the bishop of Kyrenia, who both from the very beginning of the present crisis in Cyprus, condemned violence and bloodshed.

By being dedicated citizens of these glorious United States, by living up to the dicta of good citizens, by doing your share in times of war and peace, and by deriving at the same time added strength, inspiration, and zeal from your Hellenic heritage, you, my dear Ahepans, have set a good example for all Americans of Greek descent and have contributed significantly to the life of your respective communities and of the Nation at large. Keep up this good work.

Keep on serving to the best of your ability the interest of our dear America, yes, keep serving God and country—and rest assured that your constructive efforts are and will continue to be dynamic, spiritual bullets against the forces of communism.

God bless you all.

Mr. Speaker, I ask unanimous consent to include with these remarks the foreword of the banquet's program presented to me by Mr. James Mazarakos, a past supreme vice president of the Order of Ahepa, and a resident of my district:

THE PHALANX AND THE FIELD, 1936–56

A brief survey of the pioneer days of the AHEPA[1] appeared under the same title in the program of the second Ahepa national banquet on February 24, 1936. In the short span of 14 years—it was chartered in Atlanta, Ga., on July 26, 1922—the Ahepa developed into a truly national organization, with active chapters of the mother organization and its three auxiliaries in practically every city and State of the Union. We will quote from the Ahepa constitution, under the caption of "Objects" of the organization, paragraph A of article II:

"To promote and encourage loyalty to the United States of America; allegiance to its flag; support to its Constitution; obedience to its laws and reverence for its history and traditions."

and paragraph E of the same article:

"To arouse mankind to the realization that tyranny, wherever it may exercise its baneful power, is a menace to the life, property, prosperity and integrity of every nation."

It is an exiom that war subjects to the supreme test citizen and Government alike. Did the Ahepa meet the test under the stress of war? The answer is an emphatic "Yes." Suffice to state that every member of the Ahepa and its auxiliaries not in actual service with the United States Armed Forces was mobilized through the Ahepa war service units on the home front in the sale of war bonds, blood donations, American Red Cross, British War Relief, Greek War Relief, and so forth. In one of these activities—the sale of War Bonds as agent of Uncle Sam—the Ahepa enjoyed the distinction of being the one and only fraternal organization in the United States to assume and successfully carry out such a heavy responsibility.

The Ahepa, long before World War II, vigorously protested the Hitler terror and persecution of the Hebrew race, and appealed to our Government to come to the aid of the unfortunate Hitler victims. When the sawdust Caesar attacked Greece in 1940, the fraternity drew closer to its fellow citizens of Italian descent. "The true American spirit," it was then emphasized, "can best be displayed by Americans of Greek descent by extending a helping hand to their fellow Americans of Italian descent against prejudices that may flow from Mussolini's action."

In keeping with constitutional principle, American tradition, and the now seldom-mentioned Atlantic Charter, the Ahepa raised its voice during the past year in support of self-determination for Cyprus. Tyranny in Cyprus today cannot be condoned because Great Britain, the oppressor is a friendly power.

While the Hellenic heritage constitutes a common fountain head for Western civilization, it was here in the United States that Hellenic political forms were first applied and the principles of representative government fortified into a way of life—an ideal. Thanks to these principles and their world-wide appeal, the United States has grown into a great and undisputed leader of the Western Alliance, and the federal system the dominant form of government in the Western Hemisphere. When the Hellenic influence was at its height, any person who received Greek education or one who accepted the Greek way of life, was called a "Hellene" or a "Greek" if we use the Roman version. Accordingly, Thomas Jefferson and the founding fathers may may be called "Hellenes," and all persons—irrespective of their place of birth who abhor tyranny and despotism and espouse the Greek ideal, may claim a place beside them. In this connection we think particularly of Monroe, Webster and Clay. In this sense, Mr. Carlos P. Romulo, former President of the General Assembly of the United Nations, now Philippine Ambassador to the United States, is no less a "Hellene." We quote excerpts from a letter he wrote to the New York Times on December 21, 1954, where he put the entire Cyprus question in its proper perspective:

"We are not unmindful of the security implications of the question of Cyprus. We want the free world alliance everywhere to be strong and to remain strong. But the only way for the free world to remain strong is to be really free and to be for freedom anytime, anywhere—never to be embarrassed by the principle of aquality and self-determination, never to default to the Communists in any struggle where this principle is involved. But we default to the Communists each time we tell the people of any subject or colonial territory in the world that we cannot entertain their claim to self-determination or to freedom because of Article 2 (7) of the charter or because they happen to lie in strategic territory.

"Each time we say that we may continue having the bases there, but we have lost the people. And in the end the struggle between freedom and slavery will be decided on the basis of human hearts and human minds, not of square miles of strategic land."

The Ahepa, we hope, will raise its voice for freedom and against tyranny at all times—no matter where tyranny is practiced or by whom in Cyprus or elsewhere.

[1] "AHEPA"—An acrostic word made up of the initial letters of the following words: American Hellenic Educational Progressive Association.

Petition for Separate Pension Program for World War I Veterans

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. BYRD. Mr. Speaker, under previous leave to extend my remarks, I wish to present a petition received from my congressional district and bearing the signatures of 28 of my constitutents. The petition urges the immediate enactment of a special pension program for World War I veterans. I am glad to bring this petition to the attention of the Congress. The petition follows:

PETITION FOR SEPARATE PENSION PROGRAM FOR WORLD WAR I VETERANS

This petition is addressed by the undersigned to the President and the Congress of the United States, urging immediate enactment of a separate and liberal pension program for veterans of World War I and their widows and orphans. We submit that aging World War I veterans are deserving of consideration and treatment on an equal basis with the aging veterans of previous wars in our Nation's history, and in line with established American traditions.

John S. Hannigan, Mrs. Laura Hannigan, Charleston, W. Va.; Clarence K. Holdren, Mrs. Darl J. Holdren, Joe Ferris, Belle, W. Va.; Harold W. Cavender, Raymond Egnor, Guy S. Yackway, E. D. Eartz, E. S. Mitchell, Jr., D. N. Metz, Charleston, W. Va.; William L. Guthrie, St. Albans, W. Va.; Malcolm MacLeod, Charleston, W. Va.; Hamilton P. Swillinger, Bancroft, W. Va.; Xerxes W. Wagner, Charleston, W. Va.; Carolyn J. McClung, Summersville, W. Va.; Ethel Wiblin, Charleston, W. Va.; James H. Hamilton, Beckley, W. Va.; J. B. Murphy, Charleston, W. Va.; Clyde R. Pruitt, St. Albans, W. Va.; Harry E. Stewart, Marmet, W. Va.; Ralph N. Cowgill, Roy D. Byrd, Charleston, W. Va.; Clarence Michaelson, Nitro, W. Va.; James H. Guthrie, St. Albans, W. Va.; Joseph F. Hannigan, Shrewsbury, W. Va.; Edward L. Medley, Elkview, W. Va.; Kenneth E. Steele, Charleston, W. Va.

Appendix

The Strength of Fair Trade

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 23, 1956

Mr. HUMPHREY. Mr. President, probably every Member of Congress is familiar with the reputation of Mr. Maurice "Mike" Mermey as an outstanding authority on the subject of fair trade. For many years, Mr. Mermey has served as director of the Bureau of Education on Fair Trade, a nonprofit organization devoted to developing public understanding and support of the fair trade laws to restrain unfair competition.

Recently, Mr. Mermey addressed in Chicago the 31st annual convention of the Master Photo Dealers' and Finishers' Association. Mr. Mermey's topic was "The Strength of Fair Trade on Its Silver Anniversary." This is a most significant address, worthy of the consideration of every thoughtful American and I ask that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE STRENGTH OF FAIR TRADE ON ITS SILVER ANNIVERSARY

(Text of address by Maurice Mermey, director, Bureau of Education on Fair Trade, before the 31st annual convention of the Master Photo Dealers' & Finishers' Association at the Conrad Hilton Hotel, Chicago, Ill., on Thursday morning, March 8, 1956)

Fair trade is celebrating its silver anniversary this year. It was just a quarter of a century ago that the first fair-trade law was passed in California to restrain unfair competition injurious to trademarks and to systems of distribution. This particular quarter century—covering the thirties, the forties, and half of the fifties—has been one of unprecedented economic, social, and political change and turmoil, ranging from the depression to World War II and the development of the hydrogen bomb.

Yet despite the turbulent character of these 25 years, fair trade has proved itself. Small business is still a vital part of our free enterprise economy although this quarter of a century saw a vast revolution in retailing, with the mushrooming of chainstores, supermarkets and suburban shopping centers. It is the genius of the fair-trade laws that they encourage the prosperous coexistence and growth of both the little and the big in our business community.

Small business knows from experience that fair trade has helped it to survive in this era of giant retailing. Indeed, it it were not for fair trade, it is a serious question as to whether there would be any small business whatsoever left in this this land of opportunity at the present time. It is not surprising, therefore, that small business today strongly supports fair trade as a vital safeguard of fair competition and wants fair trade to be preserved. While small business would certainly like to see improvements in some areas of fair-trade enforcement, small business is nevertheless, overwhelmingly in favor of the principle and approach of fair trade.

Today, fair trade has the strength that comes with surviving the searching test of battle. It has been examined and then enacted into law by the legislatures of 45 States. It has been exhaustively weighed and debated by the Congress on two occasions. On the first occasion, in 1937, Congress responded by passing the Miller-Tydings Act as an enabling law to permit the State fair-trade laws to operate in interstate commerce. On the second occasion, in 1952, Congress responded even more vigorously by passing, with an overwhelming majority in both Houses, the McGuire Act to plug some loopholes that has been found in the Miller-Tydings Act.

On the judicial side, in 1936, the Supreme Court of the United States unanimously upheld the constitutionality of the State fair-trade acts, including the nonsigner clause, in the famous Old Dearborn decision. And in the 4 years since the passage of the McGuire Act in 1952, the highest court in the land has turned aside no less than eight challenges to the constitutionality of the State fair-trade laws and the McGuire Act. Fair trade has been tested and upheld in the Federal appellate courts four times. At the State level, 17 State courts of last resort have ruled favorably on their State fair-trade acts in States with an estimated population of 79,752,000. On the other hand—and this hurts—the high courts of 5 States, with an estimated population of 16,828,000, have weakened fair trade by adverse rulings—4 against the nonsignor clause, and 1 against the fair-trade law as a whole. The preponderant weight of judicial opinion, however, is on the side of fair trade, as the California Supreme Court noted when it upheld fair trade for the third time last month in three ringing decisions.

The strength of fair trade, as well as its pivotal importance, is also seen when we put it in perspective in relation to the small-business men of America. The United States Senate Small Business Committee last month gave a strikingly clear picture of small business' stake in fair trade. In its sixth annual report, the committee said:

"Of the 4,200,000 businesses in the country today, over 58 percent are manufacturers, wholesalers, or retailers who have a stake in resale-price maintenance, for these firms either have fair-trade systems of their own, participate directly or indirectly as a signer or nonsigner of a fair-trade agreement, or are in competition with a firm in the aforementioned group. Inasmuch as 96 percent of the firms in these categories are small businesses, your committee is profoundly interested in fair trade and its status in the marketplace."

The strength of fair trade, in no small measure, stems from the very fact that the preservation of fair trade is crucial to the well-being of small business in America. In fact, as a 16th century English proverb points out, "Many small make a great." The strength of small business and the needs of small-business men cannot be overlooked with respect to any public policy. Translated into human terms, small business means millions of people—hard-working men and women and their families—and these people are not expendable. They cannot be cynically used as guinea pigs in costly experiements with academic theories of so-called hard competition—competition which works out in the market place to the rule of "might makes right."

The American people, acting through their elected representatives, have never been willing to support policies inherently destructive to small business and I do not believe they will do so in the future. In fact, the Congress has taken no action and does not give any signs of taking action on the anti-fair trade recommendations of the Attorney General's National Committee To Study the Antitrust Laws. In the report of the Attorney General's Committee, as the Senate Small Business Committee points out, "not a single formal recommendation is to be found which can be construed as being favorable or even sympathetic to the victims of antitrust law violation. Your committee's interest in this point was prompted by personal knowledge that antitrust victims are generally the small-business men of our Nation. On the other hand, the report is replete with recommendations reflecting concern for violators."

The Senate small business group goes on to say: "Here is seems that the National Committee digressed from the issue of soft versus hard competition to tackle the question of soft versus hard antitrust enforcement; and the National Committee resolved the issue squarely in favor of the soft or lenient, variety."

The strength of fair trade, of small business and indeed of established retailing itself has been belittled, in effect, by many who have been either impressed or frightened by the threat of the discount house. It is a psychological fact that fear can distort one's powers of perception and make reality appear much more menacing than it actually is. We have all heard, for example, that the discount houses have become so powerful that they are doing some $25 to $30 billion in annual sales volume. This sounds appalling for the future of the established retailer. And if it were so, it would be appalling. But let's apply the yardstick of cold, hard figures to this hysterical guess. In the first place, the total annual sales volume of United States department stores amounts to $11 billion. And 1955 was a very good year indeed. Are we to assume that the discount houses which include far more fly-by-night ventures than top-flight operators did more than twice the volume of all the great, well-run department stores in the country? This just doesn't add up. Then, let's take the sales figures of one of the top discount houses in the country—Korvette's of New York. In offering stock to the public, Korvette's reported to the SEC net sales of $36 million for the fiscal year ended September 30, 1955. This is pretty good. But it is a very long way from $30 billion. And this is one of the biggest discount houses. It would take many more large-scale discount operations than there actually are to come anywhere near, not the $30 billion figure, but the department stores' $11 billion.

The shadow of the discount house on the wall of American retailing has, like all shadows, appeared to be many times larger than life size. But we must not let shadows paralyze us into hopeless inaction. We need to look at the threat posed by the discount house calmly, in a daylight mood, appraise it for what it actually amounts to, and take intelligent steps to cope with it.

The fact is that established retailing has already gone a long way toward winning this

battle. It is emphasizing service, for example, as never before, and putting discount houses on the spot to meet the competition of service. Discount houses are not run by miracle men, even though they try to make the public think they are. They have to meet the rising costs of operation just as any established retailer does. In meeting the competition they are facing from each other as well as from embattled retailers, big and small, the larger discount houses are gradually adding overhead and thus increasing the gross margin needed to operate profitably. The fringe discount houses, the johnny-come-latelies, are dropping by the wayside.

Profit margins are just as important to the discount house as they are to any other retailer. It is rather significant that some discount houses are now refusing to handle some electric appliances on which the dealer's margin has been pared down. The switch, of course, is a standard tactic in the discount house whereby the customer is high-pressured into buying something just as good as the well-known smash bargain brand which lured her into the store. The something just as good is quite likely to be a private brand item on which the discounter is taking a 40- to 50-percent markup. The discounter's tricks are the same old tricks—the bait bargains of the price cutter. And the bait bargains won't exist unless the discounter is successful in selling long-profit items.

In coming to grips with the competition of the discount house, established retailers are increasingly drawing a sharp line between those manufacturers who vigilantly honor their fair-trade contracts and those who are merely trying to get a free ride by giving lip service and nothing more to fair trade. Established retailers are supporting the fair-trade prices of those manufacturers who practice fair trade in good faith because retailers know that such manufacturers mean business. But the fair-trade products of manufacturers who do not mean business are getting less retail sales power in the marketplace struggle of today. This process of separating genuine fair-traders from the weak sisters—through individual judgments of individual retailers—has important implications for the independent retailer and for fair trade. It highlights an important opportunity by which the retailer can serve himself and the cause of fair trade. The retailer holds the final key to making fair trade pay off as a profitable investment for the manufacturer and for himself. The retailer can put his sales support behind those products which are, in his judgment, strongly fair-traded, and demonstrate at the cash register that the manufacturer has a sound merchandising policy in fair trade.

All-out sales support for strongly fair-traded products by the small-business men of America could do two important things: (1) generate even more enthusiasm for fair trade among those manufacturers who are already working at it; and (2) give both the weak sisters and some of those who have never fair-traded impressive reasons to reconsider and perhaps change their vacillating or negative attitude toward fair trade to a positive policy of active support.

I urge you, the photographic dealers of America, as an important segment of small business, to demonstrate your support for fair trade at this basic, everyday level of sales performance in your own stores throughout this silver anniversary year of fair trade. Fair trade is strong but its strength will continue to depend, in large measure, upon the unflagging action you take to keep it strong.

Dignity, Ability Won Nixon His Vote of Confidence

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. HOSMER. Mr. Speaker, the following editorial recently appeared in the Long Beach Independent. It represents a California view of the spontaneous affirmation of confidence in Vice President RICHARD NIXON displayed by New Hampshire voters within the last fortnight.

NEW HAMPSHIRE SPONSORS NIXON

When 22,000 voters take the trouble to write in the name of a prospective candidate on the ballot it is unusual. When the voters of the small State of New Hampshire did that for Vice President NIXON it was an outstanding vote of confidence in NIXON. That State is strongly Republican in its registration. But it is apparent NIXON received that demonstration of the people's confidence because of the attacks that have been made on him.

An example of the stupid attacks being made on him was the Democrats who started vilifying NIXON because he cast the deciding vote on the farm bill the past week. When the bill received 45 "yes" and 45 "no" votes in the Senate it was up to the Vice President to cast the deciding vote to break the tie. NIXON voted with those who supported the administration's flexible price support measure. The cry went up immediately that NIXON would be blamed for defeat of the Democrats' bill.

Actually, the Democrats have control of the Senate. If the Democrats voted solidly the bill would have been defeated. But there were 11 Democrats who voted with the Republicans. By comparison, there were 11 Republicans who voted with the Democrats. But again NIXON is the target of the Democrats who seek in every way to tear him down. The New Hampshire demonstration should be evidence that the people of the Nation do not agree with them.

This attempt to sidetrack NIXON is not only made by Democrats. There is evidence that some of the President's own party have been trying to do likewise. But the President made it clear that he would be pleased to have NIXON as his running mate. He referred to NIXON as a brother and that any attempt to divide them would be the same as an attempt to divide his own family. His words should convince any reasonable person that Mr. Eisenhower will welcome NIXON as Vice President if Mr. Eisenhower is reelected.

It is probable the people resent these vicious attacks on a man who has conducted himself with great dignity and ability the past 3 years. They remember how he went on radio and TV to tell the people of his financial situation with complete frankness when attacked during the last campaign. Such forthright honesty appeals to the people and causes them to rally to the support of the man so unfairly attacked.

The New Hampshire election is an indication of how the people feel. NIXON got 40 percent as many write-in votes as the President got. The President's name was on the ballot and required only a stamp. By contrast Senator KEFAUVER got about 22,000 marked ballots with his name on the ballot of the Democrats. But Mr. Stevenson got only a sixth as many write-in votes as there were KEFAUVER ballots. It is a small State, but it is a victory for NIXON that should convince his hecklers that they may be hurting their own cause much more than they can hurt NIXON.

Veterans and Armed Services Affairs Platform

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, March 23, 1956

Mr. DOUGLAS. Mr. President, the American Veterans Committee held its ninth national convention in Atlantic City, N. J., November 11–13, 1955. Veterans of all 48 States were represented in the deliberations. Mr. Mickey Levine, a social-service agency executive of Riverdale, N. Y., was named national chairman. Mr. Robert S. Hunt, an attorney of Chicago, Ill., was named national vice chairman.

Messages to the convention were received from the White House, the Department of Defense, the Department of State, the Veterans' Administration, the United Nations, and many of this Nation's leaders, including former President Harry S. Truman, Adlai E. Stevenson, George Meany, and Walter Reuther. Gov. Orville H. Freeman, of Minnesota, was the keynoter of the convention.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD, for the information of Members, the veterans and armed services platform adopted by the American Veterans Committee at its 1955 convention.

There being no objection, the platform was ordered to be printed in the RECORD, as follows:

VETERANS AND ARMED SERVICES AFFAIRS PLATFORM ADOPTED AT THE NINTH NATIONAL CONVENTION, AMERICAN VETERANS COMMITTEE (AVC), NOVEMBER 11–13, 1955, ATLANTIC CITY, N. J.

I. VETERANS BENEFITS

The American Veterans Committee has constantly reiterated, since its founding, its fundamental belief that rehabilitation and integration into the community is the proper scope and purpose of a veterans program. The achievement of economic security for veterans through sound economic planning, for all citizens rather than through special grants or favors to veterans is basic AVC policy.

For many years, AVC has pointed out the need for a careful review and reappraisal of this Nation's policies on veterans. We state AVC's position on veterans policies:

1. We oppose bonuses and general pensions as being class legislation and unrelated to the real needs of individual veterans and tending to set veterans apart from their fellow citizens.

2. Two basic standards should be applied in evaluating veterans' benefits. They are:

(a) For death or disability incurred in military service: Are the benefits sufficient to provide a decent standard of living for the veteran, his family or survivors, taking account of such ability to work as the veteran possesses?

(b) For all veterans who did not incur disability: Are the benefits so designed as to enable the veteran to readjust from military service to civilian life with minimum loss from his military service?

3. The Armed Forces should use incentives only to attract those who would make a permanent career of military service. Benefits after the conclusion of service should be separate; and veterans of both compulsory and the voluntary service should be equally eligible for such benefits.

4. Veterans' benefits should be administered without regard to race, creed, color, sex, or national origin. Since benefits are a Federal responsibility, uniform standards of administration should be applied throughout the Nation.

5. The present scales of compensation for 100-percent disability and for compensation to survivors provide maximum amounts which we do not believe are commensurate with the maintenance of an adequate standard of living. Such a standard will be modest at best; but it should be at least sufficient for the necessities of life.

6. Provision should be made to maintain automatically the purchasing power of the benefit dollar. As a means of dealing with this problem, we state that the benefit dollar should be adjusted annually on the basis of the year-to-year change in the Bureau of Labor Statistics, Consumer Price Index.

7. Recognizing that many abuses exist in connection with the 10-percent service-connected disability ratings, a careful review should periodically be made of these ratings in order to weed out these abuses.

8. We believe in veterans' benefits for positions in the Federal Civil Service. However, these benefits should be limited in two major respects:

(a) No veteran should receive a position unless he is fully qualified to perform its duties.

(b) Preference for nonhandicapped veterans should be limited to initial appointment only.

9. We endorse mustering-out pay as necessary to breach the gap between military service and civilian life.

10. Experience with the World War II GI bill of rights has given ample evidence of the value and increased productivity to the Nation and increased taxes to the Government, of that law's education and training provisions. We aver that the education benefits which were made available to veterans in World War II and in the Korean war, should be reenacted and continued for all persons entering the Armed Forces for such time as there is a selective-service law which drafts American citizens into the service.

11. We urge the codification of all existing legislation in the field of veterans' benefits.

12. We urge a formula be provided for the equalization of all existing legislation in the field of veterans' benefits pointed toward eliminating differences in the present treatment of veterans of the different wars, e. g., the difference in qualifications required of veterans' widows of World War I, and those of World War II in receiving a benefit for nonservice connected death.

II. SEGREGATION IN THE ARMED SERVICES

AVC believes that any reserve program, present or future, which does not fully revoke segregation in the Armed Forces is incompatible with democratic ideals, weakens the moral fiber of our society, and insofar as it gives to the Communists another weapon in their ideological warfare, endangers our national security. It is essential for the future security of this Nation that our manpower resources be used for the defense of our way of life without reference to regional prejudices. We therefore urge that an antisegregation amendment be added to the reserve bill when Congress next convenes. We further urge that Congress prohibit racial segregation in any federally recognized and/or federally aided National Guard units and that the Congress require of the Department of Defense a report regarding the efficiency of such nonsegregated units.

III. ARMED FORCES CODE OF CONDUCT

AVC believes that the code of conduct issued by the Department of Defense on August 17, 1955, to cover American servicemen captured by the enemy is primarily important in that it indicates that the Department of Defense has given serious study to the vital matter of conduct of prisoners of war, but we feel that it by no means solves any of these problems, and the American people must not be lulled into a false sense of security in believing that this code does so. The surest hope in preparing our soldiers for the ordeals which they may face as prisoners of war rests in the creation of an enlightened indoctrination program of the basic principles on which our democratic government is founded and in an improved educational system. The so-called simulated brain-washing course presently advocated by some does not reach the basic weakness.

IV. SURVIVOR BENEFITS

New legislation for military-survivor benefits is urgently needed to bring about a maximum of simplification and integration of the present complex of five separate programs under which military-survivor benefits are now provided by the Government. Our recommendations with regard to these programs are as follows:

1. Six-month death gratuity based on serviceman's pay and paid to the next of kin should be retained since it provides a necessary emergency fund for the serviceman's family.

2. The free $10,000 servicemen's indemnity should be abolished during peacetime when life-insurance coverage can be obtained without military service riders. Low-cost Government insurance should be available for all servicemen as long as they remain in military service and up to 120 days thereafter.

3. Veterans' Administration death compensation should be retained. Those increases based on rank contained in the present military survivor's benefit bill presently being considered by the Congress as an incentive to career service should be enacted.

4. Full old-age and survivors insurance benefits should be provided for all service personnel on a pay-as-you-go basis.

5. Federal Employees Compensation Act benefits for reservists should be replaced by Veterans' Administration death compensation to provide equality of treatment for both reservists and regular members of the Armed Forces.

6. Non-service-connected death benefits for veterans with disability rating should only be retained for veterans whose service-connected disability was sufficiently serious to deprive them of eligibility for private life-insurance programs at the normal rate.

V. MILITARY MANPOWER, RESERVE FORCES AND NATIONAL SECURITY

Standing Armed Forces

1. The world we live in, despite temporary changes in the climate of international hostilities, with its subsisting emphasis on speed of attack and technical superiority, demands standing Armed Forces of sufficient size, training, and equipment to be immediately effective for defense and counterattack. No matter how effective the Reserve program of the future may be, it is apparent that the Regular Armed Forces must remain our first line of defense. Not only must they be of sufficient size and mobility for deployment anywhere on the globe within a minimum of time, but there must be a sufficient balance among the various services and arms, so that we may continue to provide, when necessary, those forces needed for collective security under the United Nations in peripheral conflicts occurring in the strategic localities of the world. Reliance on strategic airpower and massive retaliation alone is not only not enough but such reliance may weaken our military security in the long run and increase international tensions.

2. Veteran reservists of previous wars must never again be flown from the United States and committed to distant battlefronts with only a few days retraining, as they were in the first months of the Korean conflict. The most that can and should be expected of the Reserve forces and the National Guard in the first weeks of future conflict is the role of maintaining order in the zone of the interior.

VI. RESERVE FORCES AND UMT

AVC continues to support UMT whil striving for the creation of a climate of responsibility which would enable us to satisfy our military requirements and Reserve training program on a voluntary, rather than a compulsory, basis. We believe that UMT together with a sound Reserve program can provide the foundation of enduring strength that will not be subject to the fluctuation of temporary public opinion and diplomatic maneuvering.

We are opposed to any premature and drastic reduction of the Regular Armed Forces shortly after the institution of UMT training. The present National Reserve plan, though inadequate in many respects and obviously inequitable in its operation, at least contains a more realistic core of principle than House of Representatives bill 1630—Senate bill 2, 1955 Congress. The present compromise Reserve law is lacking in two vital respects. It is neither universal nor compulsory as applied to all physically and mentally qualified young men. In the near future a real UMT plan must be instituted which will be universal in application, although force requirements may not call for the active service of all men subject to UMT. We are convinced that UMT and a sound Ready Reserve program are integral parts, one of the other.

We believe that reservists and National Guardsmen should not suffer loss of job rights and privileges and employment opportunities because of their participation in Reserve or National Guard training.

VII. UNIFORM CODE OF MILITARY JUSTICE

The Supreme Court has invalidated the provision of the Uniform Code of Military Justice with regard to the trial after discharge of ex-servicemen for offenses committed in service. We believe that such civilian ex-servicemen should not escape punishment for serious offenses but should be tried before civilian courts; and we urge Congress to enact such legislation. The legislation should be limited to crimes of the same degree of seriousness as felonies at common law. It should also grant such ex-servicemen the same rights to a preliminary hearing before removal from the Federal district of apprehension as persons apprehended under other law.

VIII. SECURITY DISCHARGES

We believe that when a man gives his service to his country, whether voluntarily or involuntarily, he is entitled to a certificate from his Government reflecting the character of that service. Preservice conduct or associations should be judged before induction only to determine if the obligation to serve equally with all others should be waived because of an overriding consideration of national security. If charges are to be leveled

against an individual they should be made before induction. Federal law recognizes the right of every serviceman to a certificate of separation from active duty which characterizes his service. We believe he should have the right to an honorable discharge in the absence of proven misconduct during his tour of duty.

We are opposed to the provision in the present Reserve program whereby a draftee who has served for 2 years is given not an honorable discharge but an honorable separation. Under the present plan such draftees remain in the Standby Reserves for 6 years during which time they remain under the scrutiny of the Government as to associations, utterances and behavior to a degree greater than that of other citizens. This extension of Government interference with private life is unwarranted and a threat to civil liberties. The bill can provide for recall of such draftees within 6 years by Executive order and accomplish the same purpose.

Address by Jeff B. Bates Delivered at South Carolina Democratic State Convention

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, March 23, 1956

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the RECORD a speech delivered at the South Carolina Democratic State Convention by Jeff B. Bates. In my opinion, this keynote speech portrays to the people of the Nation what the South Carolinians are thinking at this time, and the principles for which they stand, and on which they think the Government should be operated.

There being no objection, the speech was ordered to be printed in ther RECORD, as follows:

Mr. Chairman, ladies and gentlemen of the Democratic Convention of South Carolina, this is an honor for which I am deeply grateful. I accept it with sincere humility for I fully realize the responsibility that goes with this honor.

We are gathered together today as Democrats of South Carolina, dedicated to the promotion of the best interests of our people and beloved State in a time of great trouble and increasing difficulty. To cope with these problems of today will require a united party. It is not for us to look backward to yesterday, to indulge in the luxury of recrimination or to bicker anew about yesterday's differences. On the contrary, we meet today, I hope, upon a note of harmony, united by common resolves and determined to maintain those principles upon which our Democratic Party was built and for which it has stood for almost a century and a half. We invite all citizens to join with us this year in this Democratic crusade of principle. In that spirit we must seek in this convention and, through our delegates selected at this convention, in the national convention to plant our party firmly upon a course of political action that we all as Democrats may follow in this united front.

The record of the proceedings of the 1948 Democratic Convention, in Philadelphia, relates the magnificent battle waged by our Southern delegates for the restoration of the two-thirds rule and the adoption of a States' rights plank in the platform. Both of these were lost, but we must continue to fight on both fronts. The cause of the rights of the sovereign States, which are reserved to them by the Constitution, is not just a fight for the South. It is a fight for the protection of all of the States of the Union, for all sections of the country and for all American citizens, regardless of race or creed, that they may continue to enjoy those unalienable rights enumerated by Thomas Jefferson—life, liberty, and the pursuit of happiness. Both major parties in recent years have adopted planks in their platforms which were founded on expediency with apparently one thought in mind—the election of their candidate, regardless of the means to be used. Unless this trend is halted, the very life of this great Nation of ours will be in danger.

It was a matter of regret that at the 1952 Democratic Convention in Chicago a group of youthful and irresponsible soldiers of political fortune—aptly described as the "Young Turks"—through their selfish appeal to minority pressures destroyed the unity of our party and in their intemperate zeal drove many sincere and devoted Democrats from the house of their fathers. In so doing, they made more difficult the task of our nominee. I personally am encouraged by the public expressions of many of the responsible national leaders of our party that indicate that this year and in this campaign this small group of ambitious Catilines shall not disrupt our party and that proper consideration will be accorded to those southern Democrats who, through dark days and through prosperity, have kept alive and vital the Democratic Party. Some of the memories of the 1952 convention are distasteful, but I am sure that no member of this South Carolina Democratic Convention would wish to suffer the humiliation of being a southern delegate to a Republican National Convention.

If the past offers any augury for the future, there is nothing in the record of the Republican Party which should encourage any patriotic southerner to look with confidence toward that party. To the Republicans the South exists only as a piece of geography. We can scan in vain the record of the Republican Party for its full hundred years for any legislation designed to foster the economic prosperity of the South or to uphold those fundamental political principles of States rights—so dear to southerners. The Republicans have generally been too concerned with their own selfish designs to give thought to the South or its principles.

Of course, all of us may remember that a Republican candidate did a few years ago—and from the steps of our Capitol—hold out encouragement to the people of South Carolina. In the last 2 years we have seen what those encouraging professions of principle meant—we have had impressed upon us anew the fact the southern principles will find short refuge among the leaders of the Republican Party—we have had driven home the knowledge that our forefathers had, namely, that the Republican Party will forever be indifferent to southern rights, to its economical prosperity and to its social stability.

The Republican Party has other roots and other interests. We saw what those interests were in the roaring twenties. The buccaneers of the Harding regime will live forever in our memory as disgraceful examples of public trust unscrupuously betrayed. Nor was that all of the record of those roaring twenties of Republicanism. An avid attempt to concentrate the wealth of the Nation and to grant special privileges was the guiding principle of the Harding, Coolidge, and Hoover administrations. The farmers of our State can recall with sorrow the days of Republican administrations. And, with all this, the Republican Party showed a callous indifference to our international responsibilities and brought us to a new low in foreign affairs. It drastically reduced our military strength and encouraged the aggressor.

Nineteen hundred and thirty-two was a sad day for America; it was, in truth, a fitting climax to Republican misrule. Time does not permit me to describe the desperate struggle of that year—homes, farms, and businesses were lost and banks were closing on every side—with hungry men and women in breadlines begging for food for themselves and their children—and begging for the opportunity to earn a living. All of this and the words of President Hoover, "Prosperity is just around the corner." He did not know how true those words were for it was just around the corner in the election of a Democratic administration under a great leader, Franklin Roosevelt.

It is of profound significance to us as South Carolinians that it was only under the benevolent concern of a great Democratic administration which took the helm of our Government on March 4, 1933, that our beloved South, so long laboring under the desolation of the War Between the States, first began to raise its proud head and to assume its proper place economically among the States of this Nation. The last 20 years of our State's history has been its period of greatest growth and expansion. That growth and that expansion are the fruits of the interest and concern of a Democratic administration in the economic rebirth of the South and a tribute to the sound statesmanship and the wise legislation of the Roosevelt administration.

Let me remind you of just a few of the constructive achievements of that administration: The agricultural program, which made available financing to save the homes and farms of the farmers, the Home Owners Loan Corporation, which made it possible for our people to save their homes from foreclosure, the Securities Exchange Commission to protect the small investor from fraudulent stock promotions, the reduction of interest rates and the insurance of bank deposits, the rural electrification program, as a result of which approximately 90 percent of the homes in South Carolina today have electricity. Soil conservation, price support, and marketing programs were inaugurated which gave our farmers a chance to survive and to achieve a reasonable amount of security and prosperity. Legislation was enacted which helped to raise our workers in industry to a reasonable standard of living. Public health programs were encouraged and certainly by no means least the social-security programs covering old age, unemployment, and general welfare. We should remember too that most of these constructive programs were called socialistic by the Republican Old Guard and were fought all the way. Throughout the life of the Republican Party, whenever it was in office, until the administration of Franklin Roosevelt, a deliberate attempt was made to keep industries out of the South. The obvious discrimination in transportation rates was one of their most potent weapons. It was not until the Democratic administration under Roosevelt, in which so many southerners occupied, positions of importance and leadership, that freight rates were equalized and but for this equalization our industrial development in South Carolina—of which we are so proud—could not have been what it is today.

As a result of differences within the Democratic Party and largely because the Republican Party had for its standard bearer one who in the eyes of the American people was recognized as a great World War II hero, a Republican administration was elected in 1952. He went into office with the well wishes of practically every American. He has now become a candidate for reelection

and it becomes our duty to inquire into the record of his administration and call to the attention of the people of South Carolina that that administration has departed far from the pledges made by the candidate of the party.

General Eisenhower in his States' rights address from the steps of the Capitol on September 30, 1952, facing the Confederate monument, quoted the beautiful inscription to the Confederate dead and further in his address, speaking of the Democrats, said in part, "Now we are told that we must look to Washington and that if we do Washington will look after us, and Washington will—more than we want." We have found this out from bitter experience. In South Carolina for many years—until this administration—we have had two races living side by side in harmony, tranquillity, mutual respect, understanding, and cooperation—a shining example to the people of the world. This administration from the beginning has done everything possible to destroy this relationship and has accomplished more in this direction than any administration in more than 80 years. This has been accomplished by Executive orders from the White House, the encouragement given to professional leaders of the NAACP, the action of the Republican Attorney General ,and, in the words of Mr. NIXON "a great Republican Chief Justice of the Supreme Court of the United States." Although by precedent and in fairness, a South Carolinian should have been appointed to fill the recent vacancy on the Fourth Circuit Court of Appeals, the President broke precedent and appointed Solicitor General Sobiloff, of Maryland, who had relentlessly advocated—as a representative of the administration—that the Supreme Court abolish every vestige of segregation. In this instance history repeats itself after many years. Yes, Mr. President, we believe in the best interest of all of our citizens Washington has looked after us—more than we want.

May I quote again from this address? "But, I am for ending this era in which unceasingly the American farmer has been looked upon by the Department of Agriculture as Washington's stepchild. For example, I believe wholeheartedly, and without any ifs or buts, in Federal programs to stabilize farm prices, including the present program securing 90 percent of parity on all basic commodities. I believe that the farmers should obtain their full share of the national income." He not only did not advocate 90 percent parity, but has fought it every step of the way, and just recently we read the headline "Ike Delighted Over Defeat of Fixed Price Supports." As for the fair share of the income for the farmers, we read in the press a few days ago "Agricultural income drops over $1 billion in 1955," and again we read "General Motors reports a net profit for 1955 of over $1 billion." As a matter of fact, net farm income has dropped from $14.1 billion in 1952 to $10.6 billion in 1955—a drop of $3½ billion. We are afraid to even think of the plight of the farmer and the national economy if this trend is allowed to continue 4 more years. In fact, one of the main reasons which have been given for Mr. Eisenhower's decision to run for re-election is that he knew under Mr. Benson's farm program he would not be able to make a living on his Gettysburg farm.

The Republican platform of 1952 said, "We will aid small business in every practicable way," but, according to Dun & Bradstreet reports, small-business failures as compared with 1952 were up 16 percent in 1953, 46 percent in 1954, and, on the basis of the first 6 months, up 48 percent in 1955. There again we are alarmed at what could happen in 4 more years of Republican administration. We could go on and on, and it would only prove more conclusively that the Old Guard of the Republican Party is at work at the same old stand, with an utter disregard of the average American citizen, and we must conclude that the leopard has not changed its spots. Mr. Charles E. Wilson, Secretary of Defense and formerly the head of General Motors, is quoted as saying, "What is good for General Motors is good for the country." We have no quarrel with General Motors or any other corporation, but, in our opinion, it should be, "What is good for the country is good for General Motors."

Mr. Roosevelt named his idea of the combination that was controlling the Republican Party in his time—"Martin, Barton, and Fish." Since they have come to power there are many such combinations, because the party is split. It could be "Nixon, Dixon, and Yates," or "Benson, Brownell, and Dewey."

Come to think of it, we have had some famous dogs in presidential campaigns. I am referring, of course, to the four-legged variety. We vividly recall a little cocker spaniel who played such an important part as an actor on television when he was used by Mr. NIXON to divert attention from a little deal he wanted to cover. The criticism in this situation was not leveled at the little dog or his lovely wife, Pat, but directly at him. He got by with it, but the insincerity he displayed has followed him, and he apparently does not have the confidence of the people of America—Republicans or Democrats—and all of us shudder to think of what would happen if through some stroke of fate he would become President.

The old elephant who is the emblem of the Republican Party is symbolic. He has a hard head and has had few constructive ideas in his 100 years. He is the only animal with two tails and it is hard to tell by looking at him which way he is going. Let me remind you, however, that he has been heading North for a century and if we are thinking of swinging to him we had better remember that we live in the South.

Our interests, it appears, will largely be served in the framework of the Democratic Party. Through it, the southern Senators and Congressmen head and direct the important congressional committees which fix the direction of our legislative program. Those southern Democratic Senators and Congressmen have had the courage to stand firm and they are a tower of strength for us. They must work through the Democratic Party. Their ability to make secure southern rights might be seriously impaired if the South should abandon its traditional political moorings. Hopeful that the encouraging signs of moderation and concern for southern interests may find realization at our national convention, and resolute in our devotion to the ideals and principles of Thomas Jefferson, who, in love of his fellow man and with ceaseless devotion to human dignity, founded our party, let us send to the national convention delegates who may be the authentic voice of southern Democrats and who may, by the deep sincerity of their principles, command both for themselves and for their State the respect of all men of judgment and character.

The national convention is practically 5 months away. In my judgment, it would be unwise to seek to bind the hands of or to instruct our delegates to such convention. Our delegates must be free to act as circumstances may develop in the months ahead in such ways as may contribute to the triumph of principles over expediency.

In the past it has been to the Democratic Party to which we of the South have had to look for the preservation of those things dear to us. It is our earnest hope that the Democratic Party of today will nationally prove true to those endearing principles and that the people of South Carolina, united in fraternal devotion to our traditional party affiliation may join to give our party victory in November.

Tribute to John H. Johnson

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, March 23, 1956

Mr. DOUGLAS. Mr. President, I want to pay a brief tribute today to Mr. John H. Johnson, able president of the Johnson Publishing Co., of Chicago, and editor of Ebony magazine, which recently celebrated its 10th birthday.

Starting with Negro Digest over 13 years ago, Mr. Johnson has developed and now publishes five different magazines. In the highly competitive publishing field, he has had an amazing commercial success.

But his enterprise has had broader significance also. It has sought to reflect many constructive phases of Negro life in this country, and it has greatly helped to increase general, public awareness and understanding of the ongoing contributions of our Negro citizens to American democracy.

Mr. Johnson has helped to open up new employment opportunities to those who often find many doors closed, despite their training and professional skills, and I understand our State Department has selected him and his staff for broadcasts to Iron Curtain countries to combat false anti-American propaganda.

For his many services to his city and his country, Mr. Johnson has been widely honored. I ask unanimous consent that there be printed in the Appendix of the RECORD a congratulatory salute by radio station WSBC to Mr. Johnson and to Ebony Magazine on its 10th anniversary, together with a proclamation of the mayor of Chicago, Hon. Richard J. Daley, greeting Mr. Johnson on that same occasion.

There being no objection, the statement and proclamation were ordered to be printed in the RECORD, as follows:

RADIO STATION WSBC SALUTES EBONY MAGAZINE ON 10TH ANNIVERSARY

Thirteen years ago, a man with a dream took a chance. John Harold Johnson, then 24 years old, borrowed $500 from his family and friends to launch a publication known as Negro Digest. Three years later, having built Negro Digest to a circulation of 100,000, Mr. Johnson brought out a picture publication now known throughout the world as Ebony magazine. The wise young publisher conceived Ebony as a necessary organ to reflect the positive side of Negro life in America.

In the past 10 years, American industry has invested $10 million in the pages of Ebony to tell its story to the fabulous Negro market. But the influence of Mr. Johnson's publication has not benefited Ebony alone. It was John Johnson, the man with a dream who opened the eyes of great corporations to the rich economic potential of the Negro. This has resulted in fantastically increased revenue for other Negro publications, the creation of unprecedented job opportunities in sales promotion and other areas, major expenditures with radio and television and the overwhelming upsurge in employment for Negro disc jockeys.

At his ultramodern plant, located at 1820 South Michigan, Boulevard, Chicago, Mr. Johnson employs 150 persons, who direct the operations of Johnson Publishing Co. and coordinate with highly successful branch offices in New York and California. He also publishes three other magazines—Jet, Jue, and Tan.

The man with a dream has done more than sell the potential of the Negro market to industry. He has reinforced the self-reliance and self-assurance of Negroes themselves by picturing and chronicling the bold forward march of Negro progress in the United States. He has helped to cement increasingly sound relationships between the white and black communities.

The influence of Ebony magazine, on this its 10th birthday, was demonstrated a few days ago when Mayor Richard J. Daley invited publisher Johnson to city hall where the mayor offered the official congratulations of Chicago for the achievements of Mr. Johnson and his publication.

In a proclamation bearing the city seal, the mayor said:

"Whereas 13 years ago, John H. Johnson organized Johnson Publishing Co., to further the dissemination of news and information; and

"Whereas in 1945 this company launched Ebony magazine, a picture publication to increase public knowledge and appreciation of the history of the Negro in America; and

"Whereas Ebony has its headquarters in the city of Chicago, where its home office alone employs 150 people and has acquired one-half-million circulation; and

"Whereas the State Department has chosen John H. Johnson, publisher and president of Ebony and the Johnson Publishing Co., and members of his staff to broadcast behind the Iron Curtain for the purpose of combating the false propaganda which has been promulgated about American democracy; and

"Whereas by his faith in Chicago as a publishing headquarters and his achievements both industrial and personal, John H. Johnson has made tremendous contributions to American democracy and universal understanding:

"Therefore, I, Richard J. Daley, mayor of the city of Chicago, on behalf of the city and all its people, do extend the greetings of the people of Chicago to John H. Johnson and the Johnson Publishing Co. on occasion of the 10th anniversary of Ebony magazine."

To Ebony magazine, the most influential spokesman for Negro progress and achievement and therefore the most eloquent expression of the authenticity of our democracy, radio station WSBC offers this salute to John Harold Johnson, its author and guiding genius, we extend gratitude and felicitations.

Claims of Certain Latin American Republics to Territorial Waters

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, March 23, 1956

Mr. HOLLAND. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a statement with reference to a resolution of far-reaching implications relative to the extensive, and I think unreasonable, claims of several Latin American Republics to tertorial waters, which resolution was adopted by the Inter-American Council of Jurists, Organization of American States, in Mexico City in February of this year.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

In the concluding session of the Inter-American Council of Jurists, Organization of American States, held in Mexico City in January and February 1956, a resolution of far-reaching international implications was jammed through with practically no analysis, study, or debate. The procedure, to say the least, was questionable. I refer to a resolution titled "System of Territorial Waters and Related Questions."

The effect of this resolution was to place on the agenda of the Organization of American States, now meeting in Ciudad Trujillo, the question of extension of the territorial waters of some of our neighbor countries to the south, several of which have indicated their belief that their territorial boundaries should extend 200 miles seaward. The resolution is completely oblivious of the interests and rights of states other than the adjacent coastal states in the conservation and utilization of marine resources and of the recognized need for international cooperation for the effective accomplishment of that common objective.

In the CONGRESSIONAL RECORD of February 28, 1956, at page 3079, one of my colleagues in the House, Congressman D. R. MATTHEWS, very ably stated the problem which this unfortunate resolution, if adopted by the Organization of American States, would pose for the United States fishing industry in southern waters. It could have the effect of driving our Florida fishermen off their traditional fishing grounds in the Gulf of Mexico. Also it will be a serious blow to the good diplomatic relations which have been established, not easily by the shrimp and red-snapper fishermen of both Mexico and the United States over a period of many years.

Rightfully the able representative of our Government on the Council of Jurists objected to the adoption of this resolution at Mexico City and filed a formal reservation of action thereon on behalf of the United States for consideration by the Organization of American States in Ciudad Trujillo.

While Florida's interest in this matter stems from the drastic effect adoption of this resolution would have on our shrimp and red-snapper fishermen who work in the Gulf of Mexico, the implication is much greater than that. The fishing industry of all Gulf Coast States as well as that of States on the Pacific coast which fishes in the waters off the coasts of several Central and South American countries would be dealt a terrific blow.

Consequently, I feel that our Government should do everything within the bounds of propriety to uphold the hands of our delegation at Ciudad Trujillo toward the end that action on this resolution is taken in full equity and recognition of international law.

Minnesota Presidential Primary

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 23, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial that appeared in the St. Paul Pioneer Press of March 21, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

The Minnesota Presidential primary, as this is written, is grinding out as interesting a surprise for the Nation on the Democratic side as it did 4 years ago on the Republican. Then it was the write-in for President Eisenhower that made history. This time it is the defeat of Adlai Stevenson by Senator KEFAUVER which apparently is in the making.

This is not altogether a surprise in Minnesota, because in the last phase of the primary campaign the strength of Senator KEFAUVER was becoming manifest. But elsewhere it had been assumed that the indorsement of Senator HUMPHREY and Governor Freeman, and the organized backing of the Democratic-Farmer Labor Party, would in itself be enough to carry Mr. Stevenson easily to an outstanding and smashing victory, and this wholly apart from his own prestige and great merits.

But people who made that assumption did not reckon either with the Senator's redoubtable campaigning ability and appeal, or with the people of Minnesota. It is detracting nothing from Senator KEFAUVER to say that he had on his side the inherent dislike among Minnesotans of dictation from on top. People resent even the appearance of bossism, and in Minnesota the selection of Adlai Stevenson as the heir apparent had too much of the proverbial technique of the smoke-filled room for the average Minnesotan to accept.

Even the most popular public men are prone to overestimate their ability to dictate. Time and again it has been proved that political strength can not be handed around by its possessors, and that those who think they can deliver votes by the bundle are usually wrong. So it has been in Minnesota.

Senator KEFAUVER is entitled to congratulations on a brilliant campaign and victory. In Mr. Stevenson's camp there will doubtless be great disappontment, and a tendency to believe that the outcome in part resulted from the absence of any real contest in the Republican primary. That some Republicans invaded the Democratic primary is probably true, but in the wide sweep of the voting this cannot have been more than a minor contributing factor.

The city primary was, of course, overshadowed. The familiar names have done well, but the impressive feature is the rebound of the irrepressible Milton Rosen to the top of the heap, and the strength of former Mayor Daubney and Mrs. DeCourcy.

May Day, United States Way

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 23, 1956

Mr. WILEY. Mr. President, I have been pleased on several occasions to invite the attention of my colleagues and of the Nation to the splended "May Day, United States Way" patriotic celebrations throughout Wisconsin and America.

On May 1, 1956, we shall once more celebrate Loyalty Day, and I am glad to say the Badger State will once more be in

the fore of this outstanding rededication effort.

I was pleased to read in the March 1956 issue of the Wisconsin Veteran, published by the Department of Wisconsin of the Veterans of Foreign Wars at Waterloo, a roundup article describing the intensive plans for the Loyalty Day Observance.

I wish every success to all the VFW units spearheading this fine occasion, and to all the other patriotic folks and organizations who will be participating in it.

I send to the desk the text of the article from the Wisconsin Veteran, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOYALTY DAY PLANS MADE

OSHKOSH.—It is expected that many posts in the State of Wisconsin will observe VFW Loyalty Day on or about May 1 of this year, according to Philip Lampert, Oshkosh, and William Dormady, Ashland, codirectors of the 1956 Loyalty Day observances in this State.

Lampert has been assigned the southern portion of the State, and Dormady will coordinate activities in the north.

LARGEST LOYALTY DAY WAS IN 1955

The 1955 Loyalty Day was the largest ever celebrated by the Veterans of Foreign Wars. Wisconsin had one of the largest post participations, and was also the winner of the 1955 Loyalty Day Scrapbook contest.

Posts participating last year included the ones at Appleton, Ashland, Athens, Bangor, Beaver Dam, Beloit, Berlin, Black River Falls, Clear Lake, Campbellsport, Cleveland, De-Pere, Denmark, Elk Mound, Fort Atkinson, Galesville, Green Bay, Hurley, Jefferson, Kewaskum, Marshfield, Medford, Menomonie, Neenah, Nichols, Oneida, Oshkosh, Sparta, Spooner, Sun Prairie, Trempealeau, Viroqua, Wakeman, Wausau, West Bend, Wisconsin Rapids, as well as all of the posts in the Milwaukee County Council.

ORIGINATED BY LAW

Loyalty Day, celebrated each year on May 1 or days approximate thereto, was originated some decades ago by VFW members in the East as a counter to the annual May Day demonstrations of Communists, or "loyalty as opposed to disloyalty."

In 1950, the VFW inaugurated the program on a national basis. Cooperation of civic, veteran, fraternal, labor, and women's organizations has been obtained during the past years.

In 1955 the Congress of the United States passed a bill which was signed by the President designating May 1 as Loyalty Day. This was followed by a proclamation issued by President Eisenhower calling on all citizens of the United States to observe May 1, 1955, as Loyalty Day.

It is expected that there will be a similar proclamation this year, and the governors of the various States will also issue proclamations.

Commander Kilmer has requested Governor Kohler to issue the Wisconsin proclamation.

MANY NATIONAL AWARDS

The Loyalty Day program of 1955 has just won for the VFW another award from Freedoms Foundation at Valley Forge, this time the top award of the George Washington honor medal, together with a check for $1,000. This sixth consecutive award continues to maintain the Loyalty Day record of an annual award for an annual patriotic program.

WISCONSIN POSTS ALREADY PLANNING

According to Dormady and Lampert, several posts have already commenced preparations to observe Loyalty Day. Ashland is planning a big event on April 29. Sverre Roang is to be the principal speaker at that time. Ralph Gerlach, Milwaukee County council commander, states that Milwaukee is anticipating another fine event and Department Commander Clarence Kilmer, as well as other dignitaries, will be present.

Another event that attracted attention last year was the one at Oshkosh, and it is expected that they will do the same this year.

In a joint statement issued recently urging all posts to participate, Lampert and Dormady said, "The idea of a special day for citizens to proclaim their allegiance to the principles of Americanism is a splendid idea. It has taken hold here in Wisconsin, judging from the response in 1955. It is fully expected that the 1956 Loyalty Day in Wisconsin will again show that the overseas veterans of this State are loyal in peace as well as during war. And the slogan of Loyalty Day—'Loyalty Means Liberty'—which originated in Wisconsin is something of real value to all of us."

The Situation in the Middle East

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Friday, March 23, 1956

Mr. DOUGLAS. Mr. President, touched off by the mischief-making intrusion of Communist arms shipments, tensions in the Middle East have recently mounted to the danger point and require much more positive action by our Government than it has thus far taken. Former Secretary of the Air Force Thomas K. Finletter, in an able speech at the City Club of Rochester, N. Y., has recently outlined the grave threats of the broad, new Communist political and economic offensive. He has also suggested constructive policies for our Government to take to maintain peace, to deter aggression, to assist in economic improvements, and to win the willing cooperation of other free peoples.

Because of its timeliness and penetration and proper emphasis on not allowing the State of Israel to be menaced by the Communist maneuvers in this area, I ask unanimous consent that there be printed in the Appendix of the RECORD the excerpts from Mr. Finletter's speech relating primarily to the Middle East.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM AN ADDRESS BY THOMAS K. FINLETTER AT THE CITY CLUB OF ROCHESTER, N. Y., FEBRUARY 25, 1956

The new Russian offensive has already brought them results in the Middle East.

United States policy in the Middle East is based on the Northern Tier Alliance. This is a military pact to which the United States is not a member but which it supports. The members are Turkey, Iraq, Iran, Pakistan, and the United Kingdom. The purpose of the pact is to stop the Russians from penetrating into the Middle East. The pact has failed sensationally to do what it is supposed to do. The Russians simply jumped over it and lit the bonfire of resentment which the signing of the pact had built up among the Arab States.

The weakness of the Northern Tier Pact is that it does not defend against attacks of the kind the Russians were likely to and in fact did make; namely, attacks on the economic front and by subversion.

Also, the pact did actual damage to the political objectives the United States was seeking in the area.

The political need of the free world in the Middle East is only in small part to defend against Red army attack. Of equal importance is to have harmony among the peoples there, among the various Arab ruling families and countries, and with the Israelis. There is a political need too, for the outsiders, the United States, Great Britain, and France, to identify themselves with the rising will to independence of these peoples of the Middle East and thus to lay the foundation for a friendly partnership with them.

The northern tier policy defeated both these purposes. It created jealously within the Arab States because the inclusion of Iraq in the pact offended other Arab States and particularly the Egyptians and Saudi Arabians. And by its military nature, reminiscent of of the old colonial domination, the pact did the opposite of identifying the United States, Great Britain, and France with the aspirations for independence of the local peoples.

Nor are all these disadvantages counterbalanced by the military defense which the pact raises against Russia. The military value of the pact is slight. However, the northern tier arrangement was affirmed recently in the Eisenhower-Eden talks in Washington and will probably be with us for a while, for better or for worse.

In any case, the resentments which the pact caused gave the Russians a fine opportunity, and they took full advantage of it.

The Russians hit on two fronts, first in Afghanistan, and then by inciting the Egyptians against the Israelis.

* * * * *

The Northern Tier Pact gave the Russians the opportunity to drive once more toward the gulf. The pact angered the Egyptians and the Saudi Arabians because it seemed to be pushing their rival, Iraq, into a position of prominence in the Middle Eastern world. This gave the Soviets reason to think that the Egyptians and Saudies might work with the Russians against the West. The Russians accordingly offered arms to Egypt wherewith to make war against the Israelis. They found the Egyptians ready to do business. And the Saudi Arabians worked with the Egyptians and used the dollars they get from their oil to stir up resentment against the West and its Northern Tier policy.

The arms deal between Russia and Egypt is in the form of a barter arrangement between Czechoslovakia and Egypt, whereby Czech arms are delivered for an exchange for Egyptian cotton. The arms are to consist of Russian MIG–15 jet fighters (which we know from Korea) and IL–28's, fine jet light bombers, as good as any corresponding planes in the West, as well as some tanks and submarines. According to news stories from Egypt, at least some of the MIG–15 fighters have already been delivered to, and are now being flown by, the Egyptian Air Force.

A relatively small number of these powerful modern aircraft in the hands of the Egyptians would put Israel at the mercy of Egypt, unless Israel can get the necessary interceptors with which to defend itself.

So our emphasis on military pacts to contain the Communists and our failure to go after the real prize, the minds of the indigenous peoples, have got us into a dangerous situation in the Near East.

I suggest the following broad lines for a rather drastic change in Near Eastern policy:

1. The Arab-Israel dispute is only part of a broader Middle Eastern problem. It is indeed only part of the worldwide struggle between communism and freedom.

It should be United States policy in the Middle East (a) from now on to have peaceful and if possible, friendly relations among the peoples of the area, Arabs, Persians, and Israelis; (b) to assure the complete independence of all of these peoples from any outside influence, Communist or otherwise; and (c) to encourage the economic betterment of the area.

We must continue and intensify our point 4 aid and our efforts to develop the water resources of the River Jordan. In the whole area, and particularly in the Arab lands, we should seek to be of aid in developing programs to raise the distressingly low standards of health, of education and of nourishment, which now exist.

2. Since Russia apparently already has delivered at least some jet aircraft to Egypt an emergency is thereby created, for a few jet aircraft in the hands of the Egyptians would be enough, as I have said, to enable Egypt to do the most appalling damage to the cities of Israel. Such a threat to the life of Israel and to the peace of the area cannot be tolerated and Israel must be sold immediately the necessary counter aircraft, including F-86s, which are surplus in our military establishment. Further, the necessary training facilities must be made available. The principle is clear: Any such disturbance of the precarious balance of military power must be suppressed and the balance restored with no delay whatsoever. Indeed, by the terms of the May 25, 1950, declaration of the United States, Great Britain, and France, we have promised not to allow any such disturbance of the military balance in the Middle East to take place; and it is our responsibility to carry out the promises we have undertaken in the 1950 declaration.

It might be well at the same time to call upon the Russians to stop making arms deliveries to the Arab countries for the purpose of disturbing the balance of military power in the area. We certainly want to do everything we can to stop the arms race in that tinderbox.

Indeed, our own policy in this regard is confusing. Unless our own shipments of arms to the Arab States (which were made, incidentally, after the Russians started their shipments to Egypt) are balanced by corresponding shipments to Israel, we ourselves will be contributing to the disturbance of the balance of military strength in the area.

Another point: Pending the signing of a peace treaty between Israel and the Arab States fixing the boundaries between the affected states, and also after the treaty is signed, any practicable measures to prevent border incidents and to keep the armed forces of Israel and the Arab States apart should be taken.

3. These are emergency steps only, to block this daring Russian invasion into free world territory, to protect the young state of Israel from this new and terrible menace, and to keep the situation from blowing up into war. Simultaneously with these emergency steps we must move toward longer term solutions.

We now have one long-term arrangement, the declaration of May 25, 1950, by the United States, Great Britain, and France, guaranteeing the borders of Israel. It is regrettable that the United States Government has failed to support vigorously this declaration. We should long since have worked out detailed measures for making effective its guaranties. Much of the present trouble in the area can be attributed to our failure to develop and strengthen the 1950 declaration which was and still is a good basis for the keeping of internal peace in the Middle East.

Time and again we have stood idly by in the face of border fighting between Israel and her neighbors in spite of our clear commitments under the 1950 declaration to stop such threats to the peace "either within or without the United Nations," as the declaration says. We have not carried out either the letter or the spirit of the declaration. Indeed, by talking of guaranties by the United States of the boundaries of Israel to be made only when the definitive boundaries of Israel are fixed by a peace treaty, we have cast doubt on our intentions to stand by our flat commitment in the 1950 declaration to prevent any violation of the armistice lines which now constitute the borders of Israel.

However, there is no doubt that the guaranties of United States, Great Britain and France in the 1950 declaration are still binding on the United States and the other two guaranteeing powers, and albeit belatedly, we must now implement and fortify these graranties. One way of doing this I suggest would be the following:

What we need in the Middle East is not a military pact, not a defensive alliance to protect the members from aggression from without, but a pact with a wholly new purpose aimed at keeping peace among the members themselves, at fostering friendly relations among them, and at developing their economies. If we have to move fast, and we do, I suppose the pact could be offered in the first instance by the United States to Israel along the lines of the numerous defense treaties we have in the Pacific, but with this important difference, that the pact would guarantee against any aggression by any member country, in either direction, and would be open for membership to all the countries of the Near East, including Turkey and Pakistan.

Great Britain and France, too, must be members because they are joint signers of the declaration of May 1950. To avoid any appearance of western domination for imperialistic reasons India should be urged to join in the guaranties and in membership in the pact. Great effort should be made to persuade India to accept her share of the responsibility for the maintenance of peace in this area. The role of the members from outside the Middle East should be limited to the guaranties against aggression and possible financial help. The indigenous members should be encouraged to work out reciprocal economic arrangements and political friendly relations.

The pact itself should be a regional arrangement under the aegis of the United Nations, with the full control of the operations in its indigenous members. The pact should be the mechanism which will make possible a vigorous economic development of the Middle East.

4. There is also the matter of the resettlement of the Arab refugees. Money has to be found for this. Israel and the Arab countries should make their respective contributions within their capacities and within the principles of equity. The United States and the other Western Powers should be ready to make loans for this purpose.

5. Finally, the countries involved must be urged to bring about a definitive peace treaty. There is only an armistice there now and this is not enough. The armistice must be converted into a secure peace. The definitive boundaries of Israel must be established in the peace treaty substantially at the present armistice lines; any change in the present armistice line to require agreement of both Israel and the affected Arab State.

What Is Montana?

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, March 23, 1956

Mr. MANSFIELD. Mr. President, in the Montana Standard, of Butte, Mont., under date of January 26, 1956, there appeared an editorial entitled "What Is Montana?"

In the last paragraph of the editorial the following is stated:

When you attempt to define Montana you have to say it's everything and then some. Who owns it? It belongs to the ages. Who runs it? It has 600,000 operators, and there's room for 600,000 more. And it's the greatest State in the Union, if anyone asks. Any more questions?

Mr. President, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT IS MONTANA?

We have been asked to define Montana. "What is it?" we are asked. What does it mean? Where did it come from? Who owns it? Where is it going? Who runs it?

Those are tough questions, when you attempt to answer them.

You might say: Montana is one of the biggest wheat piles in the world. It's one of the biggest copper piles. It's one of the biggest lumber piles. It's a million sacks of sugar.

It's potentially the biggest hydroelectric powerhouse in the world. It's a silver dollar. It's 1 State west of the divide and 1 State east of the divide. There's enough waste material left over to make a third State.

Montana is Robbers' Roost. It's the vigilantes hanging Henry Plummer. It's a million Christmas trees. It's Custer's last stand.

Montana is Lewis and Clark and Sacajawea. It's the world's largest giant spring from which flow the mighty Missouri and the turbulent Columbia.

Montana is Fort Peck Dam, the largest earth-fill dam in the world. It's a cattle ranch with the front gate 30 miles from the front porch. It's a rodeo. It's a dude ranch. It's Old Faithful. It's Gunsight Peak. It's Going-to-the-Sun Highway.

Montana is Charlie Russell. It's the Richest Hill on Earth. It's Last Chance Gulch. It's a 50,000-mile trout stream.

Montana is Marcus Daly looking into the earth and seeing billions of dollars' worth of copper.

Montana is Big Hole Basin with 10,000 haystacks.

Montana is a jewellike mountain lake.

Montana is a miner, a cowboy, a lumberjack, a farmer, a dude rancher, an Indian, a cattle baron, a vigilante, a road agent, a fur trapper, a banker, an oil driller, an engineer, an artist, a writer, a soldier, a millionaire.

Montana is a pine tree.

Montana is a fat steer.

Montana is a gold mine, a silver mine, a copper mine, a zinc mine, a manganese mine, a lead mine. Montana is a ghost town. It's a Grasshopper Glacier. It's Yellowstone Park. It's Glacier Park.

Montana is a church spire. It's a school. It's a boy with a dog and a fishing rod.

Montana is a scenic wonder. It's a volcano. It's a geyser. It's Hell cooled off.

It's a cherry tree, an apple tree, a potato, a mustard seed, an alfalfa patch, a lovely flower.

Montana is all these things and millions more.

It's home to some 600,000 people.

Some 2 millions of visitors come annually to drink in its beauty, enjoy its built-in air-conditioning system, mingle with its friendly people.

These visitors spent some $90 million last year, according to Jack Hallowell, State advertising director.

Mr. Hallowell thinks that if more people knew more about Montana the annual tourist crop would be considerably greater.

There isn't any doubt about Mr. Hallowell's being right. When you try to add up the total of what Montana is, the column is simply too long. It can't be added.

When you attempt to define Montana you have to say it's everything and them some. Who owns it? It belongs to the ages. Who runs it? It has 600,000 operators, and there's room for 600,000 more. And it's the greatest State in the Union, if anyone asks. Any more questions?

Views of Mr. James R. Hoffa, of the Teamsters Union, on Business and Unionism

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, March 22, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the St. Louis Post-Dispatch of March 4, 1956, which I consider a warning to the small businessmen of our Nation, of whom I am proud to number myself as one. This article gives the views of Mr. James R. Hoffa, of the teamsters union, on business and unionism, and I commend it to the attention of anyone who thinks "it can't happen here."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEAMSTER LEADER THINKS SMALL BUSINESS MUST GO—RUNS UNION WITH IRON HAND IN LUSH OFFICE—MAY CLASH WITH AFL–CIO OVER ILA

(By Spencer R. McCulloch)

DETROIT, March 3.—Be big or go under. That, in effect, summarizes a philosophy of business and unionism outlined to the Post-Dispatch today by James R. Hoffa, spark-plug of the teamsters union and negotiator of an alliance with the discredited International Longshoremen's Association which may disrupt the newly formed AFL–CIO.

"The future of labor-management relations is big labor and big business," Hoffa said, "for there is no room for the small business or the small union.

"That is unfortunate, but true.

"We have reached the saturation point. Now we have to organize what don't belong to us to stay in business. We are in business to make money—not for profit; we are a nonprofit organization—but to expand. We are out for every quarter we can get."

Hoffa's pact with the longshoremen, backed by a $400,000 loan to a union expelled from the old AFL in St. Louis in 1953 on charges of racketeering at the top, has brought the teamsters, largest union in the labor movement, under possibility of suspension by the AFL–CIO on constitutional grounds.

Hoffa, who is heir apparent to the presidency of the teamsters, maintains there is no constitutional conflict because of his mutual-assistance agreement. He indicated to the writer that the teamsters "wouldn't run from a fight" but he deferred decision to Dave Beck, also a rugged individualist. Beck was made teamsters' president largely through Hoffa's influence, succeeding the late Daniel J. Tobin.

"TAKE CHARGE GUY"

At 43, Hoffa is the "take-charge guy" of the 1,400,000-member teamsters. His paneled office here is that union's administrative nerve center. Through him, future policies affecting the national economy are in the making. Operating on a basis of centralized union power, he regards labor as a controlled commodity to be sold at highest prices possible.

Barking telephoned orders all over the country, he initiates contracts, deals decisively with both union subordinates and business executives. He is prone to lay the law down, ending with a crisp "that's it"—which usually settles disputes.

Under myriad titles, including a vice president of the international, chairman of the 12-State central States conference and other regional conferences in an expanding teamster empire, he operates with ruthlessness backed by brains and brawn, which has marked his career, which began when he was 17. His battle for power has survived congressional racketeering investigations, State indictments, and numerous arrests, often in connection with assaults and strike violence. He has emerged without a day in jail, although he paid a Federal fine in 1942 for planning to monopolize the wastepaper business and a State fine 4 years later for violating Michigan labor laws in organizing independent grocers and meat dealers.

CHAUFFEURED CADILLAC

Although some of his henchmen have been accused by a congressional committee of "racketeering, extortion, and gangsterism," he has never turned his back on them. Officially, he gets $15,000 a year as president of the 16,000-member local 299 here—which has a cash surplus of $1,500,000 plus $6,000 as teamsters' vice president.

But he has a virtually unlimited expense account, rides in a union-supplied chauffeur-driven Cadillac, travels in deluxe style all over the country, and gets enough to be comfortably well off from private investments, often in his wife's name. They have included a truck equipment leasing firm, an investment concern, and interests in a brewery and a race track.

Hoffa has no time for political or social ideologies, small businesses, or small unions. Strength, he told the writer in an interview, lies today in cash and power. He has both and is trying to get more—no matter what union or business is trampled in the process.

Hoffa functions increasingly on a master contract basis, signing up employers on an industrywide scale. Often he will deal directly with an employer for a chain of warehouses, taking the precaution, he disclosed, to first organize the employees in one of them so as not to run afoul of labor laws. His general procedure, however, is to go ahead with plans and let the teamsters' lawyers worry about the outcome—"That's what we hire 'em for."

Hoffa's administrative ability is recognized by friend and foe. His word, once given, is kept. His backing includes some powerful employers, nine of whom, he disclosed, helped him "sell" the teamsters' recently to large Southern truckers.

SHOWDOWN FIGHT

Hoffa, who is slated to succeed Beck eventually as teamsters' president, said that he felt that within a few years "there will be one more vicious fight between unions and employers," prompted by increasing union demands, which will force employers to get together.

"I think it will be a showdown. It's in the air. You can feel it."

Hoffa, who said he had no patience with "breast beaters," outlined a realistic philosophy of unionism, far afield from the concepts advanced by Walter P. Reuther, head of the AFL–CIO United Automobile Workers, who has an informal picket line respecting agreement with the Hoffa forces.

"A union is a business today," Hoffa said, "people join it not for some social reason but on the idea how much money can Hoffa get for me in wages? How many fewer hours? What sort of pensions?

"It's just like getting a suit of clothes. You shop for the best value for your money.

"The average person today looks on a union as a seller for his labor; if you don't sell it, you are through.

"They don't care about what happens in Italy or France. Hell, that's up to the State Department.

"Now we are not in the business of creating strikes. We are in the business of selling labor at the highest dollar without a strike. If the employer establishes that he is paying the prevailing wage, a strike would only prove his point."

Hoffa, who said the teamsters spent "millions and millions annually," gestured at his lush office, which contained tarpons mounted on the walls, caught by Hoffa and his young son off the coasts of Mexico and Florida. He compared it "with the broken down desk and scratch pad that we started with."

"The union is a bigtime business," Hoffa continued, "just like General Motors. They have to build a plant before they can sell a car. So this local is the same type of capital investment in a modern union as the plant is to GM."

Hoffa conceded that some businesses have gone under as the union has increased its organization and demands, but he asserted that "the little guy is going out of business—union or no union."

"I can't help it because he can't finance his operation," Hoffa continued. "He's done because he can't get financing from a bank or loan company."

Hoffa said that replacing equipment requires capital investments out of income but, because of taxes, the small operator has no capital. The banker, he said, looks first at gross business and assets.

"What's the result?" Hoffa observed. "They know people 10 times as big in a competitive field. So the little fellow is a risk."

Hoffa advanced a theory of democracy on "a controlled basis," asserting that neither judges or police departments allowed "people to run wild."

"No, there is a set of rules to go on," Hoffa said. "You either stay within them or you are in trouble. That's the way to run a union.

"I never go to a meeting without a draft of plans. Then we sell it to them. I've never been turned down. There isn't a local in the entire central States that I can't pick up the phone and tell them what to do and they do it because they know I never propose anything that is not good for them. There's not a single city that's not part of our ball team. Our team is clicking on a national

basis. We are the strongest international in the world.

"We could, of course, cut off delivery of food and other supplies throughout the country," Hoffa said. "But, as Beck has pointed out, that would be an abuse of our power and it would end us."

SHIRT-SLEEVE WORKER

Hoff, who neither drinks nor smokes, works in shirt sleeves for long hours, reads contracts on planes. He laughingly remarked that at instigation of Harold J. Gibbons, his lieutenant in St. Louis, he is to be tendered a $100-a-plate dinner, with 2,500 guests expected, and proceeds going for construction of a children's home in Jerusalem. "For once I'm going to be a Boy Scout," he said.

That's far afield for Hoffa, whose union now has become the No. 1 problem of the 15 million-member AFL-CIO. Around his headquarters there was a patent sentiment of dissatisfaction with the merger.

"There's only one thing wrong with the merger," Hoffa observed, "and that is that there is no clear definition of the teamsters' jurisdiction."

Californians Live a Long Time

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks, I wish to refer to several people in my home town of Stockton, Calif.

Jacob H. Miller, 97, and his wife, Mrs. Miller, 95, will soon celebrate their 75th wedding anniversary. They live in a house that is 102 years old, and is one of the relics left standing in Stockton. Mr. Miller was one of the first native-born citizens of Stockton. Their daughter, Lois Miller, lives with her parents in this interesting old house in the city where she was born. They have experienced floods in Stockton many times prior to this past year, and the Millers have seen their house surrounded by water due to the high water in Mormon Channel, which is a continuation of the Calaveras River.

The great flood of all time on the Calaveras River was in 1862. Both Mr. and Mrs. Miller were alive then, and Lincoln was our President.

During this period of time, vast changes have come over the country and also over California. Stockton was founded by Captain Weber, and he built a town similar to Spanish towns he had known in Spain. It was 2 miles square, and contained 4 square miles. On the south, it was known as South Street. On the east, as East Street, and on the west, as West Street, and on the north as North Street. These later were changed to Charter Way, Wilson Way, Harding Way, and Pershing Avenue.

From the beginning, Stockton was a port town and was known as the Slough City, because of the fact that Miner Channel was a slough that branched off from the San Joaquin River. The miners would take their cargoes on boats up to Stockton, and from there they would be taken in wagons, to the Mother Lode country, hauled by horses. The Mother Lode country is where there was considerable gold and many millions of dollars of gold was taken out of the lower Sierras. It must be an interesting thing for the Millers, at their age, and in perfect health, to look back over the many interesting experiences and events during their long residence in Stockton. At one time, Stockton was the second largest city in California. Today it is a city of about 125,000 to 145,000 people.

Also, since 1937 toward the end of that year the migration of California has averaged 1,000 per day, including all Sundays and all holidays. The Millers never anticipated such a migration; in fact, it is the largest voluntary migration that has occurred during the entire history of the world. Stockton has produced many important men, both in political life and in business life.

The Holt Manufacturing Co., which was founded by Benjamin Holt, started as a manufacturing concern of wagons. Near Stockton, is a large area known as the delta, which contains thousands of acres of very fertile land. The land in this area is peat land, namely, it is nonmineral land created by the thousands of years of vegetable decay. Mr. Holt made a wagon that could be utilized in this soft, porous, and fertile soil. He first made some large wheels and put strips across them to develop traction for his wagon, this preventing it from sinking into this soft soil. Later he developed the manufacture of tractors. He built the first tractor propelled by a motor. He built the first military tank in the world, and sold it to the Russians in 1917. Associated with him was a nephew, known as Pliny Holt, who was an inventive genius, and for many years was an adviser to the United States Army in the development of various types of carriages to carry ammunition for the artillery. Pliny Holt also contributed a very great deal to the city of Stockton at the time when its port was developed in the middle twenties. He was chairman of the first port commission, and through his guidance and good judgment, and the capacity of getting along with his associates, the port developed into a very fine inland port.

Among others who were interested in Stockton, the group that was born in California, organized the Native Sons of the Golden West. These were semifraternal and patriotic societies who did much to develop California and maintain the high type of citizenship for its cities, and the country areas.

California is indeed a peculiar State. From the north came the Russians and went down below Fort Bragg, Calif., and a river in that area is known as the Russian River. Near the coast is a fort that the Russians built and occupied. Luckily, they did not go down further and remain longer in California, or we might never have been a member of the United States of America. In its public life, California has had many important and influential persons. The discovery of gold by John Sutter was an important event. The curious thing is that the discovery of gold in California was made on the same day in which Karl Marx issued his famous manifesto. Today it is being utilized by the Soviet Union and other Communist groups as the basis for a type of government which they claim will give more freedom and more prosperity than the capitalistic system. How wrong they are has been proven during the past 40 years many times, and right at this moment, they are still promulgating the Karl Marx manifesto as their idea of an ideal society.

Stockton gave California a governor. He was James H. Budd who became governor on January 11, 1895. It was January 2, 1939, before we had another governor who was a Democrat, Culbert L. Olson.

In 1911 Hiram W. Johnson became Governor of California, and later in 1917, became a Member of the United States Senate.

California also has furnished several members of the Supreme Court of the United States. In 1926 Stephen Field was made a Justice of the Supreme Court by President Lincoln. He was the 10th member of that Court and he served as a Justice longer than any other member of that Court.

President McKinley appointed Joseph McKenna as an Associate Justice of the Supreme Court. Justice McKenna took office on January 26, 1898, and served for 26 years. He retired on January 15, 1925. We again had a Californian appointed to the Supreme Court when President Eisenhower appointed Governor Warren, the Chief Justice of the Court, where he is now doing an outstanding job as everyone who reads the newspapers knows.

Statement of Hon. Thomas P. O'Neill, Jr., of Massachusetts, on Proposal To Amend Longshoremen's and Harbor Workers' Compensation Act

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD a copy of my statement before the House Committee on Education and Labor on legislation to amend the Longshoremen's and Harbor Workers' Compensation Act.

As a Representative from Boston, Mass., one of the major established seaports of our country, I have had more opportunity than most of you to observe the working conditions, and to really know and appreciate the problems of our longshore and harbor workers. For many years, both as a representative in the State Legislature of Massachusetts, and as a Member of the Congress of the United States, I have worked for recognition and sympathetic understanding of the difficult, dangerous, and yet vitally essential work which they perform. They are a most deserving group, and their interests have long been close to my heart.

I feel that the amendments provided for in my bill, H. R. 9147, are long overdue. It is my hope that you, my colleagues, will assist me to secure prompt and favorable action.

Mr. Chairman, the committee has before it several bills proposing to amend the Longshoremen's and Harbor Workers' Compensation Act. I have before the committee my own bill, H. R. 9147, which is similar to S. 2280, the Magnuson-Morse bill, which passed the Senate during the 1st session of the 84th Congress.

H. R. 9147 would amend the Longshoremen's and Harbor Workers' Compensation Act for the first time since 1948. These hard-working men who earn their livelihood on the docks, piers, and ships, perform the second most hazardous occupation in our economy. The statistics show only logging to be more dangerous.

I am one who believes in the principle that the worker is entitled to a family saving wage; i. e., in time of sickness, injury, or unemployment, the employee's average wage should be such that his savings would permit him to carry his household in the accustomed manner until his compensation funds came due. Unfortunately, this is not the case in this industry, and is the consequent urgent need for section 1 of the legislation of which I am the sponsor.

Section 1 of H. R. 9147 recommends that the waiting period be shortened from 7 to 3 days, which is in line with the Federal Employees' Compensation Act. It also proposes to raise the weekly maximum benefit to $50, and provides for a minimum of $20 per week. This amends the current inadequate $35 perweek maximum ceiling which was established in 1948. The value of the $35 per week maximum has decreased substantially as the cost of living has increased.

In addition, H. R. 9147 proposes an increase in the schedules of indemnities in cases of partial disability, permanent in quality, and would repeal the present ceiling on death benefits.

I realize that the members of this committee have listened to many witnesses, have gone into this matter fully, and are aware of the many defects and inadequacies in the present law. Having acquired the knowledge of the longshoremen you now possess, it is my earnest desire that the committee will also hear H. R. 833 on safety in longshore and harbor work. As the sponsor of this bill, which provides for safety in longshore and harbor work through a system of safety rules and regulations, I wish to advise the committee that it is my conviction the legislation is just, sound, equitable, and urgent, and it is my hope that you will see fit to work for its enactment.

"They Don't Like Us" Snags United States Policy

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1956

Mr. HAYS of Arkansas. Mr. Speaker, one of the most thoughtful and stimulating statements I have seen on the challenge to United States leadership in the altered international situation appeared in Malvina Lindsay's column in the Washington Post on March 12. Under leave to extend my remarks, I include this article as follows:

From now on this will increasingly happen:

The speaker will explain that the Communists have shifted to a new, potent weapon. As a result we are losing ground in Asia, the Middle East, and even in Europe. The Italian President and other European leaders have warned bluntly of our lag. Secretary Dulles is hearing more about it on his trip to southeast Asia.

This new weapon we must counter is economic assistance. We can't promise as much as the Soviet Union, but we can deliver more. Perhaps we can even learn to be more psychologically smart about the way to give it.

Immediately a member of the audience will arise to protest: "But why should we do anything for those peoples since they don't like us? They say mean things about us."

The speaker will try to explain that with the survival of the democratic system and the prevention of a world war at stake, this Nation can't afford to waste time on the "he loves me, he loves me not" routine. It must act realistically to bolster political freedom everywhere, even among peoples who criticize it.

Yet it will not be easy to get this across. The American people's craving to be loved globally, their tendency to react to foreign policy in terms of emotion, are big hurdles for any foreign economic assistance program to take—especially in an election year when soapbox opportunists capitalize on these attitudes.

Why do Americans seem so obsessed with what other peoples think of them? They question every compatriot returning from abroad as to how "they"—the people of the country visited—"feel about us now." Every foreign visitor who rates an interview meets a barrage of questions based on, "What do you think of us?" Yet peoples of other countries seldom show such eagerness for approval.

A favorite pursuit of visiting authors and lecturers is to try to analyze the American desire to be liked. Hallam Tennyson, great-grandson of the poet, wrote in the Progressive magazine, after a tour of the United States, as follows: "One wonders, of course, whether Americans seek the opinions of others so assiduously because they are uncertain of their own; hoping to find the answer to the contradictory, unfinished riddle of America beginning to take shape in a reflection caught from foreign eyes." It was the case, he thought, of a new society trying to discover itself.

Contrasting this attitude with that of the English, he wrote: "We all know what England is. We don't need to be told. We accept it as we accept English weather. We let it seep into our bones like a London fog."

Yet he saw a value in this American uncertainty. He called the settled quality of England, "our one great gift to civilization," but he warned of its dangers. "We love something that belongs to the past, that is no longer evolving."

For all the immaturity that American concern with others' opinion may seem to have, it yet implies a lack of complacency, and it promises effort toward growth. It is also an unconscious recognition of the importance of personal relationships in public as well as in private affairs—something colonialism failed to see.

While the new turn of cold-war tactics is too pressing to permit likes and dislikes to govern foreign policy, yet on a long-run basis, Americans are on solid ground in wanting to be liked. No formal alliances between governments can remain strong unless they have foundations of friendship between the peoples involved.

But to achieve this, Americans will need to take another step toward maturity, that of concerning themselves more with liking than with being liked. For centuries religion has been teaching the importance of this, and now psychologists, medical and mental health authorities are likewise stressing it.

If the personality, in order to grow, expand, fulfill itself, needs concern with the fulfillment of others, the same may well be true of a nation. Today in the wake of the atomic stalemate, there is a surge of a desire through Asia and Africa—and it is spreading in Europe—to turn from preoccupation with armaments to raising the standard of living. To help in a generous spirt with this, to whatever extent is possible, could bring to the American people intangible returns far exceeding practical advantages.

Strategic Air Command Celebrates 10th Birthday

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I wish to offer congratulations to the command and personnel of the Strategic Air Command, which celebrated its 10th birthday on Wednesday, for the vital role they have played in offering protection to the United States and the countries of the free world.

When SAC was activated on March 21, 1946, its combat force consisted of some 600 aircraft, mostly World War II planes already becoming obsolete due to the rapid development of jet-powered aircraft. Today, more than 200,000 men and women serve at SAC's 32 bases in this country and its 12 major overseas bases, and this strategic unit of the Air Force is equipped with the most modern stratojets and the 8-jet B–52 stratofortress, an intercontinental nuclear bomber.

The development of aerial refueling techniques was pioneered by SAC. The command's global mission required that its planes have the capability of remaining airborne as long as necessary to hit any target in the world and return to a friendly base.

Mr. Speaker, one of SAC's aerial refueling wings is based at Westover AFB in my district, and I am quite familiar with its mission. Also, the officer who did so much to build SAC into a first-rate fighting unit, Gen. Curtis E. LeMay, was stationed at that base as a major in 1941. I join with the people of my district in wishing General LeMay and his Strategic Air Command a happy birthday.

Also, I would like to include editorials from the Springfield Union and the Springfield Daily News commemorating SAC's birthday.

[From the Springfield (Mass.) Union of March 21, 1956]

SAC's BIRTHDAY

Yesterday was the 10th anniversary of the Strategic Air Command and Mayor Brunton has issued a proclamation setting aside the week that ends next Wednesday as a period "to give thanks to God" for the protection the command supplies to the Nation. The appeal is well-founded, for SAC has assumed

the first importance in our national defense against attack.

The era when a huge army, standing or otherwise, go-anywhere navy, and an ordinary combat air force spelled out adequate national defense has vanished in the 10 years of SAC's existence. With nuclear weapons, the striking potential of an enemy has reduced the traditional arms of initial resistance far below their historic effectiveness, even when they are available on a full wartime scale.

The Strategic Air Command and the ready air strength it has built under Gen. Curtis E. LeMay supply the critical difference between immediate retaliation and possible disaster, as well as a powerful weapon to prevent attack through SAC's very existence. The command's wide-ranging craft and skillful crews throw an incalculably valuable blanket of protection over the Nation and the continent. We could not fight a war without all our powerful and traditional services, but it is entirely possible that we might not have the opportunity to use them if SAC had not rewritten the book on primary defense.

[From the Springfield (Mass.) Daily News of March 21, 1956]

HAPPY BIRTHDAY, SAC

The Strategic Air Command is celebrating its 10th birthday today, and only in the field of aviation can a youngster grow so tall in a decade.

On March 21, 1946, when Continental Air Forces was redesignated Strategic Air Command and established as 1 of the 3 major commands of the Air Force, some 37,000 men donned SAC insignia, and were assigned to 18 installations where some 600 aircraft were based. SAC was modern from the start; it had 3 jets.

Today, some 200,000 men are assigned to SAC which operates from 32 bases within the United States and 12 major overseas operating bases. During the last 5 years, more than 1,200 Stratojets have been delivered to SAC, and the stratofortress, the 8-jet B–52 intercontinental nuclear bomber is now in service from SAC bases. The B–52 can carry enough destructive force to wipe out completely a target of 15-mile radius. It can drop a nuclear bomb while flying 10 miles a minute at an altitude of 10 miles.

The growth of SAC is no more fantastic than the growth of the Chicopee Tobacco Flats into the SAC base at Westover. A newspaper clipping just beginning to turn yellow tells of the arrival of the first Army plane, a B–18, at Westover Field, on October 10, 1940. The first plane officially assigned to Westover landed on December 7, 1940. A year later, an act of infamy plunged us into war and set in motion the tremendous expansion of Westover.

Now, SAC and Westover, which have both grown rapidly and well, help to present to any potential enemy the evidence of force which every aggressor can understand. In thanksgiving and in praise, Americans today salute the Strategic Air Command, 10 years old and abundantly strong.

Water Need Versus Water Loss

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. TEAGUE of Texas. Mr. Speaker, water is the biggest problem facing Texas and the country today. A very good friend of mine, Mr. A. F. Mitchell, recently elected president of the Texas Water Conservation Association, prepared an article entitled "Water Need Versus Water Loss" which I feel makes worthwhile reading for every Member of this body. Under leave to extend my remarks in the RECORD, I wish to include this article:

WATER NEED VERSUS WATER LOSS

(By A. F. Mitchell, president, Texas Water Conservation Association)

The impoundment of floodwaters is essential to the maximum development of Texas' water resources. However, the promiscuous impoundment of water without proper planning as to available supplies and true water needs and without recognizing the vested or prior rights of other affected users, results in water waste and economic losses to operators in the area of development. The Federal Government frequently stands the economic loss when political expediency and an ill-informed public force the construction of water-use projects that are not supported by sound engineering and which do not recognize the vested rights of others.

Some Federal Government policies encourage water waste and particularly so in arid and semiarid regions of the Nation. In these regions everyone should be encouraged to impound and use only quantities of water meeting true and equitable needs. Recreation is recognized as a true need because recreation facilities are essential in maintaining a balanced society.

In Texas the practice of water economy should begin with the farmer and the homeowner. The homeowner needs to know how to get the most from the water he buys. The farmer must know how to get the most from the rainfall, streamflow, or ground water that falls on or passes over or under his land. The farmer is the temporary custodian of a circulating resource that he cannot keep, but can use as the resource moves across or under his land. Water supplies for the farmer's downstream neighbor are, to a varying extent, contingent upon the economic and logical manner in which the farmer uses, controls, or consumes (through evaporation or transpiration) the water that nature has made available to him. In water-short west Texas, or any section of the country where water as a resource is in short supply, wasteful water-use practices should be discouraged. A stock tank properly designed and constructed is an essential unit to the farmer when natural flowing streams or ground water is not available. On the other hand, a stock tank that loses all impounded water through evaporation during one drought season is a nonbeneficial water use. The construction and use of 2 stock tanks in a pasture where 1 properly designed tank will meet the needs with less water loss should not be encouraged. The principle of water need versus water loss should be standard practice of everyone using water in arid or semiarid regions, regardless of the magnitude of the quantities of water involved. The philosophy of water use should center around water need versus water loss rather than around "highority."

The Government policy of providing flood protection and sound land-management practices has merit, but the policy of encouraging farmers to impound up to 200 acre-feet of water in dead storage or sediment space of flood detention structures, which is consumed principally through evaporation, is unsound. If such structures are designed, built, and financed as flood-control works only, they should not provide up to 200 acre-feet of impounded water to be later lost or consumed by evaporation. Such structures should be constructed to maintain maximum flood protection and be equipped with fixed openings that fully drain the reservoir following a flood. Where flood detention reservoirs are converted to multiple uses such as flood control and water conservation, they should be so identified. Under these conditions the structure should be designed and economically justified as a multiple-use project. Further, projects should be operated in a manner to respect the rights of others and water impoundments should not be made if the water is not placed to true beneficial use.

The Texas Society of Professional Engineers' publication Water, contains, in condensed form, much factual data on Texas' water resources. This publication was authored and reviewed by a group of qualified Texas men having experience in the fields of hydrology, river hydraulics, geology, stream pollution and other related fields. Figure 4, "Evaporation for draught years 1950 and 1951," and figure 5, "Evaporation, a large water consumer," and the following text from the publication Water demonstrate the importance of correlating water use and water loss when impounding water in west Texas:

"LOSSES BY EVAPORATION

"Water losses by evaporation from exposed water surfaces are an important factor in determining storage requirements. Such losses vary from as much as 10 feet during a 1-year period in some points of west Texas to about 3 feet in southeast Texas. Such losses are partly offset by rainfall, but the greatest evaporation loss occurs during a drouth year when rainfall is at a minimum. Net losses from open water surfaces, therefore, may range from about 2 to 9 feet in dry years. Water lost through evaporation frequently exceeds that used for beneficial purposes. In areas such as west Texas, where excessive water losses occur from evaporation, extreme care must be exercised in selecting reservoir sites. The reason for this is illustrated in figure 5. This illustration shows the comparative evaporation loss from 48,000 gallons of water stored in a shallow circular stock tank (5 feet deep) and equal amount of water stored in a narrow but deeper (11 feet deep) stock tank. Ninety-two percent of the water stored in the shallow circular tank was lost in 1 year as compared to a loss of only 38 percent for the narrow and deeper tank. The reason for this variation, is that the surface area of the shallow tank is 2,000 square feet, while the surface area of the other tank is only 600 square feet. Evaporation records are available for very few areas of the State, but they are badly needed for surface water supply developments."

[Figure 4 and figure 5 charts omitted.]

Declining Farm Income and Growing Surpluses

EXTENSION OF REMARKS
OF
HON. PRICE DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Friday, March 23, 1956

Mr. DANIEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Fielding Helm, of Plainview, Tex., setting forth a three-point farm program which Mr. Helm believes will solve the present serious problems of declining farm income and a growing surplus of farm commodities.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THREE-POINT FARM PROGRAM PRESENTED TO THE UNITED STATES SENATE AGRICULTURAL COMMITTEE, JUNE 24, 1955, BY FIELDING HELM

This article explains and seeks public opinion on three proposed changes to the current farm program which were presented to a recent Senate Agriculture Committee hearing. Senators present expressed interest in knowing what citizens over the Nation think of the proposals.

The article also explains the soil bank and 90 percent parity prices.

(Pt. 1)

The three-point farm program proposes:

First, an amendment to the Government farm program which, if approved by Congress, will dispose of the present surplus stocks of basic farm commodities by sales, not by gifts, and will prevent the accumulation of such surplus stocks in the future.

Second, an amendment to the farm program, a two-price system, which, if approved by Congress, will permit the farmer to produce and sell on the export market all of the basic farm commodities he wishes to produce and sell in excess of his farm allotment, without being penalized for overproduction, and without the size of his farm allotments being reduced because of the establishment of the two-price system.

Third, an amendment to the farm program, which will clearly define the term "parity price," as a price for basic farm commodities which will not be less than the prices received when the base period was from 1909 to 1914.

During the past 5 years farm income has been going down. In 1955 it dropped over a billion dollars.

If Congress approves the three amendments, explained above, each amendment will cause a decided raise in farm income without increasing consumer costs.

CONGRESSMEN INTERESTED

At the request of Senator PRICE DANIEL, the three recommendations were put in bill form by Mr. Harker T. Stanton, a brilliant Washington attorney, and member of the United States Senate's legislative counsel. Also at the request of Senator DANIEL, Mr. Helm was invited to testify before the Senate Agricultural Committee.

At the request of Senator LYNDON B. JOHNSON, Democratic leader in the Senate, the technical advisors of the Senate's Democratic policy committee made a study of these three recommendations. Mr. Gerry Siegel, chief of the technical advisors, in discussing the subject with Helm expressed his opinions on the proposals but he said: "The policy committee never acts upon a bill until the bill has been approved by a Senate committee."

Senator JOHNSON, although not a member of the Agricultural Committee, sent the three legislative proposals to that committee and requested them to furnish him a report on the proposals.

Senator ALLEN J. ELLENDER, chairman of the Senate Agricultural Committee, sent Senator JOHNSON a report. A copy of this report is given elsewhere in this paper.

Senator JOHNSON, April 2, 1955, also wrote Helm:

"I can assure that my staff will always be available to you in connection with work on efforts to improve farm legislation and to produce the kind of farm bill that will give the farmers the protection and opportunities they so richly deserve."

Congressman JAMIE L. WHITTEN, chairman of the powerful Agricultural Appropriation Committee in the House wrote Helm May 2, 1955:

"I have read your suggestions and many of them could well be incorporated in any bill passed."

Congressman JOHN DOWDY, of Texas, suggested that some of the surplus cotton be sold to farmers, the farmers to use this cotton instead of producing more to fill their cotton allotments.

Mr. DOWDY also said he would go with Mr. Helm to farm meetings in his congressional district to help in getting farm reaction to the proposed amendments No. 1, No. 2, and No. 3.

SENATE HEARINGS

In a hearing June 24, 1955, on price supports before the Senate Agricultural Committee in Washington, D. C., a hearing presided over by the distinguished Senator WILLIAM KERR SCOTT, of North Carolina, two proposals were made by Helm:

First, that three amendments be made to the Government farm program which, if approved by Congress, will among other things, remove many Government restrictions from farming, create new export markets for United States farm commodities, and thus give the farmers in the United States an opportunity to earn more money. At the same time, by disposing of surplus farm commodities, it would save the taxpayers in storage costs alone, hundreds of thousands of dollars a day.

Second, that an article be written, explaining details of these three amendments, for publication in newspapers, especially farm papers, in which the readers be asked to write the editors of the papers stating if they favor or oppose the amendments.

After the amendments were explained to the committee each Senator present at the hearing said he would be interested in studying the results secured from this test of public sentiment.

Mr. Helm told the hearing:

"The three amendments are based on sound principles, they apply equally well to each of the basic farm commodities. Surveys have been made that indicate that 90 percent of the people who are interested in farm programs, both farmers and nonfarmers, approve these amendments.

"In preparing these amendments it was remembered that the price-support farm program beginning with the Agricultural Adjustment Act of 1933 was approved by Congress in the depth of a national depression, largely as an antidepression measure. That program was considered purely a domestic issue. The program will be greatly simplified if Congress continues to treat the farm program as a domestic issue—not as a program to be used by the State Department in making treaties to protect the interest of farmers in foreign countries."

DRAFT OF BILL FOR RESOLUTION NO. 1, TERMED "AMENDMENT NO. 1," TO REQUIRE THE SALE OF SURPLUS COMMODITIES

"Be it enacted, etc., That the Commodity Credit Corporation, shall within each marketing year for which the total supply exceeds the normal supply of any agricultural commodity, dispose of all stocks of such commodity held by it in accordance with the provisions of section 407 of the Agricultural Act of 1949. This section shall not require the Commodity Credit Corporation, however, to dispose of a quantity of such commodity in the manners provided by clauses (A) to (H) of such section in excess of the quantity by which the total supply for such year exceeds the normal supply, or to dispose of any commodity which the Secretary determines is required to provide a normal supply of such commodity for the following marketing year.

"The Commodity Credit Corporation shall dispose of a minimum of 50 percent of the commodities it has to dispose of, according to the provisions of this act, through competitive bidding by two or more privately owned business organizations."

DRAFT OF BILL FOR RESOLUTION NO. 2, TERMED "AMENDMENT NO. 2," TO REMOVE LIMITATIONS UPON THE PRODUCTION OF COMMODITIES FOR EXPORT

"Be it enacted, etc., That notwithstanding any other provision of law, any basic agricultural commodity which would be subject to marketing penalties under the Agricultural Adjustment Act of 1938 or related legislation if marketed may be marketed for export, or stored, without penalty under regulations prescribed by the Secretary of Agriculture. For the purpose of such act and related legislation commodities so exported or stored shall be treated as though penalties had been paid on them. Whenever the planted acreage of the current crop of any such commodity is less than the farm acreage allotment for such commodity, the total quantity of the commodity from any previous crop stored in order to postpone or avoid payment of penalty shall be reduced by that amount which is equal to the normal production of the number of acres by which the farm acreage allotment exceeds the planted acreage. The Secretary shall not make price support available on any commodity which would be subject to marketing penalties but for the provision of this section.

"SEC. 2. The first sentence of section 408 (b) of the Agricultural Act of 1949, is amended to read as follows: 'A "cooperator" with respect to any basic agricultural commodity shall be a producer—

"'(1) on whose farm the acreage planted to the commodity does not exceed the farm acreage allotment for the commodity under title III of the Agriculture Adjustment Act of 1938, as amended or—

"'(2) who has given the Secretary satisfactory assurance that the quantity of the commodity if any which would otherwise be subject to marketing penalties will be marketed for export or stored or—

"'(3) in the case of the price support for corn to a producer outside the commercial corn-producing area, a producer who complies with conditions of eligibility prescribed by the Secretary.'

"SEC. 3. Notwithstanding any other provisions of law, any acreage planted to any basic commodity in excess of the farm acreage allotment shall not be taken into account in establishing State, county, and farm acreage allotments."

DRAFT OF BILL FOR RESOLUTION NO. 3, TERMED "AMENDMENT NO. 3," TO MAKE PERMANENT THE 1950 DEFINITION OF PARITY PRICES FOR BASIC FARM COMMODITIES

"Be it enacted, etc., That section 301 (a) (1) (G) of the Agricultural Adjustment Act of 1938 is amended by striking out the following: 'during the 6-year period beginning January 1, 1950'."

HALE COUNTY AND BOSQUE COUNTY FARM BUREAUS WORKING TOGETHER AT GRASSROOT LEVEL

Surveys conducted by the Bosque County Farm Bureau and Hale County Farm Bureau showed 90 percent persons voting approved principles suggested in three-point farm program, committee members working on survey included:

Hale County committee: Raymond Akin, chairman; Fielding Helm, cochairman; Melvin Glantz; Cecil Curry; Cecil Thomas; Bruce Rigler, president, Hale County Farm Bureau.

Bosque County committee: Bill Oswald, chairman; Ernest Johle, Clifton; B. C. Rogstad, Meridian; Clyde Henry, Moshiem; Charles Isenhower, Clifton; W. B. Hardin, Meridian; Earl Morrison, Walnut Springs; Edwin Bekkelund, president, Bosque County Farm Bureau.

RECENT DEVELOPMENTS

Recent developments are that 63 United States Senators introduced a bill in the Sen-

ate which would, if approved by Congress, cause surplus cotton held by the Commodity Credit Corporation to be sold on the export market at competitive prices. The State Department opposed this bill.

Details of the action is described in Associated Press reports from Washington, which follow:

SIXTY-THREE SENATORS—FAVOR EXPORTING COTTON AT COMPETITIVE PRICES

August 1, 1955, an Associated Press dispatch stated:

"WASHINGTON.—About 100 Senators and House Members called on President Eisenhower today and asked him to take up at Cabinet level a positive new cotton program.

"Senator GEORGE, Democrat of Georgia, led the group.

"The unusual conference followed last week's introduction of a bill by 63 Senators aimed at selling on the world market surplus cotton held by the Commodity Credit Corporation. The bill would, among other things:

"1. Instruct the CCC to use its present authority to encourage export sales of such quantities of the present surplus as would reestablish for the United States its fair historical share of the world market.

"2. Direct the Secretary of Agriculture Benson to limit cotton textile imports to a figure not to exceed 50 percent more than the average annual quantity of such imports during a representative 2-year period."

The United States' fair historical share of the world market for cotton is equivalent to that part of the farm allotment of cotton produced in the United States for normal export. The total farm allotment is the amount needed for domestic consumption plus the amount produced for normal export.

If Congress approves this bill introduced by 63 Senators, with amendments making the bill apply to all basic farm commodities—that is, in addition to cotton, make the bill apply to wheat, corn, rice, tobacco and peanuts—the bill will put an end to the building up surplus stocks of basic farm commodities in Government warehouses in the United States.

In addition to the above bill, a simple bill would be needed to dispose of surplus stocks of these commodities accumulated during previous years, the years in which—due to the opposition of the State Department—we did not sell on the export market the commodities we produce for normal export.

The solution of the surplus problem of basic farm commodities is as simple as that. All Congress has to do is to continue the work started by 63 Senators, that is to approve the above-mentioned bill with amendments.

THE SOIL BANK—DISADVANTAGES

First, the soil bank, by paying the farmers approximately 50 percent as much money for taking their land out of production as they would receive for producing crops, will reduce the farmers' income. It will especially reduce the income of the small farmers who do most of their own work. It also will reduce the amount of money spent in agricultural sections of the country for farm labor and other expenses of producing farm commodities.

Second, the soil bank, by reducing production and thus keeping United States farm commodities off the export market, will help farmers in Mexico, Canada, and other foreign countries by giving these foreign countries more of our export business.

Third, taking land out of production, as proposed in the soil bank, does not build up soil fertility. Cultivating land, producing crops with legumes and fertilizers included in the crop rotation does increase soil fertility.

Fourth, most farmers would rather have their incomes increased by receiving fair prices for their farm allotments of farm commodities, parity prices that are equivalent to the prices of nonfarm commodities, instead of having their incomes increased by being paid for doing nothing, taking their land out of production.

Fifth, most taxpayers would rather pay the farmers a parity price for the farm commodities the taxpayers use than to pay the farmers for taking their land out of production.

Sixth, the soil bank is a new name but not a new idea. The same idea, paying farmers to take their land out of production, was used in 1933 under the Franklin D. Roosevelt administration. The idea was never popular with the taxpayer and was discontinued.

Seventh, Congress can dispose of surplus stocks of farm commodities held by the Commodity Credit Corporation by selling these surplus stocks to farmers to fill their farm allotments, without establishing a soil bank.

KEEP YOUNG MEN ON FARMS

Small farmers by the thousands were forced off the farm, as farm income dropped in the past 5 years and thousands of the most intelligent young men reared on farms have and are preparing themselves for other businesses in which there are prospects for better incomes. Congress realizes that such conditions are bad for the future of the country. Because of this situation the farm program is one of the most important issues before the 2d session, 84th Congress.

If there is a better method of maintaining the farm income, and thus encouraging young intelligent men to remain on the farms, than by maintaining our normal export business, and by paying the farmers at least 90 percent of parity prices (1909 to 1914 being used as a part of the base period) for the farm allotments of basic farm commodities, as is advocated in the amendments explained in this article, if there is some better method of accomplishing these results, please write and tell the editor of this paper about the better method.

Anyway we hope you will think about this, and write a card or letter to the editor of this paper and vote either for or against each of the amendments.

NINETY PERCENT PARITY SUPPORT PRICES

It is the function of the Government to do certain things for the people that it can do better than the people can do for themselves, including administering the postal service, national defense, and supporting prices of farm commodities.

It is not necessary or advisable for the Government to offer price supports for all farm commodities, but it has been proven practical for the Government to offer price supports for the most important farm commodities including the basic farm commodities.

There is nothing that an individual farmer or a farm organization can do, without the aid of Government price supports, that will insure the prices of farm commodities from falling to bankrupt levels, as they did in 1931 and 1932.

If you think the farmer should receive his fair share of the national wealth vote support prices for farm allotments of basic farm commodities at 90 percent of parity prices. If Congress approves this amendment it will not cure the farm problem but it certainly will be a decided help to the farm income.

Regardless of what you think, vote. Let's tell Members of Congress what we think. If we and other people who read this article do that, we may get better farm legislation.

Write either your Congressman, the editor of this paper, or both, and vote either for or against each of the amendments explained in this article.

The Offshore Islands

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, March 23, 1956

Mr. LEHMAN. Mr. President, on the inside pages of the newspapers there are again appearing ominous reports about military activity in the Far East in the vicinity of the offshore islands, Quemoy and Matsu. It is only a little more than a year ago that we stood on what Life magazine has called the brink as a result of our unfortunate involvement with these offshore islands.

The March 2 issue of the fine publication, Commonweal, carried a very excellent summary of the present situation with regard to these offshore islands, as well as a recapitulation of the events leading up to the present situation. The article was written by Mr. Harold C. Hinton, who is a member of the faculty of Georgetown University.

I ask unanimous consent that this excellent article, entitled "The Offshore Islands", be printed in the Appendix of the RECORD. I think it would be most useful if all Members of Congress refreshed their recollection in regard to the offshore islands. We may be facing this situation and this issue again in the not-too-distant future, unless our Government moves rapidly and forcefully to eradicate this possible source of conflict and disunity in the free world.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Commonweal of March 2, 1956]

THE OFFSHORE ISLANDS

(By Harold C. Hinton)

It will soon be fighting weather again in the Formosa Strait, and then the air will undoubtedly be filed with propaganda blasts from Peking and Taipei over the offshore islands. In January of this year the Chinese Communists began shelling Quemoy on a scale unknown since the bombardment of September 3, 1954, which sent blood pressures up in Washington and proved to be the opening gun of the offshore islands crisis of early 1955. The problem of the offshore islands will have to be faced. But before taking stock of the problem as it now stands, it is worthwhile to look at the record. It is complex, and fogged by propaganda.

When the Chinese Nationalists retreated to Formosa at the end of 1949, they left garrisons on a considerable number of islands fringing the South China coast from Shanghai to Hainan. Some of these, notably Hainan itself, they soon lost or had to evacuate. The principal islands which they managed to hold, and which are therefore of interest today, are (from north to south) the Tachens, about 200 miles south of Shanghai; the Matsus, off the port of Foochow; and Quemoy, lying just off Amoy and about 125 miles west of Formosa. Although these islands were than rather lightly held by the Nationalists, they succeeded in repelling a Communist attack on Quemoy in October 1949. Shortly afterward an epidemic of liver flukes prevented a Communist attack on Formosa, which was not then under American protection. With the outbreak of war in Korea at the end of June 1950, came President Truman's order neutralizing Formosa by in-

terposing the 7th Fleet between it and the mainland. This was followed by substantial American military and economic aid to the Nationalists which, combined with the operations in Korea, further reduced the feasibility of an attack on Formosa or the offshore islands.

One of the first acts of the new Republican administration was to unleash Chiang Kai-shek in February 1953. For the record, the Nationalists were now free to attack the mainland, while Formosa was still protected from any assault by the Communists. In private, however, the administration insisted that the Nationalists seek our consent before undertaking offensive operations against the mainland. At the same time, we encouraged the Nationalists to occupy the offshore islands in force without, apparently, giving any undertaking to help in defending them. The following year saw American supplies begin to flow in significant quantities to the offshore islands.

The Communist counterploy was not long in coming. In August 1954 Peking loosed a mighty wind of propaganda demanding the "liberation" of Formosa and the offshore islands. On September 3 Communist artillery laid down a heavy fire on an improvised pier on Quemoy over which American supplies were being unloaded. Nationalist propagandists, exaggerating the vigor of their own counterbattery fire, misrepresented the Communist barrage as the beginning of a serious effort to take Quemoy, which it almost certainly was not. The administration dutifully took fright. With General Ridgway alone dissenting, the Joint Chiefs of Staff recommended direct American support for the Nationalists in the event of an attack on Quemoy. The President overruled them, however, and threw his weight behind a less-forceful policy. In October reports circulated that the Nationalists had called off their air attacks on the mainland at the request of the United States Government.

Whatever the actual intentions of the Communists in shelling Quemoy may have been, their blow fell not there but farther north. In December they clamped a blockade on the Tachens, whose military importance is probably greater than that of the Matsus or Quemoy, since they lie in the flyway between the Shanghai area, where the largest concentrations of Communist aircraft are based, and the Formosa Strait. On January 18, 1955, the Communists "liberated" Yikiangshan, which lies about 5 miles northwest of the Tachens, and thereby touched off another crisis in Washington.

On January 20 the administration took the unusual step, for it, of inviting Democratic congressional leaders to a conference on the offshore islands. Led by Senator GEORGE, the latter agreed to the administration's proposal for a treaty guaranty of the security of Formosa and the Pescadores and a free hand for the President with respect to the offshore islands. On January 24 the President asked, and on January 29 received, discretionary authority from Congress to give American support to the defense of Formosa, the Pescadores, and such other Nationalist-held islands as he might see fit to defend. A defensive treaty with the Nationalist Government embodying these principles was promptly negotiated, and both Secretary Dulles and the Joint Chiefs conveyed to the public the impression that the offshore islands, or at least Quemoy and the Matsus, would be defended. The U. N. Security Council, for its part, was vainly trying to persuade the Chinese Communists to discuss a cease fire in the Formosa Strait.

The President, however, apparently inclined to the view that the offshore islands were not worth defending. Early in February, at any rate, our Navy aided the Nationalists to evacuate their military personnel and civilians from the Tachens, which were promptly "liberated." Late in March the public was given the impression that the Joint Chiefs, or, at any rate, Admiral Carney, expected an attack on the remaining offshore islands at any time after the middle of April. On the 11th of April, Adlai Stevenson not unreasonably condemned the administration for vacillation and bluster and implied that, to him, the offshore islands did not seem worth defending.

The expected crisis never came, although Secretary Dulles' "brink of war" policy probably had little effect in preventing it. Probably more important was a presumable desire on the part of the Communists not to be caught in a warlike posture at the opening of the Bandung Conference. The optimum fighting season passed away fairly peacefully at any rate.

During 1955 the Communists inaugurated a greatly intensified propaganda campaign, which still continues, aimed at persuading Nationalist officers to defect to the New China. In January of this year Chou En-lai, in the course of a major speech, promised individual Kuomintang members amnesty and jobs if they returned to the mainland; he did not, of course, guarantee them the right to return to Formosa if they chose. This sort of appeal is likely to be increasingly effective on Formosa.

This does not necessarily mean that the Communists have given up all hope of liberating Formosa, let alone the offshore islands, by force. When India's Krishna Menon came to Washington in October 1955, he warned Dulles that the Communists intended the existing unofficial cease fire in the Formosa Strait to be only temporary. Under these circumstances the administration apparently considered it wisest to continue its policy of forbidding any major Nationalist assault on the mainland and keeping Nationalist military action of any kind within rather strict limits. In December 1955, the Nationalist commander on Quemoy complained that the United States had forbidden him to fire his artillery at Communist work parties building a causeway from the mainland to a small island near Quemoy.

The Chinese Nationalists for many years have appeared to share with the lemmings a strange tendency to commit actions likely to lead to their own destruction. Last December they vetoed the admission of the admittedly farcical state of Outer Mongolia to the United Nations and thereby nearly wrecked the "package deal" for the admission of new members, both slave and free. This action, which annoyed many members of the U. N., has made the admission of the Communist regime to at least the General Assembly a not improbable feature of the next session of the United Nations.

Sir Anthony Eden, when he visited Washington in January of this year, recommended that the Nationalists be persuaded to evacuate the offshore islands. To this Mr. Eisenhower replied that the Nationalists seemed determined to fight, and he gave no indication that he saw any way of overruling them. There the matter was dropped, but it is clear that any American support for a Nationalist defense of the offshore islands would be extremely unpopular in Europe, to say nothing of Asia. Diplomatically, affairs seem to have reached a stalemate.

Not so militarily, however. Early in January, artillery of the People's Liberation Army began shelling Quemoy, and on January 19 more shells fell there than on any day since September 1954. It is possible that the entire problem of the offshore islands may soon have to be viewed in the light of the principle, inter arma silent leges. It is important, therefore, to understand the military factors which would be involved in a defense of the islands.

It is worth noting that no power, even the United States, is obligated to come to the aid of the Nationalists if the offshore islands are attacked. The SEATO pact does not cover them any more than it covers Formosa itself, or for that matter, Hong Kong. The United States is the only nation with any sort of military commitments to the Nationalists, and, as we have seen, the defense of the offshore islands, as distinct from that of Formosa and the Pescadores, is left entirely to the discretion of the President.

Although monsoon winds make amphibious operations in the South China Sea difficult in the summer and fall, and although the spring is the best season for such operations, the offshore islands (except perhaps for the Matsus) are so close to the mainland that amphibious operations could probably be mounted against them at any time of the year. They are also so close that ships of the Seventh Fleet would be unable to operate in the waters which separate them from the mainland.

The offshore islands have undoubtedly been useful to the Nationalists as guerrilla bases, intelligence and patrol centers, blockade bases, radar stations, and the like. Their blockade of the mainland, however, is not very effective, and in the opinion of at least some competent military observers the value of the islands as bases for an invasion of the mainland is slight. Even if it were not, to retain the islands at considerable cost on the very doubtful assumption that the Nationalists may some day be able to attempt an invasion of the mainland, would be a gamble with few parallels in modern times. The British, for example, made no serious attempt to hold the Channel Islands after the German conquest of France in 1940. Finally, there is the problem of Nationalist morale, which is often alleged to be a growth so tender that it would be ruined by an evacuation of the offshore islands. Against this view it can be maintained that if a man sees that he is bound to be thrown out of a barroom after announcing that he can lick any man in the house, his morale, prestige, and physique are likely to suffer less damage if he walks out under his own power than if he waits to feel the bouncer's hand on his collar.

The important question remains, Is the loss of the islands by the Nationalists inevitable, and if so how soon is it likely to occur? Any answer to this question must be based on some view of the Communist military buildup on the mainland opposite the islands.

This buildup has been proceeding at a steady but not very rapid rate for the past few years. The main controlling factor is geography; Fukien is a rugged province almost isolated from the rest of China by mountains. Most heavy equipment brought in from outside must therefore arrive by boat, and Nationalist control of Quemoy has denied the Communists the full use of the port of Amoy. Clearly, if Amoy were connected with the rail system of continental China the buildup could be greatly accelerated. This idea occurred to someone in Peking some time ago, and work gangs are now constructing a line southward from the Hangchow-Nanchang railway through the mountains, with Amoy as its main destination; apparently a branch will also be built to Foochow. This railway is expected to be completed before the end of 1956.

The Communists have also been busily building airfields near the coast. There are about half a dozen within jet fighter range of Quemoy, and another half dozen within range of the Matsus. About half these fields are presently in use, but only to a limited extent. The Communists still keep the bulk of their formidable air strength based in the vicinity of Shanghai and Canton, but they could easily occupy the Fukien fields in force once they are supplied with fuel dumps, hangars, and the other essentials.

At the same time the Communists have been digging gun emplacements, of which the Nationalists estimate there are about

700 near Quemoy, 300 of them occupied. There are about a quarter of million ground troops in the coastal region opposite the offshore islands.

By any possible standard the Communist already dispose of vastly superior force, and there are military observers who believe that the offshore islands would be doing well to hold out a week if they were attacked in earnest. After the railway to Amoy is completed and the Communists have had time to bring in more troops and materiel, the disparity in strength will grow even more overwhelming. The Communists could almost certainly take the islands now, and could take them still more easily in the spring of 1957—which, if a prediction has to be made, looks like the most probable time for an all-out attack—if they were willing to risk the consequences. What might these consequences be?

One would probably be a sharp decline in whatever chance the Communists may actually have of admission to the United Nations, if the attack occurred before their admission. Although it is true that most member governments of the United Nations regard the offshore islands as logically and rightfully belonging to the mainland of China, they would be upset by a Communist attempt to solve this ticklish problem by force. Difficult as it is to know how much importance the Chinese Communists actually attach to their admission to the United Nations, it is clear that they seldom calculate comparative advantage and disadvantage in precisely the same way that a more rational government would.

Another possible consequence would be active American support for the Nationalists, possibly including bombing of Communist installations on the mainland. Would an attack on the offshore islands actually bring on this measure of "graduated deterrence"? The regime in Peking can hardly be blamed for not knowing the answer to this question. Neither, apparently, does the one in Washington.

The more one studies the problem posed by the offshore islands, the more desirable it appears for the Chinese Nationalists to evacuate them while they still can. An evacuation similar to that of the Tachens a year ago is still a military possibility today, but it may not be one much longer. In the not too distant future the Nationalist garrisons may be left with only the choice between surrender and annihilation, without the option of retreat. If these troops are lost it will be a serious blow to the defense of Formosa, where they are badly needed against an eventual Communist attack.

The difficulty, of course, is that the Nationalists refuse to evacuate the islands. The main reasons for this are probably the value which they attach to them as a symbol of their mythical future return to the mainland, and the feeling that their prestige in the world a large and among the overseas Chinese in particular is now so low that to yield an inch would be to lose face irretrievably. Parenthetically, it might be pointed out that Nationalist prestige probably would not stand so low if the Kuomintang did not insist on alienating its most honest and effective supporters. Early in 1954, the able and respected governor of Formosa, K. C. Wu, went into an exile from which he accused the Nationalists of turning Formosa into a police state. Within the past few months the honorable and capable General Sun Li-jen has been disgraced on trumped-up charges of harboring Communist agents, but in reality for taking a cool and realistic view of the chances of a Nationalist return to the mainland.

Given the mainland neurosis from which the Nationalists suffer, and their consequent determination not to abandon the offshore islands, it might be argued that the thing to do is to bring about a cease-fire in the Formosa Strait so that the whole question may be settled through negotiation rather than by force. But this approach, which has been tried by the administration, is completely unacceptable to both parties to the dispute.

There seems to be only one way in which we might save the Nationalists from the consequences of their own folly, as we failed to do on the mainland from 1945 to 1949. We could, and should, insist that they promptly evacuate all their military and civilian personnel from the offshore islands and bring them to Formosa. We should retain our presently existing ban on offensive action by the Nationalists against the mainland. If these demands are complied with, we should continue substantial military and economic aid to Formosa. If not, we should cut off all aid to the Nationalist garrisons on the offshore islands, reduce our aid to Formosa to the minimum necessary amount to prevent internal collapse (thereby releasing funds to other countries which have at least as great a need for them, such as India), and specifically reserve the right to reconsider our stand on the admission of Communist China to the United Nations. Such a step, which would, of course, provoke the most heart-rending wails on Formosa and on Capitol Hill, seems to be the only sensible one to take in a situation which has grown so complicated that it would be best to admit frustration and make a clean start in our policy toward the offshore islands.

Finally, what of the argument that we must make a sand somewhere in Asia, so as not to be nibbled to death? There is much to be said for this point of view, but it so happens that Korea was the logical place to make a stand. The Truman administration nearly lost sight of this fact when it allowed Soviet peace feelers and neutralist pressure to distract it from the task of crushing the Chinese forces in Korea in the spring of 1951. But what it had already done in Korea was being denounced by its opponents as Truman's War, and it was Mr. Eisenhower, not Mr. Truman, who promised and delivered a truce agreement which was in effect a defeat for the United States and the United Nations. The next choice for a place in which to make a stand would be Formosa, which is reasonably defensible. Indochina would be very difficult, and the offshore islands next to impossible. If we fight for them, we are likely to be drawn into direct participation, on an increasing scale, in the war between the Chinese Nationalists and the Communists. While this would suit Chiang Kai-shek very well, it would not serve the long-term interests of those who have first claim upon our Government's consideration, the people of the United States.

Let's Keep the Railroads Ready

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 23, 1956

Mr. LANGER. Mr. President, last evening it was my pleasure to hear one of the great speeches—perhaps the best that I have heard in the city of Washington during the last few years. It was delivered by W. P. Kennedy, president of Brotherhood of Railroad Trainmen, the first time I understand one of the trainmen was ever invited to speak at a railroad meeting and be the main speaker. It was an outstanding speech, entitled "Let's Keep the Railroads Ready." I inquired of the Printing Office what it would cost to have the address printed, and learned that the cost to have it printed would be $280. I ask unanimous consent that the address be printed, because I believe it will be found to be very worthy reading by every Member of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET'S KEEP THE RAILROADS READY

(An address by W. P. Kennedy, president, Brotherhood of Railroad Trainmen, delivered at the ninth annual dinner of the Federation for Railway Progress, March 22, 1956, Sheraton Park Hotel, Washington, D. C.)

Federation for Railway Progress—a good name and a most ambitious goal. It's about time for progress—real progress on and for the railroads of the Nation.

The Brotherhood of Railroad Trainmen, the organization which I have the honor to represent, consists of employees operating the trains over the road and in the yards of the railroads. It has always favored progress in services, in employment, and in working conditions.

Now in our 73d year, we are justly proud of our achievements thus far, and we look hopefully and confidently to the future.

I believe that this is the first time in railroad history when the head of a labor organization has been selected as the principal speaker at an affair such as this—a national gathering jointly patronized and sponsored by railroad companies, railroad employees, railroad suppliers, and railroad users.

I am deeply honored.

I understand that the heads of all railway labor organizations are either present or represented here tonight. I feel that I have been asked to speak merely as one who is representative of this entire group of outstanding men, and I am confident that what I have to say here exemplifies the attitude and the thinking of all of us within that group.

I think my selection as a speaker here indicates at least two important things—First, the changing nature of the problems with which we are faced. For the better part of three-quarters of a century, the problems on the railroads have been those largely within the industry. We have had men and management pitted against each other. While we still have those problems, and probably always will, in recent years there has been a growing importance—an increased urgency—in problems which bear directly upon the welfare and the future of the entire railroad industry, where management, employees, and suppliers, are all affected alike and in much the same way. And, second, I believe, at least I like to think, that my appearance here indicates confidence in both the ability and the responsibility of labor to function as a full partner in the solution of industrywide problems.

Trouble, apprehension, danger, are great forces toward unity and cohesion. Those who have common cause are inclined to forget their differences and unite for mutual benefit. It may be that the growing storm clouds on the railroad front are having some such effect. At least, we now have a new solidarity within the railroad industry which is without precedent. In labor, nearly all the brotherhoods have followed the example of the A. F. of L. and CIO, and have joined together in common congress—The Railway Labor Executives' Association. The larger railroad companies are now unanimous in

their participation in the Association of American Railroads and the regional organizations, and the smaller lines support the American Short Line Railroad Association. The railway suppliers have reorganized into the Railway Progress Institute. And all segments of the industry support this federation—our host here this evening. In addition to this physical evidence of unity, we find a new spirit of consultation and cooperation between these various segments. Increased effectiveness will surely follow.

We are indeed honored by the presence here this evening of so many men of government—leaders all in your respective fields. Members of Congress—Senators, Representatives, Members of the Interstate Commerce Commission, and of other important administrative agencies. Your presence here is heart-warming. Your sincere interest in the problems of transportation in general, and the railroads in particular, is both proper and commendable. We are flattered that you break bread with us and are willing to listen to us tell our story.

I sincerely hope that my remarks may be constructive and of some value to you in your day-to-day deliberations.

In my discourse, I will endeavor—first, to give you the highlights of some of the things that have happened and are happening in transportation; second, to outline the many different and often inconsistent roles played by Government in the field of transportation; and, third, to respectfully suggest some things which should be done to make your American railroads a stronger, more efficient, and better servant of the American people.

Many interesting and truly important things are going on in our business. Mechanical and physical changes in the means and methods of transportation are dramatic, and their economic effects are of far-reaching importance.

Recently, I accepted an invitation to testify before a joint congressional committee on automation in the transportation industry. It was, indeed, a timely subject. The national security and future welfare of our country depend largely upon our avility to fully and wisely utilize the scientific revelations.

Automation, using the scientific inventions, will often reduce manpower requirements or cause change in skills and location of workers. Such changes may affect the stability of employment, if we do not act quickly and prudently in formulating private and public policies to deal with the specific local problems as they arise.

Labor, management and government must all work together to make certain that automation will be a stabilizing, and not a disturbing, element in our economy.

Railroads, like others in industry, are taking advantage of the developments in electronics by applying them to good use in the handling of cars in freight classification yards of the larger terminals. There is reason to expect that type of automation to increase rapidly on the major railroads.

Within a few short years, we have watched the steam locomotives give way to the high-powered diesel electrics.

The drafting boards are now filled with the primary blue prints of future motive power which will be as big an improvement over the diesel-electric locomotive of today as the steam engine was over the old ox-cart of a few years ago. As soon as mobile reactors can be satisfactorily developed for use on wheels, and I'm sure within the lifetime of many of us, we will watch the trains go by, powered by atomic locomotives.

I am particularly pleased to note the action of thet major railroads in developing the movement of highway truck trailers in trains of specially equipped cars. This new piggy back service seems to have been successful from the start. It will not only increase railroad business, but will do much to relieve highway and street congestion. I am confident that progressive-minded railroad management will expand this new service as rapidly as possible.

Literally hundreds of other scientific developments have been applied upon the railroads—perhaps less spectacular than some others—but effective in bringing better, cheaper and safer service.

Of course, the railroads are not alone in this field. Airplanes, which were the marvel of World War II, are already obsolete and we are entering the age of jet propulsion with real possibility of vertical take-off and landing. The automotive industry is in the vanguard of this parade. We are watching a race between the autotive engineers and the highway engineers. Highways are laid, horsepower and speed go up, and highways become obsolete. Highways are relaid, and the same thing happens again. Uncontrolled horsepower, as a factor in highway obsolescence and traffic accidents, has been completely ignored. Trucks have also been mechanically improved. Increased horsepower, improved tires, diesel truck motors, use of lightweight metals, and further development of semitrailers and tandem-axle equipment have literally converted many trucks into rubber-tired boxcars engaged in service from ocean to ocean, and from border to border, cruising the highways at breath-taking speeds.

The diesel motor has also revolutionized transportation on the rivers and other inland waterways, moving tremendous tonnage at very low cost.

In 1 or 2 places even belt-conveyor companies, in no position to render a really public service, are demanding the right of eminent domain. Governor Chandler, of Kentucky, is to be commended for his recent veto of a bill which would have extended that public power for purely private gain.

We, in the labor unions of the railroad industry, welcome the application of science to our problems, for there is the hope of lifting burdensome and hazardous toil, and providing that level of good living which a full-employment economy should make possible.

We did not like the old link-and-pin method of holding cars together in trains of years ago. That method was dangerous, uncertain, and limited. We hailed the automatic coupler as a savior of life and limb and a great boon to better and more business. The automatic train brakes brought forth additional safety and more business. We have every reason to look forward to the future with increased automation for more safety and more business as we have further improvements in the handling of cars and the making up and breaking up of trains in the terminals, and freight trains that can be handled expeditiously between the terminals.

Of course, we will be sitting across from management at a conference table with our ideas as to what methods and procedures should be used to safeguard the workers from accidents, reduction of income, and possible loss of employment.

We are at the threshold of a new era in passenger-train services. Remarkable improvements have been made in sleeping cars and coaches of passenger trains. The traveler can now ride in a luxury unknown to kings a century ago.

The American version of the Talgo-type train, train X, and the aerotrains foreshadow the resurgence of railroad competition for passenger business.

The railroads serving the congested industrial areas have a wonderful opportunity to serve the public by coordinating commuter trains with the in-city transportation lines, thus eliminating a great deal of the rush-hour traffic congestion on the highways and city streets.

It was only a few years ago that efforts were made to abandon the South Station at Boston, along with the greater portion of the Old Colonly Railroads. The management was prevailed upon to keep both the station and the Old Colony in operation. Commuter parking places were provided along the tracks near suburban station stops and the commuters patronized the modernized services by the thousands. What was done in that area can be duplicated in other similar areas with the same or even better results.

There is every reason to believe that the new type trains can be used to good advantage in service between the larger cities, such as between Chicago and Detroit, Kansas City, St. Louis, Louisville, and the Twin Cities.

The drive for a larger share of the passenger business will be aided tremendously by the traffic congestion and hazards on the highways and streets. The public is due for a rude awakening from the current highway program. The people have been sold on the program as a means of reducing traffic congestion, yet the money is being spent, not in the towns and metropolitan areas where congestion occurs, but out on the intercity turnpikes where there is no real congestion. Furthermore, Congress does not seem to have the fortitude to keep the truck in its proper place. Operating over the new turnpikes at bargain rates with little real control of size, trucks will get bigger and bigger, and there will be more and more of them. The ordinary motorist will again be driven from the highways, while fast, safe, comfortable, and convenient passenger-train service comes back into its own.

There will be some who will hold high that inflated passenger-deficit figure, and cry out that it can't be done. I say it can be done, and at a profit. Mr. E. B. Padrick, chairman of the Trans-Continental & Western Passenger Associations, talked sense in his address before the Traffic Club of Minneapolis, when he said, "I do not consider passenger traffic to be a deficit operation." I am of the same opinion. No railroad man will contend that if all of the passenger trains had been discontinued, the railroads last year would have had $669 million more in profit. It might be well for the Interstate Commerce Commission to revise its methods of allocating expenses as between freight and passenger operations.

Scientific advancement has helped to bring about another development which needs attention. We now have several distressed areas where there is an excess of unemployment. These areas offer an example of what can happen when we fail to act quickly and wisely in localities where workers are unemployed for various reasons.

At the same time, there are certain other areas where the railroads are obliged to work short-handed, or to hire and train new employees. Sometimes these opposite conditions occur on the same railroad. It seems logical that the unemployed, experienced worker, already in the industry, should be utilized during his employable years before hiring and training new men. This is only one of the many instances where the establishment of reasonable policies to protect workers displaced by change or by improved production methods can be of untold value in keeping employment stable. In such situations, it may be found necessary to transfer workers from one State to another, as well as from 1 community to another.

We have found instances where experienced, displaced workers were available and were needed on other railroads, but were not employed due to unreasonably low age limits.

We are recommending that such age limits be waived or eliminated entirely in instances where experienced displaced workers are available.

We are convinced that the industry will profit by making use of such workers.

I said there were economic effects flowing from these scientific developments which are of far-reaching importance. I pointed out the new solidarity within the railroad industry—a unity which results from common concern for the very survival of the railroads as instruments of private competitive enterprise.

Remember, the United States is the last Nation on the face of the earth where all railway transportation is the subject of private enterprise.

Why should there be such concern about the railroads? Why should an industry—once held by the courts and Congress to be such a monopoly as to warrant Government control of rates and service—an industry which still is the backbone of our transportation system—an industry absolutely essential to the national defense and the national economy—why should such an industry be talking now about survival? What has happened to produce such an effect as to drive these several factions together for their common good?

The opening sentence of a recent report to the President says (and I quote) "Within the short span of one generation, this country has witnessed a transportation revolution."

A look at the record provides ample proof of that statement, and we may say in reply "So what!" a mere revolution in transportation would not, in and of itself, be cause for alarm. We are accustomed to revolutionary change.

But in transportation, the changes which have occurred—physical, scientific, and economic—have not been accompanied by necessary and proper changes in the relationship of Government to transportation. Changes in regulations, in controls, in promotion, and in subsidies, which should have been made to keep pace with these scientific and economic developments have not been made. The influence of Government has been allowed, largely by default, to apply in such a way as to create an imbalance between the several modes of transportation—an imbalance which is unhealthy and uneconomic. The regulated monopoly of 50 years ago, together with all its economic advantages, has vanished. The traffic density—the volume—of public carriers has been diluted—divided between many carriers which are supported and encouraged by Government. While the total volume of business has multiplied, this thinning out action has operated in such a way as to deprive the public of many advantages which would otherwise be available.

This shifting process between different types of carriers has gone further than most of us realize. For example, in highway transportation, when the revenues of all intercity motor carriers are taken into account—that is, those who are exempt from ICC control as well as the regulated truckers—their aggregate income is estimated at $14,651,000,000. This compares with $8,538,000,000 total freight revenue of all the railroads.

The railroads have been unable, because of the law and the interpretations of the ICC, to adjust their rate structure to the realities of competition. In 1955, truck revenue per ton-mile averaged more than four times the average ton-mile revenue of the railroads. The total amount the shippers paid the trucks was half again as much as they paid the railroads. Yet the railroads handled 2½ times the ton-miles of traffic. Largely because of these artificial rate conditions, the high-cost carrier—the truck—is gaining, and the low-cost carrier—the railroad—is still slipping.

Of course, we have fine transportation in America, perhaps better than in any other country. We, likewise, have many other things superior to other countries. But that is not the point. If sound basic principles are adhered to by Government in the whole broad field of transportation, if the natural laws of economics are given free play without bias or favoritism, the American people will receive vastly better transportation at a fraction of the cost they are now obliged to pay.

What is the role of Government in the field of transportation? We find substantial and often controlling influence by Government acting in at least four separate capacities. We have the United States first as defender of the Nation directly dependent upon transportation as a first line of defense; second, as a buyer of transportation, the world's largest shipper of freight; third, as a provider of transportation facilities, giving away or selling their use in the channels of commerce; and finally, as a regulator of transportation—the referee between shippers and carriers and between various classes and kinds of carriers. In these several capacities, the action of Government is unrelated, uncoordinated, and often brutally inconsistent.

Great buckets of bunk are being peddled about the importance of highways and the obsolescence of railroads in the national defense. This is being done as a means of channeling highway money into turnpikes where it is not needed, instead of into cities and towns and farm roads where it is needed. I wish I had time to give you all of the answers. We should have learned a lesson from Hitler. He developed his autobahn and neglected his railroads—and lost a war. The North Koreans rebuilt bombed-out railroads overnight, but gave up trying emergency rebuilding of highways. We talk about building highways to accommodate tanks. A set of tank treads costs about $4,000 and is good for about 1,000 miles. That makes $4 per mile for treads alone. A tank that wears out its treads in getting to a battle is of no value in a battle. Tanks must be hauled to the theater of action by railroad. Once in action, tanks do not need roads of any kind. The railroads are vital to our national defense in either an onshore or offshore war.

There can be no doubt whatsoever about that statement.

Yet, the Federal Government goes right on in other fields and conducts activities which impair, if they do not imperil, the ability of the railroads to perform that task. It's nobody's job to look out for the interest of the national defense in railroad capacity and readiness.

Then we have government as a shipper—a user of transportation facilities. The Government of the United States is today and has been since before World War II the biggest shipper in America. And what are its policies as a shipper? For the most part, they are consistently inconsistent. It uses its economic power to apply pressure in such a way as to shame any commercial shipper. In transportation an industry where rates are supposed to be stable and where all shippers are supposed to be treated alike, Government adheres strictly to an auction-block traffic policy. When service is remotely comparable, it stimulates rate cutting and the lowest bidder, by whatever means of transport, gets the business. This philosophy is applied even in the movement of dangerous explosives. Thousands of tons of these dangerous commodities, because of a few cents' difference in rates, are shipped by truck over the public highways and streets of the Nation. TNT on Main Street is an everyday occurrence. Government plays one form of transportation against another in cutthroat practices despite the noble mandate to the Interstate Commerce Commission to preserve sound economic conditions between and among the several forms of transportation. This is done to save money for the Government. This is so as to the bulk of its freight shipments, but not so when it comes to mail.

Literally hundreds of passenger trains have been pulled off and their equipment junked and thus lost forever to the defense plant because the mail has been taken away and awarded to trucks. Trucks are obliged to bid against each other as contract carriers, and I am told a very large number of successful bidders have gone broke in their bargain services to the Government. But worse than that is the policy of the Post Office Department in the handling of airmail. Mail which it ships by rail is handled at a profit to the Government, and mail by air at a tremendous loss. Yet, despite this loss, the Post Office Department is engaging in an experiment—an experiment which it has been carrying on for nearly 2 years—shipping 3-cent mail between important terminals by air. The courts have held that, while there is no statutory sanction, these shipments will not be prevented as an experiment. Mind you, this action is absolutely illegal, except as an experiment. I believe Senator JOHNSTON is justified in his proposal to investigate this unusual course of action. In this respect, Congress should not abdicate to the Postmaster General.

And then we have government as a provider of transportation, both at the national, State, and local levels. In this activity, its spending is tremendous.

First, we have waterways, both inland and intercoastal. Literally millions have been poured into these transport facilities over the years to make them available for use by private business for private profit or gain, with no serious thought to recovering for all of the people the money thus spent for the use and profit of some of the people. By what legerdemain is money spent for waterways different from money spent on any other facility? Certainly the use of these waterways is given away or sold by Government at less than cost.

Then we have airports and airway facilities. Expenditures in this field are supposed to be justified as a means of promoting a new and useful industry. But how long is the promotion to continue? In 1954, the passenger revenues of only the scheduled domestic airlines far exceeded the total passenger revenues of all the railroads, $906 million versus $767 million. Certainly these carriers have now come of age and should now be relied upon to stand on their own feet. Yet, States and municipalities join with the Federal Government in racing to extend the use of airports and navigation services provided by the taxpayers (including the railroads) with no serious effort to obtain adequate or fair return or rental.

And last, but certainly not least, we have the State and local units of government now joined by the Federal Government in furnishing highway facilities provided at tremendous cost. We have a vague idea that highways should be paid for by those who benefit from them, but general understanding as to who should pay how much is certainly lacking, with very little real effort to find the answer. When the House Ways and Means Committee only a few days ago considered the Boggs bill, it knew it had a hore and rabbit stem when both automobiles and big trucks are taxed on gasoline and rubber at identical rates per gallon and per pound. It admitted the fairness of a differential between big trucks and automobiles, but took no effective steps to find out what it should be. In its haste to pass a bill so billions may be spent, it inserted only a token charge on trucks weighing more than 13 tons.

For the most part, no distinction is made between ordinary use and commercial use of the highways. You would not think of charging a man a fee for walking into the post office to mail a letter or buy a stamp.

But if Joe Doaks wanted to set up a cigar stand in the post office lobby to make himself some money, you would expect Joe to pay a little rent.

It is the same with public highways. Certainly those who use public highways as a place of business—those who sell highway use for profit, should be obliged to pay a little extra for that privilege.

We like to think of America as a land of private enterprise. I wonder who is kidding who. There could be no such thing as an automotive industry without our vast system of highways provided by the public. If the Government is to engage as extensively as it does in the business of providing and selling the use of facilities for highway transportation—and that in competition with true private enterprise—it certainly should not sell that use at less than cost.

So you see we have Government by far the biggest factor in the provision of transportation facilities, highways, waterways, and airways. Invariably their use is sold at less than cost. What a tribute it is to the railroads that they have been able to exist in competition with these overwhelming subsidies.

These subsidies are aggravated by the States and local units of goverment. Only the railroads and pipelines, because they are owners instead of tenants, are obliged to pay taxes upon the right-of-way they use. No other form of transportation makes any material tax contribution to the general expense of State and local government and in many, many school districts across the United States, the railroads are the principal source of tax support.

And then we have Government as the regulator of transportation—that is, as the regulator of part of the transportation carried on. Our pattern of regulation has been allowed to grow like Topsy. The Interstate Commerce Commission has been handed an almost impossible task. It has some power over some of the transportation agencies, with no power over others which are often in position to exert controlling influence over rates and service. The Civil Aeronautics Board has power over some but not all air carriers who affect the business and revenue of rail and highway carriers of passengers and mail. The Federal Power Commission has control over gas pipelines, which affect the business of coal carriers by rail and barge. The ICC has power over all railroads, but only about 35 percent of the business carried on by truck, and only a small fraction of the business on inland waterways.

With literally thousands of carriers under its wing, it has woefully inadequate appropriations and a completely inadequate staff. A pitifully small number of men makes no more than a gesture at supervising the safety of operations of the carriers throughout the country. The Attorney General is charged with primary responsibility for defending the Commission in court. That duty has been assigned—of all places—to the antitrust division of that office. The basic philosophy of the Antitrust Division is often opposite to that of the ICC. On many occasions when the Commisison is sued in court, the Attorney General promptly confesses error by the Commisison and the Commission must then, by its own attorneys, intervene and attempt to defend the case.

When agricultural commodities are moved by rail, they are subject to ICC regulation in every respect. When the same commodities are moved by truck, they are completely exempt.

Endless examples could be cited to show the fragmentary character of the power to regulate which is exercised by Government. Its power to regulate is actually exercised effectively over only one agency—the railroads. Of course, the regulatory system should be overhauled and made complete and effective, or it should be repealed.

In view of these facts, what should Government do?

In the solution of these problems, at the very threshold is the proper approach. A fundamental mistake of Government has been its failure to consider and take into account all of transportation as an entity—instead of separately considering individual segments of the transportation system. With rare exceptions, the various means of transportation are treated individually with eyes tight shut to the inevitable interaction between the various forms of transportation. In one sense, all carriers are competitive, and in another sense they complement each other. No important action can be taken as to one means of transportation without producing a reaction within, or upon, another.

For example, Congress is about to appropriate as much as all the money in circulation—more money than was used to fight all of World War I—to build a vast system of interstate highways—highways to be primarily and deliberately designed for the transcontinental transportation of freight by truck. Without going into the merits or demerits of that action, I respectfully call attention to the fact, and to me it is an appalling fact, that this action is being taken without one moment's consideration being given by any responsible agency of Government to the effect of those highways, and their use as freightways, upon the American railroads and upon the ability of those railroads to serve the needs of national defense and the general economy. We have this and other action by Congress and its agencies promoting and providing more and more transportation, while at the same moment we have the ICC working under orders of Congress to restrict entrance into the business of public transportation in order to prevent a surplus. There are many examples which could be cited of the blindness with which government so frequently approaches problems in transportation.

So long as Government refuses to coordinate the several phases of its own interest in transportation as well as the interests of the American people—so long as the left hand knows not what the right hand does—there will be confusion, inconsistency, and economic waste, inexcusable waste, in the broad field of transportation.

So the first and most fundamental thing I have to suggest is that every action by Government, in the field of transportation, to restrain, promote, or regulate any segment of the transportation industry, that every action as a provider of additional transportation facilities, be fully and intelligently weighed to determine its consistency with our national transportation policy and its real effect upon all of the transportation system.

The dictates of commonsense, the frank recognition of cause and effect in transportation, require compliance with the substance of this suggestion. No elaborate or profound action of Congress is necessary to put it into effect. A brief declaration of legislative and administrative policy, with the establishment of simple procedures, would be enough.

I mentioned the impending highway program. The immediate expenditures would be more than the current value of all the railroads and railroad property in the United States. The additional expenditures by States and local government, contemplated in this program, would bring the total to about four times the amount that has been spent on all of the railroads in all the history of this country.

I think you will admit that the economic wisdom of making those fabulous expenditures is at least debatable, although there seems to have been very little debate about it. These freightways will be operated in direct competition with the privately owned and operated railroads. The Government is going into business on a scale never heretofore contemplated—the business of providing and selling the use of transportation facilities. Motor carriers will buy the use of these freightways and will resell that use to their shippers. If we are to avoid nationalizing our transportation system, the Federal Government must assume primary responsibility to see to it that the privilege of road use is not sold by any level of government at less than cost. This is particularly true as to those who use those highways for commercial purposes. To sell highway use for less than cost is to furnish subsidy to those who get the bargain—subsidy by government aiding motor carriers in their competition with privately operated railroads. And the subsidy is just as real if it results from charging private automobiles a part of the cost that should be paid by trucks.

From now on, the Federal Government must maintain a watchful eye on both the Federal revenues for highway use and the weight of Federal charges as they fall on individual users. In this connection, a deplorable situation has come to light. There is a surprising lack of dependable information as to how costs should be allocated between the different classes of users. A road test to end all road tests is to be held in Illinois. In this elaborate test, there is not even an attempt to learn the cost of building and maintaining a highway for automobiles only. That information is necessary as a standard of comparison—a starting point for cost assignment. We're spending and collecting billions before we know the facts. With such a stake in the picture, the Federal Government can well afford to, and should, spend what it takes to learn the truth about highway cost responsibility.

Furthermore, Congress must exercise eternal vigilance to keep these highways from being destroyed. In 1954 one of the principal owners of a truck line ran for, and was elected, governor of one of our sparsely populated Western States. He promptly jammed through the legislature a law permitting truck size and weight limitations among the highest in the land, and this in a State where the financial ability to build highways was at the opposite end of the scale. In State after State, after highways and bridges are built to given standards, weight limits have been raised to permit operation of trucks far in excess of highway capacity. Without the moral support of Congress, State legislators will be unable to stand up against political pressure to make trucks bigger and bigger. Profit is the motive, and highway destruction is the result.

I have a suggestion about freight rates that I believe to be practical and timely. I make it purely on my own responsibility. I am not at all certain that my colleagues agree with me or with the propriety of making this suggestion at this time. Much has been said about the so-called Cabinet Committee Report on Transport Policy and Organization and the pending bills to put it into effect. Railway labor must oppose some and will support others of its recommendations. The report has brought to light the action of the ICC and its interpretations of the Interstate Commerce Act so as to deny the full, free play of competition between the various modes of transportation. Among other things—many other things—the report urges action by Congress to make it clear that whenever a carrier by one mode proposes reduced rates which do not discriminate and which yield revenue above cost, those rates may not be rejected merely because they adversely affect the rates or earnings of a carrier by another mode.

Now there's an idea that I can buy. And one the great American public can buy. In fact, it's an idea that everyone can and will support—everyone, that is, except those who are afraid of competition.

But there's something else that seems utterly clear. This is the 22d day of March. It won't be long before adjournment. As practical men, we know if hearings are to be held upon the whole report and all of its many recommendations, there is grave doubt as to whether there is yet time for any constructive action to get through both Houses of Congress before adjournment.

There is no reason that I can understand why this whole report must be handled in one package. It makes sense to me for the committees to bite off no more than they can chew. I hope the committees will give thought to a short bill dealing only with these umbrella rates—to quick and full hearings on that one measure, and action on it in both Houses this session. Forgetting the selfish interests of the carriers that might be affected on either side of this action, it is high time that the shippers and consumers be given the consideration they deserve. If a railroad or a truckline or a barge line can reduce rates and get more traffic without discriminating and can make money in the process, it should be allowed to do so. This is an election year. I think action on such a bill would be good politics for either party.

As to the movement of these dangerous explosives over public highways, Congress should certainly investigate the facts and enact whatever requirements may be necessary to stop that practice, except in time of war, and to provide adequate safeguards and insurance to protect the public from the hazards connected with the movement of any and all dangerous commodities. Under the rules of the ICC, insurance protection for the public required of trucks hauling groceries and of those hauling dynamite or gasoline is the same. My organization on two separate occasions has joined with others in petitioning the Commission for adequate insurance protection from these dangerous truckloads, but to no avail.

In summary, I respectfully suggest that to bring real and lasting progress to the railroad industry and to transportation as an enterprise, in furtherance of the welfare of all the people, these things should be done:

1. Congress should stop pouring out additional millions of public funds for the provision of more facilities for transportation until and unless it finds, through competent authority, that such facilities are truly necessary and consistent with the real public interest.

2. Congress should recognize that the United States and the several States are heavily engaged in the business of transportation through the provision of facilities for transportation and the gift or sale of their use. When such facilities are used in the channels of commerce, Congress and the States should stop selling that use at less than cost.

3. In view of the gruesome toll of injury and death on the public highways and the frequency of fatal collisions at railway-highway crossings, Congress should recognize its responsibility for action to prevent mixing into the traffic stream, truckloads of dangerous explosives and other inherently dangerous commodities. Above all, it should, by appropriate action, prevent its own agency, the Defense Department, from exposing the public to such hazards as a shipper of such commodities.

4. As a gesture of fairness to the millions of hard-earned dollars invested in the railroads, to the million railroad employees, and their wives and families, and the millions of men and women dependent upon railroad service, Congress should take prompt action to untie the hands of the railroads in their competitive struggle for survival. They should be allowed to defend themselves. The law should be amended at this session of Congress so that any carrier which can reduce its rates, without discrimination, and yet make money in the process, should have the full power to do so.

5. We should never forget the lesson learned from the transportation muddle of World War I, with the Government in control of the railroads, and the contrast of that dismal failure with the thrilling performance and magnificent record of these same railroads, and of the men and women who made that record possible, in World War II under private control.

We know the tragedy and the heartbreak of those sickening words, "Too little, too late."

We must not close our eyes to the very real possibility of world war III, and the terrible implications of such a conflict. The day and the hour of its arrival, if it arrives, only God in his wisdom can foretell.

In this age of electronic control and atomic power, the railroads of this country, more than ever before, are vital to—an indispensible part of—our nationwide mechanism for war. A few days—a few hours of time—precious time—may alter the course of destiny.

We must keep the railroads ready.

In time of peace, we must be prepared for war.

Let it never be said that the Members of Congress have courted national suicide, through inaction, bias or partisanship, in weakening or dissipating the strength, the vitality, or the readiness of the American railroads.

Union Pension Funds and Housing

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. MULTER. Mr. Speaker, the New York Times for March 15, 1956, contains the following interesting article concerning the suggestion by the New York State Division of Housing on the investment of union pension funds in middle-income rental and cooperative housing:

PLAN SETS BILLION IN UNION HOUSING—AGENCY TO INVEST A POOLING OF PENSION FUNDS PROPOSED FOR MIDDLE-INCOME HOMES—HIGHER YIELD INDICATED—LEGISLATION TO USE MONEY FOR COOPERATIVE PROJECTS URGED IN REPORT TO STATE

(By Charles Grutzner)

The creation of a quasi-public financing institution, through which more than a billion dollars of union pension funds might be invested in middle-income rental and cooperative housing, was proposed yesterday by State Housing Commissioner Joseph P. McMurray.

His suggestion was advanced in a report to Governor Harriman on a year's study of the State Division of Housing on the incentives and drawbacks of such investment of part of the vast funds held in trust for pension payments.

Commissioner McMurray said legislation could be adopted to create the lending agency, whose bonds would be bought by union pension funds, and to make investment in housing easier and more attractive to pension funds trustees.

The plan would work something like this:

The corporation, which might take any of several forms, would be authorized by special legislation to invest in housing development mortgages up to 90 percent of the project cost. The corporation would not be a State agency nor would it be subsidized by the State. It would be controlled, under limited States supervision, by the pension funds that would buy its bonds.

OBJECTIVES IN UNITED INVESTING

There are several advantages of such a pooling of pension fund investments over individual ventures by union pension funds into specific housing projects, according to Commissioner McMurray.

The housing investment would become a full-time work of experts, leaving union officials free to carry on their primary labor responsibilities. Special legislation would remove the limitation under which pension funds may not now be invested in any mortgage exceeding two-thirds the value of the project. Ninety-percent mortgages would make possible lower development costs, with resultant lower rents and higher profits to the pension funds on their investment," Mr. McMurray said.

Mr. McMurray believes this would produce more private construction of housing to rent at $18 to $22 a room and also more cooperatives at comparable costs.

The new proposals are a followup on Mr. McMurray's report of last January on middle-income housing problems, in which he told the Governor that the greatest unmet need was apartments for the middle third of the State's families, having incomes from about $3,750 to $5,900 and able to afford monthly rents or carrying charges of $63 to $99.

In his new report, Mr. McMurray said there was at least $25 billion in pension fund reserves, exclusive of Government pension funds, and that the reserves were increasing at the rate of $2,500,000,000 annually. About $10 billion of these reserves are held by insurance companies and about $15 billion are in funds administered by unions or corporations.

The report concerns itself only with the $15 billion in self-administered or trusteed plans. Mr. McMurray estimated that an investment of a tenth to a fifth of these funds in housing mortgage bonds would result in a tremendous construction program.

GREATER USE IN THIS STATE

Although such funds could be invested in similar housing ventures in several parts of the country, the largest programs would be expected in New York State.

Types of investment held by pension funds now differ from fund to fund. Mr. McMurray noted that at the end of 1954 the Securities and Exchange Commission reported that self-administered funds on the average invested 54 percent of their assets in corporate bonds, 18 percent in Government bonds, and 18 percent in common stocks. Of the rest, about 4 percent was in preferred stock, 2 percent in cash, and 4 percent in other assets, including mortgages.

A study of 1,024 self-administered pension funds, published recently by the State Banking Department, showed an average return of 3.18 percent on all their investments. Mr. McMurray believes that mortgage investments, through a quasi-public corporation, can bring a better yield and at the same time provide needed housing.

Except for a limited amount of investment by trustees in conventional mortgages, there has been very little pension-fund financing of housing.

The only examples in this State have been Electchester, a 2,225-unit development in Queens built in 1953–55 by local 3 of the International Brotherhood of Electrical Workers in conjunction with electrical contractors and Corlears Hook, in lower Manhattan, with 1,668 apartments, opened last year under sponsorship of the International Ladies Garment Workers Union. Both are cooperatives and are not limited to union members.

Moscow and Vietnam

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. FEIGHAN. Mr. Speaker, a distinguished American, Lt. Gen. John W. O'Daniel, recently retired from active service. It has just come to my attention that General O'Daniel has assumed the post of chairman of the American Friends of Vietnam. Those who know General O'Daniel and his great work in preserving the spark of freedom and national independence in Vietnam, can well understand his unselfish desire, even in retirement, to aid the cause to which he gave so much in the past. The Washington Post and Times Herald, in today's issue, carried a most significant letter on the subject of Moscow and Vietnam, written by General O'Daniel. I sincerely hope that President Eisenhower and our policymakers will pay heed to the warnings raised by General O'Daniel in his letter. Under unanimous consent, I include it with my remarks:

MOSCOW AND VIETNAM

Soviet hypocrisy as the champion of anti-imperialism is clearly evidenced by Moscow's latest proposal for a new Geneva conference on Vietnam. In effect, the Moscow-Peiping axis hopes, through an all-Vietnamese election, to destroy the independent state of the Republic of Vietnam, and transfer its inhabitants to Communist bondage. The demand for a new Geneva conference can only be viewed as another tactic in the overall Communist design for imperialist expansion.

Led by President Ngo Dinh Diem, the Republic of Vietnam comprises all of Vietnam south of the 17th parallel. The Republic represents more than 11 million persons free from tyranny, including some 800,000 refugees who fled from the Communist armies in the north. On Sunday, March 4, almost half of these people went to the polls to freely elect a national assembly, the first such election in Vietnam's history.

More than 12 million Vietnamese live under Communist tyrany in the north. We may infer from past Communist "elections" that the northern regime can deliver the entire vote above the 17th parallel in support of any Communist slate, should all-Vietnamese elections take place in the near future. The net result of all-Vietnamese elections, therefore, would be to turn over to the Communists 11 million free people in the south without firing a shot. Those who support such elections under present conditions, in effect, must be aware of the consequences.

President Diem has rejected all-Vietnamese elections as long as Communists control the 12 million people and their votes in the north. Since the government of south Vietnam was not a signatory to any Geneva agreement and, in fact, protested against it, it is assuredly President Diem's legal and moral right to reject any proposition designed to abrogate his nation's independence. Nor is the United States, which signed nothing at Geneva, legally bound to uphold the principle of all-Vietnamese elections.

In reality, no agreement—aside from a truce—was signed at Geneva in July 1954. The participants did voice a pious hope that representatives of North and South Vietnam would agree to confer on national elections. The Geneva participants realized, however, that they had no right to bind a nonparticipant (i. e., South Vietnam) to any agreement. The use of the term "Geneva agreement" is therefore a journalistic fiction and not a legal fact in connection with Vietnamese elections.

Apparently the Soviet Union, the Chinese Communists, and the North Vietnamese—in their recent statements—have understood the nonlegal nature of Geneva by calling for a new Geneva conference. Our friends in France, Great Britain, and India seem to have fallen for this subterfuge by their willingness to appease communism's imperialist appetite with the vital morsel of independent South Vietnam.

It is important for the United States Government to reject Moscow's demand for a new Geneva conference and to affirm its support for the Republic of Vietnam President Diem, and the new and freely elected national assembly.

JOHN W. O'DANIEL,
Lieutenant General, United States Army (Retired), Chairman, American Friends of Vietnam.

NEW YORK.

They Intend to Destroy Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. MULTER. Mr. Speaker, permit me to divert the attention of our colleagues to Mr. George E. Sokolsky's column on the State of Israel, which appeared in the New York Journal-American for March 8, 1956. It is as follows:

THEY INTEND TO DESTROY ISRAEL

(By George E. Sokolsky)

What is called the Middle East problem is, in fact, the question of the continued existence of the State of Israel. Here is a new state, recognized as a member of the United Nations and its existence guaranteed by all the solemn treaties and agreements which arise out of the Charter of the United Nations. Now Egypt and Saudi Arabia intend to destroy, liquidate, and abolish the State of Israel. In this effort, they are supported materially by Soviet Russia and the United States, the former supplying arms to Egypt, the latter to Saudi Arabia.

In due course, some kind of war is bound to break out on the boundaries of Israel. It cannot be foretold who will start that war, what little circumstance will send men to kill each other over a boundary. Naturally when a new state comes into existence, it is carved out of territory which once belonged to some other people. What we now call Israel was up to the end of World War I part of Turkey; then it became a British mandatory under the old League of Nations and now is an independent state. It never was Egyptian or Saudi Arabian territory. As a matter of fact, Egypt was a semi-colony of Great Britain and Saudi Arabia was not a country until after World War I when the Turkish Empire was divided up.

So, when it comes to claims, the legality of the position is that the United Nations turned a British mandated area over to the Jews who had settled in Palestine and formed there the State of Israel.

COMPLICATING FACTORS

This situation is complicated by religious, racial, and social differences and by the enormous oil reserves of Saudi Arabia. The American State Department faces the dilemma that while it has guaranteed the existence of Israel, it does not propose to lose the oil of Arab countries nor the air bases which it has established in such countries.

Meanwhile, the Arabs, under the leadership of Nasser of Egypt, have maneuvered themselves into the enviable position of being able to blackmail both the United States and Soviet Russia. Nasser seems to be more clever than Nehru, who tried the same game and manipulated himself into a Russian slave.

The Jews, on the other hand, have waited since 70 A. D. to get back to Jerusalem. Whether one agrees with the Zionist program or not, it is impossible to ignore historic facts. In the Seder service each Passover for this long period, the phrase was repeated year after year, "And next year in Jerusalem." In the Orthodox Jewish prayer book, the return to Zion, to Jerusalem, is a constant prayer. And Orthodox Jews, wherever they may be, always face toward Jerusalem when they pray as a Mohammedan faces toward Mecca. Those who hope that they can overcome this tradition of Zion by diplomacy are whistling in the wind. Every man, woman, and child in Israel will have to be killed before that country is abolished. They will fight for that soil as no people ever fought before. If Israel is to be liquidated, it must be by war.

STATE DEPARTMENT LACKS PROGRAM

The question then arises whether a state recognized by the United Nations can be pressed out of existence by neighbors who dislike it or by great powers that find its existence inconvenient. Furthermore, the question arises whether the United Nations is correct in tolerating the blockading of a country by other member states.

The answer, of course, is that the United Nations cannot function in a situation which involves the great powers; that it is virtually helpless in any situation in which Soviet Russia chooses to take a side. Therefore, it is not to be expected that the United Nations will be able to prevent war between Israel and Egypt and Saudi Arabia. And now that Glubb Pasha has been kicked out of Jordan, that little country will become bellicose.

Our own State Department has no program. It pursues what might be called a flexible policy; that is, meeting each situation as though it were an isolated problem, which no situation ever is. The reason a little fellow like Nasser can be so fresh is that he gets away with it; anybody can twit the United States or Great Britain because they take the twitting. And whereas it is all done in the sacred cause of peace, there is no peace.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Let's Fortify Freedom With Faith

EXTENSION OF REMARKS
OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, March 26, 1956

Mr. SMATHERS. Mr. President, I ask unanimous consent that there may be inserted in the Appendix of the RECORD a sermon delivered by Rev. Dr. Stephen T. Harvin, pastor of the South Jacksonville Presbyterian Church, entitled "Let's Fortify Freedom With Faith."

Dr. Harvin recently received an award from the Freedom Foundation at Valley Forge, Pa., for this very excellent sermon, and I highly recommend its reading to the Members of Congress.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

LET'S FORTIFY FREEDOM WITH FAITH

(Sermon by Dr. Stephen T. Harvin, South Jacksonville Presbyterian Church, Jacksonville, Fla.)

Let's fortify freedom with faith. This subject was brought to my attention by a group of the Veterans of Foreign Wars, some of whom we have the pleasure of having with us in our church. This week we pause to pay tribute to the noble dead who made America possible. Let's fortify freedom with faith.

The price of freedom is eternal vigilance, and the man who forgets to be on his guard finds that sooner or later he himself will lose this wonderful thing we call freedom. In America we love it; we boast of it. It is great, but believe me, we can lose it; and once it is lost, it is hard to regain. Let's fortify freedom, for certainly freedom needs to be fortified. Let us not forget it can be lost.

There are enemies beyond the bounds of America and there are plenty of them. In our day and generation we have the menace of communism as it seems to grow stronger and stronger every year. Why? I shall tell you the reason why. Our friend, Dr. Frank Price, last year's moderator of the Presbyterian Church, United States, who also was the last man of our church to be run out of China, said that a young Chinese spoke to him, and said, "Christianity can give the world a better social order than Marxianism ever can; but you see, We Marxians believe in ours. We give our time. We live on a moderate income and give the rest for propagation purposes of Marxianism. Until you Christians believe Christianity enough to live it, to sacrifice, to work for it, we Marxians are in the lead." To fortify freedom with faith calls for every American to stand true, to live for the gospel of Christ, our Lord.

We can lose it in another generation because we are living in a day and generation when great giants are awakening all over the world. Did you read Collier's magazine last week? Chester Bowles tells something about Africa, that great giant that is awakening fast. In the next 25 years Africa shall speak and every man that lives will hear her voice. Will Africa speak with us or against us? Here is the great danger of the next two decades. Mr. Bowles makes this one bright picture, however; thank God the Christian missionary has been to Africa and the leaders now in the revolution in Africa, who are helping Africa awake out of its darkness, are native Christians. That is one great hope.

The other hope, he said, is that in America we have over 16 million descendants of Africa, and as they know and taste of justice, peace, and love in America and know the Christian cause, we are that much surer of ourselves. Let's fortify freedom with faith. Believe me, freedom needs fortifying.

Certainly in our country we must fortify freedom for we know what it means to be free to worship, free to work, free from want, free from fear. But what is freedom? We talk about fortifying it; we talk about possessing it in America, but what is freedom after all? It is not the ability, the right, and the liberty to do what you want, when you want, and how you want. This is anarchy, and once it comes, then everybody loses his freedom. But what is freedom? Freedom, my friends, is simply taking the Golden Rule and putting it into practice, doing unto others as you would have them do unto you. Freedom is respecting the rights of the other man. You, too, possess your right to live for your good, for the glory of God, and the good other other people. These three: you, the eternal God, and your fellow man, are all considered in this great work of freedom, and once any one of the three is forgotten, freedom is lost.

Let me show you Christian freedom. It is the greatest in all the world. First there is a freedom from that terrible thing called the guilt of sin. Men and women who have sinned and still taste of the horror of that guilt, who cannot get it out of their minds or hearts, day or night, wherever they are, are haunted as if by a ghost and can never be free, regardless of whether they live in America or not. The way to find freedom from the guilt of our sin is found in the wonderful and glorious truth of Jesus Christ, our Lord. Through a faith in Him sins can be forgiven, the guilt is gone, and man knows the wonder and the glory of peace.

There is another peace and a great freedom that is offered to us in the Christian Gospel, which is freedom not only from the guilt of sin, but from the power of sin. Look at it. If you don't mind, stop and think of the millions of alcoholics in America who are not free. They are slaves. Think of the millions of people in America whose hearts are led by hatred, bitterness, and jealousy. They are not free; they are slaves, regardless of where they live. You see, when you sin, as the Scriptures tell us, you become a servant of sin. Sin has dominion over you and you are not free.

Yes, the Christian Gospel cuts the bonds and sets us free so we can live and enjoy living. This, my friends, is the freedom that is given in Christ. Now when you talk about defending freedom with faith, here is what you need: the power of the Christ that can help us defend freedom.

Fortify freedom with faith. But just to say fortify freedom with faith is not enough. We must define this faith, so those who are proclaiming this great truth today want to define it. They are urging the people of America to go back into the churches where they can find a true understanding of Christian faith.

How many people have sought freedom through faith but followed the wrong thing. They had faith in the wrong cause. That is the trouble today with all the satellite countries of Russia. Ah! It must be a faith that is built on Jesus Christ, our Lord; and when we have a freedom built on this type faith, then we have a freedom that lasts. It is a freedom that works. As a man thinketh in his heart, so is he; and the man who builds his hope on Jesus Christ now has something on which he can have a freedom that works.

Look at our noble forefathers, Washington and others. They had implicit faith in the living Christ and today we have the America we know. Now you and I, their sons and daughters, had better have an implicit faith in the same Christ, or we will never be able to hand the glorious America we know today to our posterity. There is the challenge we face. Let's fortify freedom with faith.

How to possess this faith? The world has the answer. Do not fool yourself. Anywhere you turn somebody will tell you how to have faith, but I would like, my friends, for you to turn to the word of God that I read a few moments ago, and there you will find out how to have faith. Jesus said to these men, "My word abides in you, then are you my disciples indeed; then you shall know the truth and the truth shall make you free." There is the answer. As the word of God abides in you, then you grow in faith.

On the syndicated page of last Sunday's Times Union, there was an article urging people for this summer to make it a plan to read the Bible through. Let us at least read the Gospels through this summer. Get acquainted with Jesus Christ as He is revealed to us through the word of God. As you do, believe me, you will find yourself growing in faith; you will find yourself trusting the will of God; and you will find the wonders of His grace, for faith comes through the word of God. Read your Bible, study your Bible, is the plea of the church to the American people and to the peoples of all the world.

"When you let My word come in you, then you become My disciple." Ah, now as the word of God comes in you, then you come into the church, into the other group of Christians. The man who talks about being a Christian and stays outside by himself is making a misinterpretation of the Christian Gospel, for the early church brought the disciples into the church as one; and there as one they grew in faith, for they studied the word of God together. There as one they increased in knowledge and they put their religion into practice in the church, of loving one another, of helping one another, of doing the great work that God wanted them to do.

Fortify freedom with faith. My friends, here then is the answer. Get busy and develop faith. Study God's word; come into the church; fellowship with Christian people; learn how to love and how to forgive in the church, then put it in your home, and then into the world. There is the way to develop faith.

Faith produces a definite result. When you and I develop this faith, then we have freedom; and when we have freedom, then we know the great joy of living. Analyze the situation. The facts are these: As you know God's word, you know God. You begin to learn more about Him, and as you know more about God, then God lives in you. It is wonderful. The living Christ. As you study God's word, you learn more about other people. You learn how to get along with them. Whether their skin is black, white, or tan does not make any difference. You learn more about other people whatever their nationality, whether it is Russian, French, British, African, or American. You learn they are children of God. You learn that when they are stabbed, they bleed like you and I bleed. You learn that when they are dead, they are dead; and women's hearts bleed, and children are reared as orphans. It teaches us something about God. It teaches us something about other people. It teaches us something about ourselves. When you grow in faith, you fortify freedom, for you find out your inability to live as you ought to live. Therefore, you look to the living Christ to give you strength and to help you live.

You see, you can talk about freedom all you want, but unless you are right inside, you cannot have personal freedom. Unless the Nation is right, it cannot enjoy freedom. And unless we know God's word and find the great truths and facts of life, we can have no freedom.

Last month in the Reader's Digest there was an article, which if it had been written by me or any other preacher, you would all have said the man did not know what he was talking about. But the article was written by none other than Gen. Douglas MacArthur on the subject: "Can We Outlaw War?" General MacArthur spoke of the evolution of war since he had been in the Armed Forces. He spoke of the efforts to stop war and to outlaw war. They have failed. He said as a whole the Russian people do not want war any more than the American people as a whole want war. He said the time has come. War will have to be outlawed because we now have such tremendous and terrible weapons that everybody who can think knows that the next war, regardless of which side comes out victorious, we will all lose, and everybody will be destroyed. He says now we cannot have another war and live. As I read it, I remembered it was the very same man who at the surrender of Japan said the same thing, and he said the problem now is a theological one.

What is he saying? The same as our subject: "Let's fortify freedom with faith." The problem is a theological one, that only as a man knows God will a man be able to wake up and see the horrors of the next war. Only as a man knows God will he find out how to get along with himself, how to get along with his fellowmen. It is the only hope of mankind.

Let's begin with you and with me. Let's put our own souls into the life of the living Christ and let Him give us power and grace to live together with one another, and then pray God the rest of the world will do likewise.

Fortify freedom with faith, but remember—let the faith begin inside you. It will become contagious and you will begin to propagate it to the man who is near you.

Our Father God, we thank Thee for Jesus Christ. We thank Thee for letting us live in this great world and this great hour. As men have been slaves because of the horrors of war, because of the fact of sin, help us to see we cannot have another war and live. Therefore, help us to start right now with ourselves, put our faith in Jesus Christ, and trust and follow Him. Make the church awake to the hour and give us men and women who will unite with it and go forward with Christ.

Be with those this day who will unite with this church through the session, for we ask in the name of Christ, our lovely Redeemer. Now may the grace of the Lord Jesus Christ, the love of God, the communion of Thy divine spirit be with you now and forever more. Amen.

The Gallup Poll—Electorial Reform Has Two-One Backing

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 26, 1956

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD yesterday's Gallup poll, indicating that the people of the United States are two-to-one in favor of electoral college reform.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GALLUP POLL—ELECTORAL REFORM HAS 2–1 BACKING

(By George Gallup)

PRINCETON, N. J., March 24.—As the Senate considers the proposal for a basic reform in the American political process of electing a President, an institute survey finds sentiment better than 2 to 1 in favor of changing the present winner-take-all system of the electoral college to make it more representative of the will of the people.

Under the present method the candidate who receives a plurality of the vote in any State wins all of its electoral votes.

The Senate proposals, although differing in mechanics, have as their goal the division of the electoral vote among candidates more nearly according to their popular vote.

More than 4 voters out of every 10, or 42 percent, had an approximate idea of the meaning of the term, while 48 percent said they didn't know what it is. The remaining 10 percent gave incorrect answers.

Each person in the survey was then asked a second question in which the general idea of the present system and the proposed change, in principle, were described as follows:

"Today, the presidential candidate who gets the most popular votes in a State takes all the electoral votes of that State. Do you think this should or should not be changed so that each of the candidates would receive the same proportion of electoral votes that he gets in the popular vote?

"This would mean, for example, that if a candidate gets two-thirds of the popular vote in a State he would then get two-thirds of the electoral vote of that State."

Here is the way opinion divided among all persons questioned in today's survey:

ALL VOTERS

Should be changed, 60 percent; should not, 28 percent; no opinion, 12 percent.

Voters with the most education were found to be most in favor, as the following shows:

Should be changed: College, 76 percent; high school, 59 percent; grade school, 51 percent. Should not: College, 21 percent; high school, 30 percent; grade school, 27 percent. No opinion: College, 3 percent; high school, 11 percent; grade school, 22 percent.

INFORMED GROUP

Here is the vote among the informed group—those who could give a reasonably correct definition of the term, electoral college:

Should, 68 percent; should not, 28 percent; no opinion, 4 percent.

In today's survey both Republicans and Democrats were found to be in favor, but the greatest approval vote came from Independents.

Comparing 1952 under both systems we find:

Stevenson, who got 44.6 percent of the Democratic-Republican popular vote, received only 17 percent of the electoral votes. Eisenhower, with 55.4 percent of the popular vote, received 83 percent of the electoral vote.

If the electoral votes had been divided according to the popular vote in each State, Eisenhower's total would be reduced from 442 electoral votes to about 285 and Stevenson's total would be increased from 89 electoral votes to about 240, with about 6 electoral votes going to other candidates.

The Constitution now provides that a candidate must receive 266 of the total of 531 electoral votes to win.

Three presidential candidates in United States history have been elected who trailed their opponents in the popular vote. They were John Quincy Adams in 1824, Rutherford B. Hayes in 1876, and Benjamin Harrison in 1888.

The Soil-Bank Program

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 26, 1956

Mr NEUBERGER. Mr. President, in a letter from Mr. Gene McNulty, field editor of the Oregon Farmer, some very constructive thoughts relative to the soil-bank program are advanced.

Mr. President, so that these ideas may have the widest possible consideration, I ask unanimous consent to have printed in the Appendix of the RECORD Mr. McNulty's letter of March 8, 1956.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE OREGON FARMER,
Portland, Oreg., March 8, 1956.

RICHARD L. NEUBERGER,
United States Senator,
Senate Office Building
Washington D. C.

DEAR SENATOR NEUBERGER: One of my closest advisers has proposed that tree-fruit plantings with cover cropping have a place in the soil-bank legislation.

Certainly there is a need for such special consideration on the thousands of small farms here on the west coast and particularly in Oregon. When Secretary of Agriculture Benson was here in Portland recently, he suggested that the small west-coast farmer could take part in the soil bank by forest-tree planting. However, this proposal does not fill the need on our higher-priced specialty cropping farms here in the Willamette Valley.

There is much merit in adding tree-fruit plantings to the program. Most of the existing prune orchards are from 35 to 40 years old and have all but reached "retirement"

age. The aged condition is about the same for Oregon's commercial cherry orchards. Soil-bank tree-fruit plantings is just as well suited for the better specialty farms as for-fruit-tree plantings is for farms having less rich land.

The long-range planning committee for horticulture in Marion County recommends replacement of many old orchards, particularly cherry and prune plantings. Market outlook for the future is vastly improved—cherries are now in demand for fresh market shipments as well as processing and the lowly prune is coming into its own as a canned "Purple Plum" product.

As you are well aware, tree-fruit plantings represent a relatively long-range investment before profitable fruit harvests can be had. Soil-bank inclusion would encourage more plantings to replace cash-grain cropping on hillsides subject to severe erosion. The program would also help the grower financially while waiting for his orchards to reach maturity.

We urge that you give the proposal your consideration.

Sincerely,

GENE MCNULTY,
Field Editor.

Need for Election Laws

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, March 26, 1956

Mr. JOHNSON of Texas. Mr. President, it is very apparent that the people of our country are thinking deeply of the problem of election laws. They want realistic laws, and laws which will guarantee them full knowldege of the issues and the backgrounds of the candidates.

I ask unanimous consent to have printed in the Appendix of the RECORD thoughtful editorials from the Duluth Herald and the Washington Post bearing upon this subject.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

POLITICS NEEDS MARKET SURVEY

Senator LYNDON B. JOHNSON, Democrat, Texas, majority leader of the Senate, suggests that we let voters know how much money is spent in a campaign, through clear, complete reports, made public before the election.

For the Senate races he would put the limit at 20 cents per vote, taking any total vote in the State in the past 4 years. But a Senate candidate would be permitted to spend at least $75,000, even in a small State.

Senator Johnson suggests the same 20-cents-a-vote limit on expenditures of candidates for representatives with at least $15,000 permitted in any district.

Complete, prompt, two-way reporting of both contributions and receipts, as proposed by the Senator would probably be more important than the campaign limits.

Of even more interest to the watching public would be a survey to show how much money it really takes to make an effective campaign.

In business the taking of market surveys to be used in planning advertising and distribution has become a science. Politics is not quite the same, but has several points in common. Undoubtedly a candidate, like a favorite entertainer or an ordinarily welcomed guest, can appear too often, take too much of people's time, talk too much, and wear out his popularity.

Perhaps it should not be so, but with many independent voters a little politics goes quite a long way. It would be a great day for free government if a survey showed that beyond a point a big campaign fund can hurt a candidate more than it helps him.

[From the Washington Post and Times Herald of March 18, 1956]

EQUAL TIME, UNEQUAL ISSUE

If the America First political candidate in Chicago had set out deliberately to demonstrate the defects of section 315 of the Federal Communications Act, he scarcely could have done so more effectively than through his demand for equal television and radio time to answer President Eisenhower's announcement speech. Lar Daly is the America First candidate for the Presidency and the Governorship of Illinois in the Republican primary on April 10. It is safe to assume that not more than a tiny fraction of the voters in the country have ever heard of him. Yet the law seems to require that he be given time on national hookups equal to that set aside for Mr. Eisenhower's speech and Senator SPARKMAN's reply on behalf of the Democratic Party.

It is difficult to think that Congress contemplated any such strained result when it wrote section 315. Congress was intent on preventing limited broadcasting facilities from being placed at the disposal of one candidate to the disadvantage of other serious contenders for public office. It scarcely could have intended to place fringe candidates, perennial office seekers and crackpots on the same footing as the major contenders for this would virtually prevent the use of broadcasting facilities for campaign purposes. Yet the language of the law appears to require equal time on the air for all legally qualified candidates. The practical effect has been to place a severe restriction on the availability of broadcast time for political purposes.

Correction of this defect is one of the purposes of the clean elections bill which has such overwhelming sponsorship in the Senate. This bill would permit broadcasting stations to sell or give time to major candidates without being obligated to extend similar facilities to fringe and splinter groups. The nudge from America First in Illinois is another reason why passage of the campaign reform bill is urgent.

Forest Recreation

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, March 26, 1956

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Forest Recreation," which was published in the Logan Herald-Journal, of Logan, Utah, on March 19.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Logan (Utah) Herald-Journal of March 19, 1956]

FOREST RECREATION

Senator WALLACE F. BENNETT's suggestion that expenditures for improvement of forest recreational areas be doubled to $28.5 million in 8 years should be welcomed by the public in general. The Senator expressed the opinion that the $2.2 million now approved by the House for forest recreation was not even enough to maintain existing facilities.

Last year over 45 million people enjoyed visits to the national forests. This figure indicates clearly how the popularity of these particular areas is growing, which is as it should be. They offer a great deal of enjoyment to those who wish to get away from their usual environment if for only a few days out of the year.

Those of us who live near them can attest to the fact that the improvement of facilities in most national forests has not kept pace with the tremendous increase in their use. And this situation reflects directly the lack of dollars because the Forest Service itself seems to have done an excellent job with the limited resources at hand.

It is hoped that Senator BENNETT's proposal meets with immediate support and that an expansion of facilities can be carried forward in time to help care for the record crowds of tourists expected again this summer.

Pheasant Hunting, Foreign Aid, and the Veterans

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 26, 1956

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Walter Travis, department adjutant of the South Dakota American Legion. In the article, "Speedy," as he is known to all Legionnaires in South Dakota, expresses some ideas that grew out of a pheasant hunting experience. His article can be read with enjoyment by all.

There being no objection the article was ordered to be printed in the RECORD, as follows:

Doing for others is highly recommended, particularly around Christmastime, and I wouldn't discourage it. But, human nature being what it is, I suggest moderation. It's a thing that can be overdone.

Came to mind an incident in my calm and peaceful past. A bunch of us used to go pheasant hunting together. And one time a brother joined our party who was convinced that a pheasant should be cleaned when taken—right now. He seemed rather to like to clean pheasants. I didn't—none of us did, particularly. We took 'em home as we picked them up, and the cleaning came then—preferably by somebody else.

Since this brother was sure immediate cleaning was vital, and since he was willing, shortly he was cleaning not only his own birds, but those of everyone else. It was his idea. Nobody asked him to do it. But we were willing. Second day out about all this lad did was clean pheasants. And along in the afternoon, I realize now, we got to feeling we were doing him a favor by shoving birds in his hands—and we got a mite critical of the job he was doing.

Well, the third day it came to this citizen that he'd traveled a couple of hundred miles to hunt pheasants, and here all he was doing was operating a field butcher shop. So he

quit it, and started hunting—didn't even clean his own birds. And doggone if the rest of us didn't feel we were gypped. He was failing us. And that guy—a good guy—never was asked to go with us again. I realize the reason, now—he'd gone overboard doing us favors, then committed the cardinal sin of quitting that same.

So it isn't with any holier than thou attitude that I view the reception other nations have given the foreign "aid" the United States has as its policy. As I thought about somebody to write my column, and about the pheasant cleaner, newspapers on my desk heralded the suggestion, supported by some in both political parties—but happily opposed, at least now, by some in both—that foreign aid be increased. For the people to whom we've been giving money are getting a mite critical now, and peevish, just as we did when the young man went overboard to clean our pheasants.

This giving away cash collected from American taxpayers is something unique in this world. No other nation's ever done it—the others figure their job is to take care of themselves. Now Russia is doing some promising, to keep up with the Joneses, but the value of a Russian promise has been pretty well established. And when they do give, they see to it that they get their money's worth—an idea shied away from by most of our leaders through all the years of this noble experiment.

Maybe giving would be all right if it worked. But we've given away more than it would take to run this Government our lifetime, and it hasn't netted this country one firm ally, or even any fair-weather friend we didn't have before. The reason's plain—it's the same human nature that made us turn thumbs down on the pheasant-cleaner. We've proved it doesn't work, so we should have more!

And a quirk that irritates me is that some of the lads most eager to build up our stock of enemies by this give-away are the same who urge cuts in funds to compensate war veterans for the physical and economic disabilities they have because of service to their Nation, and urge this reduction on the ground that it's costing too much!

This matter of economic disability is little considered in most discussions of veteran compensation. A man may come home from war in apparent good health—though that's deceptive, because months and years in mud and cold or heat take something out of a man that makes him vulnerable the rest of his life. But he can come home apparently sound, and still he's lost years of experience and skill needed to compete in the business world today. A man's main earning period isn't much over 20 years, and when a fourth or fifth of these years are spent clear out of civilian life or brushing up on his profession or job, he has really lost. This loss is for the Nation, and the Nation has an obligation to compensate for it when that loss is evident at the end of his earning days. Fulfilment of this obligation is the aim of the Legion legislative program adopted at the Miami convention last fall.

And another thing: The cost-too-much boys cry that this is becoming a Nation of veterans. The December 15 National Tribune debunked this. "The facts show," said this long-established paper, "that from less than 1 percent to fewer than 10 percent of our citizens ever saw war service, the percentages running up to the top figure only as a result of the awful holocaust of World War II. It is undeniable truth that a very small minority of our people have ever fought in a war."

Of this minority, many are so fixed financially and temperamentally that they never will apply for Federal pensions; the number each year attaining age 65—the yardstick age under Legion proposals—is necessarily small; and the total number, under and over 65, is constantly being whittled by death.

You want to know what I think? I think—and perhaps I should emphasize that this is Travis speaking and in no sense an official view of the American Legion or any other member thereof—I think things would be better if this country invested millions in the folks at home instead of billions to increase the number of those who hate us.

The Lakeview (Oreg.) Municipal Airport

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 26, 1956

Mr. NEUBERGER. Mr. President, Lakeview, located in south-central Oregon, where distances between communities are great, has proved a haven for airplanes; and the Lakeview Municipal Airport, ably managed by Myron Buswell, assisted by his wife, Jean, is well known for its warm hospitality.

The airplane has become a necessity to cover great distances and has replaced the horse and buggy as the country doctor's vehicle, and it is especially useful to the veterinarian. The uses of the airplane are innumerable.

Mr. President, I ask unanimous consent to place in the Appendix of the RECORD a fine article by Leverett G. Richards, aviation editor of the Oregonian, which appeared in that paper on March 18, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAKEVIEW AIRPORT OPERATOR USES PLANE TO HUNT LOST CARS, COUNT ANTELOPE, PATROL FIRES

(By Leverett G. Richards)

Lakeview, capital of a country made for airplanes, is one area where the plane is used for everything, including looking for lost automobiles.

Myron Buswell, municipal manager and operator of the modern airport with its surfaced runways and its own unicom radio, uses his planes for just about everything but plowing. More than once in the long winter months he has been called upon to search for trucks missing or overdue on the long, lonesome stretches of desert highway that radiate in all directions from Lakeview.

In one case he located a big truck broken down alongside the highway, landed and located the driver. In another case the driver was overdue but O. K. This week he volunteered his plane to hunt for two women lost hunting uranium.

Another winter chore is helping the game department count its antelope. With a game expert operating the counter Buswell dives down the canyons and waterholes of Lake County, rounding up the antelope and herding them long enough to get a count. The plane is also used to aid in the deer count. In summer he flies fire patrol.

The plane has virtually replaced the horse and buggy as the country doctor's vehicle—especially the veterinary doctor. Buswell finds it easy to land in fields or roads and taxi into the barnyard almost anywhere.

His is a family operation. When Myron is away his wife, Jean, services transient planes and operates the airport radio.

REA's Rural Telephone Program

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. WILLIS. Mr. Speaker, in the storied Evangeline country of Louisiana where most of our French speaking population are direct descendants of the Acadians, we are adding a new sign of progress to our landscape. My constituents in St. Martin Parish are getting modern dial telephone service on their farms through loan funds furnished the Breaux Bridge Telephone Co. by the Rural Electrification Administration. Mr. Earl J. Conrad is president and manager of the telephone company. In that connection I quote from a letter I received from Mr. Conrad:

I want to comment on my decision to seek financing through the REA program. Contrary to the feeling on the part of some who sought such financing, I never had any misgivings about the financing through a Government agency.

I purchased this company in 1942 at which time we had 250 subscribers. Most of these were in the town of Breaux Bridge. We had a multiparty circuit running from Breaux Bridge to Cecilia and one such circuit to Parks. At Arnaudville we had a small dial exchange serving some 32 subscribers there. I might say that at that time the Breaux Bridge exchange consisted of an outmoded magneto board.

I have always been an advocate of electric and telephone service to the people who live in rural areas. However, I soon found that my lifetime savings, revenues of the company, a $50,000 loan at 5 percent from suppliers of equipment on a 5-year basis, a $50,000 loan from individual sources, all were insufficient to completely do the job. I further found that rates granted to an independent telephone company are not consistent with short-term high-interest financing. Therefore, I turned to REA for financing.

The Rural Electrification Administration has certain policies, such as equity requirements, engineering, minimum construction requirements, and area coverage. I subscribe wholeheartedly with all of them. These requirements are for the best interest of my company and have caused me no trouble.

We cut over the new system on February 25, 1956, with some 1,450 subscribers, 300 of which were rural and had never had telephone service before. With funds available we plan to serve another 400 rural subscribers out of Breaux Bridge, Cecilia, Parks, and Arnaudville Exchanges.

The use of REA loan funds to make the farm a better place on which to live is nothing new to the farmers of St. Martin Parish. For a long time, they have been getting their electricity from the Southwest Louisiana Electric Membership Corp. which is described as the country's largest rural electric association.

The Breaux Bridge Telephone Co. is 1 of the 17 independent telephone companies in Louisiana which has borrowed money from REA to put modern telephones on the farm.

One cannot help but be a little amazed that in an age of atoms, electronics, jet planes, and other scientific miracles, that something so fundamental as effective telephone conversation has so long been delayed in reaching all the farms of America. Not to be able to have clear and quick communications with relatives and neighbors and market centers is to have an artificial wall around our farms. Many of our farmers with radio and television are in the position of hearing the world talk to them without being able to talk back.

It is a matter of great pride to me that the independent telephone companies of Louisiana have recognized that REA loan funds offer a great opportunity to modernize our links of communication. Town and country are to be tied closer together in both our languages.

The 17 Louisiana companies now using REA loan funds have set out to remedy the telephone situation for more than 21,000 farmers. As of now, they have borrowed a little over $9.5 million from REA to improve and extend rural service. Rural people in approximately 25 parishes in the State will be affected. Line construction and the installation of new dial exchanges will provide employment for hundreds of our working people. In many instances Main Street and the parish farm will be able to talk business with each other for the first time.

What is happening in Louisiana is happening in 43 other States and Alaska. REA has allocated close to $276 million to 419 rural telephone borrowers. The borrowers represent independent, cooperative, and mutual telephone organizations. The loan funds mean improved or first-time telephone service to more than 600,000 rural residents. It means the construction of more than 164,000 miles of new telephone line.

Despite the good start that has been made in REA's rural telephone program, a great deal yet remains to be accomplished. The 1954 Census of Agriculture, released around the first of the year, shows that only 48.8 percent of the farms in the United States have telephones. And we have no way of determining how many of those with phones have adequate service. The telephone figure contrasts sharply with that for rural electrification. Around 94 percent of our farms now have central station electric service.

The percentage of farms with telephones increased by 10 percent between 1950 and 1954. In Louisiana the increase was from 11 to nearly 26 percent. In five other States, the percentage also doubled.

REA's telephone-loan program stems from an amendment to the REA Act in 1949. Loans are made at the rate of 2 percent interest over a period of 35 years. Borrowers are required to put up sufficient equity capital of their own. The purpose of this is to help secure the Government loan to make sure that the owners of the telephone system will have a real interest in competent management and operation.

During 1955 REA made 188 loans to telephone borrowers in the amount of $66,808,000. Borrowers using REA financing for the first time numbered 99. The loan activity during the calendar year meant extension and improvement of telephone service to some 135,000 farms and rural establishments.

The future of rural telephony appears to be brighter each year. I count myself and my neighbors as being most fortunate to have a progressive organization like the Breaux Bridge Telephone Co. to provide our farms with modern dial telephone service.

Farm Conditions and the Political Campaigns

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 26, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the daily radio roundup of the Farmers Union Grain Terminal Association, of St. Paul, Minn., on March 22, 1956.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

THURSDAY, MARCH 22, 1956.

Every political doctor in the country is holding his own private autopsy on Tuesday's presidential primary in Minnesota. They want to find out what caused the big political tummyache that's upset the whole Nation. Some of them have diagnosed the trouble already. They point out that the Democrats piled up a 2-to-1 advantage over the Republicans in Minnesota's farm districts. That's significant, observers say, because farmers apparently were not voting party lines—they were voting parity. They are fed up with price flexing from Washington, and they voted against it. These observers see the vote as a complete repudiation of the Eisenhower-Benson sliding-scale farm program.

That's one interpretation. There are others, too. One writer points out that farmers are restless; they're not yet hanging their hats in any political party's office. They are waiting to hear from Washington before making up their minds.

In a speech prepared for delivery tonight, at the National Farmers Union convention in Denver, M. W. Thatcher, GTA's general manager, emphasizes that. He's critical of both political parties. In 1952, Thatcher explains, the President during his campaign made a golden promise of parity to farmers. He hasn't kept it. Then, he adds, the Democrats in 1954 promised parity for farmers if they gained control of the House and Senate, and they have failed to keep their promise.

The Thatcher speech brings out the fact that Farmers Union and its cooperatives made up the only farm group that carried on an effective all-out campaign in behalf of firm farm prices on a real parity basis, with decent living standards for farm people. He said the Farmers Union has a great and difficult task before it, and that is to lead American farmers out of the valley of the shadow of disaster into which they have been led by the Secretary of Agriculture.

"To do this," Thatcher states, "we may have to change a number of faces in Washington. There never will be a sound program that protects farm families until we have a President, a Vice President, a Secretary of Agriculture, and a Congress that sets its mind to the task."

Thatcher, in his Denver speech, pays tribute to the parity leadership in Congress by Minnesota's Senator HUBERT HUMPHREY, who led the hard-fought campaign for firm farm-price legislation. Speaking of GTA, the Farmers Union and affiliated organizations, Thatcher states again that "we are the only group making this fight for the family-size farm. We know we are right. That's why we know that we will finally win this fight for all the farm people."

You can join in this great effort to keep farm families on the land by making your bushels work for fair farm prices. Ship them GTA, the co-op way.

Outflanking the Welfare State

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 26, 1956

Mr. CASE of South Dakota. Mr. President, last month Under Secretary of Labor Arthur Larson, delivered at the Midwinter Personnel Conference, at Chicago, Ill., an address entitled "Outflanking the Welfare State."

I am sure that the judgment of history will be that this administration yields to no philosophy in its concern for the needs of the people. Since Under Secretary Larson so ably detailed the path of the Eisenhower administration to meet the needs of the American people, I ask unanimous consent to have his address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. ARTHUR LARSON, UNDER SECRETARY OF LABOR

We do not, in contemporary America, go in much for philosophizing, nor for analyzing our actions and plans in terms of the long historical view. We do not lay down systematic blueprints like the Communist Manifesto, or even Mein Kampf. Rather, our typical analysis is that of the daily radio commentator or the weekly newspaper columnist. The result is that, while we are a very well informed people on the events of the day, we are apt to be deficient in observing the lines of the pattern we are tracing in history. We write our philosophy in our actions, but once in a while it is a good thing to stand aside and try to put into words the design we have woven with our deeds.

In labor relations and labor legislation, the judgment of history, when it comes to sum up the period we are going through, will be that this was the era in which America outflanked the welfare state.

I give you this summary as a substitute for a number of other judgments which are heard nowadays, such as that "we are going down the road to socialism," or that "the Eisenhower administration is just a continuation of the New Deal," or that " we have accepted the welfare state."

When people say that we have merely gone further along the New Deal road to the welfare state, they are presumably referring to the accomplishments and proposals of the Eisenhower administration in social security, unemployment insurance, workmen's compensation, disability insurance, mini-

mum-wage laws, maximum-hours legislation, industrial safety, programs for special groups such as older workers, and improved working conditions for Federal and District of Columbia workers.

It is unquestionably true that, when you add together the actions of the State legislatures last year, and the actions of Congress in 1954, this has been the most productive biennium for improvements in income insurance since the founding of these systems. The 83d Congress extended social security to 10 million more people, provided the most generous increases in relation to cost of living ever passed, and added many other humane changes; it also extended unemployment insurance to 4 million more people, increased maximum benefits in the District of Columbia by 50 percent, and made many other improvements. Last year 45 States improved their unemployment insurance and workmen's compensation laws, in the great majority of instances supplying a more generous scale of benefits. In our legislative program this year we have 4 bills to improve unemployment insurance further, 4 bills to improve Federal workmen's compensation laws, including an increase of the maximum benefit under the Longshoremen's Act to $50 a week, a bill for registration of health, welfare, and pension funds, a bill to strengthen State industrial-safety programs, a bill establishing a temporary-disability insurance system in the District of Columbia, and half a dozen other bills improving our labor laws.

Why, then, with all this activity, is this not the New Deal or the welfare state?

There are at least six reasons.

DOING THE JOB AS PRIVATELY AS POSSIBLE

One of the pillars of the Eisenhower administration philosophy is that whatever can be done privately should be done privately, and that the Government should become involved only when there is a job that must be done, and nobody else can do it.

This is not the philosophy of the welfare state, nor of the contemporary exponents of the New Deal approach. If you want to see the various philosophies fighting it out on a current proving ground, watch the debate that occurs whenever a bill for temporary disability insurance is at stake. President Eisenhower in his last two State of the Union Messages called for a disability insurance bill for the District of Columbia, and a bill was introduced in the Senate last year. The significant thing about the bill is that, like the act now in effect in New York, it sets out to achieve a social purpose by utilizing the mechanisms of private enterprise. The essence of the bill is simply a requirement that employers provide a certain minimum level of income-insurance for sickness and disability; the normal way to comply would be to take out insurance or work out some kind of private plan. One reason this method was chosen was that about two-thirds of the employees in this country are already covered by some kind of disability insurance, and it seems obviously desirable to cause as little disturbance as possible to adequate plans that are now operating to the satisfaction of the parties. When this bill comes up, you will find that it will be under attack by those who believe that this sort of thing should be handled exclusively by the government, as in Rhode Island, with no "contracting-out" to private insurance or private plans under any circumstances.

The difference, then, is one of method, not objective. This administration yields to no philosophy in its concern for the needs of people. But it believes these needs should be met by plans containing a maximum of private content.

For example, in 1954 the administration put through a plan for group life insurance for Federal workers. It would have been easy for the Federal Government, with its vast resources, to act as a self-insurer, but it did not; it placed the business (on a virtually nonprofit basis) with private carriers.

Again, in the case of workmen's compensation, your true welfare-staters would like the Federal Government to take over the whole business. However, workmen's compensation, as experience has shown, is capable of being handled through private insurance; that being so, under our philosophy it must be handled privately.

The high proportion of private content in our American social insurance system comes about in two ways. The first, which we have just noted, is the assignment of as much as possible of the administration and financing of public plans to private bodies. The second is the large and growing amount of supplementation of public benefits by private plans. The supplementation of old age and survivors insurance by private pension plans is the best known and most widespread example; for some years the number of such plans has been growing by thousands each year. Less well known is the growing practice of supplementing workmen's compensation payments to bring them up to a higher level. Most recent of all is the supplementation of unemployment insurance.

Then there is considerable supplementation in the sense of providing income insurance in categories where no public plan exists at all, as in the case of nonoccupational sickness and disability insurance in most States.

All this adds up to a pattern—a sort of two-layer structure with compulsory public plans (privately insured when possible) providing basic protection and voluntary or collectively bargained plans bringing the benefits up to a level more acceptable to the particular parties, in all major categories of income insurance.

DOING THE JOB AS LOCALLY AS POSSIBLE

The second respect in which the American pattern has followed a principle directly opposite to that of the welfare state is in deliberately avoiding centralization of power. In the typical welfare state, you find an intensive concentration of authority in a central executive. We have followed the reverse policy of decentralizing to the States anything that the States can handle.

It is not easy to adhere to this line, against the constant demands of those who would centralize unemployment insurance, workmen's compensation, and disability insurance. Getting improvements in these systems through 51 legislatures is the hard way compared with the temptation to accomplish sweeping reforms through a single Federal enactment. It may be the hard way, but it is our way in this country. We believe that any temporary gain in ease of legislation would be much more than offset by the permanent damage that would result in the proper balance of State and Federal power.

The only major social insurance system we have which is centralized is old-age and survivors insurance, and this involves no violation of our basic rule, since it is obvious that this system could be handled neither by private bodies nor by States. Contributions must be collected and benefits paid over a lifetime, with people moving from State to State constantly; a local system would be altogether unworkable.

But we still follow the principle of decentralizing to the States whenever possible, even under OASI. For example, when President Eisenhower's plan for freezing the rights of the totally permanently disabled was enacted in 1954, the administration of the job of determining disability was farmed out entirely to State agencies, so as to avoid the necessity of setting up a whole new array of Federal offices throughout the country.

Similarly, when we extended unemployment insurance to Federal workers, we did not—as your real welfare staters would have done—set up a new system within the Federal Government; we merely said that Federal workers shall be paid the benefits provided by the State law where they worked subject to State administration and decision, with the State to be reimbursed for its outlay.

INCOME INSURANCE AND PROSPERITY

Classically, the main purpose of income insurance has always been the humanitarian object of preventing hardship to workers and their families during periods of income-loss, and this is still unquestionably its principal function.

A second function, which has commended income insurance to economists and businessmen, is the maintenance of purchasing power in time of individual or community or even nationwide adversity. No one needs to give a sale's talk on unemployment insurance to the merchants of a town whose principal industry has had to lay off half its work force for a month. On a broaded scale, everyone knows by now, that, in a time of general business downturn such as we saw in 1954, the automatic pouring of $2 billion into the purchasing stream at the crucial time and at the most strategic places had a lot to do with checking the downturn and helping the business cycle to turn upward again.

But there is a third function of income insurance which has never been properly understood or appreciated, and that is its function in promoting and sustaining a high level of prosperity. It is no secret that a part of the vigorous upsurge in 1955's consumer-based prosperity was the result of an expansion of consumer credit. Why are people so willing to undertake installment commitments, and why are sellers so confident in accepting them, and why is their faith borne out by the very low ratio of defaults? It is in a large measure because of income insurance. Before the days of income insurance, the prudent man had to accumulate his money in savings against the possibility of unemployment or injury or death. Now he can assure himself that, even if he is out of work for a few months, he will not be without income, and will probably not have to forfeit the car or dishwasher or air conditioner he has bought on installments.

I do not think we should take this as an occasion to lament the passing of old-fashioned habits of saving of the sort Benjamin Franklin is popularly supposed to have advocated. Our people are probably saving at a much higher rate than their grandparents ever did—if you count as savings their equities in social security, life insurance, and various social insurances, in addition to conventional savings, which are still very high. Secure in the confidence supplied by this reliable and systematic protection against periods of wage loss, the American wage earner is spending as he has never spent before, and there is no reason why he should not continue to do so. The greatest enthusiasts for income insurance in the past have been humanitarians and economists; I think we shall presently be able to add sales executives to the list.

STICKING TO THE WAGE-LOSS PRINCIPLE

The fourth difference between the welfare state and what we are doing is this: our public systems are centered around a single clear principle, that of restoring a portion of lost wages during periods of income loss due to such exigencies as unemployment, disability, death, and old age. The welfare state goes on to provide cash and services to people even during time of full employment and full income.

The contrast can be quickly seen in two features of the British system which we have rejected, but which welfare staters in this country are still trying to interest us

in: the nationalized health service plan, and the family allowance plan.

Under the health service plan, the Government no longer merely says to a man, "If your income is interrupted, the system will restore part of it, but you can budget your income and pay your bills in your own way." Rather, the Government says: "We think you have not got enough sense to manage your finances so as to pay your medical bills even in time of full income, and therefore we are taking the matter out of your hands and making special provision for this one category of expense." Once the Government has gone this far, where does it stop? Anyone can discover by looking at his check stubs that medical expense is not the only unpleasant and unexpected major drain on one's resources. Having gone so far, why should not the Government someday look after legal expenses, loss by fire, loss due to broken homes, or the risk of having indigent relatives move in? Why shall we compel a man to insure against a $100 medical bill and not against the loss of his $10,000 house?

Another sharp difference between income insurance and the health services plan is that income insurance involves no interference with the free conduct of our business and professional affairs, while the health services plan eventually would be almost certain to work profound changes in the freedom of the medical profession and the hospital business.

The family allowance plan has never made any serious headway in this country, but I notice that one or two Senators are now proposing that official action be taken to study the possibility of adopting it here. The typical family allowance scheme pays a given sum of money per child every week, even when the breadwinner is earning full wages. Millionaires are as much entitled to it as paupers. If you visit England, you can observe on a certain day each week a long queue of women, frequently with perambulators, stretching out from the local post office. These are the wives of Englishmen standing in line to be paid 8 shillings and 6 pence for each child beyond the first.

I submit that those who are now suggesting that American husbands likewise send their wives to collect a few dollars per week per child from the Government have grossly misjudged the temper and pride of Americans. We prefer to support our own families, and we can do it. With average wages in manufacturing approaching $80 a week, we have no need for such charitable concern. Cases of need or of wage-loss we know how to take care of. But we will not tolerate the idea that America is somehow just one vast settlement house in which all the inmates, even when working at full pay, need to have weekly support money from a benign Government.

STRONG, INDEPENDENT LABOR VERSUS WELFARE STATISM

The fifth difference between the welfare state and the modern American pattern is this: the welfare state assumes that the government must look after labor as its special ward; but we assume that labor has reached the point where, given a chance to organize and bargain freely, it can for the most part look after itself.

Two principles of the Eisenhower administration philosophy are involved here: the first is recognition of the value of free unionism; the second is avoidance of governmental interference as far as possible in the everyday affairs of the people.

Where you have weak unions or no unions, it is often necessary for the government to step in with minimum wage laws, standards on hours and working conditions, and other intrusions upon free contract. But where labor is strong, there is less need for such governmental action. Therefore it follows logically that a government which prefers to withhold its hand from interference with private affairs is glad to have more and more of the job of maintaining labor standards taken over by private organizations. The stronger labor is, in short, the less need there is for a welfare state.

This is one reason why President Eisenhower said, in his telegram on the occasion of the opening of the Teamsters Building in Washington:

"Strong, dedicated, democratic trade unionism is one of the bulwarks of our American way of life. Our democracy and our economy both make possible and draw strength from free trade unions."

INDIVIDUALIZED VERSUS MASS WELFARE

The typical old-fashioned welfare stater is inclined to think of welfare in mass terms. He has a weakness for grandiose schemes to raise the wages or calories or housing standards of millions of people at a crack; he generally favors uniform benefits for everyone under an income-insurance scheme regardless of prior standard of living; his way of dealing with unemployment is apt to be the expenditure of billions of Federal dollars which he calculates statistically to be capable of creating a million jobs.

This is the natural product of the Socialist-type philosophy with its concern for mass welfare. But we have begun from a philosophic starting point that exalts the individual person as the object of all our exertions. As a result, our labor legislation has developed along entirely different lines. We keep millions and millions of individual wage records so that each person can have his own personal social-security rights tailored to his own earnings. We provide elaborate proceedings to protect individual rights under law in all these systems, including judicial review with right of counsel—which is not afforded, for example, in England. We complicate our laws and put ourselves to no end of trouble in our efforts to deal equitably with the needs of people whose circumstances vary somewhat from the normal. And we approach the problem of employment, not by wholesale blind spending to create jobs in the aggregate, but by a series of carefully planned ad hoc programs to increase the employment opportunities of special groups such as older workers, racial minorities, the physically handicapped, teenage school dropouts, veterans, women, and people in chronic unemployment areas.

CONCLUSION

I have mentioned six distinct ways in which the present American pattern of social and labor legislation is not only different from, but in most instances the very opposite of, the welfare state.

And yet, if you add together all our public plans, all our private plans, all our voluntary employer and union and local and personal provision for security, I am confident that the sum total would be a degree of well-being surpassing that which most avowedly comprehensive governmental plans in other countries can show.

This is what I mean by the saying that America has outflanked the welfare state.

We have not gone down the road to socialism. We have gone along our own road, and in an entirely different direction; and what we have attained surpasses in value to the workingman and to the community anything that socialism has even promised. We have dealt with the 20th-century problem of wage loss in a cash economy and labor progress in a capitalistic system without sacrificing our own distinctive governmental structure—the State-Federal division, our own distinctive economic structure—moderately regulated free enterprise, or our own distinctive political philosophy—the freedom and preeminence of the individual person. The job is not done; but I think we should all draw inspiration from the thought that, as we expand and perfect these systems and relations, we are all contributing to what history will undoubtedly recognize as one of the signal achievements of the century; the unique American system of fostering for working people well-being without welfarism.

Overpayments to Aircraft Contractors

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. HOLIFIELD. Mr. Speaker, one of the most important problems in military procurement concerns overpayment to aircraft contractors. This problem is discussed in an article in the Army-Navy Air Force Register, a weekly newspaper of the Department of Defense in the issue of March 10, 1956. The author is Allen M. Smythe, an accredited Department of Defense writer, who specializes in military procurement problems. He is a free-lance writer and this article is one of the many he has written on military procurement.

The article follows:

NO INTEREST REQUIRED ON REFUNDS, SAYS GAO

(By Allen M. Smythe)

Continued interest by the General Accounting Office and promised scrutiny by two congressional committees may again raise for the Pentagon the problem of overpayments to large contractors holding incentive and price-redetermination types of contracts.

Labelled "windfall working capital" and estimated from $600 million to a billion, these overpayments were a surprise and of much concern to Secretary Charles E. Wilson. One large west coast aircraft firm was reported to have had $70 million in overpayments, another was credited with $52 million and a large eastern aircraft firm listed $30 million in short-term bonds under the heading "Reserve for refunds on defense contracts."

Such payments resulted from long-term contracts hastily signed during the Korean war with clauses containing unrealistic target prices in incentive type contracts and high unit prices in price-redetermination contracts.

Deputy Secretary Reuben B. Robertson, signing his first important directive, and backing a Navy viewpoint, ordered new contract clauses limiting partial payments to 105 percent of total costs for all new contracts.

Trade groups, led by the National Association of Manufacturers, the Aircraft Industries Association, and the National Security Industrial Association, protested the severity of the order to Mr. Robertson and Assistant Secretary Wilfred J. McNeil, Comptroller.

On December 5, 1955, Mr. Robertson issued a new Department of Defense directive 4105.7/limiting partial payments to 100 percent of delivered costs plus the agreed profit percentage (usually 6 to 11 percent). Advances for work in progress were to be limited by progress payment rules, now at 75 percent. Changes were also made to allow quarterly reports on costs made by the contractor to be accepted by the contracting officer "unless he has a good cause to question or doubt the accuracy of the statements."

One fiscal officer stated: "The effectiveness of the directive will depend on the truthfulness of the contractor and the alertness of

the contracting officer in making spot audits."

Two clauses, slightly different, applying to incentive and price-redetermination contracts are incorporated in the directive. They are to be included in all new contracts and in present contracts when amended for increases.

Although the directive states that "prompt action" shall be taken to place these new clauses in present contracts, contractors are disinclined to accept them in their valid contracts "without consideration." However, the Services report that many refunds being made voluntarily although legally contractors are not required to do so until final prices are fixed which is often a year or two after completion of the contract.

The threat of requiring return of interest earned on these refunds has vanished. It has been learned that the GAO has decided that this cannot be done legally. The law under study was 3448, 31 U. S. Code 529 which stated that "payments shall not exceed the value of the article delivered."

Many Penatgon officials believe the revised directive is still "too liberal" and not in keeping with Mr. Wilson's policy of requiring contractors to partly operate on their own money. Mr. Robertson is reported to be planning strict enforcement and to have signed the order reluctantly and then only after he was told that 350 million of Navy contracts alone were being held up awaiting a new "improved" clause. On the other hand, the trade groups were disappointed that the directive was not cancelled outright.

Some small business groups and their friends have been quoted as saving that the "large contractors have found a tunnel to the Treasury," and Congress is particularly sensitive to the complaints of small business. However, Pentagon officials state that in instances where small firms were given long-term contracts, the same problem of overpayments has arisen.

The School-Lunch Program

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 26, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD this excellent letter on the school-lunch program.

This letter, be it noted, was addressed to me by Fae Pittman, president of the Rockaway Parent-Teacher Association in Tillamook County on the Oregon coast.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ROCKAWAY PUBLIC SCHOOL,
Rockaway, Oreg.

The Honorable RICHARD NEUBERGER,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR NEUBERGER: Federal aid in the school-lunch program could be considered as a necessity because of the increased cost of food over the past several years.

Without this help the many school-lunch programs in Oregon in operation at the present, as well as those that will begin operation in the future, will have to increase the charge to youngsters. And those children who need the lunch the most will miss the opportunity to get a good wholesome meal in the middle of their schoolday.

We would like to go on record as being in favor of increased Federal aid to the Oregon hot-lunch program and urge you to do all that is in your power to bring this increased aid about.

Sincerely,

FAE PITTMAN,
President, Rockaway Parent-Teacher Association.

Three Hundred and Twenty-second Anniversary of Founding of Maryland

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, March 26, 1956

Mr. BEALL. Mr. President, yesterday we in Maryland celebrated the 322d anniversary of the founding of our Free State. It was only fitting and proper that the Knights of Columbus Charles Carroll, of Carrollton Assembly, observe this day by initiating some 137 members into the fourth degree. At the conclusion of the ceremonies there was a dinner in commemoration, not only of Maryland's anniversary, but also in honor of a member of the Baltimore Council, Knights of Columbus, Alfred E. Cross.

Among the friends of Mr. Cross who gathered at the banquet to pay tribute to this distinguished American, were: His Excellency, Jerome D. Sabastian, auxiliary bishop of Baltimore; Rev. Charles Fleckenstein, C. SS. R.; Rev. Gerald W. Spraker; Hon. Theodore R. McKeldin, Governor of Maryland; Senator John Marshall Butler; Hon. Thomas D'Alesandro, Jr., mayor of Baltimore; and the following Sir Knights, Frank J. Balcer, J. Edmund Walsh, Irving J. Dell, John J. Eustace, Charles B. Humelsine, John F. Nagel, Jr.

It was a pleasure and a privilege to join with these other citizens in paying my personal tribute to this outstanding Marylander, who has dedicated himself to the aid and help of his fellow Marylanders.

Nothing would be more appropriate at this time than to make the address given by our Governor, the Honorable Theodore R. McKeldin, on this the 322d birthday of our Free State, made available for my colleagues and the country, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GOVERNOR MCKELDIN, FOURTH DEGREE KNIGHTS OF COLUMBUS BANQUET, HONORING ALFRED E. CROSS, BALTIMORE, MARCH 25, 1956

It was 322 years ago today, after an Atlantic crossing of more than 4 months' duration, that the proud ships, the *Ark* and the *Dove*, arrived at St. Clements Island, and a new Colony was launched.

It is with some pride that I state on this Maryland Day, 1956, that the world, in its turmoil of prejudices and even this free America of ours could learn much and benefit greatly from the story and example of that Colony and the great State into which it has grown—our Maryland.

The very conception of the Colony by Lord Baltimore in England grew out of a desire and a yearning for freedom—that same freedom for which oppressed peoples of the world are yearning today.

In those days, as in these, man's right to worship his God in accord with his conscience was paramount among the freedoms on which he placed the highest values.

But then, as now, rulers of tyrannical bent confused their temporal authority with power over the immortal souls of men.

Indeed they often sought to mold man's vision of his Creator in a manner to serve the earthy seats of government instead of the heavenly throne.

Even before they burn the great books and silence the great voices, the totalitarian rulers of today seek first to suspend or control the places of worship, because the freedom of religion and the God-given dignity which it inspires are incomptaible with that enslavement which decrees that the individual exists to serve the state—not the state to serve the individual.

Unhappily, when our American Colonies were founded, there were some who fled the persecutions of the Old World only to seek to establish themselves apart from their brothers and even to persecute those who would deviate from their manner of worship.

Unhappily, in this modern America, we have a law—the McCarran-Walter Act—which bars from our shores many of those—indeed, most of those—who seek haven here from the persecution of tyrants, including persecution against religion. It is a repudiation of the basic American tradition of freedom and opportunity and of faith in the individual. It is a retreat from the ideal of America as a haven for the oppressed.

Unhappily, too, we have in this land of the free men who say to other men: "You can be of our religions but not of our churches. If you want to worship as we do, you must build churches of your own. Stay out of ours."

But in the founding of Maryland, freedom—particularly religious freedom—remained more than a mere hope—more than an empty theory.

Primarily our province was a haven for persecuted Catholics—but there was then no McCarran-Walter Act here. George Calvert and his son, Cecil, welcomed and even sought settlers of other religious faiths.

Catholics and Protestants shared a chapel building at St. Mary's.

Fifteen years after the original settling, the general assembly of the Colony enacted what has come to be known as "The Maryland Act of Religious Toleration," probably the first such law in the history of the world. Written into that pioneer law of religious freedom were the descriptive words, "the better to preserve mutual love and amity" among the people.

Today, Maryland, the birthplace of religious understanding among people, under the law, has taken a place of leadership in the advancement of racial understanding under the supreme law of the land, the Constitution of the United States, and its interpretation by the Supreme Court.

And when the full story is written of these stirring and significant years in the progress of American civilization, much credit must be given to the Catholic Church for its unswerving devotion to the law and to the brotherhood of man even in those areas of the Nation where racial prejudices long had been accepted as a way of life.

Indeed, I believe that in the solution of the problems that surround the issue, the churches of the United States—all of them—must and will play a prominent role. I am happy to say that many religious leaders and groups, other than Catholic, also are recognizing this call to brotherhood.

We have not reached perfection; we have a long way to go. Indeed perfection is not the lot of mortal man—but while there are men of good will—men of concern for the

well-being of their fellows—in places of leadership, there will be progress, not retrogression; there will be hope, not despair.

Such a man is he who sits in the place of honor here tonight—your distinguished fellow-member of this great organization—my good friend of many years—Alfred E. Cross.

His is a life devoted to love for the people—to contributions of his time and substance to good causes—to compassion for the needy—to faith in the future—to unwavering hope for the constant betterment of mankind's lot.

His is a shining example of that which was pronounced by another great Alfred—another great Alfred E.—the late Alfred Emanuel Smith: "There is no room for hatred in the Catholic heart."

Certainly there is no room for anything but love in the heart of this man who, on each anniversary of his birth, instead of accepting pleasures and seeking honors for himself, gives a party for those self-sacrificing, humanity loving, devoted women of God's Vineyard—the Little Sisters of the Poor.

Surely this outstandingly successful man of business who serves as treasurer for the Baltimore Boy Scouts of America and as an executive committeeman on the board of directors of St. Vincent's Male Orphan Asylum looks to tomorrow with the certain faith of today's love.

Yes, Al Cross, the banker and businessman could plead lack of time. He could say he was too busy to be the treasurer of that distinguished dispenser of help to those who need help—the Hibernian Society of Baltimore—but there he serves.

He could be too busy to be on the executive committee of the board of directors of that fine institution of human compassion, the House of the Good Shepherd, but there he sits.

He could have pleaded lack of time when he was named to serve as fiscal officer of the Baltimore Council of the Knights of Columbus—but not Al Cross. He found the time or made the time, because the job needed to be done.

He could make his contributions and then let someone else worry about the success of the annual Catholic charity drives which mean so much to so many people in this archdiocese—but not Al Cross. He gives and then he serves.

Yes, one could go on and on telling of the good works of Al Cross about which we know—and still we would know there were many deeds of help and of kindness, of love and compassion about which we have no way of knowing—because Al Cross is that kind of man.

It was not without fine and substantial reason that he was named East Baltimore Boy of a recent year.

As a South Baltimore Boy, it gives me real pleasure to join in this tribute to the East Baltimore Boy of 1952—a great citizen of Baltimore for any year—a great Marylander and a distinguished American—Alfred E. Cross.

Peaceful Coexistence

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. FEIGHAN. Mr. Speaker, the Communist propaganda maneuver of peaceful coexistence has been pretty well exposed in recent months. Communist Party boss Khrushchev in a 6-hour directive to the 20th so-called congress meeting of the Communist Party in the Kremlin, removed any doubts that may have remained concerning the Russian trickery involved in their campaign of peaceful coexistence. Khrushchev defined the tactic of peaceful coexistence as a vastly stepped up Communist propaganda, economic, political, and cultural offensive against all of civilization. He directed that the usual Communist methods of violence be used only in those countries where the resistance to communism is strong, and that in the neutralist nations, Communist agents use the deception of the popular front and the misuse of parliamentary methods in order to take over control. Khruchchev made it crystal clear that the United States is marked for violent internal treatment by the Communist conspiracy rather than the conciliatory and friendly approach the Kremlin leaders have been claiming to have for the people of the United States.

I should like to take this occasion to remind my colleagues and the American people that only a relatively few weeks ago some American leaders were suggesting that we extend the friendly hand to the Communist proposal of peaceful coexistence and that we could not possibly lose by giving it a try. I trust such unsupported hopes have now vanished against Communist Party boss Khrushchev's reading his ultimatum to the world.

Early last fall I was asked a number of questions by a European publication put out by the anti-Bolshevik bloc of nations. These questions had to do with peaceful coexistence. These same questions were put to President Singman Rhee, of Korea, Lord Robert Vansittart, Maj. Gen. J. F. C. Fuller, Mr. John F. Stewart, and President Ku Cheng-kang.

The answers to these questions were printed in the October edition of the ABN Bulletin and I believe they are most pertinent today in view of what Communist Party boss Khrushchev had to say about the realities of peaceful coexistence with the Russian Communists.

I, therefore, under unanimous consent, ask to have these answers printed in the RECORD as a part of my remarks:

OUR INTERVIEWS: COEXISTENCE OR A POLICY OF LIBERATION?—PRESIDENT SYNGMAN RHEE, LORD ROBERT VANSITTART, MAJ. GEN. J. F. C. FULLER, MR. JOHN F. STEWART, CONGRESSMAN MICHAEL A. FEIGHAN, AND PRESIDENT KU CHENG-KANG EXPRESS THEIR OPINION ON THE BURNING QUESTIONS OF THE DAY

As was to be expected, the Geneva Conference failed to clear up the present confusion in the international political situation. The unfortunate and erroneous opinion which is held by various Western statesmen on the subject of the coexistence policy prompts us to discuss the most interesting problems connected with the change in Soviet tactics, in the columns of our A. B. N. Correspondence. Accordingly, we addressed ourselves to various prominent personalities in the free world and asked them to give us their opinion, in the form of an interview, on the burning political questions of the day. They most kindly complied with our request, and we are now, therefore, in a position to start this series of interviews, as planned, and have pleasure in publishing the six interviews to reach us, which come from well-known personalities in all the world.

These interviews are published in the order in which we have received them.

QUESTIONS PUT IN THE INTERVIEWS

Question 1: What is your opinion of the Geneva Conference and the aims of the Soviets in connection with this Conference?

Question 2: Do you share the opinion of the majority of responsible politicians in the West, that the Soviets have abandoned their plans to rule the whole world?

Question 3: Do you think that the coexistence policy is an effective means of preventing an atomic war?

Question 4: Do you consider that the conception of the A. B. N. is right in maintaining that national revolutions in the Soviet sphere of influence would be the way to avert an atomic war?

Question 5: Which policy would you suggest to the statesmen of the Western World, in order to check the advance of Russian imperialism, that is to say to confine it within Russian ethnographical boundaries, and to bring about the liberation of all the nations that have been subjugated by Russia?

Question 6: Do you think that the October conference of the Foreign Ministers is likely to lead to any positive results in this respect?

Question 7: What is your opinion of the military and political situation in the U. S. S. R.?

Question 8: Do you think the assumption correct, that the Soviets have resorted to their coexistence policy under pressure of the national fight for freedom of the subjugated nations and under pressure of the economic crisis and the unsettled conditions in the Kremlin, and in order to put a stop to the resistance movements and to overrun the Western World, once they have managed to gain a breathing space?

Question 9: What is your opinion of the present situation in Asia in view of the Russo-Chinese coexistence policy and the hireling role of Nehru's India?

Question 10: What is your opinion of the significance of the national liberation movements behind the Iron Curtain, in the world fight against Bolshevism?

Question 11: In view of the present international political situation what tasks would you assign to the A. B. N. in the free world?

THE FREE WORLD MUST BE READY AND WILLING TO FIGHT

(By Syngman Rhee, President of the Republic of Korea)

1. In my opinion the Geneva conference was successful for the Communists in that they succeeded in selling the free world the idea of a bogus soft peace. They are making great propaganda use of photographs and newsreel footage showing "Summit" figures smiling together in friendly relationship, thus leading captive populations of satellites and their own brain-chained people to believe that the democracies have made peace with communism and have abandoned intentions of liberating them. To counteract this widely accepted belief, President Eisenhower and Vice President Nixon have publicly declared that the United States will not accept a status quo peace, but will insist that Germany and Korea must be reunified under governments of their own choosing. I regard any negotiations with the Communists as simply opportunities to make concessions to them and to sign agreements which they have no intention of keeping.

The Foreign Ministers' Conference cannot inspire much hope of success with the alternative course already ruled out before it convenes. I believe it is essentially wrong to approach the problems with a preliminary announcement of a determination to be friendly and an absolute renunciation of force, no matter what happens.

Russia and Red China have blood on their hands. They have murdered millions of innocent persons. They have broken solemn promises. They hold people prisoner and occupy stolen territory with the arrogance of the ruthless and powerful. They have not repudiated their goal of world conquest. Action, not words, is called for.

2. I do not believe that free world statesmen honestly believe the Communists have changed their spots. The Reds have added 800 million captives to their empire in the last decade and have bluffed the United States and the United Nations into negotiating an unsatisfactory truce in Korea and surrendering millions of Indochinese into Communist hands. Perhaps when things are going badly an aggressor might lower his aims, but it is the free world that is on the defensive and that is talking compromise and appeasement.

3. Coexistence could prevent an atomic war. So could outright surrender, but it would be too obvious. Yet coexistence would be only a slower route to the same end.

4. Before answering this question, let me say I dislike use of the terms East and West. We of the Far East are used to these terms in connection with races and do not stress their differences. We do not regard Soviet Russia as East and we do consider ourselves allied with what would be called West. We prefer free world and the Communist bloc or other applicable designations.

The free world must be ready and willing to fight for its own and for the freedom of enslaved peoples; the stage has been passed where words can have any effect. The major problem is how to reestablish this conviction worldwide and harden Allied determination.

I advocate that (1) those countries which are willing should join in a proclamation that areas held unjustly and in violation of treaties are to be liberated by whatever means are required; (2) that an absolute embargo be imposed on all commercial and financial dealings with Communist nations until they keep promises they already have made; (3) that the Neutral Nations Supervisory Commission, which allows Poles and Czechs to operate as spies in South Korea to prepare the Republic for Communist conquest, be eliminated; (4) that the Communists be warned that no further territorial aggression will be permitted, anywhere; (5) that withdrawal of Communist forces from areas south of the 38th parallel in Korea be ordered, to forestall building up of aggressive bases and interference with Han River navigation; (6) that the Bamboo and Iron Curtains be lifted and restrictions on communications be ended; (7) that Communist aims for world domination be openly renounced in word and deed; and (8) that no further conferences be held with the Communist powers other than to confirm agreements already found to be practicable through informal understanding.

5. I would suggest that each government in the still-free world take the issue of freedom or slavery to the people in secret ballot and those countries voting for freedom be willing to fight for it if necessary; in any event they should stand together behind an ultimatum to the Communists as outlined in the reply to the preceding question. I have faith in the people and blame the hesitancy of some free-world leaders on their lack of trust in the people's wisdom and courage.

6. No answer.

7. Like everyone else, I hope that Soviet Russia's political situation is precarious and near total collapse, that a new era—with the people in free, secret elections choosing their government from independent candidates—is imminent. Of course, since Stalin's death there have been changes, but from this distance facts are difficult to weed out from rumors. However, it appears obvious the ruling clique are dyed-in-the-wool followers of the party line; therefore, their personal rivalries are of little importance internationally.

Militarily, great publicity has been given to the announced reduction of Russia's army, effective by the end of this year, of 640,000 men, though nothing was said of the size of the force still mobilized. Intelligence reports reveal Soviet Russia's army still is larger than Britain's and the United States' combined. Further, top United States militarists say Russia's active navy is larger than Britain's and her air force is close to America's strength and constantly growing. Her pile of atomic weapons is sufficient: This in a country that professes to be peace-loving while causing tensions at a dozen scattered points simultaneously.

8. The Russian program of concentrating on heavy industries for the war chest has prevented production of daily necessities ,and the public's need might have been an influence in the about-face. However, if by feigned friendliness Russia can obtain imports of things she has not been "wasting" materials and labor on, and at the same time allays free world suspicions to permit a subsequent surprise attack, it would be logical. I would not want enslaved peoples to expose themselves to execution by premature rebellion—as happened more than once—and thus prolong the tyrants in power. But from what I have learned from ex-captives of the Communist in Korea, there is deep unrest everywhere behind the Iron Curtain, smoldering under suspicion and fear of detection through the insidious secret police and informer upheaval. More confidence must be built up in the necessary help of the free world powers, and such confidence is dependent upon their determination.

9. I expect the crisis in the world situation to be reached in Asia, not Europe. I hope the United States will awaken to the dangers of coexistence and I feel that some of her allies are responsible for what concessions she has made to date. It now appears that pressure to get Red China a seat in the United Nations has abated and no effort will be made to do so for another year. This smacks of a secret agreement, in that Chinese Communists' hands are still dripping blood and the free world would not consent to admitting an aggressor before he takes time to change his clothes. Further, if through coexistence the Communists can obtain control of the countries they desire peaceably, why should they undertake to fight? Certainly the status quo will not last, nor can we expect a real peace until we repulse and punish the aggressors.

The Soviets Have Abandoned Nothing

(By Lord Robert Vansittart, P. C., G. C. M. G., G. C. B., M. V. O.)

1. The Geneva Conference was a success for the Russians.

2. The Soviets have abandoned nothing, neither their aims nor doctrines.

3. There is no present danger of an atomic war. The Communist propaganda about peaceful coexistence is a soporific rather than a preventive.

4. There could be no greater mistake than to stimulate revolutions without the means of supporting them.

5. The Soviets are now in difficulties. I believe that communism is so inhuman and also in the long run so impracticable that it will ultimately break down. This is the best hope for the liberation of the subjugated nations.

6. Unless there is a complete change in the Russian attitude the conference of Foreign Ministers is unlikely to lead to any appreciable result because—among other reasons—the Russians have already declared that the key topic, Germany, is not "ripe" for discussion.

7. The U. S. S. R. is undergoing a severe crisis of manpower.

8. Owing to this crisis the Soviets are in no position to wage a war and are therefore playing for time.

9. The Chinese Communists are no more sincere than the Russian Communists in their talk about peaceful coexistence, though the doctrine suits them well for the present. The absence of sincerity is well illustrated by the fact that they have now been talking for nearly 3 weeks with the Americans about the liberation of prisoners—a question which could easily have been settled in a day.

10. I am not in a position to judge with sufficient knowledge and authority.

11. Continue the process of enlightenment. There is nothing else to be done at present.

The Coexistence of Violent Incompatibles Is the Father of War

(By Maj. Gen. J. F. C. Fuller, C. B., C. B. E., D. S. O.)

1. The factor which governed the Geneva Conference was the H-bomb. Now that both sides have it, neither dares to use it unless its national survival is directly threatened. This means that the H-bomb is not a deterrent of all types of war, but only of one type—the war for which it is made. Therefore, in another war, as long as the national survival of one or other of the groups of belligerents is not challenged, there is nothing to prevent the recurrence of conventional warfare. According to the policy recently made public by the Kremlin, the Russian aim is clearly defined. It is the withdrawal of the NATO forces from Western Germany; and it may be assumed that in the intimate conversations it was argued that, faced as these forces would be by atomic war, their value was highly problematical. Further, that were Russia to invade Western Germany, she would at once be faced with the H-bomb. But would she? For the snag in this argument is that such a move, which in all probability would be made by proxy, as it was in Korea, would not appear to the popular mind of the western democracies to be a threat to their national survival, and therefore not worth the risk of an atomic war. The complete somersault performed by the Kremlin, which has been acclaimed in the West with such puerile enthusiasm, is nothing more than a repetition of Lenin's famous maxim—"1 step back to gain 2 steps forward."

2. On the contrary, my opinion is that Moscow is attempting to fortify and not abandon her plan of world revolution, and though her tactics have changed, her strategy remains constant. We are back to the days when Stalin disbanded the Comintern. Having failed to keep Western Germany unarmed by bluster and threat, the Kremlin has now turned to wooing and cooing. Nevertheless, whether scratching or purring, a cat remains a cat.

3. The coexistence of violent incompatibles is the father of war, whether atomic or otherwise. As Abraham Lincoln said in 1854: "A house divided against itself cannot stand, it cannot endure half slave and half free * * * it will become all one thing or all the other." And this is as applicable to the world in general as to a nation in particular. Further, it is supported by Lenin's prediction of the inevitable clash between the Bourgeois States and the Soviet Union.

4. The problem is not atomic war, it is the Russian dominion of the world either by war or by subversion, and the direct way to avert it is the policy of the ABN—namely to liberate the subjugated and satellite peoples, and thereby annihilate the Muscovite Imperium.

5. The policy I should suggest is: (I) Fix upon the annihilation of the Muscovite Imperium as the long term political aim. (II) Enter into close collaboration with the

ABN. (III) Create an anti-Communist coalition of Free Peoples, under a joint political and economic council to coordinate their military requirements and economic needs. Its most important tasks should be: (1) To assess military potentials within the financial means of each nation, and (2) to develop new world markets and so avoid a with Russia and her satellites.
scramble for trade by individual nations

6. No. In all probability it will lead to another conference and yet another. "If you do not wish a man to do a thing," once wrote Thomas Carlyle, "you had better get him to talk about it, for the more men talk, the more likely are they to do nothing else." The Russians are adepts in delaying a problem indefinitely by confusing arguments, by verbal acrobatics and double-talk. What they risk losing on the diplomatic swings they make certain of gaining on the propaganda turnabouts.

7. As long as half the personnel of the Russian Army is recruited from the subjugated peoples, Russia's military strength is extremely fragile. And as long as this remains so, the political situation within the USSR will be precarious. The strength of a fortress does not only lie in its walls, but above all in the determination and loyalty of its garrison. The Kremlin is not blind to this, hence the constant deviations in its political tactics.

8. Yes. I have nothing to add to this clear summary of the Soviet position.

9. For some time to come China will be dependent on Russia for military and economic support. But as she becomes more and more industrialized, the present coexistence of compatible political systems will give way to friction between ever-increasing incompatibles. It therefore behoves the western nations to elaborate a long-term policy toward China. Western policy should aim at detaching China from Russia. At present the short-sighted American support of Chiang-kai Shek bedevils the issue. As to Nehru, little attention should be paid to him, he is no more than a slippery oriental eel wriggling on a volcano—the ever-increasing over-population of India.

10. The significance of these movements is that they are the main weapons the West should sharpen in order to overthrow the Bolshevik imperium.

11. I should first create a western psychological warfare general staff as the military instrument of the joint political and economic council (see answer 5). Secondly, I should rope in the A. B. N. as a section of its intelligence and operational staffs. Its task would be to collect all possible information on conditions behind the Iron Curtain, and suggest plans of how to stimulate opposition in the occupied and subjugated countries, as well as elaborate schemes for the day when the time is ripe for open revolt.

Coexistence Between Communism and Civilization Is Impossible

(By John F. Stewart, chairman of the Scottish League for European Freedom)

1. My opinion of the Geneva Conference is that it was a social event, a glorified picnic at the expense of the taxpayers of the various countries. The reason that the Russians attended was to gain more time—their usual need. They also wanted to demonstrate to the subjugated peoples the extreme friendliness and support of the western nations for themselves. As far as my information goes, the unrest in the non-Russian peoples of the U. S. S. R. and the satellite countries was getting beyond the power of the MVD to crush. Nothing could have helped Moscow more than adding to the depression and loss of hope of these peoples than the show of western friendliness; it makes it much easier for the MVD to cope with the unrest. The Russians knew they wanted that and they maneuvered the West into supplying the weapon. Sir Anthony Eden added strength to the weapon by proposing his pact of security, thus enabling Russia to hold on to all her plunder and making the West an accomplice in the oppression.

2. I am quite certain that Moscow has never abandoned for a moment the intention to conquer the world, and I doubt if many "responsible politicians believe it. But none has the courage to speak out, but obediently obeys the party whip. The friendly attitude of Sir Anthony Eden to the most atrocious power this world has known is beyond my ability to explain.

3. I do not believe coexistence is possible or that the Russians intend it. Coexistence between communism and civilization is impossible, for one would perish. The phrase was invented by Lenin with the usual Russian objective of gaining time for some subjugating plan he had in mind, and was not quite ready for. In any case, no atom or any other policy will prevent war—it never has. Each nation is feverishly trying to provide more and more effective weapons than any other, showing that, in reality, none trusts Russia. And, as far as I have ever read, there has never been an arms race in history which has not ended in war.

4. I have always held the opinion that disintegration from within the U. S. S. R. is the only way to avoid a world war, and the only way to accomplish this is by national revolutions within the Soviet Union; these revolutions must take place within all the countries dominated by Moscow, whether formally within the union or not. I believe that, with a sane and firm western policy, they would succeed.

5. Russia professes to be horrified at the policy of other powers of colonialism. The civilized powers should insist on Russia applying this policy of anticolonialism to themselves. In past days, colonialism by the white powers meant taking control of immeasurably inferior races, and, as far as my long experience goes, and I have had much, it was for the uplifting of these races. In the case of the Soviet Union, they apply the policy, in a brutal form, to races far in advance of themselves in civilization, culture, and all that is human, and try to bring all down to a level never before thought of. The western powers should see that Russia gives the only possible test of sincerity by at once and completely evacuating every Russian soldier and civilian from every non-Russian country it dominates and leaves it completely free and independent. The Russians should be confined to their own large ethnographic country and turn their attention to developing it. Till then they should be outside the pale—not accepted in the family of civilized nations. There is no other way of bringing peace to the world.

6. The meeting in October of the foreign ministers will have no result other than gaining more time for Russia or the West making another disastrous surrender to Moscow. Personally I believe there will be nothing but further procrastination.

7. I am not an expert in military affairs. But my opinion, for what it is worth, is that Russia is not at the moment strong, although she professes to be. She is quite aware of the internal weakness by the non-Russians and the fact that the non-Russians in the Red Army will not fight for Moscow if their countries are assured of independence, and in this the West can help by even moral support. Pilsudski, who knew the Russians if anyone did, said "When the Russians say they are strong, they are weak; when they say they are weak, they are strong." Politically, the U. S. S. R. is weak internally.

8. I think the assumption stated is absolutely correct. To my mind there cannot be a doubt that the present gracious policy of Moscow is caused by the national fight for freedom inside the U. S. S. R. and under pressure of the economic crisis, and, I believe, a struggle in the Kremlin for sole power. And also to weaken the resistance movements. The present gracious and conciliatory showing of the Russians is as clearly as possible Lenin's "one step backward to gain two steps forward." The theatrical proceedings at Geneva were the one step backward, and it is difficult to believe that grown men could be so deluded.

9. I am afraid my opinion on the situation in Asia would not be of great value. I believe that Nehru is, at the very best, a dangerous demagog of great value to Moscow. I sympathize with Dr. Syngman Rhee and his South Korea, which has been deserted by the West, while the North Koreans, that is, the Russians, are building up strength for an attack on the South. China has been betrayed by the West to the Communists. I do not know China, but I have many friends who have spent a lifetime there in business or missionary work, and all agree that the Chinaman is the reverse of a Communist, and that the great population of the Chinese peasants has been subjugated by an insignificant number of Communists supported from Moscow.

10. If there is any sincere desire among western politicians to conquer communism, which I doubt, the national liberation movement behind the Iron Curtain is the key, and the only key, to accomplish that end. All other talk is mere drivel.

11. Beside the modest Scottish League, ABN is the only organization in the world, as far as I know, on the right lines to bring freedom and peace to the world. It has many enemies, some of them professing to work for similar objects. I do not see it can improve the lines on which it works unless it were able to put an end to the insane jealousies which, unfortunately, exist within every single nationality in exile. This is ruinous and defeats the struggle for freedom. If ABN could induce all nationalities to cooperate for the one object—the restoration of independence to all—it would accomplish half its undoubted aim. After they had independence, they could form their different parties, but surely the one single object just now is independence. I am sure that if all would unite it would make a tremendous impression on the Western World and would be difficult to oppose. Disunion on comparative trifles is one of the best weapons in the Soviet arsenal.

The A. B. N. Shall Continue the Advocacy of the National Independence Movement

(By Congressman Michael A. Feighan)

I feel these are good questions because they go right to the basic issues which we Members of Congress must face up to in the dispatch of our duties toward our constituents and our Nation. In every sense of the word, I consider that your questions have created the basis for an interview and therefore the answers to them are in the attachment to this letter.

Permit me to take this occasion to wish you and your colleagues every success in your efforts to expose and to destroy the menace of communism and to bring to the suffering people of all the Communist occupied nations the blessings of individual liberty and governments representative of the will of the people expressed by the secret ballot and through the multiple party system.

1. Before the convening of the Geneva Conference on June 5, 1955, I made my views public on the floor of Congress as to what I thought the aims of the Russian Communists would be at that Conference and what position I felt the United States representatives should therefore take. My statement in this matter is as follows—

First, we must regard such a conference as nothing more than an opportunity for us to spell out for the entire world what we stand for and what we stand against. In this connection, we should make it clear that we stand for the rights of all nations, large and small, to national self-determination, and the natural rights of all people to the basic freedoms. We should make it equally clear that we stand unqualifiedly against any form of colonialism or imperialism and in particular, we will never acquiesce to the new Russian colonialism which is being carried out under the camouflage of Communist imperialism.

Second, as a logical followup to this first condition, we must demand that the Communist-enslaved non-Russian nations be permitted to determine their own destiny by the use of free elections, including multiple political parties, the secret ballot, together with international supervision to guard these basic requirements. If we fail to do otherwise, the good people of Estonia, Latvia, Lithuania, Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, Albania, Ukraine, Byelorussia, Georgia, Turkestan, Idel-Ural, Armenia, Azerbaijan, Cossackia, and Russia will look upon any United States participation in a conference at the so-called summit as the failure of the last great hope of mankind and a sellout of all those moral and political principles which the United States has stood for during the 179 years of our national existence.

Third, the Russians must agree to dismantling and completely removing the Iron Curtain which they have constructed from the Baltic Sea to the Pacific Ocean. They must remove the minefields, the barbed wire, the vicious dogs, the special squads of machine-gunners, and all other unnatural barriers which the Russians have concocted in order to divide the world into separate parts. The Russians must agree without reservation that the Iron Curtain is the basic obstacle to true peace and freedom.

Fourth, we must abide by the proven principle of open covenants openly arrived at. There can be no secret understandings reached at such a conference. To insure against this possibility, the administration should avoid being party to any joint communique being issued from such a conference, because the constant Russian demand for unanimity would mean that any joint communique would serve primarily the Kremlin interests. President Eisenhower would be wise to issue his own communique, on a day-to-day basis, covering developments and any successes or failures that might come out of such a conference.

Since the end of the Geneva conference, it is all the more apparent that the Russian Communists sought to use this conference as a means of putting the free world to sleep to gain badly needed time, in order to cope with its most serious internal problems and to cause the free nations to relax their defense efforts—particularly the dismantling of NATO and delaying disarmament of free Germany. In summary, therefore, it is now more clear than ever that the Communists are seeking to lull the free people of the world into a deep slumber because they are now in the weakest position they have ever been in since the days of World War II when the German wehrmacht stood at the gates of Moscow, Stalingrad, etc.

2. There can be no doubt that the Communists have not and will not change their central objective of world domination, nor will they in any way weaken the conspiratorial apparatus which they use to destroy and occupy the non-Russian nations of the Geneva Conference. I disagree with you that the majority of responsible politicians in the West believe that the Communists have abandoned their plans to rule the whole world. Speaking only for responsible political leaders in the United States, I can assure you that we have not in the least been fooled by this latest Communist maneuver. I also recognize that irresponsible politicians and other opportunists in the United States may hold the personal opinion that the Communists have abandoned their plans to rule the whole world. I assure you that such people constitute but a very small percent of the American people and in no way do they represent the opinion of the average man on the street in the United States. Responsible political leaders in the other free nations of the West can best speak for themselves and the opinions of their people.

In this connection I should like to point out that the latest maneuvers of the Russian Communists in the international arena follow strictly the tactical line laid down by Malenkov in his speech to the 19th congress of the Communist Party. A review of that lengthy and crude discourse will show that the Russians have a critical need for time and that there is grave fear the free nations might be stirred up to a point where they would demand justice and liberty for their enslaved fellow men. Moreover, Malenkov called for peaceful coexistence and then defined it as a drug to cause nations to destroy their national independence and integrity. There can now be no doubt but that this policy line of the Politburo, laid down at the 19th party congress, is more active than ever before.

3. I firmly believe that if the West is lulled into an era of peaceful coexistence with the Russian Communist conspiracy, the dangers of an atomic war will thereby be multiplied a hundredfold. It is my opinion that while the Communists are now pleading a policy of peaceful coexistence, they will carry out a sneak attack against the United States and other free nations just as soon as they feel they have a 50-50 chance of winning an all-out atomic war. It is also my opinion that the only practical way to prevent an atomic war is for the United States and the other free nations to engage in an all-out political offensive against the conspiracy of communism. Such a political offensive would expose the many vulernabilities of the Russian Communist empire, utilize all the assets which are the gifts of freemen, and thereby bring about the complete downfall of the international Communist conspiracy. That is the only course which gives hope of preventing world war III and at the same time preserving our civilization.

4. I have long maintained that the heroic struggle of the captive non-Russian nations of the Communist empire for national independence was the greatest asset we have toward attaining our never-changing goal of peace and freedom for all the people of the world. It naturally follows that all-out support for the national revolutionary movements within the Russian Communist empire is the most dynamic method for prevention of atomic war. The only ones who could possibly want an atomic war are those who wish to further colonial and imperialist aims against other nations and people. We Americans who want only to establish a world in which all nations have sovereign rights and all individuals possess liberties and freedoms demanded by their human dignity, obviously do not need an atomic war to advance our objectives. It follows that when the United States has attained these stated objectives, the fear of atomic warfare will have been eliminated.

5. I feel that the most effective program to eliminate Russian imperialism is to secure the national independence of Russia. The Russian people have been too long denied their national independence by chauvinistic and super-racist intellectual thought and action which has been the dominant characteristic of Moscow life for more than 300 years. The Russian people have been the exploited victims of these antidemocratic forces. When the Russians have been given their full and unqualified national independence, it will naturally follow that the enslaved non-Russian nations of the Soviet Union, as well as the other non-Russian nations enslaved by Russian Communist imperialism during and after World War II, will then enjoy an equal sovereignty and national independence.

6. It is difficult to speculate at this date on the outcome of the October conference of the foreign ministers, because sufficient time has not elapsed to permit some of the slow-thinking and politically inept people who participated in the Geneva conference to understand the full implications of the Russian maneuvers. I should like, however, in this connection to point out that I shall continue to urge the President of the United States and the Secretary of State to use every means at their disposal to advocate the rights of all nations, large and small, to national self-determination, and to demand that the Russian Communists dismantle the Iron Curtain which now divides humanity and to require the Russians not only to destroy their world conspiratorial apparatus, but to provide the leaders of all free nations with the names of their spies, saboteurs, and other covert agents so that appropriate criminal proceedings can be taken against them.

7. I believe the political situation within the U. S. S. R. is now at a critical boiling point. While there is a great deal of talk about "rule by committee" within the Soviet Union, and claims that the present heads of the conspiracy are becoming more tolerant in their approach to the people, we must never lose sight of the fact that political tensions within the Russian Communist empire are responsible for any and all concessions that may have been made by the regime. The masters of the Kremlin have not been able to destroy the drive for national independence in any of the non-Russian nations of the Soviet Union or in any of the non-Russian nations added to the empire during and since World War II. The hard, cold facts are that national tensions within the Russian Communist empire present the most overriding problem confronting the masters of the Kremlin, and that the much advertised crisis in the fields of agriculture and industry are nothing more than reflections of those national tensions. With respect to the military situation within the U. S. S. R., I am convinced beyond doubt that the Red army is still completely under the control of the Russian Communist Party. This control is exercised by political commissars over whom Voroshilov presides, as he did during the World War II years. It is interesting to me to note that the Kremlin no longer permits "national elements" within the Red army as existed before World War II, but that emphasis has been on the "multinational elements" all of which have Russian officers at their command. Also of interest to me is the fact that the Red army garrisons along the Iron Curtain are over 90 percent ethnic Russians, whereas the Red army garrisons in the Far East show a majority of non-Russians, but still controlled by a Russian officer corps. The political and military within the U. S. S. R. are so closely linked that discussions of any real differences between them must be considered as a game for the theorists and academicians.

8. The facts of history and the developments of most current events confirm the asumption that the Russian Communists have been compelled to adopt a policy of peaceful coexistence because of the increasing pressure of the non-Russian nations in their fight for national independence. Moreover, I believe that the economic crisis in the

field of agriculture and industry is primarily a reflection of the resurgence of nationalism. The seeds of destruction for the Communist regime which Beria unwittingly nurtured when he sought to attain total power through the support of the national elements within the non-Russian nations are now beginning to bloom all over the Russian Communist empire. It is, of course, obvious that the Kremlin is seeking a breathing spell in order to increase its efforts to destroy the resistance elements within the empire, just as it is equally obvious that the Russians will step-up their drive for world conquest as soon as it is again opportune for them to do so.

9. With respect to the Russo-Chinese coexistence policy, I should like to point out that the Russian Communists exercise an exacting control over the Peiping regime. While the front men for the conspiracy in China are ethnic Chinese, the facts are that the vast majority of them are Soviet citizens. Moreover, Russian Communists sitting as "advisers" in Peiping, are the real politburo of the Chinese Communist regime. It is clear therefore that Moscow will continue to cause trouble in Asia by using their Chinese stooges while at the same time they are beaming sweetness and light in Europe. With respect to Nehru, who has made a significant contribution to the Russian Communist maneuver in Asia, he unfortunately, is more to be pitied than censored. Nehru is a sick man who is incapable of leading the people of India toward the goal of a permanent and flourishing national independence. Notwithstanding Nehru and his many faults, the national independence movement which is sweeping all of Asia will eventually turn its full force against the long-standing colonial and imperial policies of Moscow.

10. The national liberation movements active behind the Iron Curtain, enjoying as they do the support of the overwhelming majority of the people, have forced the Kremlin to plead for time and to readjust its schedule of the plan for world conquest. These same movements will eventually lead the way in pulling down the house of cards which we know as the Russian Communist empire.

11. In view of the present international political situation, I would urge that the A. B. N. continue its all-out advocacy of the national independence movements within the Russian Communist empire and for the establishment of governments representative of the will of the people—expressed through the secret ballot and a multiple party system. The support of those objectives is in keeping with the natural law and surely is consonant with the age-long struggle of mankind for justice, individual liberty, and peace.

THE POLICY OF COEXISTENCE WILL LEAD THE WORLD TO AN ATOMIC WAR

(By Ku Chang-kang, president of the Asian Peoples' Anti-Communist League, Republic China, Taiwan)

1. Since we have the United Nations we don't see any need for a high level conference to solve international problems. This is a sign of power politics and secret diplomacy and is therefore detrimental to the interests of the people of the world. The Soviet Russians always use conferences as a booby trap to sell their intrigue of peace offensive, which is necessary for them to gain more time to prepare for war and undermine the free world's solidarity. We must indicate the very fact that the intrigue played by Bulganin and Khrushchev is less skillful than that by Stalin and is explored clearly before the eyes of the free world. Thus I believe the leaders of the free world will not be trapped.

2. To believe that Soviet Russia will abandon her plans to rule the whole world is just the same as to believe that a fox will do no harm to chicks. Recently the Soviet imperialists are making gestures for peace and saying many high sounding words of peace. However, when we examine their plans for the sovietization of the Chinese mainland and the preparation for war on the mainland, we can see clearly that the Soviet imperialists want to unite the Communist strength in Europe and Asia for the domination of the whole world. Therefore, the Soviets did not abandon their original imperialistic designs, but on the contrary, by gaining time, they are still marching toward their goal of world domination.

3. On the contrary, the policy of coexistence will only lead the world to an atomic war, because Soviet Russia will be able to increase atomic stock for a surprise attack.

4. We agree. However we would like to make clear that the internal trouble in the Soviet sphere of influence will also include a struggle for freedom and subsistence. If this struggle could have the full support of the West, the Soviet regime would be crushed without the necessity of a world war.

5. Speaking of the situation of Asia, we have been saying that the most effective measure of relieving the whole of Asia from the menace of communism is to render full support to Free China's plans to return to the mainland. Speaking of the situation of the world, we regret that the American policy of liberation of the Iron Curtain has not been effectively put into action. The United States was successful in pressing Soviet Russia to remove the Iron Curtain at the summit conference at Geneva. More steps forward in the direction of liberation are expected.

6. Impossible. In the forthcoming Conference of foreign Ministers the questions of German unification, disarmament and prohibiting atomic weapons will remain deadlocked as before. The deadlock as such is of course what the Communists want. Time is favorable to Soviet Russia in the sense that they will be able to suppress the internal crisis and to create more menace to the free world. It is doubtful whether the western statesmen will see clearly the intrigue of Soviet Russia and adopt appropriate measures against it.

7. Because of a deficiency in economical war potential as well as atomic weapons, Soviet Russia can hardly launch an all-out war. But a surprise attack is very possible. The latest development of Russia's air force may well indicate this. The weak point is in the political side. Plural leadership under Krushchev and Bulganin and others can't last long. The showdown will probably be around the 20th plenary meeting of the Communist Party. Judging from this another big purge is almost in sight.

8. I am in full agreement with this statement. One more reason for the Soviet delay in launching war is its unpreparedness for it, militarily as well as economically.

9. The idea of coexistence and neutralism, by which some Asian people are fascinated, cannot fool the majority who are victims of the Communist aggression. The formation of the Asian Peoples' Anti-Communist League is a big step forward in this direction. If the western leaders will do no more things which eventually undermine anti-Communist power over the Asian peoples, the whole picture of the anti-Communist movement in Asia could be brighter. The resist-tyranny cases in evidence more and more on the Chinese mainland may be explained as one of the signs.

10. The anti-Communist struggles inside and outside the Iron Curtain are indivisible. Of course we should do our utmost to tear down the Iron Curtain from within so that a new peak of the anti-Communist campaign can be expected.

Celebration of Republican Day in Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 26, 1956

Mr. WILEY. Mr. President, last Tuesday, the State of Wisconsin celebrated Republican Day.

It marked the unforgettable occasion when on March 20, 1854, in a little white schoolhouse at Ripon, Wis., the Republican Party was born.

In the years that have elapsed since then, the Republican Party has been the dominant politicaly party of the State in which it was born, for 90 out of 102 years. It is only natural, therefore, that Wisconsin should be particularly proud of the Grand Old Party, and that it should honor its birth at Ripon through the passage of appropriate resolutions by the State Legislature of my State, and through a gubernatorial proclamation which followed.

I have in my hands the text of a most interesting historical article from the March 16 issue of the Ripon Press. It describes the birth of the Republican Party, and it elaborates on the history of Republicanism in my State.

I may say that credit for the idea of Republican Day goes to Mr. Pat R. Cuda, of Milwaukee.

I ask unanimous consent that the text of the Ripon Press Article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPUBLICAN DAY MARCH 20 BECOMES A REALITY

(By Paul C. Richards)

The Republican Party, which was born here in the little white schoolhouse on March 20, 1854, has been the dominant political party in Wisconsin for 90 years of its 102 years of existence, but during that long span of time not one single thing has ever been done to point to proper official and legal recognition to either the party or the birth.

That old story—for want of a nail a shoe was lost, for want of a shoe a horse was lost, for want of a horse a rider was lost, for want of a rider a message was lost, for want of message a battle was lost—was the exact position of both Republican Day and Ripon was in until April of 1955.

Because of Maj. Alvan E. Bovay's perseverance and active participation his message was not lost for want of a rider for he carried his own message and thereby won the battle that resulted in the birth of the Republican Party.

Just 101 years and 1 month later, the job that Major Bovay started came to an official conclusion. As a result of his efforts the Republican Party was born, and as a result of that birth Republican Day was originated. And now March 20 of each year beginning with this year will be known as Republican Day in Wisconsin.

CUDA SPONSORS RESOLUTION

The 1955 legislature, in making the official conclusion, passed a joint resolution sponsored by Pat R. Cuda, a Milwaukee public relations man active in Republican affairs,

that requests the governor to annually proclaim March 20 as Republican Day.

Ripon is cited in the resolution as the actual birthplace of the Republican Party. The little white schoolhouse where the blessed event took place remains intact, and is situated on the same corner lot as the famous Republican House.

Cuda said he originated Republican Day because: (1) Wisconsin has never given proper recognition to the fact it was the birthplace of the Republican Party during the 101 years since its birth; (2) to officially and legally establish the fact that the Republican Party was born on March 20, 1854, and that the actual birth took place at Ripon, Wis.

On April 15, 1955, when the senate concurred on the joint resolution, senate majority floorleader Paul J. Rogan made this statement: "There is no question in my mind that Wisconsin down through the years has missed a terrific public relations bet, being the birthplace of the Republican Party."

TWENTY-FIVE GOP GOVERNORS

Since the birth of the Republican Party, Wisconsin has had 25 Republican governors. And from "Abe to Ike" there has been 12 Republicans elected as chief executives of this great Nation.

The proceedings of the famous political meeting in the little white school house received very little publicity in the Wisconsin press at the time. Thus this story is a good place to report the results of the research concerning the Ripon blessed event.

GREELEY AGREES ON NAME

In 1853, Major Bovay was visiting with Horace Greeley, editor and publisher of the New York Tribune. Bovay mentioned the word "republican" as an adjective, but Greeley replied that "republican" as a noun, would be a good name for a new political party.

Greeley told Bovay, "The name, republican, for a political party will serve all purposes, present and future—the only one that will live and last." (Greeley later became a member of the new party and helped to achieve Lincoln's nomination in 1860.)

One year later, on March 20, 1854, Major Bovay changed the word republican from an adjective to republican as a noun. He added the word party and together they spelled out Republican Party.

Later that same day, a meeting was held in the little white school house. Of the 100 eligible voters Major Bovay had invited, 53 showed up.

TOWN COMMITTEE DISSOLVED

A committee of 5—3 Whigs, 1 Free Soiler, and 1 Democrat, was appointed to consider Major Bovay's proposal for a new political party, the Republican Party.

Prior to the committee of five going into executive session, by a formal vote the Free Soil and Whig town committees were completely dissolved.

Major Bovay in describing the historical meeting later said: "We came out of it Republicans, and we were the first Republicans in the Union."

Prior to the meeting, Major Bovay had been a prominent Whig. And to this day the Republican Party has never properly honored its founder, nor has the city of Ripon. This story, therefore, is dedicated to Major Bovay and to the 53 persons who attended the historical meeting and to all of their descendants wherever they may be at this time.

An attorney and educator, Major Bovay served with the 19th Wisconsin Regiment during the Civil War. Prior to that he was an assemblyman in the Wisconsin Legislature. He died at Santa Monica, Calif., on January 29, 1903.

Samuel M. Pedrick, who has been practicing law in Ripon since 1894, knew Major Bovay personally. Last year Pedrick completed a 3,000-word story about Bovay, and it has been published in booklet form and is available at the little white schoolhouse. His library is a haven for researchers.

RIPON COLLEGE CREATED

Another outstanding accomplishment of Major Bovay is that of his part in raising funds for an educational building that today is known as Ripon College. The college was coeducational from the beginning, and prior to 1863 was known as Smith Hall, Middle College and Brockway College. Bovay taught mathematics when the school became a reality.

Major Bovay's colleague in raising funds for the college was Capt. David P. Mapes, who had been a steamboat captain. He was born at Racine, Wis.

LAND OF CERESCO

Prior to 1850, before Ripon became a reality, the area was known as Ceresco—the land of Ceresco. The name was the product of the Phalanx who had migrated from Kenosha, Wis.

At the time, John Scott Horner, who had been governor of the Northwest Territory, which included Wisconsin prior to its statehood in 1848, owned most of the land adjacent to the Ceresco area. He agreed to give the upper, hilly side (now known as Ripon) to Captain Mapes, providing Mapes named his new city Ripon, and that every other lot in the business district would be his.

Mapes agreed and the town of Ripon was born in 1850. The reason Horner suggested the name Ripon to Mapes stemmed from the fact that the hometown name of Horner's ancestors—Ripon of Yorkshire, England.

Governor Horner's son, Gustavas, still lives in the house his father built over 100 years ago. And Gustavas' daughter, Mrs. Ann Calden, lives directly across the street from her father.

INTERESTING FACTS

William E. Merriman, a graduate of Williams College, was the first president of Ripon College, from 1863 to 1876.

In 1854, the Ripon Commonwealth was a Free Soil newspaper and its editor was C. J. Allen. Also, the Milwaukee Sentinel was a Whig newspaper and its editor was Rufus King.

Shortly after the birth of the Republican Party, Frederich Vogelgesang named his new hotel at North Third Street and West Kilbourn Avenue, Milwaukee, the Republican House after the new political party.

Charles F. Kletzch, who had purchased the Republican House, tore it down and built a new hotel and named it the Republican Hotel.

In 1955, the Journal Co., publishers of the Milwaukee Journal, bought the hotel and at the time of the purchase said there would be no name change. The hotel was headquarters of the Republican Party of Milwaukee County for many years.

TEN REPUBLICAN NEWSPAPERS

There are 10 weekly newspapers in Wisconsin that carry the name Republican in their flagheads-newspaper's title appearing on the front page. Throughout the Nation some 300 newspapers have Republican in their flag-heads.

The Wisconsin newspapers are: Journal-Republican, Columbus; Forest Republican, Crandon; Republican-Journal, Darlington; Republican, Delavan; Republican, Galesville; Sawyer County Record and Hayward Republican, Hayward; Buffalo County Republican, Mountain City; Press-Republican, New London; Republican Observer, Richland Center (home of Atty. Gen. Vernon W. Thomson), and Republican, Stanley.

Edward V. Durling, a King Features columnist, began his newspaper career as a correspondent of the Springfield (Mass.) Republican. And the Rushville (Ind.) Republican is one of the most effective daily newspapers in the country.

LITTLE WHITE SCHOOLHOUSE

The history of the little white schoolhouse is a story in itself, but a few of its highlights are important to this story, and here they are.

When the Republican Party was born, the schoolhouse was located on the grounds now known as the campus of Ripon College. Since that time the school has been moved five times.

For 2 years the school building was used as a residence by George W. Peck, who later as a Democrat served two terms as Governor of Wisconsin from 1891 to 1895.

John C. Fremont, who was the first Republican to seek the office of President of the United States, visited the birthplace of the Republican Party during his campaign in 1856. He carried the State was 66,090 votes; his two opponents garnered 53,000.

During Abraham Lincoln's campaign for President in 1860, he also visited and spoke in the schoolhouse. Lincoln was the first Republican to be elected President. He carried Wisconsin with 86,113 votes. The combined vote of his three Democrat opponents was 66,000.

On March 20, 1954, Leonard Hall, chairman of the Republican National Committee, came to Ripon to participate in the Freedom Light ceremony adjacent to the schoolhouse. That night at 8 p. m. President Dwight D. Eisenhower tapped a special Western Union golden key that started the freedom flame to burning.

It was that night that the Republican national motto—Freedom's Light—From Abe to Ike—was born. The Ripon Educational Foundation, which maintains the freedom flame shrine, has dedicated itself to keep the flame burning as long as there is freedom in this great Nation of ours.

REPUBLICAN HISTORY

Wisconsin has had 25 Republican governors since the birth of the Republican Party, and those governors held office for 45 terms. Three Democrats held office for 4 terms, and 1 Progressive held office for 2 terms.

Following Wisconsin statehood in 1848, Nelson Dewey, a Democrat, was the first governor, from June 6, 1848, to January 5, 1852. He was succeeded by a Whig, Leonard J. Farwell, who served from January 5, 1852, to January 2, 1854.

In those years general elections were held in the odd numbered years and terms of office began in the even numbered years. The switchover to the present day system of general elections in the even numbered years and terms of office starting in the odd numbered years took place in 1886 and 1887.

The year the Republican Party was born there was no general election. The legislature of 1855 was confronted with choosing a United States Senator.

For 3 days the legislature balloted, and on the eighth ballot, Charles Durkee, Town of Windsor, Dane County, received 54 votes out of a total of 107 votes, and became the first Republican from Wisconsin and the Nation to win a seat in the United States Senate.

Prior to his election as Senator, Durkee was a Wisconsin Congressman and a former Free Soiler. He served two terms as Senator. In 1865 he left Wisconsin and a few years later turned up as governor of the Territory of Utah.

In the general election of 1855 the growing strength of the Republican Party was soundly recorded at the polls.

The Republicans had nominated Coles Bashford, a Madison attorney, as their first candidate for the office of governor. C. C. Sholes was nominated for lieutenant governor.

William A. Barstow, a Democrat, who was the incumbent, was renominated for a second

term. Arthur MacArthur, grandfather of Gen. Douglas MacArthur, was nominated by the Democrats for the post of lieutenant governor.

BASHFORD ELECTED GOVERNOR

At the election on November 6, 1855, Bashford received 35,872 votes, and Barstow garnered 35,523 votes. MacArthur won the lieutenant governnorship by a wide margin.

The board of State canvassers had reversed the returns and on December 17, 1855, the last day permitted by law, made their report that Barstow with 36,355 votes had a majority over Bashford and was issued a certificate of election. In the revision, Bashford was credited with 36,198 votes.

Governor Barstow was inaugurated for his second term on January 7, 1856. At the same time, Bashford was sworn in as Governor before the Supreme Court of Wisconsin. Barstow was de facto governor for more than 2 months.

On March 21, 1856, Governor Barstow submitted his resignation to the legislature. The same day, Lieutenant Governor MacArthur assumed the legal duties of the office of governor. He served in that capacity for 4 days, and then Bashford quietly took possession of the governor's office on March 25, 1856.

Therefore, Coles Bashford became the first Republican Governor of Wisconsin.

FATHER AND SON TEAM

The only father and son team up to this writing to serve as Republican governors of Wisconsin is the late Walter J. Kohler, Sr., and Walter J. Kohler, Jr. And when the present Governor Kohler completes his third term in January of 1957, the Republicans will have been in power in Wisconsin for 90 years out of a total of 102 years since the birth of the Republican Party.

Important to this story is the case of Orland S. Loomis, who had been elected governor as a Progressive in 1942, but who had died on December 7, 1942. Walter S. Goodland had been elected lieutenant governor as a Republican.

Just 86 years later, the decision of the Supreme Court of Wisconsin in the Barstow-Bashford case became the basis for the determination of the Loomis-Goodland gubernatorial tangle.

As governor-elect, Loomis had died before taking his oath of office; therefore, the supreme court declared Goodland as his legal successor, and he was inaugurated as governor on January 4, 1943.

RANDALL GOES TO CABINET

Alexander W. Randall, who served two terms as Republican governor, from 1858 to 1862, was the first man from Wisconsin to become a member of a President's Cabinet. In 1855 President Andrew Johnson, who had succeeded President Lincoln upon his death, appointed Randall as Postmaster General.

Republican Lt. Gov. Edward Salomon, who became governor when Republican Gov. Louis P. Harvey succumbed in office in 1862, was the only person who had inherited the Chief Executive's Office that never sought election to that Office.

But Republican Lt. Gov. Oscar Rennebohm, who had become governor when Governor Goodland succumbed in 1947, sought election and won in 1948.

THREE-TERM GOVERNORS

Five Republican governors completed three terms, and the sixth, Governor Kohler, is now completing his third term.

Lucius Fairchild served from 1866 to 1872; Jeremiah McLain Rusk from 1882 to 1889, during the time when the switchover from odd years to even years became effective; James O. Davidson from 1905 to 1911; Emanual L. Philipp from 1915 to 1921; and John J. Blaine from 1921 to 1927. Governor Kohler began his first term in 1951 and his third term ends in 1957.

LINEAL DESCENT CLAIMED

The Democratic Party up to this very day claims lineal descent from the first Republican Party and that Thomas Jefferson was its founder.

But when the Democrats discovered they could not establish their theory in the history books, they did the next best thing. They coupled Jefferson with Andrew Jackson, and now they celebrate their unknown "birthdate" with Jefferson-Jackson day dinners.

GOVERNORS AND PRESIDENTS

The Republican governors and Republican presidents follow in the order in which they served their terms. Where an asterisk appears it denotes the person inherited the office through death.

Governors: Coles Bashford, Alexander W. Randall, Louis P. Harvey, *Edward Salomon, James T. Lewis, Lucius Fairchild, Cadwallader C. Washburn, Harrison Ludington, William E. Smith, Jeremiah McLain Rusk, William D. Hoard, William H. Upham, Edward Scofield, Robert M. Lafollette, James O. Davison, Francis E. McGovern, Emanuel L. Philipp, John J. Blaine, Fred R. Zimmerman, Walter J. Kohler, Sr., Phillip F. LaFollette, Julius P. Heil, *Walter S. Goodland, *Oscar Rennebohm, and Walter J. Kohler, Jr.

Presidents: Abraham Lincoln, *Andrew Johnson, Ulysses S. Grant, Rutherford B. Hayes, James Garfield, *Chester A. Arthur, Benjamin Harrison, William McKinley, *Theodore Roosevelt, William H. Taft, Warren G. Harding, *Calvin Coolidge, Herbert Hoover, and Dwight D. Eisenhower, (Eisenhower will seek his second term this year.)

The Electoral Debate

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 26, 1956

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Electoral Debate," written by Murrey Marder, a writer and reporter for the Washington Post and Times Herald. Mr. Marder is a very able member of the press gallery, and it has been my observation that he makes very careful and analytical reports on the matters to which he addresses his attention. I think this particular article is of value in summing up the various proposals before the Senate, in connection with the debate on the electoral college.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ELECTORAL DEBATE—POLITICS VERSUS LOGIC

(By Murrey Marder)

A question as old as the Nation will come up for a vote in the Senate Tuesday, for the second time in 6 years: How should we elect our Presidents and Vice Presidents?

All last week a scattering of Senators talked, and few listened, to debate on a half-dozen proposals, any one of which could have profound effect on the political future of the country.

Basically, the argument was the same as in 1950. Then the Senate passed, and the House turned down, a plan to abolish the electoral college system by amending the Constitution.

Much of the debate on the Senate floor actually reechoed many pros and cons weighed by the Founding Fathers when the Constitution was being written.

The "great compromise" they drafted gave each State equal representation of two seats in the Senate, with seats in the House apportioned on the basis of population. That is the bedrock for the continuing dispute.

That formula also determines how many electoral votes each State has for the election of President and Vice President; one electoral vote for each of the State's seats in the Senate and House.

Many persons are unaware that when they vote for President and Vice President they are merely indicating a preference. The popular votes are actually cast for the electors, in turn, the Nation's two highest officials.

The States are constitutionally free to choose their electors in any manner they wish—even without any popular vote at all, as many once did. The drafters of the Constitution distrusted the ability of the citizenry to pick a President or Vice President.

But national popular voting soon made the electoral vollege "degenerate," in the language of the Senate Judiciary Committee, "into a mere rubber stamp." It became a formality without meaning, except in the rare instances when an elector bolted and failed to vote as the balloting in his State intended.

Over 100 years ago the first bill was introduced in Congress to change the Constitution and divide electoral votes in proportion to the vote cast for each candidate—which is now part of the leading attempt in the Senate.

Under the present winner-take-all system, the candidate who gets the highest vote in a State gets all of that State's electoral votes, even if he wins by only one vote.

In the Nation's total electoral vote of 531 this makes the big States the top prizes in an election.

The system makes the electoral vote tally lopsided. In 1952, President Eisenhower had 33,666,062 popular votes; Adlai Stevenson, 27,314,987. But General Eisenhower won 442 electoral votes, and Stevenson only 89.

From the standpoint of logic, it might seem everyone would favor a proportional divison of the electoral vote. But what may be logical in theory is not always logical in politics.

Dividing the vote proportionally would reduce the big States' power in determining who will be President.

Supporters of the proportional system argue that blockvoting gives the big States a greatly overbalanced weight in elections; makes candidates play up to minority and pressure groups within those States; that it perpetuates the one-party system in the South and many Midwest States.

Also, they contend, it disenfranchises, in effect, all voters who back the losing candidate in any State, and increases the likelihood that a President with a minority of popular votes will win the national electoral vote.

Opponents of the proportional system say that in a relatively close election, like the Truman-Dewey race of 1948, the system would cause the voters almost to cancel each other out, and the balance of power is left with the one-party States.

Proportionally, the 1948 vote in New York would have given Dewey 21.6 of the electoral vote, Truman 21.2, with Henry Wallace, the Progressive Party candidate, getting the remainder.

Illinois would have given 14 electoral votes to Truman; 13.8 to Dewey. California: Truman, 11.9; Dewey, 118. Pennsylvania: Truman, 16.4; Dewey, 17.8.

But Georgia, with 12 electoral votes, would have given 7.3 electoral votes to Truman and

2.2 to Dewey. This, in terms of net electoral votes, would have made a State like Georgia more important than most of the largest States put together.

The proportional system's advocates argue, however, that as the Senate Judiciary Committee reported:

"Had this amendment been in effect in the past, the whole composition of the popular vote would have been different. Campaigning would have been carried all over the 48 States instead of being concentrated in a few key pivotal States."

The same argument, with a different meaning, is used by the opponents. They say voting patterns would be hardened more than the 1948 breakdown indicates; that the control in "one-party" States would be tightened; that voting requirements for Negroes would be increasingly restricted; that the most populous States' influences would be reduced even more in the outcome.

Because of the constitutional compromise, the less populous States have far greater weight in the electoral count than they would have in terms of population.

For example: Nevada has three electoral votes. In the 1952 election it had a total popular vote of 82,190. New York State, with 45 electoral votes, cast 7,128,241 popular votes.

Hence, it took about 5½ popular votes in New York to equal the value of a popular vote in Nevada, measured in electoral votes.

The winner-take-all system of electoral counting, say the big-state spokesmen, is the only counterbalance urban areas have against disproportionate representation of the rural areas in State legislatures and in the House of Representatives.

This, they argue, is because of the gerrymandering of many congressional districts to favor rural areas.

The proportional voting proposal would end the archaic electoral college, retaining electorial votes only as a counting device.

Also, it would change the system by which Congress determines the winner where no presidential candidate wins an adequate electoral vote.

If now no candidate has a majority, the contest goes into the House of Representatives. There each State has one vote, with 25 votes required to elect. But under the proportional plan the Senate and House jointly would decide the election, with each member having a vote.

The Senate, in 1950, passed the proportional idea 64 to 27, when it was known as the Lodge-Gossett plan. But it was lost in the House where a vote of 134 to 210 barred it from reaching the floor.

In May 1955 the proportional voting approach again was reported by the Senate Judiciary Committee, this time as the Daniel-Kefauver plan.

On March 15, however, a major change took place. A compromise tied proportional voting to the "district" plan, sponsored chiefly by Senator KARL MUNDT, Republican of South Dakota, and Representative FREDERIC R. COUDERT, JR. a Representative of New York.

An important midwife in what is called the Daniel compromise was Senator STROM THURMOND, Democrat, of South Carolina, Dixiecrat candidate for President in 1948 who won 39 electoral votes.

The district approach was now offered as an alternative approach in the jumbo package.

Under it, a State, if it wished, could choose its electors in the same manner it elects Senators and Representatives. Two electors would go to the candidate with the most votes in the State as a whole. In each congressional district the electoral vote would go to whoever won that district.

But under the Daniel compromise a candidate to win would need a majority of the electoral votes, not 40 percent, as originally. Instead of electoral votes being divided among all candidates, they would go only to the top 3 candidates. If the election were thrown into Congress the 2 houses would choose the winner from the 3 highest candidates, instead of the top 2, as under the earlier proportional plans.

If that had been in effect in 1948 Truman would have lacked a majority and Thurmond's electoral votes would have been a potent force in determining the outcome.

The so-called Daniel compromise has been cosponsored by 54 Senators, short of the needed two-thirds vote there. Its backer, Senator PRICE DANIEL, Democrat, Texas, has called the plan "the closest we can get to the people themselves having a direct vote for President and Vice President * * *."

DANIEL, Senator ESTES KEFAUVER, Democrat, Tennessee, and others have said they compromised to accept the Mundt-Coudert alternative because it is one that the States can use right now if they wish. In the Nation's earlier history, DANIEL noted, 12 States did select electors that way.

Senator JOHN F. KENNEDY, Democrat, Massachusetts, leading the opposition, has tabbed the compromise "a shotgun wedding" which would have disastrous results. He claims it will be defeated.

Compromise proponents have argued that liberals should back it. But Americans for Democratic Action, for example, charges it would "curb the political influence of liberal-labor forces in the presidential nomination and election process."

There are many other pending plans, each making an appeal to logic and fairness, but none are given much hope for passage.

Foremost is the direct popular-vote plan of Senator WILLIAM LANGER, Republican, North Dakota. It would nominate and elect Presidents and Vice Presidents through a direct primary and a direct election.

Senator ALBEN W. BARKLEY, Democrat, Kentucky, said for 40 years he has favored this system, which LANGER urges to end control of politics by party bosses.

But it would mean an end to the Federal "great compromise" where smaller States get extra weight in the electoral vote, and probably would mean uniform voting requirements, and therefore is regarded as impossible of attainment.

Senator HUBERT H. HUMPHREY, Democrat, Minnesota, has favored a different approach, but concedes it cannot pass. Under it, States would retain two electoral votes each, but the remaining 435 votes would be divided nationally among the top candidates. HUMPHREY also has offered a direct popular general election.

Senator CLIFFORD P. CASE, Republican, New Jersey, has proposed an amendment to the Daniel compromise through which electoral votes in the States would be reduced proportionately by the number of eligible voters not voting—which has its own appeal in logic.

Whatever the Senate does do this week, the odds are that politics will outweigh logic.

Alaska Mental Health Act

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mr. BARTLETT. Mr. Speaker, I have already presented for the consideration of my colleagues two articles by Mrs. Marjorie Shearon of the Shearon Legislative Service in defense of H. R. 6376, the Alaska Mental Health Act. I now present the third in this series. Whether they are taken singly or together, Mrs. Shearon has presented a factual answer to the unfounded attacks which are now being made against this measure:

ALASKA MENTAL HEALTH ACT

IN ASSESSING H. R. 6376 LET REASON AND THE WILL OF GOD PREVAIL, NOT UNFOUNDED HYSTERIA

Matthew Arnold, in an essay on Culture and Anarchy (1869), noted that culture has no better motto than the words of Bishop Wilson, "To make reason and the will of God prevail." During the past month we have witnessed an extraordinary display of mass hysteria, unreason, and shameful vilification of public officials in connection with the Alaskan mental health bill, H. R. 6376, now before the Senate Committee on Interior and Insular Affairs.

The editor approaches this bill humbly, not being a psychiatrist. On the other hand, she does have 40 years of professional experience since taking a doctor of philosophy degree in scientific research. She has had 3 years of practical experience in the field of mental retardation, first as an assistant at the pioneer clinic for mentally retarded children in New York City in 1918, later as a research associate for the welfare council in New York City in the study of problems of mental defect (1933). As a research analyst at the USPHS (1941–45), the editor worked on the 10-year mental health program envisaged by Surgeon General Parran.

In connection with H. R. 6376, the editor has attended hearings and read approximately 600 pages of testimony given in the House and Senate Interior Committees, together with hundreds of additional pages of floor debate in the House, research documents on State and Federal mental health laws, court decisions, and administrative procedures dealing with persons suffering from mental disease and defect.

Despite the volume of available material, many persons throughout the United States who are normally reasonable and careful in forming judgments have suddenly expressed themselves without first ascertaining the facts about H. R. 6376.

THE FEDERAL GOVERNMENT AND YOU ARE RESPONSIBLE FOR THE BARBARIC CARE OF ALASKAN MENTAL CASES

We urge a reasoned, calm, judicious approach to H. R. 6376. The bill was developed at the request of the Alaskans. The whole subject has been before the United States Congress for 8 years. This particular bill was given extraordinary attention by the House. Hearings were held April 21 through July 8, 1955, approximately 400 pages of printed matter.

The House Subcommittee on Territorial Affairs went to Alaska last fall for about 3 weeks. They visited 22 cities, taking testimony and discussing the Territory's mental health problems with officials, the general public, the Governor of Alaska, and the Alaskan Delegate to Congress.

"Why should the Federal Government stick its nose into Alaskan affairs?" we have been asked. The answer is simple. The United States originally "stuck its nose" into Alaskan affairs by purchasing the Territory in 1867 from Russia for $7.2 million. The area comprises 365,481,600 acres.

The Congress of the United States treats the Alaskans as wards, appropriating funds annually for the Interior Department to use for governmental activities in the Territory. The United States owns 99.5 percent of the land of Alaska so that the Territory is deprived of customary sources of revenue available in the States. Furthermore, the United States will not grant statehood to Alaska, nor will it permit the Territory to issue bonds for support of a mental health program and construction of desperately needed facilities.

To whom should the Alaskans turn for help with their mental health problems? To Russia, Germany, Britain, or Red China? The United States, obviously, has a moral responsibility to help the Alaskans solve these problems which have been created by earlier Congresses.

DR. WINFRED OVERHOLSER IS EMINENT PSYCHIATRIST WHO HAS BEEN VILIFIED BY THE FRENZIED FRINGE

Perhaps it would be well to dispose quickly of some of the most widespread errors now current about H. R. 6376. It has been stated that there is an international Marxist plot emanating from the United Nations, the World Health Organization, UNESCO, the State Department, and numerous Federal officials to institute an international mental health program. We are told H. R. 6376 would authorize a Federal grant of 1 million acres to Alaska for the purpose of setting up a vast fenced compound to which Conservatives, anti-Communists, and other Rightists would be railroaded as mental cases.

There has been testimony to this effect in Congress. According to frantic letters, telephone calls, and bulletins we have received, the deus ex machina in this vile Red plot is Dr. Winfred Overholser, internationally known psychiatrist, superintendent of St. Elizabeths Federal mental hospital in the District of Columbia, and a Health, Education, and Welfare Department official.

Opponents to H. R. 6376 claim that Dr. Overholser is conniving with WHO and UNESCO. If these vehement opponents can possibly be reached by facts, truth, and reason, let them heed the following. Dr. Overholser is of Swiss descent. His pioneer ancestors came to this country 200 years ago. He is not Jewish. He has had a distinguished career in psychiatry for the past 40 years and has headed the St. Elizabeths Hospital for 19 years.

Dr. Overholser has held numerous important posts in Massachusetts as professor at the University of Boston, as commissioner of the Massachusetts Department of Mental Diseases, where he had supervision of 13 State hospitals and 3 schools for the feebleminded. His professional honors are too numerous to list. His service to the United States in peace and war is so great that his detractors should hide their heads in shame and quickly apologize for the outrageous and unfounded accusations they have leveled against him.

Dr. Overholser is not now and never has been a member of WHO or UNESCO. He has never been a delegate to, nor ever attended, any of their meetings. He is a member of the World Federation for Mental Health, a lay group not organically connected with U. N., WHO, or UNESCO. The WFMH is as subversive as the Epworth League or the American Red Cross. If Dr. Overholser is a Marxist plotter, seeking to turn the United States over to Russia, then this editor is a Communist, too, and is equally subversive.

WAS REPRESENTATIVE A. L. MILLER OF NEBRASKA, RESPECTED HOUSE MEMBER, INVOLVED IN RED PILOT? ABSURD!

One deluded witness testifying on H. R. 6376 said she suspected that the proponents of the bill were planning to use the million acres as a compound in which the people railroaded to Alaska as insane would be turned loose. That was her concept of Siberia, U. S. A. There was testimony that Russia might buy the million acres for a concentration camp.

Actually, this is the origin of the million-acre proposal. What we are about to state is so prosaic, so devoid of headline appeal, that probably the frantic "Siberia, U. S. A." crowd won't believe us. When the question of financing the well-rounded mental-health program in Alaska was presented to the several Government agencies involved, especially the Bureau of the Budget, which speaks for the administration (the White House), it was suggested that a grant of 500,000 acres might take care of costs 10 years hence after the whole program had been turned over to the Alaskan government by the United States.

It should be stated that H. R. 6376 is designed to ease the Federal Government out of the mental-health picture in Alaska over the next decade. This is to be done by making an appropriation of $6.5 million toward the building and equipment costs of a small mental hospital, 1 or 2 schools for mentally retarded children, and a few treatment and detention centers. Another $6 million in grants-in-aid spread over 10 years would enable the Alaskans to get their program started, to make surveys, and hire professional personnel. Finally, the Territory would be authorized to select a certain number of acres, the revenue from which would be used for future administrative costs.

Representative ARTHUR L. MILLER, Republican, of Nebraska, in the House hearings and on the floor, stated his doubts that such financing methods would be adequate. Now Representative MILLER is a physician whose views are highly respected in the House where he has served for 14 years. He was the person who proposed in committee and again on the House floor that 500,000 acres would not be adequate for the Alaskan mental-health program. He proposed 1 million acres, and after he presented his reasons to the House they approved his amendment to the bill.

Was that treason? Is Dr. MILLER a member of an international Marxist gang? He is a Republican, a Methodist, and a well-informed physician. He stated repeatedly he was for the bill.

WAS CONGRESS ASLEEP AT SWITCH WHEN REDS PLOTTED ALASKAN COUP? WHOLE IDEA FANTASTIC

There was considerable debate in committee about the million acres. In order to guard against the possibility that the lands which the Alaskans selected might prove to be fabulously valuable (oil, uranium, gold), the bill was amended to read that such lands shall be "administered by the Territory of Alaska as a public trust and the income therefrom shall first be applied to meet the necessary expenses of the program for the hospitalization and care of the mentally ill in Alaska." (Sec. 202 (e), p. 39, l. 22.) Surplus funds would be used for other public purposes.

If, as the frenzied fringe has claimed, the million-acre grant was a diabolical plot engineered by an international Communist gang, then we shall have to conclude that Dr. Miller joined the Reds along with Dr. Overholser and the Congressmen who approved the grant on January 18, 1956.

Dr. Miller expressed high praise for the commitment procedures in this bill. His only worries were that the standards might be too high for the Territory at the start, that the grant for hospital facilities might be too small, and 500,000 acres would not produce adequate revenues for Alaskan needs. He was also fearful that an outright Federal grant for a mental hospital might lead the States to demand similar grants.

If this bill is such a diabolical plot, one cannot but wonder why it is that the Members of Congress, many of whom are conservative and most of whom are anti-Communist, never discovered the plot. More Republicans than Democrats spoke in favor of the bill in the House debate.

At the request of the Governor of Alaska, a 2-year study of Alaskan health, and social and economic conditions was made under the auspices of former Surgeon General Parran and some 18 experts (sanitary engineers, an anthropologist, physicians, etc.) The Parran report was published in 1954.

In 1950, the former Federal Security Agency, aided by leading psychiatrists outside Government, drafted a model act governing hospitalization of the mentally ill. Dr. Overholser was one of the experts who worked especially on improved commitment methods for the better protection of the mentally ill. Several States have already modernized their laws to conform to the Draft Act which was revised in 1952. H. R. 6376 follows the Draft Act with some changes.

MILLION-ACRE GRANT FINDS PRECEDENT IN WESTERN STATES 75 YEARS AGO—PRINCIPLE 180 YEARS OLD

No one in Congress or in competent professional circles thought it was diabolical to modernize commitment procedures for the mentally ill until a California woman came along with a fetching cliché, "Siberia, U. S. A." As Senator MALONE remarked, it wasn't appropriate, but even so, it caught on like a spark in dry tinder. Mrs. Leigh F. Burkeland, in January, 1956, publicized a 2-page broadside headed "Siberia, U. S. A." The Minutewomen of California reproduced the speculative sheet. Mrs. Burkeland came to Washington to testify and introduced the ill-founded statement into the hearings record.

Senator MALONE tried to pin her down about language changes in the bill. She demanded to know why the United States was placing mental patients in jail in Alaska instead of putting them in the mental hospital "that's already there in Fairbanks." If Mrs. Burkeland had studied the record, she would have found that back around 1905-10, a 2-story, frame detention house had been built at Fairbanks. It never was a hospital. Even that little building burned down 25 years ago. It was never replaced.

The Hoyas Syndicate in Sana Ana, Calif., took up the "Siberia, U. S. A." cliche, publishing an editorial thereon in their small papers in Texas, Colorado, Indiana, and elsewhere.

It has been said H. R. 6376 sets a new (presumably sinister) precedent in granting public lands for the care of the mentally ill. There is nothing new in the idea. The enabling acts of 5 western States provide grants up to 0.3 percent of their area for support of insane asylums. H. R. 6376 is similar.

1. Idaho: The enabling act of July 3, 1890, provided 50,000 acres for support of an insane asylum at Blackfoot (26 Stat. 216–217c, sec. 11);

2. Oklahoma: Enabling act of June 16, 1906, provided 200,000 acres "for maintenance and support of insane asylums" (34 Stat. 283, ch. 3335, sec. 34);

3. South Dakota: In the enabling act of February 22, 1889, the section of land previously granted to the Territory of Dakota in 1880 for an insane asylum was transferred to the State of South Dakota (25 Stat. 680, ch. 180, sec. 14);

4. Utah: Enabling act approved July 16, 1894, gave 100,000 acres for establishment and maintenance of an insane asylum (28 Stat. 110, ch. 138, sec. 12);

5. Wyoming: Enabling act of July 10, 1890, grants 30,000 acres for establishment and maintenance of insane asylum (26 Stat. 224 ch. 664, sec. 11).

H. R. 6376 PROVISIONS FOR NONRESIDENTS NOT NEW—JUST USUAL RECIPROCAL REIMBURSEMENT AUTHORITY

We should like to assure our readers there is not a member of the House or Senate Interior Committees, who has expressed an opinion about the language of the bill, who is wedded to any particular wording. Spokesmen from the Interior Department and the HEW Department said they, too, were not insistent on particular language.

Perhaps no other provision in the bill has so inflamed people as section 119 (c). Yet Federal officials said they did not care whether that particular language was used.

Section 119 has four paragraphs spelling out the reimbursable arrangements for nonresidents. The governor is authorized to return to the State of legal residence any per-

son who has been hospitalized for mental illness in Alaska (sec. 119 (a)). The Governor of Alaska is further authorized to make reciprocal agreements with the governors of the several States—a procedure which is standard practice is all States—whereby a resident of Alaska who is hospitalized in Indiana, say, shall be returned to Alaska at the expense of the State where the illness occurred, and a resident of Indiana, say, who has been hospitalized in Alaska, would be returned to Indiana at the expense of Alaska (sec. 119 (b)). Subsection (c), which has caused such a furor, really adds little to subsections (a) and (b).

Lines 15 and 16 on page 26, the last 2 lines of section 119 (c), are supposed by some people to authorize railroading of people from the States to Alaska. That is an absurd deduction, as anyone familiar with health and welfare laws would know. The subsection is not a committing provision. Section 119 deals only with nonresidents in Alaska and in the several States. Commitment or transportation out of a State for a resident of such State would be controlled by the laws of that State, not by the laws of Alaska. A resident of Indiana, obviously, could not be touched by section 119 (c).

It seems that most of the criticism of H. R. 6376 comes from people who are not familiar with mental health legislation and who, perhaps, never saw a mental health bill or law until the read H. R. 6376. The committee will next check the language of the bill line by line. It could write a new bill.

ALASKANS NEED AND WANT H. R. 6376—IT IS CRUEL TO KILL BILL FOR SELFISH REASONS OF ALARMISTS

As we have previously stated, the Governor of Alaska, the Delegate from Alaska, and the people themselves urge enactment of this bill which was written for Alaskans. The Alaskan Medical Association on February 22 sent a resolution of approval to the Senate Interior Committee.

Opponents of the bill seem to forget that the bill has 3 purposes: (1) To correct the inhumane, brutal, medieval commitment procedures which have been in force in Alaska for 50 years under United States law; (2) to provide funds for the construction of a mental hospital, clinics, detention centers, and 1 or 2 centers for mentally retarded children; and (3) to provide administrative funds through the proceeds of a million-acre land grant. There will be a 10-year transition period before the Territory takes over full responsibility for its mental-health program and is placed on a par with the several States.

Amidst all the furor stirred up by misunderstandings about this bill, we have seen nothing about the plight of the Alaskans. Under present law an idiot is defined as "insane" and may be thrown into jail along with hardened criminals. A jury of six fishermen or lumbermen is called upon to decide on the idiot's "crime" of mental defect. If adjudged guilty, he will be shipped to Oregon along with criminals, under custody of a United States marshal.

A Challenge to Conservationists

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. REUSS. Mr. Speaker, Les Woerpel, executive secretary of the Wisconsin Federation of Conservation Clubs, of Stevens Point, Wis., presented a stimulating and challenging address to the North American Wildlife Conference at New Orleans, La., on March 6, 1956. The text of Mr. Woerpel's address follows:

You all know of situations which you consider fumbles. Have you analyzed them to see if you could determine what caused them?

From the Horseshoe refuge controversy on through the Government-approved and paid-for drainage of our midwestern potholes the stories hold a frustration that is hard to duplicate from any other cause. They carry with them the futility of trying to stop a flood with your hands.

All of these fumbles indicate a lack of depth of understanding of the whole problem, ignorance of the fundamental principles of conservation in all senses of the word, or a cunning exploitation of a public resource for personal gain and glory; exploitation, not only of a game resource, but of the waters and lands, marshes and wetlands, watersheds and people.

It seems incredible that agencies dedicated to management of our natural resources can be so far apart in their understanding of what constitutes good management, or, if they know, that they can lose sight of their objectives so soon because of political pressure, personal friendships and prejudices, personal power and greed, or for economic advantage. Uniform understanding of total conservation, and aims for the future, are imperative to accomplish a common program in cooperation with other agencies and other countries.

All of our major fumbles, although they seem varied and unrelated, can actually be laid to one cause, which is also the cause of many of our fumbles in all the fields of resource conservation. That cause, ladies and gentlemen, is the reason we are losing the game of conservation. We won't lose that game tomorrow, or maybe the next day. We'll win a few plays here and there, enough to salve our consciences and lull our senses of responsibility. But if our present course continues, the realization of our loss of the game is going to come much sooner than you think.

This may come as somewhat of a shock to some of you who have been preaching lack of public support as the reason for our failures. Even the failure of public support is a result, not a cause.

It is my firm and honest belief that the major cause of slow progress in our game of conservation, and of most of our fumbles, is a lack of an honest belief in the importance and loftiness of the cause to which many of you have dedicated your lives. Many of you do not believe, in your own hearts, that conservation of our resources, including our waterfowl, is destined to be the future salvation of men's minds, bodies and souls—or you are afraid to let your fellow man know that you do believe. You are not convinced that your cause is as important, if not more important, that that of industry, business, and the public utility. You are not convinced that your form of conservation is actually better for the farmer, the land and water, the cover and fertility, as well as the game and fish, than that of the Army engineers, the various extension services, the Soil Conservation Service, among all the rest of the agencies which dabble in the art of conservation sciences.

Keep this in mind as we run through a few examples of some of our recent fumbles. Although relaxation of the duck-baiting regulations in the three major trouble areas seems to be from different causes, their effect is the same. California's claim to a need for succor from the duck plague always reminds me of the muck farmer's plight in our own State. Muck marshes suitable for farming when drained have a nasty habit of forming in or near forests, and swampy forests at that. Generally it is just the kind of home that deer like.

After clearing out openings in the forest and planting crops designed to make the muck farmer rich in the shortest possible time, a rude awakening is encountered when the deer feel that the truck crops have been planted for their personal benefit and take advantage of the banquet table set before them. All kinds of pressure is put on the State to pay the damage, kill off the deer, fence the truck farm, etc.

Farmers of the Great Plains States generally aren't recompensed for loss of winter wheat, rye, and other succulent morsels ducks and geese appropriate for themselves on their way north in the spring. No one has yet insisted that these ducks and geese should be fair game to the hunter in the spring to prevent decimated and trampled fields from taking money out of the farmer's pocket. Yet there is just as much justification for it as for some of the other concessions we make.

Probably no animal does as much damage to farm crops as the field mouse, whose depredations cause the greatest loss due to a single cause on our continent's farms. The frequency and numbers of this creature is, to a large extent, controlled by game and fish departments and State legislatures by their management of the so-called predators. Would anyone assume that the State should protect the farmer from the mouse, or recompense him for his loss?

I feel sorry for the poor ducks that are unfortunate enough to decide to migrate over the State of Ohio. According to reports these ducks just couldn't live to reach the south or come back to breed unless the kind Lake Erie marsh owners fed them to carry them over the State, which is apparently devoid of duck food, according to reports. Maybe there is something to the child's saying, when he tells his dad, "I love you to death." The Erie marsh owners apparently feel that way about the ducks that come their way.

Political interference for any purpose is bad. It is especially bad when that interference is based on a lack of knowledge of the facts, disregard of the principles of public rights, and the prodding of disgruntled constituents.

Public Law 566, the so-called Watershed Protection and Flood Prevention Act, was supported by sportsmen and conservationists all over the United States, because they were sure that it would help put a stop to promiscuous drainage of our prairie potholes, which were rapidly disappearing through the assistance of the Federal Government and ditch happy heavy machine owners. The bill was passed by the 83d Congress in 1954.

Since the enactment of this law, 4 out of every 6 drainage projects in Minnesota, 3 out of every 5 in South Dakota, and 7 out of every 12 in North Dakota, as well as great numbers in the rest of the upper Mississippi flyway States, have been carried out under Public Law 566. Previous to the enactment of this law such projects had to be paid for over a period of time by the landowner. If the price was too high the project became unfeasible. Now the farmer gets the price from Uncle Santa Claus gratis, all he has to do is drain his land and pay for some of the minor costs. Projects which were previously unfeasible now became feasible with the taxpayer shouldering that part of the load that made it unfeasible before.

The tremendous increase in drainage since the enactment of this law indicates that it is probably one of the greatest fumbles we have yet made, and if the soil-bank plan some conservationists now envisage incorporates the practice of plugging up some of these drainage projects it will be another case of paying, not once, but twice for our mistakes.

While 30,000 acres seems like a drop in the bucket compared to many waterfowl projects, the Great Lakes States don't have many refuge and development areas belonging to the public any larger than that. In central Wisconsin there is an area of that size which is one of the most beautiful marshes I have seen, both from the standpoint of diversity of flora and fauna and from the standpoint of opportunities for development for a waterfowl area without harming the other assets of the marsh.

Because industry decided to use it as a reservoir for downstream paper and power mills, almost everyone in the State laid down and played dead. It didn't matter that for an investment of about $135,000 the power company would receive the privilege of condemning clost to $1 million worth of property not yet in their ownership. It didn't matter that for a saving of about $195,000 annually by using waterpower over using steampower they would destroy well over a $400,000 income from the farms that would go under water and the industries that these farms supported, which sum, when multiplied through its trade channels, might easily reach an economy of around a million dollars a year. Neither did it matter that the sandhill crane or the prairie chicken used the area, or that hundreds of persons used it for fishing, hunting, berrying, picnics, and just plain enjoyment.

Although the State only derives 17 percent of its power from hydro impoundments, it was considered imperative that this little $6 million development take place, although several other power companies were building steam developments worth upward of $20 million each.

Anyone bold enough to suggest that there might be other ways of attaining the same goal of water conservation along the tributaries of the river by good land practices, small impoundments, and cover plantings, and that the additional power needed could be derived from steam, was ruthlessly ridiculed and brushed aside, not only by the power interests, but by some of the controlling conservationists in the State.

In conjunction with the above case a State college sent its conservation class to the public service commission hearing expressing to all who would listen their conviction that industrial values were greater than the conservation values, although I doubt that any of them, including the teachers, weighed more than a few ducks, geese, partridge, prairie chickens, and deer in a hunter's bag against a little more power and a few more jobs in the paper mills downstream.

How many of you have hard of "Millionaires Monday"? In other States where conditions are slightly different it may be called by other names. It applies to the practice of closing public blinds around the perimeter of our Federal waterfowl refuges that have been recently opened for public use, so that private landowners surrounding the area could get, or sell, some shooting from their own lands.

A few years ago these perimiter blinds were established because the adjacent landowner had eliminated the public from participating in the harvest of the ducks and geese on the marsh after their money had been used to restore the area to use and production by the proper management practices. The elimination of the public had been so complete that only the rich, gifted, or lucky had an opportunity to utilize the big marshes' assets in ducks and geese.

Now the trends are being reversed once again, to supply private hunting one or more days a week around the marshes, once again to the rich, gifted, or lucky. Whether or not they take advantage of it, these people are now entitled to hunt the marshes 7 days a week during the season, without contributing 1 cent more than anyone else who hunts ducks and geese, by using the public blinds while they are open, and reverting to their own or leased lands the rest of the week, while the public is limited to only those periods when the public blinds are open.

The trend toward gearing our conservation program to public opinion without greatly expanded efforts toward clarifying our stand to the public is one of our greatest fumbles. Public opinion is notoriously lacking in the understanding of the ultimate aims for which this program should be directing our paths. It is notoriously selfish in extent, being based on more for a locality, personal advantage, or advantage over some other area, purely sensual pleasure from hunting and fishing, etc.

Georges Clemenceau, the Tiger of France, in speaking of the tyrannies of the Dreyfus case at the turn of the century, said, "Courageous men defying tyrants are never wanting in history, but it requires true heroism to defy the tyranny of public opinion." How many of our people in the conservation field can lay claim to reaching that peak of heroism?

How can you rally the support of the conservation public, and keep it, when you expound at great length on the idealistic principles that should guide us and then forget them in your administration of our resources? How can the conservation public, especially that segment of it still learning the fundamentals of the business, find a common denominator on which to base it's computations of the worth of our program if we preach one thing and do another?

The latest Department of Agriculture's Yearbook, Water, contains this gem, "Excess water becomes a problem when it interferes with tillage, land preparation, the development of plants, and harvest operations." Do you think that the people who wrote that believe that conservation goes any further than drainage and bumper crops?

You have all seen administrators and conservationists back away from a clash with a power interest or a drainage district. You have all heard their excuse that we need to save our wetlands, but not at the expense of increased employment, more power, or more agricultural products. With the great extent of the recreational business, who is qualified to state that retaining our wetlands does not create more employment than any of these other uses that people are dead set on putting these lands to?

There is no doubt that use of our recreational resources is rushing headlong toward that point where shear force of numbers will crush the remains of our dwindling opportunities.

Unless we look to that higher purpose for saving our recreational lands and waters we will continually fumble opportunities to make a good gain toward our ultimate goal. We need a purpose, the value of which far exceeds that of purely the wildlife that can be produced for the hunter and fisherman before we can even believe in the right and justice of our cause. Once we have that purpose we will be able to fight on an equal basis against the inroads of industry, business, and the public utility. We will be able to fight the losses we have been sustaining on a much broader plane, with much more fervor and believing in the right and justice of our course.

We know that unless we can save and improve our wetlands and other recreational resources in sufficient amounts to meet a public demand, unless we administer them for the good of the resource, and impartially, we will be contributing to the filling of hospital beds in both physical and mental hospitals of the Nation in the future.

We are rapidly nearing our last goal line. We are inviting the final fumble which will mean that we have done too little and too late. Then we will recognize that all the fumbles that had gone before should have warned us that we had been more concerned about the plays and the cheers of the crowd than we had been about the game and winning; that most of our previous fumbles were caused by the lack of a goal of sufficient importance to make the game worth while and make us expend every effort possible toward reaching that goal without digression to values of less importance.

The Prudential Insurance Co.'s motto is, "The future belongs to those who prepare for it." Can you think of a more apt motto for sportsmen and conservationists?

Business and industry set their goal because they believe in it, and it takes a major catastrophe to swerve them from their purpose. That is one reason why they have been winning all or most of their games with us, because they have believed in their goal above all else. They have believed that the goal they have set in each one of the controversies must be reached to gain the ultimate score to win the game. They don't digress, they don't concede, they seldom compromise. They are gaining their goal and winning their game.

Conservationists can accomplish the same results. They can believe in their program just as thoroughly, if they are careful in setting it up and look to the future for the need, as industry and business do. They can convince the public that their cause is just as important, if not more so, than that of any other segment of society, if they will just believe in their own cause themselves and base their programs on the higher needs of the future rather than on a few more ducks, a little more shooting, or a little more game in the bag.

It's time we quit stressing the need for more ducks and geese, pheasants and quail, prairie chicken and sharptails, rabbits and deer, and got down to convincing ourselves and the public that it is imperative that we begin to save our waters and our lands, our swamps and our marshes, our trees and shrubs, our watersheds and our people by adhering more closely to the principles we insist should be the guide for others.

Yes; we've made a lot of fumbles, some of which have been extremely costly. We've put ourselves behind the "eight" ball many times, because we have operated piecemeal, because we have not had an ultimate, clearly defined goal or a cause of sufficient importance to compell our undivided support. It isn't too late to learn from some of our past mistakes and make up the yardage we need. It can be done by setting our eyes to a new, broader, more important goal which will give the participants in our game the pride, courage, and determination to carry the ball over.

Membership of Arkansas Agricultural and Mechanical College in American Association of Colleges for Teacher Education

---

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 26, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Step Forward," written by Dr. George S. Reuter, Jr., of the Arkansas A. and M. College.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A Step Forward

(By Dr. George S. Reuter, Jr., Arkansas A. and M. College)

The American Association of Colleges for Teacher Education at its 8th annual meeting, which was held from February 16 through February 18, 1956, at the Conrad Hilton, in Chicago, Ill., elected Arkansas Agricultural and Mechanical College to membership. There were 29 other institutions of higher education elected, too. This meeting was held at the same time that the National Society of College Teachers of Education, the United Business Education Association, and the Association for Student Teaching met.

The others elected were: Alabama State College, Montgomery, Ala.; Huntington College, Montgomery, Ala.; Ouachita Baptist College, Arkadelphia, Ark.; San Jose State College, San Jose, Calif.; Sacramento State College, Sacramento, Calif.; Northwest Nazarene College, Nampa, Idaho; Concordia Teachers College, River Forest, Ill.; Greenville College, Greenville, Ill.; McPherson College, McPherson, Kans.; Gambling College, Gambling, La.; McNeese State College, Lake Charles, La.; Alma College, Alma, Mich.; St. Mary's College, Winona, Minn.; Fontbonne College, St. Louis, Mo.; University of Missouri, Columbia, Mo.; Northern Montana College, Havre, Mont.; University of Nevada, Reno, Nev.; Eastern New Mexico University, Portales, N. Mex.; Adelphi College, Garden City, N. Y.; Syracuse University, Syracuse, N. Y.; High Point College, High Point, N. C.; Oklahoma Baptist University, Shawnee, Okla.; Oklahoma City University, Oklahoma City, Okla.; Phillips University, Enid, Okla.; Augustana College, Sioux Falls, S. Dak.; Our Lady of the Lake College, San Antonio, Tex.; Texas State College for Women, Denton, Tex.; West Virginia Wesleyan College, Buckhannon, W. Va.; and Humboldt State College, Humboldt, Calif.

The theme of the annual meeting was New Horizons in Teacher Education. President Laurence D. Haskew, dean, College of Education, and vice president, University of Texas, began with an address "Toward New Horizons." President Gordan K. Chalmers, of Kenyon College, followed with the address "The Two Meanings of Practical." This was followed by Sister M. Madeleva, president, St. Mary's College, who spoke on "Teacher Education and Abiding Values." Thursday morning's program ended with the general topic "A New AACTE for New Tasks," and this was divided between Dr. Haskew's topic, "AACTE Developmental Program," and Associate Secretary Richard E. Lawrence's topic, "The Role of the AACTE Associate Secretary."

Thursday afternoon the delegates had a wide selection to make by selecting a group meeting. These choices were: "Making Direct Experience Educative," under Chairman Kimball Wiles; "The Marks of Quality," under Chairman Evan R. Collins; "Effective Administration for Democracy," under Chairman Ernest O. Melby (this is the section that the writer attended. He was highly pleased with the address of John Bartky, director, Public Education Association of New York City); "Differentiation in Curriculum," under Chairman Robert I. White; "Public Participation in Teacher Education," under Chairman Arnold E. Joyal; "Recruitment With Vision," under Chairman T. M. Stinnett; "Advanced Degrees and Master Teachers," under Chairman John R. Emens; "Mental Health—Lip Service or Action?" under Chairman Robert L. Sutherland; and "Clear Thinking and Clear Teaching," under Chairman B. Othanel Smith.

The second general session was then held with W. Earl Armstrong, executive director, National Council for Accreditation of Teacher Education, speaking on "Accreditations Has New Horizons." Then came William Selden and E. B. Norton with the topic "Discussion of the Accreditation of Teacher Education as Viewed by the National Commission on Accrediting."

The third general session brought John R. Rackley to the front with the subject, "The United States Office of Education and Research in Education." Ralph W. Tyler, director, Center for Advanced Study in the Behavioral Sciences, then spoke on "New Horizons of Human Capacity."

On Friday morning there was a symposium of Wisconsin educators. The general subject was The Future of High School Teacher Preparation. Dean Lindley J. Stiles, of the School of Education, University of Wisconsin, was the moderator. Of the University of Wisconsin staff, Vice President J. Kenneth Little spoke on Approaching Quantitative Demands for the Production of New High School Teachers. Edward A. Krug had as his topic Developing Role of the High School. Glen G. Eye then spoke on The Kind of High School Teachers We Need. First assistant superintendent of public instruction of Wisconsin, Russell F. Lewis ended the papers with the topic Future of High School Teacher Preparation. John R. Mayor, director, American Association for the Advancement of Science, presented the final address of the morning on Cooperation in Science Teacher Education.

President J. W. Jones, of Northwest Missouri State College presented the AACTE report on Studies. This was followed by President William J. Haggerty, of State University of New York State Teachers College, report on International Relations. Lowell Treaster, of Michigan State University gave the report Public Relations.

A symposium came next with the topic What Have We Learned About Teacher Education and Religion? Leonard Gernant, Jerome Housman, J. W. Maucker, and Jack B. Scroggs were the speakers.

A series of general addresses followed. Ellis F. White, of the American Social Hygiene Association spoke on Education for Personal and Family Living; President Warren C. Lovinger, of Northern State Teachers College in South Dakota spoke on School for Executives; Executive Secretary Edward C. Pomeroy gave the Executive Secretary's Report; and finally came the business report.

Friday evening Western Michigan College gave a concert. Finally, the best book ever written, according to many, Teacher Education for a Free People, was presented. Donald P. Cottrell, Gordan N. Mackenzie, Buell G. Gallagher, Russell M. Cooper, Charles W. Hunt, Donald M. Sharpe, Jack Shaw, Florence B. Stratemeyer, and Wendell W. Wright all made fine contributions.

Saturday morning brought a series of clinics on New Means of Utilizing Faculty and Student Resources. There were four divisions: Universities, State colleges, teachers colleges, and liberal arts colleges. Then the final address came before adjournment, and it was one of the best. Walter H. C. Laves of Indiana University spoke on International Understanding in Our Schools.

AACTE had a fine program. The meeting was an inspiration. It gave the writer an opportunity to visit wtih some old friends in the profession and old Chicago friends. Dr. Calvin E. Harbin, of Fort Hays State College, Hays Kansas, in the first area, and Dr. Harry Lion Boren in the second area, were gems to be with again. Last summer when the writer visited Woodrow Wilson's home at Staunton, Va.; the Arabian Knights at Jones Beach in New York; and the Abyssinian Baptist Church, where Dr. Adam Clayton Powell, Jr., is pastor, and Calvary Baptist Church, where Dr. John Summerfield Wimbish is pastor, he felt that the experiences were the richest possible, but the Chicago ones were just as outstanding.

It is true that Dr. Powell's church has the finest retirement program for church members, but Arkansas A. and M. has a great background, too. President Horace E. Thompson came in 1948, Dean James H. Hutchinson arrived in 1927, and Executive Assistant C. C. Smith has been here since 1921. This gives a seasoned administration.

On a lighter vein, Clara Ford, 5th grade teacher, Des Arc, Ark., recently gave the teacher's version of Sixteen Tons, as follows:

"SIXTEEN TONS

"Some people say a teacher's made of steel,
A teacher's made of stuff that can think and feel.
A mind and a body and a tortured soul,
The ability to teach the shy and the bold.

"I teach 42 students. What do I get?
Another day older and deeper in debt.
St. Peter, don't you call me to that heavenly gate.
I owe my soul to the youth of this State.

"I was born one morning when it was cloudy and cool.
I picked up my register and walked to the school.
I wrote 42 names on my class roll,
My superintendent said, 'Well bless my soul.'

"I teach 42 students. What do I get?
Another day older and deeper in debt.
St. Peter, don't you call me to that celestial shore.
I have 42 students, and they are sending me more.

"There's a student in every seat from wall to wall,
Any more who come will have to stand in the hall.
They're breathing down my neck, and they're walking on my toes,
They're telling me their joys, and I'm sharing all their woes.

"I teach 42 students. What do I get?
Another day older and deeper in debt.
St. Peter, don't you call me to that heavenly gate,
I owe my soul to the youth of this State.

"The bell rings at 4, but my day's not made,
I still have all those papers to grade.
There's a faculty meeting at 7 they say,
And tomorrow a meeting of the PTA.

"I teach 42 students. What do I get?
Younger in heart. Nothing to regret.
St. Peter, don't you call me, I can't leave here.

I'll have 42 students again next year."

Arkansas A. and M. has thus made an important step forward by becoming a member of AACTE. The next goal should be membership in the National Council for Accreditation of Teacher Education.

Soil-Bank Acres

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 26, 1956

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the March 17 issue of the Farmer, of St. Paul, Minn. Entitled "Soil-Bank Acres," the article was apparently written after interviewing many Northwestern farmers on their ideas about the soil bank and the amount of money needed to induce them to retire acres.

In a letter from Mr. W. H. Kircher, managing editor, he stated that farmers are doing what one would expect, considering the disturbance to their general farming operations, as well as the basic matter of the income they normally get from land planted in corn or in wheat.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The inducement offered farmers would have to be generous.

That was the statement made by Secretary of Agriculture Ezra Taft Benson before the Senate Committee on Agriculture and Forestry several weeks ago.

He made essentially the same statement later in answer to a question put to him at a press conference in St. Paul, Minn. In the latter statement, he elaborated by saying the amount would "perhaps have to be a little more than the farmer's net return if the land was farmed."

In both statements, he was referring to what he believed the Government would have to pay farmers in order to persuade them to take acres allotted to wheat or corn (and cotton and rice, too) out of production, and put them into what in the administration's farm bill is called the acreage reserve part of a two-part program.

The acreage reserve is designed only to take acres allotted to surplus crops out of production. They may be rented by the Government, 1, 2, 3, possibly 5 years until the surplus of the particular crop is brought down to a point where it is regarded as somewhere near in balance with demand. It is guessed that about $750 million will be needed to finance this part of the program.

The second part of the plan is the conservation reserve. It is guessed that about $350 million would be needed for this. Objective of this part is to shift about 25 million acres from cropland into forage, trees, or water storage. It is designed as a long-range program open to all farmers.

Both parts of the program have this point in common: There would be no compulsion to cooperate. On acreage reserve land, grazing, or hay, or silage-making would not be permitted. On conservation reserve land, grazing may be permitted after the first year.

As this is written, the bill which includes the administration's version of the soil bank is still being argued. Whether or not it will become law is anyone's guess, but when and if it does, what do you think would be a sufficient rental rate for your allotted corn acres or your allotted wheat acres to entice you into the program? Following the Secretary's suggestion that the amount would have to be a little more than your net per acre return from your allotted crop, what would you regard as reasonable? These are the questions members of the Farmer editorial staff and our correspondents have been putting to farmers in Minnesota and North and South Dakota the last few days, and in general this is what we have been told:

To take allotted corn acres out of production. From $50 to $100 per acre.

To take allotted wheat acres out of production. With 1 exception, $25 to $35 per acre.

EXAMPLES USED BY USDA

This is more than USDA officials are anticipating. In their presentation to the Senate Committee on Agriculture and Forestry, they gave these two examples of what Government payments might have to be in order to make them attractive:

Corn on a quarter section farm in Blue Earth County, Minn. (Mankato is the county seat.)

County normal yield, 56.8 bushels per acre.
Size of farm, 160 acres.
Acreage allotment, 50 acres.
Acreage put into reserve, 10 acres.
County loan rate (approximately), $1.30 per bushel.
Farm normal yield, 70 bushels per acre.
Payment rate per acre, $45.50.
Total payment, $455.

Wheat on a half section farm in Ward County, N. Dak. (Minot is the county seat.)

County normal yield, 13.2 bushels per acre.
Size of farm, 320 acres.
Acreage allotment, 120 acres.
Acreage put into reserve, 30 acres.
County loan rate (approximately), $1.80 per bushel.
Farm normal yield, 15 bushels per acre.
Payment rate per acre, $13.50.
Payment for this farm, $405.

VISIT VARIETY OF FARMS

We visited farms that are larger and smaller than those listed above. We visited farmers in the Upper Midwest Wheat Belt, and the Upper Midwest Corn Belt. We visited dairy farmers and hog and cattle producers. And, of course, we did some visiting with farmers in Blue Earth County, Minn., and Ward County, N. Dak.

We picked at random a quarter section place farmed by Walter W. Schull in Blue Earth County, Minn. He owns 120 acres and rents 40 acres from his sister. He figures the land worth $250 to $350 per acre.

"I would want more than half the value of a 60- to 70-bushel corn crop, somewhere around $50 per acre, to take allotted corn acres out of production," he said. "I need that much in order to make a living on this farm. It takes every acre we have to produce what we feed, and to cover our fixed costs—taxes, interest, machinery, miscellaneous operating expense, and housing."

Now go with us to Ward County in North Central North Dakota, near the Canadian Border. Remember the example used before the Senate committee was a farm of 320 acres with a wheat acreage allotment of 120 acres. Well, such a farm is hard to find. The average farm size in the county is about 640 acres, and there are many farms of this size with wheat acreage allotments of less than 120 acres. In fact, ASC records show fewer than 25 Ward County farms having 120-acre wheat allotments.

A most unusual farm is that of A. Reuben Semen, of near Minot. It is a 320-acre place with perhaps the largest wheat acreage allotment for that size farm in the county—137 acres. He would be willing to take out of production about 30 acres of hill country wheatland at $13.50 per acre.

But another Ward County man, Peter Kizima, who has an allotment of 103 acres on his 320-acre place wouldn't give up an acre for less than $30 per acre. He said:

"Why I could do better than $13.50 an acre with just plain old oats at 40 cents a bushel." Reflecting on the need to change his farming operations, if he put some acres in the acreage reserve, he continued: "The 103-acre wheat allotment I have permits me to operate my farm in 3 equal-size units, 1 part summerfallowed, 1 part in barley or flax, and 1 part in wheat. If I took land out of wheat, I would have to cut down on my summerfallow because I would have to put more land in other crops to make up the difference."

To Harold E. Hanson, another Ward County farmer, a per acre rate of $13.50 appeared reasonable. He has 800 acres, 500 of which is cropland and a wheat allotment of 120 acres.

"The soil-bank idea appeals to me," he said, and "I think we'd be willing to put 30 or 40 acres in it at $13.50 per acre, provided the program is continued for 3 or 4 years on that basis."

Another expression from the wheat country comes from Russell Younggren, Hallock, Minn., operator of almost 2 sections, 850 acres of which is cropland with a going market value of about $115 per acre.

"Nothing less than $35 an acre would be attractive to me," said Mr. Younggren. He has a 213-acre wheat allotment, and in addition to that his 1955 cropping scheme included 150 acres in barley, 100 acres in flax, and the balance, summerfallowed.

"With any reasonable weather and our newer wheat varieties I will average 25 bushels per acre, although the county average is only about 18. I wouldn't want to increase my barley acreage because our present barley varieties are susceptible to blight and other diseases. Last year my barley averaged only 11 bushels per acre. And it must be considered that I'd have my investment in machinery to write off regardless of how much I reduced my wheat acreage. As a matter of fact, I'd a little rather take my chances with wheat production than take $35 per acre to rent my allotted acres."

In Barnes County, N. Dak., N. J. Clemens said that he has too much grass now on a farm he owns. Last year he had 160 acre in alfalfa, 135 acres in wheat, 160 acres in flax, 200 acres in oats, 25 acres in corn, 60 acres in durum, and about 100 acres summarfallowed. "I figure about 20 bushels per acre as an average wheat yield so I wouldn't regard anything less than $25 an acre as a reasonable rate."

C. M. Dahl, who with his son, Jack, and son-in-law, William Carlisle, produce their own feeder cattle in Logan County, N. Dak., and fatten them on their general farm in Cass County, appraises soil-bank rental values in his home area this way: "Even on our brome-alfalfa land, when cattle are selling at $20 per hundredweight, our figures show a return of about $56 an acre. I want to see this soil-bank plan work so I might go along at around $25 an acre."

That figure of $25 an acre popped into the minds of many others in the same general type of farming area where wheat is the main crop subject to acreage allotments. Maurice Koester, Clay County, Minn., a man not now enthusiastic about the soil-bank idea, put $25 an acre as "the least I'd take."

WOULD DISTURB FARM SET-UP

Disturbance to crop rotations, production of livestock, feed, and spreading machinery investment over as many acres as possible figured high in the thinking of others visited in that part of The Farmer territory where farms are large by comparison to southern Minnesota and eastern Wisconsin.

George Smith of northern Cass County, N. Dak., who has a large farm with a cropping system that includes summer fallow, wheat, barley, corn, flax or oats, sweet clover, and a large acreage of alfalfa, along with feeding out about 100 head of cattle a year and 100 to 200 head of hogs, has a "wait and see" attitude. "I don't want to express an opinion just now, but it does appear to me that cutting acreage will mean we must do a better, more efficient job of farming with what we have left. That's our goal for the immediate future."

And that, in general was the attitude of Lloyd Hill, Beadle County, S. Dak.; E. G. Sanderson, Brookings County, S. Dak., and Peter Ginsbach, who farms on the Moody-Minnehaha County line in South Dakota. All get a considerable share of income from livestock, all are concerned about disturbance to their cropping program, and to their feed production.

There is much more concern about what taking land out of production would do to the pattern of farming in the corn-hog-dairy country of Minnesota. In Carver County, Minn., a dairy area, where farm size averages about 100 acres and everything that grows goes to feed dairy herds there would be a demand for $50 to $100, and not much enthusiasm for the idea even at these figures.

Said dairyman Ralph Jopp: "If compliance means only a little sacrifice, I'll go along. I always have cooperated with Government

programs. But I'd have to have at least $50 an acre to take my cornland out of production." Mr. Jopp has a 50-head herd (26 milking and 24 young stock) on 95 acres, 80 of which are under cultivation. He has 26 cows milking and is planning to have more. With fertilizer and a hay-hay-hay-corn-oats rotation, and good soil-conservation practices, he has built the productivity of his land to a point where on one field he made a 123-bushels per acre crop in 1954 and a 76-bushel yield on the same field last year, when the weather was not as favorable.

It was a neighbor of Mr. Jopp's, Wayne Gutzman, who put the $100 per acre rental tag on his land. Another neighbor a few miles away, Hilbert Knauer set his figure at $75 an acre. His is a 144-acre bottomland farm. "This farm is geared to top production, and I am not sure the Government would be willing to pay on that basis. If I put land in, I want to be assured of feed to keep my dairy herd at its present level. If I must cut my cow herd I'd just as well sell out. Costs, repairs, and work would be just about the same, but returns would be less."

Among farmers in extreme southern Minnesota where corn and soybeans are main crops there is a reluctance to go along with 1956 corn-acreage allotments. That is because of a cut of about 14 percent under last year's allotment, and a reduction in loan value. "Bitter" was the adjective used by an ASC worker in describing farmers' attitude toward this year's allotment program.

But in random selection of farmers with whom to visit about their attitude toward the proposed soil-bank program, one does find farmers like Art Abel, Jr., who said: "If the Government will pay for my grass seed and not tie too many strings to the agreement, I might go along at $20 per acre." Mr. Abel, who had been in partnership with his father until 4 years ago, is cropping about 400 acres. Two years ago all of it was in corn. Last year, in compliance with his corn-acreage allotment, he had 160 acres in corn, the balance in soybeans. He has no livestock so all his corn and beans are sold.

Corn yields run 65 to 70 bushels per acre in the area where Mr. Abel farms. Land is valued at around $300 per acre.

Clem Zender, who farms in Watonwan County, a few miles north of Mr. Abel, is even more generous in his attitude toward the soil-bank idea. He summed it up this way: "If we get an incentive payment to withhold land from production, that should be enough. I don't think we should be paid the amount our land could return. We must cut surpluses back. They are reducing the market value of what we have to sell." Mr. Zender owns a 200-acre farm, feeds out 150 head of hogs a year, has a 15-cow dairy herd, and keeps a 20-ewe sheep flock to clean up waste spots. His corn yields are in the neighborhood of 100 bushels per acre.

Paul Cunningham, Pipestone County, Minn., farms 400 acres of which about 125 acres are in corn. "I think this land is worth about $150 an acre, but with Uncle Sam's unlimited appetite for corn and soybeans it is worth more than $200 to the operator. I think a payment of $35 to $40 per acre would be about right to get this land out of production. I am considering, as a valuable part of the program, giving the land a rest and a chance for a buildup of moisture reserve. Moisture is our limiting factor.

Over in Winona County, southeastern Minnesota, lives John Daly, who farms 463 acres, feeds out about 500 head of hogs a year, produces grade A milk from a 50-cow herd, has 60 head of young dairy stock, and feeds about 100 head of beef cattle a year. Said he: "Average corn yields on our place are high enough that I certainly wouldn't care to take less than $90 an acre to reduce my allotted corn acreage."

Those are the reactions of farmers with whom we visited. In none of our discussions was there exploration of the conservation reserve part of the two-part soil bank plan.

If and when the administration's soil bank plan becomes law maybe that second part of it will work out well for some of the farmers who are not enthusiastic about the acreage reserve.

There are farmers who a few years ago found it profitable to crop less productive land. Production from such land has been adding to the surplus just as has production from the better land. The conservation reserve is aimed at getting such land out of production. For it, the Government could make an annual payment over a period of 5 to maybe 15 years, and in addition would pay a fair share of the cost of establishing cover, maybe grasses and legumes, or it may be trees. Water impounding also is mentioned as a use.

What new details will be added to the soil bank plan as it is kicked around in Washington cannot be predicted, but one thing can be predicted: There is going to be a lot of scratch paper used up as farmers and program administrators figure out ways to make it work to the end that it will adequately compensate farmers, and at the same time, reduce the surplus of crops.

The Wrongs of Irish Petition—Second to World Peace

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following excellent editorial from the Pilot, Boston, Mass., Saturday, March 24, 1956, regarding the inspiring remarks of the Prime Minister of Ireland during his recent visit to the United States.

The editorial entitled "A Statesman's View" follows:

A STATESMAN'S VIEW

Political observers point out to us that one of the most anxious forces in present world affairs is the revival of nationalism. The former colonial powers have, in these last years, shown a new interest in national independence and a willingness to sacrifice mightily for its realization. Since political independence is, especially in its beginnings, a pretty heady kind of experience most of the international tensions of the present, particularly in the Middle and Far East, find their origin in overzealous partisans of newfound independence.

Of course nationalism is not limited to the newer countries, nor even is excessive nationalism. Many of the powers long established have a brand of partiotism which far exceeds the normal attachment which should characterize a man's relationship to his fatherland. Along with this, there is the pressing problem of unsettled boundaries, always an excuse for a rash of fanatic dedication to national interests. In all of this we notice one small country, itself a sovereign state, cut off from some portion of its own people in a clearly unjust way, and understandably eager for unification. We are speaking of the partition of Ireland.

This is an old story, and an old injustice—what brings it into the news this week are the remarks of its Prime Minister during his recent visit to the United States. Certainly the Irish are not a notably unenthusiastic people and they have been highly excited for some decades over the dismemberment of their country. The wrongs of Irish partition have been the subject of many a speech, many a screed, and not a few deeds of violence and valor. It is, in the spirit of young nationalism, a hot subject full of inflammatory possibilities.

For all of these reasons it was comforting to hear the Irish Prime Minister put the partition in the perspective of world politics. While St. Patrick's Day orators everywhere denounced in high rhetoric the injustices of a divided Ireland, Mr. Costello was careful to point out that for responsible Irishmen the issue of partition, burning as it may be, took second place to the larger problem of world peace. This is certainly the acid test of maturity in political life, to be able to see our national anxieties in terms of their implications for the total welfare of the world. It is encouraging to see such realistic statesmanship, especially when it finds itself face to face with a situation in which national pride is inextricably involved.

We suggest here a lesson for other young nations who find it easy to understand their problems only in terms of their own survival or advancement. How much relaxed would be the pressures of the Near and Middle East if the Arab States and Israel thought more of the international implications of their national ambitions and placed a priority on peace rather than national pride and territorial aggrandizement. Similarly in the Far East, how much quieter would be the climate of affairs if individual nations thought more of the total world picture and less of the demands of individual recognition. Nationalism in its best form understands the fragmentary nature of its proper claim and gives way to the superior demands of the full human picture. Without this vision it runs inevitably and fanatically toward war.

An Open Letter to Look Magazine

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. FORRESTER. Mr. Speaker, last week's issue of Look magazine devoted 18 pages to the race issue and, as usual, gave a distorted picture of conditions in the South.

That magazine featured a Negro soldier, Pvt. Joe Foster, who was born and reared in Albany, Ga., a fine little city located 11 miles from where I reside.

The people of Albany feel, however, that under the circumstances, Private Foster conducted himself very well during the examination given him by the Look reporters. Even that magazine admits that Private Foster said that he loves Albany and expects for Albany to be his permanent home. The people of Albany feel that Private Foster was subjected to a rigorous examination by his inquisitors, and when his mental qualifications are considered, that actually he was trying to show in his own way, as best he could, that he appreciates Albany and its people.

Mr. Speaker, in 1947, Maj. James H. Gray, after 4 years of service with the 82d Airborne Division, and a paratrooper with several months of real fighting in World War II with the 82d Airborne,

came to Albany, Ga., and purchased the Albany Herald. He is affectionately known as Jimmy. Jimmy was born and reared in Springfield, Mass., graduated from Dartmouth College, and lived with all of the traditions and sentiments of his native State until he came to Albany.

Jimmy is a perfect example of the fact that we all react alike under similar circumstances. Jimmy is thoroughly devoted to south Georgia and, indeed, to the South. In the short period that he has lived there, he has become a part of us in every respect, and we love Jimmy Gray.

We appreciate Massachusetts sending us a man like Jimmy, and if they have any more like him, we would be most happy to have them make their homes with us. In the past few years, we have had many outstanding men from the North and East come and make their homes with us, and invariably after being with us for a little while become as southern in their viewpoint as we are.

Jimmy is a man of extraordinary abilities, and certainly a writer with remarkable talents and courage.

Jimmy sorely felt that Look magazine had done Private Foster, Albany, and the South a grave injustice. Consequently, he wrote an editorial in the Albany Herald this week, entitled "An Open Letter To Look Magazine." That editorial is so well written and so completely true, that I quote it in full as follows:

GARDNER COWLES,
Editor, Look Magazine.

DEAR SIR: We have read with mixed emotions the story, Private Foster, United States Army, in your April 3 issue. Plainly, you have little respect for Albany's social habits and customs which represent those of the Deep South. That is your privilege, of course.

But you will pardon us if we enter a strong dissent. For the sake of the record, Albany is not "cut in half by fear, ignorance, and the last remains of a dead civilization." The last time that we looked around our schools were full, our churches were thriving, our population was up some 300 percent in the last two decades, our civic clubs were markedly active in community endeavors and, incidentally, numerous industries from your neck of the woods were making inquiries about how they could come down and join us. If this is decadence, we can use more of it.

Contrary to your impressions, Albany is not psychopathic about the racial question. And this applies to our colored citizenry as well as our white. We have not locked the issue away in the closet like a family skeleton, nor do we spend every hour in the day beating it with a stock like a mangy cur. It is but part of our social and economic fabric, and we treat it as such—with common sense.

Like you, we are American citizens, living in accord with our best conceptions of what constitutes a decent, moral social system. America, thank God, is still a land of diversity, despite obvious political pressures to make it something else. You do not have to live as we do, and we do not have to live as you do. And we think that is healthy; we think that is American.

Private Foster can make his way in Albany, successfully, within the framework of an established society. There is none here who does not wish him well. So why do not you, who pose piously as his friend, give him a break? You do not help Private Foster by indicting the morals of his community. And we thing that your good instincts tell you that. What makes for circulation on Madison Avenue, New York, can impair a life in Albany, Ga.

In our opinion, it is articles such as yours that permit no reasonable solution of the racial issue. They inflame; they incite, but they solve nothing. The NAACP may well applaud your condemnation of Albany, Ga., but as for the people of this community, their reaction is contemptuous and wholly negative.

And, after all, it is we not you who must live and work to solve this problem—not academically but in practical human relationships.

Sincerely,

MR. JAMES H. GRAY,
Editor and Publisher.

Eisenhower Is Sound on Foreign Aid Plan

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include an editorial from the Modesto Bee concerning the recommendation of President Eisenhower that Congress authorize him to spend $2 billion during the next 10 years for foreign aid of which about one-third shall be used for economic and other nonmilitary aid to undeveloped countries. To those of us who have considered this problem for a long time and who must implement it, this is valuable support. We realize that the stakes involved concern our capacity to adapt ourselves for survival. We are in truth and in fact legislating for posterity because we feel that the proposal will enable the President and Congress to bring that enduring peace to which our children and grandchildren are entitled.

I hope that every Member of Congress will read this masterful argument, which follows:

EISENHOWER IS SOUND ON FOREIGN AID PLAN

If Congress rejects President Dwight D. Eisenhower's recommendations on foreign aid it will adopt a deliberate and suicidal policy of appeasing communism.

Power has been draining away from the West to the Soviet orbit simply because Communist policy has shifted from military aggression to what Eisenhower characterizes as "ceaseless probing for opportunities to exploit political and economic weaknesses."

The President's sound and all-important message calls for an increase of more than $2 billion in foreign aid expenditures for the fiscal year 1956–57, about a third to go for economic assistance. One of the most important proposals is that the President be granted a 10-year authorization to make commitments of $100 million a fear for economic aid to undeveloped countries.

Americans had hoped that foreign aid could taper off. Our minds were set toward that happy prospect. But Russian strategy has changed drastically and unless we can change to meet it, we shall abdicate any right to denounce the Eisenhower administration for lack of flexibility and imaginativeness.

Traditional election year grandstanding by Congress to curry votes among the parochial and shortsighted, if it develops, will demonstrate it is Congress which is the rigid block in the path of our policy.

Last year Congress granted Eisenhower a blank check for military action around Formosa. How can it therefore possibly talk of risks in a 10-year commitment of $100 million annually to be used by the President to aid distressed peoples and endeavor to win them as allies?

Only by some such long-range, relatively small commitment can we hope to match the continuity of policy which inheres in the Russian dictatorship.

Not only would such stability of policy put us on a nearer equal footing with Russia but it actually would reduce foreign aid costs. Such organizations as the World Bank and the Export-Import Bank would be far more likely to make financial commitments for projects in backward countries if they knew America was in the field for a forseeable period.

This is a crucial test of a democracy's capacity to adapt itself for survival.

Passive Acceptance of the Deteriorating Stalemate

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. PRICE. Mr. Speaker, I have frequently in the past asked consent of my colleagues to insert in the RECORD the brilliant reporting of the brothers Joseph and Stewart Alsop. With my colleagues' permission, I have recently inserted a number of their articles on the deterioration of the Strategic Air Command. I think, therefore, it is only proper that I should again ask consent to insert what is essentially a summary of the thoughts expressed in these recent articles.

Some time ago the Messrs. Alsop coined a happy phrase to describe the Strategic Air Command. They called it "the shield." It is the shield that protects us while we build the strength to insure security and peace. This shield is what Sir Winston Churchill referred to in his MIT speech in 1949 when he said:

It is certain that Europe would have been communized and London under bombardment some time ago but for the deterrent of the atomic bomb in the hands of the United States.

The Strategic Air Command is the long-range force of our United States Air Force and it is the force which can deliver the atomic bomb. It is, of course, what Secretary of State Dulles had in mind in his remarks about "massive retaliation." It is the force which permits what Secretary of Defense Wilson and President Eisenhower referred to as "the atomic stalemate." Unfortunately, the present American policy is to tolerate a situation in which about two-thirds of our long-range striking force is dependent upon overseas air bases. This policy continues at a time those air bases are beginning to be hopelessly vulnerable because of the Soviet jet bomber and ballistic missile programs.

We in the United States are apparently accepting passively the rapid deterioration of a situation which we recog-

nize. The administration is pretending that the new power the Soviets are gaining either does not exist or, if it exists, will not be used.

Here and there, a voice cries out in protest and presents the facts which are the basis for apprehension. But Secretary of Defense Wilson continues to make bland acceptance of a situation which has in it the seeds of a more horrible Pearl Harbor. As Joseph Alsop says in his most recent column:

When the enemy has the power to kill, and we have only the power to wound, there will be no stalemate.

Mr. Speaker, with the consent of my colleagues, I shall extend my remarks in and insert in the CONGRESSIONAL RECORD the column reporting the unhappy thoughts of a very intelligent and experienced observer of international affairs as he departs from Washington on a 2-months' inspection trip of the situation in the Middle East. This column from the New York Herald Tribune of March 21, 1956, follows:

MATTER OF FACT

(By Joseph Alsop)

GOODBYE, WASHINGTON

DEAR STEW: I leave tomorrow for 2 months and a half in the Middle East; and so, as our custom is, I want to sum up how things look to me on the eve of my departure.

Maybe advancing years are making me a bit obsessive, but in my opinion every other feature of the national scene pales into the dimmest insignificance when compared to our foreign and defense problems. Of course, it's important that the country is prosperous. Of course, it's important that a new kind of enlightened conservatism has taken root among us. Of course, it's important that we have in Eisenhower that very unusual being, a leader who is loved.

But the whole smiling prospect of present-day America can prove and will prove to be an empty and dangerous delusion, if the cause of freedom in the world is not upheld. You may be shocked when I say so; yet it seems to me that our present situation has more than a flavor of the situation in Britain in the late 1930's.

Britain was prosperous then, remember. The conservative governments of Baldwin and Chamberlain commanded immense majorities. The opposition was feeble and feckless, as I'm afraid I think the Democrats have been these last 3 years. None by a very few, who were thought to be "merchants of gloom and doom," were worried about the way the whole European balance of power was turning against Britain. And then this vast shift in the power balance produced its inevitable effect; and all that had seemed so good and hopeful proved to be ruinous and wrong.

I am not comparing the Eisenhower administration to the Baldwin and Chamberlain governments. The personalities and outlooks could hardly be more different. But I am suggesting that in the midst of our prosperity, and perhaps because of our prosperity, we are passively assenting to the same kind of vast, unfavorable shift in the world balance of power that finally brought Britain to ruin.

As the supreme example of this neglect, I would cite the change that is now going on in the status of the American Strategic Air Command.

This single force, I need hardly point out, is the sole shield and buckler of the free world. It is the central, basic instrument of the defense of the United States. It is what Secretary of State Dulles had in mind in his remarks about "massive retaliation;" and it is what Secretary of Defense Wilson and President Eisenhower have in mind now, when they talk about "atomic stalemate."

You and I have already written so much about the impairment of the Strategic Air Command's striking power that a good many people who are kind enough to read our stuff are beginning, I'm afraid, to be thoroughly bored by the whole subject. But I hope that you will go on writing about it, all the same, for the very good reason that no subject is more important.

For what, in essence, is the present American policy? The present policy is to tolerate a situation in which about two-thirds of SAC's total striking force is dependent upon overseas airbases. The policy is to tolerate this dependency although those SAC airbases are beginning to be hopelessly vulnerable, both strategically and politically, because of the Soviet jet bomber and ballistic missile programs. The present policy, in short, is to pretend that the new power the Soviets are gaining just isn't there, or that they won't use this new power anyway.

The arguments that the Soviets won't use their new power, which they are spending billions to acquire, are just about as logically convincing as the arguments that made Pearl Harbor a catastrophic surprise. And even if the Soviets do not use their new power, SAC's vulnerability will still be a hard fact. With two-thirds of SAC's striking force in danger of being neutralized any fine morning, it is misleading and mischievous to talk about "stalemate." When the enemy has the power to kill, and we have only the power to wound, there will be no stalemate.

The defense problem is therefore the key problem, and you will have to go on dealing with that. As to what I shall find in the Middle East meanwhile, I follow our usual rule of keeping an open mind until one sees the facts on the spot. But I rather think I may find the kind of local reflection of a general shift in the balance of power that one also saw in Europe in the 30's.

You recall how the sort of people who are now called uncommitted went all out in the 30's to adjust their surfboards so they could ride the waves of the future. I have a notion that a lot of surfboard adjustment is going on now, in the Middle East and elsewhere. I suspect, too, that it wasn't very brilliant to make such an effort, at the famous summit meeting, to convince the Soviets and the rest of the world of our devotion to peace at any price.

In any case, I shall be looking into and trying to report on one very critical aspect of the shift in the world power balance, while you in Washington report on other aspects of the same life-and-death phenomenon, and while you report, too, I hope, on all the interesting episodes of our changing political scene. Best of luck.

JOE.

Minnesota Presidential Preference Primary—Editorial Comment

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mr. EVINS. Mr. Speaker, 4 years ago at this time the big news out of Minnesota was that more than 100,000 voters had written in the name of Dwight D. Eisenhower on the ballots of the Republican Party primary. The recent big news out of Minnesota comes from the Democratic side. It is that Tennessee's Senator ESTES KEFAUVER has won a thumping victory over Adlai Stevenson, another great Democrat, the latter allied with the Minnesota Democratic organization in the presidential preference primary. Senator KEFAUVER's margin of victory is recognized as noteworthy. Also of great significance is the decisive Democratic vote polled by both Senator KEFAUVER and Governor Stevenson in contrast to the total vote received by the Republicans. The Democratic total vote has been heralded as a "good omen" and indicative of a Democratic prairie-fire trend.

In this connection, Mr. Speaker, I ask unanimous consent to have reproduced in the RECORD brief statements of editorial comment on the recent Minnesota primary by newspaper editors throughout the Nation. These comments were compiled from the press throughout the country and reproduced by the New York Times, dated March 22, 1956.

The editorial excerpts follow:

[From the New York Times of March 22, 1956]

EDITORIAL COMMENT ON KEFAUVER VICTORY IN MINNESOTA PRIMARY

Following are excerpts from editorial comment in newspapers, gathered by the New York Times and the Associated Press, on Senator ESTES KEFAUVER's victory in the Democratic presidential primary in Minnesota:

NORTHEAST

Newark

Marked Talent for Losing

The News (independent Republican): "Adlai Stevenson has demonstrated a marked talent for losing. His 1956 score stands at 2 up and 2 down. No matter how he reads Tuesday's returns, Mr. Stevenson will find no balm—and mighty few delegates—in them."

Why and What

The Star-Ledger (independent): "The whipping given Adlai Stevenson by Senator ESTES KEFAUVER * * * is capable of a number of interpretations, none in itself the full answer. While there is no denying Senator KEFAUVER's great personal victory, there is, and will be, plenty of argument over why he won and what his victory means."

Trenton

Star in Ascendancy

The Evening Times (independent): "Unquestionably, Senator KEFAUVER's star is in the ascendancy. He was conceded little chance of a creditable showing, much less a victory, in Minnesota, where strong Democratic organization and the substantial personal following of Senator HUBERT H. HUMPHREY were committed to Mr. Stevenson. His surprising success, accordingly, is in the nature of a major personal triumph."

Paterson

Tide Has Turned

The Evening News (independent): "Coming from a second position, ESTES KEFAUVER won [both the New Hampshire and Minnesota primaries] and we are forced to agree with him that the tide has turned in his favor. Mr. Stevenson is no longer the invincible lead horse."

Boston

Agrarian Discontent

The Herald (independent Republican): "There are many indications that the big factor in the vote was not a Democratic bossism or Republican indifference but agrarian discontent. Senator Kefauver outbid Mr.

Stevenson on the issue dearest to the rural voter, farmer aid. It suggests that the Republicans would do well to pay more attention to farm sentiment and putting across their essentially constructive farm policies."

Farmers Show Displeasure

The Post (independent Democrat): "Senatore Estes Kefauver may not have knocked Adlai Stevenson out of the contest for the Democratic nomination * * * but he has uncovered some aspects of the presidential contest which both parties will study in exhaustive detail. While this might have been cause for Republican jubilation it is plain that Kefauver's victory is in generous part due to Republican farmers swinging into the Democratic primaries to demonstrate their displeasure with Republican policies and Stevenson's farm policies."

Philadelphia

May Be Overrated

The Bulletin (independent): "While Senator Kefauver's excellent showing, added to his victory in New Hampshire, may encourage him and his followers, its actual importance, in terms of convention support, can easily be overrated. The Minnesota vote did not change the feeling of many professional Democratic politicians that the Tennessean is not the man for them. Nor is it likely to change any opinion on the South, where he is cordially disliked."

Pittsburgh

Leaders' Reaction a Factor

The Post Gazette (independent): "Much will depend upon how party leaders, including Pittsburgh's Mayor Lawrence, react to the Minnesota returns. If they panic, as some of them (but not Lawrence) did in 1948 when there was strong sentiment for ditching Harry Truman, and feel that he has no chance of winning, then Mr. Stevenson's number would be up."

SOUTH

Washington

A Crushing Blow

The Star (independent): "The voters of Minnesota have dealt a crushing—one might say almost fatal—blow to Adlai Stevenson's political ambitions. We venture to guess that the hard-boiled bosses of the Democratic Party will come to but one conclusion when they sit down to analyze the returns: Senator KEFAUVER has more vote appeal than Mr. Stevenson."

Democrats Disenchanted

The Post and Times Herald (independent): "Whatever the explanation in Minnesota for Mr. Stevenson's dismal showing on Tuesday, it is apparent that many Democrats are disenchanted with him. Out of office he has not been able to hold the great loyalty that he was able to command in 1952. Perhaps he is too much of a conservative for the Democrats; at least he has not been able to inspire the voters sufficiently with his moderate and philosophical speeches."

Atlanta

Must Not Be Belittled

The Journal (Democrat): "The victory over Adlai Stevenson must not be discounted or belittled in any way. The chances are that Kefauver cannot win the nomination for himself. But, if he keeps going as he is going now, he may hamper, and even halt, Adlai Stevenson."

Baltimore

Nomination Race Open

The Sun (independent Democrat): "Mr. Stevenson has lost ground with the voters in the past 4 years. After Minnesota he can no longer be a shoo-in for the Democratic nomination or even the leading contender. What it means is that the race for the nomination is now a wide-open one, with every dark horse taking new heart."

Louisville

Helps Symington Chances

The Courier-Journal (independent Democrat): "Although this primary has left Stevenson's future in doubt, it has not enhanced Kefauver's chances for the Democratic nomination. He does not have the support of party leaders. He does not have the support of a single Senator. It would not be far wrong to say that the Minnesota primary has done more for the chances of Missouri's Senator STUART SYMINGTON than any other possibility as of now."

MIDWEST

Cleveland

A Possible Deadlock

The Plain Dealer, independent: "The politicians are writing their own tickets in efforts to explain Senator ESTES KEFAUVER's astounding victory in Minnesota's primary Tuesday. Whatever the explanation, there is no disagreement on the proposition that Stevenson's candidacy has suffered a severe setback. This was not necessarily a knockout blow, however. It merely enhances the possibility of a deadlock at the Democratic convention. In such an event, the dark horses would come prancing out of their stalls, and the Democrats have quite a few of them."

Detroit

Means Many Things

The Free Press, independent: "Tuesday's surprising upset will mean many things, but what is certain is that Governor Stevenson, while still a potential winner at the August convention, is not an overwhelming popular choice. Although Senator KEFAUVER'S star is rising, and his appeal to the rank and file is obvious, he is still a long way from being his party's 1956 nominee."

Chicago

Indeed in a Bad Way

The Tribune, Republican: "It is remarkable, after he was so soundly beaten by Mr. Eisenhower 4 years ago, that the myth should have persisted this long that Mr. Stevenson was a likely candidate. If the Minnesota returns are an awakening to reality, Mr. Stevenson is indeed in a bad way."

Adhering to Principle

The Sun-Times, independent: "In such States as Florida and California, where Stevenson will be pitted directly against Senator ESTES KEFAUVER, there is bound to be a bandwagon psychology operating in KEFAUVER'S favor. If he (Stevenson) is to achieve success ultimately, he can best do it by being himself, adhering to principle rather than expediency, and speaking with the voice of reason and reasonableness."

St. Louis

"Dark Horse" May Win

The Globe-Democrat, independent: "May prove to be a coup de grace to the Presidential ambitions of the former Illinois Governor. The net result of the Minnesota primary is to lay the groundwork for a rough-and-tough nominating convention in Chicago next August, with the chances of a dark horse immeasurably bettered."

Received a Setback

The Post-Dispatch (independent Democrat): "The campaign of Stevenson has received a setback, perhaps a serious one. KEFAUVER, on the other hand, had come up from underdog in the Minnesota race to what is seemingly today the position of a front-runner."

Minneapolis

Many Voters Crossed Lines

The Star (independent): "The plain speaking Senator from Tennessee has confounded most of the political experts and given a painful kick in the shins to the DFL (Democratic-Farmer-Labor) brass of Minnesota. Certainly a number of Republicans crossed over party lines for this occasion and probably most of these wanderers voted for KEFAUVER."

Milwaukee

Like Folksy Manner

The Journal (independent): "It is evident that a good majority of Minnesota Democrats prefer KEFAUVER'S folksy manner, his simple solutions, to Stevenson's restrained campaigning, formal speeches, more complex solutions, and witty remarks. Stevenson may come back."

St. Paul

DFL Support Hurt

The Dispatch (independent): "The way it seemed to most of the rank-and-file Democrats was that Senator HUMPHREY and Governor Freeman presumed to hand them over to Adlai Stevenson and they were just not being had that way. So the asset of DFL organization support became a liability."

People Resent Bossism

The Pioneer Press (independent): "People resent even the appearance of bossism, and in Minnesota the selection of Adlai Stevenson as the heir apparent had too much of the technique of the smoke-filled room."

WEST

San Francisco

A Showndown Seen

The Chronicle (independent, Republican): "Despite our cross-filing law, California allows no crossover by the voter in a presidential primary, so the fight between the two in the State will be a strictly Democratic Party showdown. It shapes up today as the pivotal Democratic preconvention battle, out of which will come a clearer indication of the relative strength of KEFAUVER and Stevenson than Minnesota has given."

Los Angeles

May Change Outlook

May well change the entire outlook for the Democratic Party's eventual selection of a nominee to run against President Eisenhower.

Portland

The Oregonian (independent, Republican): "Adlai Stevenson's defeat * * * is so close a parallel to Wendell Wilkie's defeat in Wisconsin's Republican primary in 1944 that one is entitled to speculate on a similar result. The pressure in the Democratic Party for a compromise candidate is certain to build up."

SOUTHWEST

Dallas

Soul Searching

The Morning News (independent): "The KEFAUVER vote must necessarily cause some soul searching in official circles. Stevenson did not carry Minnesota in 1952, but he polled an impressive 608,000 votes in a cat-and-dog fight. Now Minnesota Democrats, a lot of them, don't want Stevenson, do want KEFAUVER."

Greetings for a Hatchetman

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. FEIGHAN. Mr. Speaker, all the world was shocked to learn that MVD Gen. Ivan Serov, who now commands the legions of terror built up by Stalin and Beria, was in London making ad-

vance arrangements for Communist Party boss, Khrushchev, and his entourage, who are planning to visit the British Isles this spring. This General Serov is the same General Serov who signed and issued a secret order which brought about the cruel and forced deportation of over 60,000 Estonians, Latvians, and Lithuanians from their homelands to the cold and barren slave camps of Siberia. This exhibition of mass terror directed by this same Russian Communist General Serov took place during the month of June 1941. This Russian General Serov personally supervised the carrying out of the international crimes of genocide against nations. I plan to have more to say at a very early date about the black and foreboding record of this Russian general, Ivan Serov.

The Cleveland Press under date of March 24 carried a highly significant editorial, commending the British newspapers for exposing to public light some of the many evil crimes that dominate the life work of a fanatic, dedicated Russian Communist, General Serov. This editorial is, in every sense, a tribute to the free press of Great Britain, and a proper recognition of the fact that the British people have always been able to spot a phony miles away: Under leave previously granted, I include it in my remarks.

GREETINGS FOR A HATCHETMAN

"Thug, jackal, odious, Russian version of Himmler, chief killer, most sinister man in Russia."

That was the way the British press greeted Soviet Gen. Ivan A. Serov, chief of the Red secret police and the successor to Stalin's late hangman, Lavrenti Beria, on his arrival in London.

It was a proper greeting. Smiles to the contrary, Serov is the chief executioner for the new regime. His past record is one of mass murder. He deported and liquidated thousands of Poles, Czechs and Balts in World War II.

All in all, a pleasant guy. Congratulations to our British newspaper colleagues for giving this creature and example of what a free press really can do—tell the truth about him.

District of Columbia Residents Deserve Home Rule

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. MACK of Washington. Mr. Speaker, a recent editorial in the Seattle (Wash.) Times points out that there are 25 States where the people contribute less in Federal taxes than the 853,000 living in the District of Columbia.

The 1952 platforms of both political parties promised District residents home rule. I feel that these promises should be kept. District of Columbia residents when they pay so much in taxes should have something to say about who is elected to spend their money and how that money is spent. The full text of the Seattle Times editorial follows:

COMMUNITY OF NEARLY A MILLION WITH NO VOICE IN ITS AFFAIRS

Residents of the District of Columbia and the Nation's Capital City have renewed their campaign, on a nationwide scale, for full enfranchisement as citizens of the United States. They want the right to conduct their own self-government.

The fact that the people of the District of Columbia do not have home rule, and cannot vote for the President who resides in their midst, is an anachronism of long standing. In 1874, because of some municipal debt crisis, Congress took over the municipal government of Washington as a strictly temporary measure. Like many temporary measures, this one has been continued for close onto a century. Congress has never been able to agree on a suitable form of government. Voting privileges of the capital's populace have never been restored.

With a population of 853,000, Washington, D. C., pays almost a billion dollars into the Federal Treasury each year in taxes. There are 25 States of the Union whose people contributes less than that amount to the cost of the Federal Government. District of Columbia taxpayers have nothing to say about how their tax money is spent. They also pay some $112,000,000 a year in municipal taxes, and defray 85 percent of the cost of running their city. A committee of Congress serves as a municipal council under this anomalous arrangement.

Yet the national platforms of both political parties in 1952 included planks favoring home rule for the National Capital. All four of President Eisenhower's messages on the state of the Union have urged that the principle of self-government be extended to the District of Columbia and the right of suffrage be granted to its citizens.

In recent years, the Senate has passed three home-rule measures, and each time the legislation has been pigeonholed by the House District of Columbia Committee. The latest of these Senate bills, enacted last year, is in the hands of that committee now.

This is a question of chief interest to the people who reside in the shadows of the Capitol and the White House, but it is a matter of concern also to the rest of the country. The American Colonies fought the War of the Revolution to escape the burdens of taxation without representation. Almost two centuries later, residents of the District of Columbia still are in that undesirable situation.

The House of Representatives will be remiss if it permits the Senate's home-rule measure to expire in the files of a committee. Self-government legislation for Washington, D. C. should be enacted during the present congressional session.

It's Hard To Know What To Believe

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Reporter published in North Conway, N. H., Thursday, March 22, 1956, entitled "It's Hard To Know What To Believe":

IT'S HARD TO KNOW WHAT TO BELIEVE

Fourteen years ago last fall, there was a gesture of friendliness extended by certain Japanese officials whereby they came to Washington to say that our Government was all wet in thinking that Japan would provoke a war with the United States. While the passage of time deadens our memory, nevertheless it's not difficult to recall how easily we were fooled by that setup. Hardly had the Japanese representatives walked out of the White House before Pearl Harbor was attacked. Remember?

The Soviet Union today is telling the world that Stalin was really a dictator as bad as Hitler or even worse and that the world is misjudging the U. S. S. R. in their efforts now to clean up the situation.

From the standpoint of ideology, the American people would like to believe this but on the basis of the progression of circumstances which have characterized the operation of the Soviet Union, there is no firm foundation upon which to place any trust.

Confidences are not built on a pattern of helter-skelter action, and if the brass of the Kremlin now feel that they can suddenly impress the world with how upright and moral they really are, our minds go back to the Japanese incident. This all adds up to a few short words—let us keep our guard up because it's hard to know what to believe.

P. K. B.

Statement of Principles on Indian Affairs

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. METCALF. Mr. Speaker, late in January this year a seminar on problems facing the American Indians was held in Washington. It was my privilege to participate in one of the panels at that seminar.

After very thorough study, those attending—many of them people actively engaged in working with our Indians—adopted a well-balanced statement of principles to be followed in dealing with our first Americans. This statement, which merits the thoughtful consideration of everyone interested in Indian legislation, follows:

STATEMENT OF PRINCIPLES ON INDIAN AFFAIRS

BACKGROUND

The following statement of principles grew out of a seminar held in Washington, D. C., January 21–23, 1956, attended by some 50 friends and others much concerned with problems facing the American Indians. It is a statement of the views of those attending the Seminar rather than an official statement of any of the three sponsoring friends organizations. It is based on the considerable experience of many of those attending who were, or are now, actively engaged in working with Indians, and also formulated after hearing Government officials set forth in detail present poicies and programs affecting Indians.

STATEMENT OF PRINCIPLES

The basic underlying requirement in the field of Indian affairs is to provide an opportunity for Indians to develop as healthy, happy and useful members of the kind of society in which they choose to live. Our Government's duty is to assist in every way possible to achieve this end, and we are appreciative of the efforts of sincere and dedicated people in the Federal Government working toward this goal.

We find ourselves in agreement with many statements of policy set forth by high Gov-

ernment officials which we have heard. The reports which we have received from the areas in which these policies are applicable, however, indicate in all too many cases that a wide discrepancy exists between the principles enunciated and the actual implementation in the field. It is our hope that in the near future there will be a closer coordination between desirable policy and practice.

INDIAN HEALTH, EDUCATION, AND WELFARE

There is an urgent need to raise health, educational and social standards for American Indians to acceptable levels so they may enjoy the same opportunities as other citizens. Programs to reach these goals, including expanded appropriations, should receive every favorable consideration from all appropriate Departments of the Executive Branch and from all Members of Congress. Individual citizens should support the adoption of such programs and make their support known in Washington.

While the seriousness of the situation confronting American Indians in this area will require, for a time, greatly increased appropriations and governmental assistance, constant efforts should be made to encourage Indians to develop individual responsibility, initiative, and self-reliance. Progress in this and other areas should be made by working with Indians rather than for them.

Health

1. We are in sympathy with the goals of the Public Health Service regarding Indian health:

(a) To elevate the level of health to acceptable standards;

(b) To develop programs of teaching Indians principles of sanitation, to prevent and protect against infectious diseases;

(c) To expand hospitals to care for existing acute illnesses and surgical emergencies, and to care for the accumulated backlog of medical need;

(d) To raise the general economic level.

2. In implementing these goals we would urge greater use of Indian organizations such as welfare committees of Tribal Councils.

3. We urge an employment policy of hiring staff members who are sensitive to the historical background of the Indian people with whom they work so that they will more readily develop a relationship of confidence and trust.

4. Since the relationships of confidence and trust grow slowly, we urge that staff workers be allowed to remain in locations where their work is proving acceptable to the Indian people.

5. We deplore the fact that from time to time Indians are meeting discrimination off the reservation when applying for Government and private care. We urge that medical agencies find ways of doing away with discrimination.

6. The need for adequate roads and a satisfactory water supply is pressing on many reservations and must be met if Indians are to have an equal opportunity to achieve proper health standards.

7. We welcome the announcement that certain tribes with sufficient resources are taking the initiative in health matters by participating in private group health plans.

Education

1. We appreciate the efforts made by the Bureau of Indian Affairs to provide education for all Navaho children. Efforts should be made to increase educational opportunities for all Indian children.

2. We urge that schools be located as near the home as possible so that young children, especially, may live at home and family life not be disrupted.

3. Standards of Government schools should be equal at least to standards of better public schools. There should be adequate vocational and college preparation courses, and opportunities to develop the Indians' own cultural and creative abilities. The Indian Bureau may have a responsibility to make sure that such opportunities are available to Indian children attending public schools.

4. There should be a greatly expanded adult educational program which will give Indian people the opportunity to prepare to assume responsibility for schools, health services, and other community activities, and to enable them to compete successfully economically and otherwise in a non-Indian world. A special staff experienced in adult education is required.

5. Many more opportunities should be provided for Indian young people to attend colleges, universities, and graduate schools. Where resources permit, tribes themselves should set aside scholarship funds. The Indian Bureau should seek larger appropriations for this purpose, and insure that tribes know of their availability. The Public Health Service should assist and encourage Indian youth to enter the health profession and medical-care work. Private organizations, churches, civic groups, and individuals are also urged to help Indian youth receive higher education.

Welfare

1. Welfare committees of Tribal Councils should be made aware of the existing fund for general assistance in the Bureau of Indian Affairs, and welfare committees of Tribal Councils should be called upon to assist in determining where these funds should be used.

2. Welfare workers should be technically informed on and sympathetic to the particular group with whom they work—their culture and practices.

3. We are aware that one of the great problems is the care of Indian transients, and we urge further study and assessment of possible organizations, public and private, which can help to solve the transient problem.

4. We approve the item of the Bureau of Indian Affairs' budget for increased funds to help relocated families with emergenices that arise after relocation, such as seasonal unemployment or sickness. There should be full collaboration with the Public Health Service on the health aspects of the relocation program.

5. The Federal Government's responsibility for Indians who leave the reservation to seek work, whether under the relocation program or otherwise, should extend to such time as care is adequately provided by State and local governments. States concerned should adopt programs which give adequate aid for these and other residents of the State. States should also be aware of the needs of the more than 30,000 Indians who are not protected by any treaty obligations between the Unied States Government and individual tribes and must therefore depend entirely upon State and local assistance programs.

DEVELOPING ECONOMIC SELF-SUFFICIENCY

As friends, we believe that recognition of Indian rights and aspirations is basic to any question of economic development.

We believe that Indians, like all other people, should have the opportunity to choose their own way of life and make their fullest contribution to the society in which they elect to live.

We feel confident that with understanding, encouragement and assistance Indians will manage their resources in such a way that they will benefit themselves and the people as a whole; but we realize that the present reservations, even fully-developed, cannot be expected to support the rapidly expanding Indian populations,.

We are led to believe that Indians can be helped toward economic self-sufficiency by:

1. Assistance in the development of reservation resources: As Indians themselves see the need for specific developments, they should be aided through social and economic surveys, technical assistance and training, and adequate credit. Management of Indian resource development should be in Indian hands to the greatest possible extent.

2. Encouragement of self-help enterprises. In strengthening Indian initiative, we favor use of cooperatives, credit unions, and similar enterprises for resource development. We feel that self-help projects, encouraged through special assistance, could play a vital role in the stimulation of Indian community action and leadership. Federally financed construction and other projects on reservations should be utilized wherever possible to train Indians in new skills and in carrying executive responsibility.

3. Attraction of industry to reservation and near-reservation communities: In areas where Indian tribes and groups feel resources can best be developed and utilized by introduced industries, efforts should be made to attract those which will provide the fullest possible employment of Indians at prevailing wage rates, including opportunities for advancement to responsible positions.

4. Careful resettlement in areas where job opportunities exist: Indians who voluntarily elect to leave their home communities should be thoroughly prepared, through on-reservation orientation and training programs, for the transition to urgan living. We feel that employment opportunities should be sought first in cities close to reservations.

5. Preventing the forced breaking up or uneconomic sale of Indian holdings: Legislation or administrative measures which propose to divide resource management units should be carefully examined in the light of Indian feeling and good conservation practices. We urge that tribal groups and communities be helped to purchase lands where division would have a detrimental effect.

6. Involvement of local and private agencies: The experience of all concerned with Indian affairs on national and local levels should be brought to bear in a coordinated effort to help Indians meet their needs.

TERMINATION OF FEDERAL CONTROL

It is our belief that ultimately the independent management by Indians of their own affairs is desirable. We view with grave concern, however, the hasty and premature efforts which have recently been made to terminate Federal supervision. Termination of Federal supervision in Indian affairs should follow the attainment by Indians of acceptable health and educational standards and the development of economic resources and experience in business management. It should not be merely an abandonment of protection of Indian property and of responsibility for services to Indians.

Consent clause in termination legislation: We strongly urge that any "termination" bill contain a requirement that the bona fide members of each Tribe affected give their consent according to the usual tribal voting procedure on similar questions. The reasons are advocating such consent provisions are many, but those of greatet importance are here outlined:

1. In many treaties with Indian tribes then operating as small, conquered nations, the United States made certain promises with respect to tribal lands, tribal land-tax exemption, tribal self-government rights, and certain services that would be rendered to the members of those tribes.

2. In the Indian Reorganization Act (1934) and in subsequent Government approved tribal constitutions and business charters adopted under IRA authority by tribal majority vote, tribes taking such action were

given many assurances, primary among them being a pledge that henceforth none of their lands or other assets might be sold without their consent, that they might maintain on their reservations certain forms of local government similar to those maintained by counties and incorporated towns, and that they might have a controlling hand in management of tribal business within certain limits.

3. Such promises are binding upon the legislative and executive branches of the United States Government, and national honor is inextricably involved in this question. Such promises cannot, in all honor, be broken. They can be revoked, ethically, only when the tribes to whom they were made express a willingness to release the Government from its pledge, or to substitute some other agreement acceptable to both parties to the original promise.

4. Consent procedures for tribes seem wholly in line with certain initiative and referendum provisions made by several States and apparently consonant with principles laid down in the United States Constitution. They seem particularly applicable in this instance.

5. Congress itself set an apt precedent when it included in the Reorganization Act a clause which provided that the principal terms of that act would apply only to tribes that signified, by a majority vote of the adult members, tribal consent to its application.

Indian consultation: We urgently request that Indians chosen by their fellow tribesmen through established tribal procedure be consulted when any legislation or any administrative action that affects the well-being of their people is under consideration, and that Indian opinion and Indian wishes be given serious consideration and be respected. Indians, down to the present day, have sound grounds for mistrusting "consultation." Too often it has been characterized by inattention on the part of Government "consultants," followed by arbitrary action totally at odds with Indian opinion.

We believe serious efforts should be made by the Indian Bureau and the Public Health Service to develop and refine methods of carrying on consultation with Tribal representatives so that Indian opinion can be adequately determined.

Termination and natural resources: We believe that any successful plan of termination must include sound policies with regard to such major natural resources as forests, mineral deposits, dam sites, farming and grazing areas, fishing grounds, and irrigation systems in a manner which will protect the best interests of the people of the entire region—Indian and non-Indian.

Emphasis should be on developing Indian initiative and self-reliance rather than on termination.

We agree with Commissioner Glenn L. Emmons when he says: "The major forces now holding many of the Indian people back are these three problems—ill health, lack of full educational opportunities, and widespread poverty. By attacking these problems at the root we can greatly hasten the day when the Indian people will no longer need the protection of special relationships with the Federal Government and when they can take their proper place in our local communities on an equal footing with their non-Indian neighbors. As these are achieved the need for Federal protection and supervision will disappear."

It is our hope that personnel in the Bureau of Indian Affairs, the Public Health Service in State and local governments as well as individuals and organizations, Indian and non-Indian alike, will direct their experiences and energies in a coordinated effort to accomplish, in a spirit of brotherhood and love, the principles set forth here.

The seminar out of which this statement of principles grew was sponsored by American Friends Service Committee, 20 South 12th Street, Philadelphia 7, Pa.; Associated Executive Committee of Friends on Indian Affairs, 1520 Race Street, Philadelphia 2, Pa.; Friends Committee on National Legislation, 104 C Street NE., Washington 2, D. C.

Senator Humphrey's Farm Fight Wins Acclaim

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. MARSHALL. Mr. Speaker, under leave to extend my remarks, I include a report from the New York Times of March 21, concerning Senator HUMPHREY's leadership in the fight for the Senate farm bill.

His untiring and determined efforts during the lengthy debate and his devotion to his duty on the floor of the Senate are characteristic of the kind of leadership he has provided in the continuing struggle for economic justice for farmers.

Senator HUMPHREY has again demonstrated that equality for agriculture is not an empty hope but a realistic goal worth working for day in and day out. Despite the reverses of the past several years—or because of them—he has persevered in his efforts and inspired his colleagues to renewed enthusiasm. The fruits of this work are evident in the improvements finally included in the bill.

HUMPHREY'S HAND SWUNG FARM VOTE—MANEUVERING BY MINNESOTAN IN FACE OF SKEPTICS TURNED TIDE FOR DEMOCRATS

WASHINGTON, March 20.—A former professor of political science played for the breaks in the Senate contest over farm legislation and won.

Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, almost singlehandedly turned the tide running in favor of the Republican administration to give his party potent ammunition for the coming election campaign.

He worked in the face of skepticism by Senate Democratic leaders. Yet, he scored a triumph as both parties conducted some of the wildest political maneuvering of recent years.

Mr. HUMPHREY was the voice of his party on the Senate floor. He carved the Democratic line and revived the sagging spirits of his colleagues.

CONVINCED OF DEFEAT

As late as last Wednesday most Democrats were convinced they were completely beaten. The administration had won a major round when the Senate deleted the restoration of high, rigid price supports from the bill.

The concessions by Ezra Taft Benson, the Secretary of Agriculture, on corn and cotton to hold midwestern Republicans in line and win some southern cotton votes hit the Democrats hard. In addition, they had consistently lost 13 of their Members in keynote States.

The White House operated effectively behind the scenes. At least two Republicans who did not see eye-to-eye with the administration lunched at the White House as President Eisenhower sought to change their minds.

After the administration's chief victory on flexible price supports early in the vote, Senator HUMPHREY and other Democrats detected a change in some Republicans who come up for reelection this year. It was sensed that these GOP Members felt they had done their duty and were searching for something to give them a campaign peg at home.

But Senator HUMPHREY had a bigger problem with 13 Democrats who had consistently upheld the administration's farm policies. He had to get a majority of these votes to win.

His break came Wednesday afternoon when Senator GEORGE D. AIKEN of Vermont, floor manager of the administration, made a personal attack on Mr. HUMPHREY.

ANDERSON REACTS

Senator CLINTON P. ANDERSON, Democrat, of New Mexico, took offense at the attack in the belief that he had been included in it. Mr. ANDERSON, who was Secretary of Agriculture under President Truman, had worked closely with Senator AIKEN in fighting for the flexible price system and other adjustments sought by the administration.

Mr. ANDERSON also had begun to look doubtfully on other administration moves. He did not appreciate Secretary Benson's concessions on cotton and corn. He was upset that a White House aide had passed the word to some Republicans that the administration would not oppose a permissive two-price system for wheat offered by Senator FRANK CARLSON, Republican, of Kansas.

Senator HUMPHREY put out feelers to Senator ANDERSON through Senator LYNDON B. JOHNSON, of Texas, the Democratic leader, in an effort to find common ground on which they could meet.

He found his vehicle in the use of the set-aside or insulation device that the administration used in 1954 to seal off some Government-held surplus from price-support calculations, thus raising the level of price subsidies.

Senator JOHNSON, who had heard complaints that his leadership was slipping, took hold. Negotiations went on through Friday and Saturday. The conferences included Senators EARLE C. CLEMENTS, of Kentucky, WALTER F. GEORGE, and Richard B. RUSSELL of Georgia, and ALLEN J. ELLENDER, of Louisiana, chairman of the Agriculture Committee.

By yesterday afternoon all 49 Democratic Senators had been approached and promises obtained. A few high-support Republicans worked their side of the aisle. A simple nine-line amendment was agreed on. As it went to the floor some leaders still were skeptical but were willing to try it.

Senator JOHNSON worked hard on the floor. Senator ANDERSON gave his approval in floor debate amid GOP denunciations. The vote was 50 to 44 to put the new set-aside in the bill. Eight Democratic votes had been picked up.

Senator HUMPHREY had planned to return to Minnesota to help Adlai E. Stevenson in the closing days of the State primary. Friends said that by staying in Washington for the farm battle he laid his prestige on the line in Minnesota. All that the Senator would say about this was that "it was a tough decision."

Retirement of Gen. J. Lawton Collins

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. DINGELL. Mr. Speaker, on March 31 Gen. J. Lawton Collins ends his 39 years of active duty as an officer in the United States Army. He will

retire with the knowledge that he has served his country well.

The future corps commander and Chief of Staff was born in New Orleans, La., on May 7, 1896, the 10th of the 11 children of the owner of a country store. Lieutenant Collins graduated from West Point in April 1917, just 2 weeks after our declaration of war in Germany, but was disappointed in his hopes for battle action. Only after the war had ended did he go overseas, in 1919, to command a battalion of occupation troops in Coblenz, Germany. While on occupation duty he met and married Miss Gladys Esterbrook, daughter of an Army chaplain. General and Mrs. Collins have two daughters and a son, the latter also an Army officer.

In the years between the First and Second World Wars, Captain Collins was assigned as either student or teacher to a variety of Army schools. He taught at the United States Military Academy and the Infantry School. Later he attended the Command and General Staff School and the Army War College.

During the Second Word War General Collins was to acquire in full measure the combat experience earlier denied him. His name became feared by the enemy in both the Pacific and European theaters.

Immediately after Pearl Harbor, as Chief of Staff to Gen. Delos E. Emmons, Brigadier General Collins reorganized the defenses of the Hawaiian Islands. In May 1942 he was assigned a divisional command, the 25th Infantry, and attained the rank of major general. Tropic Lightning, they called the division, and its commander, Lightning Joe. The 25th Infantry spearheaded the attacks which drove the Japanese forces off Guadalcanal and captured New Georgia.

In December 1943 General Collins was transferred to the European Theater and assigned command of the VII Corps. General Collins led his men all the way from the beaches of Normandy to the Elbe River in eastern Germany, where he made junction with the Russian forces from the east. The VII Corps took Cherbourg, led the breakthrough east of St. Lô and the sweep across France, turned north into Belgium, stopped the German counterattack in the Battle of the Bulge, crossed the River Rhine at Reimagen, and drove straight east across Germany to the River Elbe.

During the entire campaign Collins was to be found with his troops in the front lines, causing his friend and commanding officer, Gen. Omar Bradley, to exclaim: "Collins is a good man, but I am afraid I am going to lose him. He crowds the front too much."

The war over, General Collins, with a distinguished combat record and long experience, was an obvious choice for the Army's highest administrative posts. In July 1947 General Collins was made Deputy Chief of Staff, and in August, 1949, Chief of Staff, United States Army.

As Chief of Staff, General Collins supervised the growth of the new Army that had to be recruited and trained to fight the Korean war and to serve as a deterrent to other outside aggression. During General Collins' tenure as Chief of Staff, the Army's manpower went up from half a million to a million five hundred thousand men, its divisional strength from ten to twenty combat divisions.

General Collins completed his 4-year tour as Chief of Staff in August 1953. Since then he has served as the United States representative to the Military Committee and the standing group of the North Atlantic Treaty Organization. These bodies are charged with overall direction of NATO's military commands. From November 1954 to May 1955 General Collins was appointed as special representative of the United States in Vietnam with the personal rank of Ambassador. His duties were to coordinate the work of all United States agencies in Vietnam.

The hero of Ernest Hemingway's novel, Across the River and Into the Trees, an Army colonel, commenting on Allied generals, singled out General Collins for special praise:

Give you Lightning Joe as a good one. Very good, very sound. Rapid. Accurate.

Our country may be grateful it has soldiers like J. Lawton Collins. We wish him a happy retirement.

Success of Charles Weissman of Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Wilkes-Barre Record on Thursday, March 15, 1956, which announces the formal opening of a new store by Charles Weissman, leading businessman of the Greater Wiles-Barre area.

Mr. Speaker, I would like to call to the attention of the House the outstanding career which Mr. Weissman has enjoyed in the field of business as well as in philanthropic and civic work in my district. Mr. Weissman is a self-made man, the type of individual who has foresight, initiative and confidence in himself and his community. It gives me a great deal of personal pleasure to salute him and his fine organization on the occasion of the opening of another of his fine stores. I wish him even greater success and achievement in the years that follow.

Formal opening of the new American Auto Store at 300 Wyoming Avenue, Kingston, today is bound to be an event of widespread interest. Charles Weissman, the founder, and his son and business associate, Oscar Weissman, are well established in the community as forward-looking merchants.

Their refurbished Kingston establishment and its new addition represent the latest ideas of a modern setup. Occupying some 35,000 feet of floor space on the ground level are ten complete stores with 36 departments. The number and variety of articles on view are both staggering.

Congratulations are due Mr. Weissman and his son for this impressive addition to the shopping facilities of Wyoming Valley and for the faith in the community which throughout their careers they have consistently evidenced. Translated into terms of action, this faith has advanced the progress of the valley businesswise and has brought success to them as leading merchants.

Golden Years on the Golden Coast: The Story of Intracoastal Canal

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. WILLIS. Mr. Speaker, I wish to call attention to a most interesting booklet on a most interesting subject. It is entitled: "Golden Years on the Golden Coast" and it is the story of the Intracoastal Canal, that waterway which has been called the most remarkable transportation facility in America and which is certainly the Nation's most beneficial waterway. For the Corps of Engineers, conducting a study for Congress, found that this protected inland channel, now transporting approximately 40 million tons of commerce a distance of nearly 7½ billion ton-miles a year, has achieved the phenomenally high ratio of benefits to costs of 14.8 to 1. This means that the savings in transportation costs accruing to users of this vital project amount to $14.80 for every dollar expended by the Federal Government in the entire cost of construction, maintenance and operation of the waterway. Since the study also disclosed that the benefit-costs rates for all of the country's inland waterways amounted to an average 3.17 to 1, and the ratio for 12 major waterways with which the canal was compared amounted to an average of 7 to 1, the beneficial ratio of the Gulf Intracoastal Waterway is more than four and one-half times as great as the average for all the waterways of the Nation, and more than twice as great as the average for the major facilities. Specifically, the figures show that the annual savings in transportation costs resulting from the canal amount to $83 million—more in a single year than all the funds appropriated by the Government for construction of this waterway during all the years of its existence.

Back of this unprecedented achievement is the inspiring record of faith and determination on the part of those who had the vision, courage, and determination to carry on to success. When the Intracoastal Canal Association of Louisiana and Texas was born more than 50 years ago, the coast of these two States was a sparsely settled, even primitive land. The circumstances and the realization of the task, however, did not lessen the enthusiasm displayed at the first meeting and as interest grew with each subsequent assembly, more and more

leaders from public and private life joined forces in selfless devotion to the cause. The roster of those with long and faithful service in this connection is a lengthy one. Yet the story of the intracoastal canal is largely the personal history of two men—Clarence Holland, from Victoria, Tex., and Roy Miller, from Corpus Christi, each of whom gave four decades of his life to the objective of enriching the economy of the gulf coast through water transportation. Their deaths, which occurred a year apart in 1945 and 1946, brought to a close an intimate association of 40 years in mutual dedication to a common task, a dedication forged in friendship and enriched by the highest ideals of unselfish service.

As president of the Business Men's Association of Victoria, it was Mr. Holland who issued the call in the summer of 1905 for an intracoastal canal convention. This stated, in part:

The object of this convention is for the purpose of discussing the feasibility, plans, and final construction of an intracoastal canal * * * and for the especial purpose of organizing an intracoastal canal league. * * *

This canal will give all the section of country adjacent to same the advantage of direct communication by water with all our deepwater ports, and in addition thereto will extend the same advantages to the tributaries of the canal (in Texas) * * * and all the rivers and bayous in Louisiana, and also the great Mississippi River and all its tributaries, which spread over the country like a great hand laid over the face of the United States.

It means cheap fuel and transportation. It is a necessary adjunct to the rapid development of the greatest country in the world.

The second meeting, held at Lake Charles, La., actually brought Louisianians into active participation for the first time, since their plans to attend the Victoria convention had been thwarted by a quarantine imposed by a yellow fever epidemic. It was at the third meeting, held the following year at Houston, Tex., that Mr. Miller joined Mr. Holland in what was destined to be such a long and eventful association.

The progress of the canal from those first days is thus vividly traced in the publication's section, Through the Years:

The association's program was prosecuted vigorously from its inception, with annual meetings alternating between the sister States. Survey authorizations were obtained from Congress, the efficient Corps of Engineers expedited its reports, and it was not long before certain segments of the waterway had been constructed, initially at a depth of 5 feet and a bottom width of 40. Within less than 10 years from the date of its organization, the Interstate Inland Waterway League had made substantial strides toward the attainment of its first objectives.

As the years went on, however, it became apparent that the disconnected segments of the waterway in Louisiana and Texas provided facilities only for local traffic and afforded no opportunity for through transportation. During those years association leaders experienced considerable difficulty in persuading Congress to appraise the program from the broad perspective of its relation to a national inland waterway system. Congress maintained that each segment of the waterway should be evaluated strictly on its own rather circumscribed merits, while our association insisted that the canal should be considered in its entirety as an integral part of the Nation's developing system of navigable waterways.

With that end clearly in view, the organization changed its name in 1920 to the Intracoastal Canal Association of Louisiana and Texas to conform more nearly to the official designation of the Gulf Intracoastal Waterway project, and in 1922, at the convention in Houma, La., the association embarked on an expanded program. The services of the best consulting engineers were obtained, the energetic assistance of congressional leaders from both States was enlisted, and the combined efforts of association leaders and their representatives in public life resulted in the authorization, in the River and Harbor Act of 1925 and 1927, of an Intracoastal Canal, 9 feet deep and 100 feet wide, from Mississippi to Corpus Christi. Thus, for the first time, the Gulf Intracoastal Waterway was authorized as an integrated facility to provide through transportation.

Then began the long and arduous task of bringing to realization the objectives which had been authorized. Rights-of-way for distances of hundreds of miles had to be obtained free of cost under the auspices of the association; changes of route were frequently necessary to accommodate local conditions; appropriations by Congress were not always forthcoming, and when they were the funds were often inadequate. It is impossible to delineate the numerous difficulties which were encountered, the formidable obstacles which had to be surmounted, but as the years went on the authorized waterway, 9 feet deep and 100 feet wide from the Mississippi to Corpus Christi, became an accomplished fact.

Long before this project was constructed, however, it became evident that it would succeed to a degree far in excess of the predictions of its supporters. It was authorized by Congress on the expectation that it would develop approximately 5 million tons of commerce a year, but that figure had been exceeded even before through transportation became possible for the first time, and when the canal eventually reached its terminus at Corpus Christi, near the outbreak of World War II, it was carrying in excess of 17 million tons of commerce a year.

Though the Intracoastal Canal had already established its value to the country's peacetime economy, it was during the Second World War that it made its greatest contribution to the welfare of the Nation. While scores of tankers and freighters were being sunk by enemy submarines, not only along the Atlantic coast but in the Gulf of Mexico as well, millions of tons of petroleum, sulfur, and other vital war materials were moving in complete safety in a protected inland waterway virtually within sight of the catastrophes at sea. With ocean shipping constantly in peril, and railroad rolling stock in dangerous short supply, the Intracoastal Canal and the inland waterway system generally made a contribution of incalculable value to the winning of the war and the preservation of our way of life.

The war was scarcely 6 months old when Congress passed the Mansfield bill, which authorized increasing the depth of the Intracoastal Canal to 12 feet and its bottom width to 125 feet, and extending it beyond Corpus Christi to the Rio Grande. This work went forward during and after the war, and on June 18, 1949—a memorable date in the annals of water transportation—the main channel of the Gulf Intracoastal Waterway was completed to the Mexican border. More than 28 million tons of commerce were moving over the waterway by that time—and that tonnage continued to grow.

Meanwhile, construction on the canal extended eastward from New Orleans through coastal areas of Louisiana, Mississippi, Alabama, and western Florida. The Mississippi River crossroads soon became congested with barge traffic, and the association moved promptly to develop new projects to accommodate the growing commerce. The new Algiers lock was designed to relieve the overburdened Harvey lock at New Orleans, and is now nearing completion. And an improved direct route from Morgan City to Port Allen—a multimillion dollar project which will shorten distances for through traffic by 160 miles—is now under construction, with a modern lock opposite Baton Rouge to provide new access to the Mississippi. Thus, the Intracoastal Canal system, extending and expanding to keep pace with the concomitant rapid development of the gulf coast, remains responsive to the needs of the dynamic region it serves.

It is particularly significant that when the Intracoastal Canal Association was organized in 1905, there was scarcely a seaport worthy of the name between the Mississippi and the Rio Grande, while today 9 of the Nation's 15 largest seaports are directly served by the canal. It is also of special interest to note that the growth of the petroleum industry, which has contributed so much to the great industrial and economic progress of the gulf coast of Louisiana and Texas, has been paralleled by the growth of the intracoastal canal, since more than two-thirds of the tonnage now moving over the canal each year consists of petroleum and petroleum products. In addition, giant chemical industries, aluminum plants, shipyards, and a host of other installations have been established along the route of the canal.

Under Goals of the Future are listed:

Deepening and widening of the Gulf Intracoastal Waterway and its connecting channels to accommodate the growing commerce.

Development of tributary streams to extend the benefits of water transportation inland and to open new areas for industrial expansion, and development of further channels outward to the gulf.

Construction of bypass channels and short routes to achieve still greater savings in transportation costs.

Assistance to industry in the location of sites for development and in the efficient and economical use of the waterway.

Extension of the canal southward down the west coast of Florida, and construction of the cross-Florida barge canal.

Encouragement to Mexico in efforts to extend the Gulf Intracoastal Waterway southward from the Rio Grande to Tampico and Veracruz.

Continued cooperation with navigation districts and port authorities in the improvement of port facilities and services.

Constant and vigorous effort to preserve the free waterway policy of the Nation, and to resist all proposed legislation to impose tolls or user charges or otherwise to vitiate the public benefits of low-cost water transportation.

Headquarters of the Intracoastal Canal Association are located at Houston. Officers are J. W. Fulbright, Beaumont, Tex., president; Dale Miller, Washington, D. C., executive vice president; Munger T. Ball, Port Arthur, Tex., Bailey T. DeBardeleben, New Orleans, La., and Hal C. Leonard, Baton Rouge, La., vice presidents.

The executive committee is headed by Guy C. Jackson, of Anahuac, Tex., and other members are Mr. Ball, Mr. DeBardeleben, W. H. Bauer, Port Lavaca, Tex.; J. Omer Hebert, Plaquemine, La.; Frank E. Bourgeois, New Orleans; Mr. Leonard;

Carlton Crawford, Palacios, Tex.; and William R. Parker, Houston.

Those on the advisory council include Chairman E. O. Taulbee, Bay City, Tex.; L. A. Borne, Raceland, La.; Richard King, Corpus Christi; E. W. Brown, Jr., Orange, Tex.; Robert J. Kleberg, Jr., Kingsville, Tex.; Oscar C. Dancy, Brownsville, Tex.; Mayor de Lesseps S. Morrison, of New Orleans; John N. Garner, Uvalde, Tex.; Frank A. Godchaux, Sr., Abbeville, La.; DeWitt L. Pyburn, Baton Rouge; Lon C. Hill, Corpus Christi; and Col. J. Lester White, Baton Rouge.

The Day We Celebrate

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a most interesting address "The Day We Celebrate," delivered by Hon. Matthew T. McGuire, United States district court judge, for the District of Columbia, the evening of March 17, 1956, on the occasion of the 219th annual dinner of the Charitable Irish Society, held in Boston, Mass.:

Tonight the world over, wherever our common tongue is spoken and even in strange and faraway places, alien to us in all we hold dear and familiar, the Celt, wherever he may find himself, pauses if only for the moment to pay tribute to the blood that is in him and to the saint that symbolizes this common tie with those akin to him in race and sentiment.

Indeed, I strongly suspect that even in the land of Khrushchev and Molotov there is many a descendant of the wandering Gael who fled to the Continent with the rest of the Geraldines after the breach of Limerick and settled in that vast country of constrast and contradiction, who this very night senses within himself an odd bestirring, a strange inexplicable feeling of pride and exhileration which cannot be explained by vodka, and which you and I know can only mean that exuberance of exuberances felt only once a year by the spontaneous liquefaction of even the most minute drop of Irish blood.

Truly, then, this day is to those in whose veins there flows the blood of the Gael, the day we celebarte, as it ever has been, down through the long and bitter years for those from whom they sprang. It is at once the reminder of their storied past and the hope that lived when all but hope was dead.

The hope of a people who, when London was all but a Roman ruin and Paris slept in lonely desolation and the glory that was Rome reeled beneath the hammer blows of the barbarian, kept aflame the torch of Christian faith and learning and sent her missionary sons to light once more its sputtering embers in England and the Continent.

A people, not the incomprehensible, half-comic, half-tragic caricature of those writers of the 17th and 18the centuries who were incapable of understanding them, but a people who for almost 900 years fought the longest consistent struggle for freedom in human history and never lost their love of country nor their retermination to be free.

And a people who, deprived of all things save hope—even in what was to them for a long time an alien tongue gave us the matchless eloquence of an O'Connell and a Burke, the brilliant satire and wit of a Swift and a Shaw, the genius of a Goldsmith, and a Sheridan and, latterly, that of a Russell and a Yeats—and others like them—and in the modern theater the perfect artistry of the abbey and its galaxy of stars.

This society of yours, celebrating tonight at its 219th annual dinner, evidences if proof were needed, the depth of that feeling even in those of us remote in generation, as we well may be, from the land where Patrick preached the awe-inspiring gospel of the God that stooped to man that man might rise to him.

It evidences further the presence of men of Irish blood and of substance here in this ancient capital of the commonwealth—and in goodly numbers—almost a century before Crispus Attucks fell with Patrick Carr in what history calls the Boston Massacre, and this almost two generations before Parker at Lexington gave the terse command: "Don't fire unless fired upon, but if they mean to have a war, let it begin here."

While a glance at the muster rolls of the revolutionary regiments of this State indicates that there were enough of them to join with relish and vigor in the struggle against what was to them the ancient tyranny.

What was true here, we find repeated throughout the Colonies—In Pennsylvania, in the Carolinas, in Delaware, Rhode Island, New Hampshire and New Jersey, in Georgia and New York. No wonder, then, Lord Mountjoy, at the end of the War of Independence, standing up in parliament to explain the cause of England's defeat, epitomized it in these unforgettable and incontrovertible words: "America was lost by Irish immigrants."

Later, driven from their native land by the horrors of the famine, came their descendants in ever increasing numbers seeking only that opportunity and freedom which had been denied them in the land of their birth.

And so, in this city, the old North Church which had blinked out the message of Revere, himself the offspring of French Huguenots, looked down as it does today upon the crowded streets of the old North End, upon these new pilgrims of freedom, who were Americans before they landed and who brought with theim their fierce love of liberty and unswerving fealty and devotion to the ancient and enduring faith.

The Puritan city in which they found themselves was the capital of what was originally a theocratic State. The Ten Commandments were the underlying and basic stratum of its courts, the marriage bond and family life idealized and protected, the faithless father and child alike feeling the rigor of its law and the homely virtues of honor and patriotism enthroned.

Steeped as they were, however, in the Cromwellian tradition that proclaimed the fact that "Cromwell's battles were the battles of the Lord," it was only natural that the descendants of those early Puritans, in the years immediately following that of 1847, should have viewed with suspicion and distrust the arrival in their midst of thousands to whom the grim leader of the Ironsides was the personification of plunder and hate and of worse.

Yet the 200 years that had passed since the horrors of the religious and political wars in the Old World and the free air of the New had softened in great measure the asperities, the cruelties, and the bigotry of those older days. For the most part, then, the newcomers settling down in and about the narrow and crooked streets that still surround the old North Church, despite an occasional flare-up of the old intolerance, found their proffered hand accepted.

A short time later when the call came to defend the Union and these new Americans almost as one man sprang to the colors, the blood of Celt and Puritan became mingled in a deathless union on the hard-fought earth of a hundred fields.

What appeals to me, however, is not so much what they did as what they contributed to the great melting pot that is America. They became Americans as we have seen, almost at the moment they left the gangplank. Indeed, it is rumored that some of them even voted here in Boston without the formality of naturalization. The suggestion that this was a necessary prerequisite was indignantly resented as a challenge to their patriotism.

And in these strange unsettled and parlous times we find among their descendants few, if indeed there are any, whose loyalty to this country and its institutions and the principles for which it stands can be questioned.

"God and country" was the lesson Patrick Taught. "God and country" was the lesson learned. And an unswerving and unquestioning devotion to both was bred in the blood and bone and sinew of those who came after them.

They have been as salt in the leaven of the great admixture that is today America. They gave it not only savor, but contributed mightily to its substance as well. Yet there is no doubt but that they are a race of paradoxes.

I believe it was Bishop Wright who pointed up this seeming contradiction in their makeup by reference to their songs. There is no more soul-stirring ballad in any language than Danny Boy. Properly sung by a tenor in good voice it would melt a heart of stone. Yet, despite the most poignant entreaties for the beloved Danny to return home, in the end it probably will of no use, for the object of his affections will undoubtedly be dead, indeed, as she warns him. And poor Kathleen Mavourneen is not being left for a while by someone going on a business trip or a vacation. She is being left for years—with the subtle hint added that it may be not only for years, but may be forever, while her more modern counterpart is being taken home "across the ocean sad and drear." In all probability the fact is, if she had any choice, she would rather remain here where she is in West Roxbury, or take one of those trips we read about in the Sunday papers to some one of the islands in the Caribbean, the waters of which are known to be anything but drear or sad.

Then their war songs, The Poor Minstrel Boy. He has enlisted for the duration, not in some soft branch of the service but in "the ranks of death you will find him." Taking his father's place, and never to return, to talk over old times with his comrades in arms, or to draw a pension from a grateful government. And so, down through the long list of ballad and song to their modern counterparts of Turaluralura and Galway Bay there is always an overtone of sadness, whether sung by Bing Crosby or that Pennsylvania Irishman, Perry Como.

Again, they have been called the fighting Irish. And Notre Dame has appropriated the title for its own. And it has been a long time since either Leahy or Brennan made a straight substitution of Murphy for O'Brien. And the same goes for Holy Cross and Boston College—and even Harvard and Yale, who with their Brickleys and Mahans and their Callahans have also fallen victim to other times and other customs.

They were called the Fighting Irish because "A man does not fight because he hates, he fights because he loves. And since an Irishman loves more than anyone else, he fights more than anyone else."

Fear plays little part in their makeup, except that healthy fear of the Author of their being which the prophet says is the beginning of wisdom. Not only do they subscribe to the aphorism of Theodore Roosevelt—fear God and take your own part—but they are willing to take yours too, if they thought you needed help and deserved it.

Quick to resent a wrong, slower still to forget—strangely enough the waters of forgiveness well upward freely in the Irish heart. Their word not easily given—once committed is kept, no matter what the personal cost or sacrifice.

They will be with you to the end when they think you are right, and will battle you through hell and high water when they think you are wrong—and what's more, they will do it in the open. They will seek no quarter and will give none. Their wit is proverbial and they have sharpened ours—with its deft touch, its paradox, and sheer humor.

They have brought music and laughter wherever they have gone. Social and convivial, at times, like all of us to a fault, and more open about it, they often seem to jest at life—maybe because they see it more clearly for what it is and for what they firmly believe it to be—merely the time between two eternities—the eternity before we came and that which is to be after we go.

To them, principle is principle, and admits of no shadings; right is right, and wrong can never be other than what it is—yesterday, today, tomorrow, and forever.

"The harp that once through Tara's Hall, the soul of music shed * * * no longer (Tom Moore to the contrary) * * * hangs as mute on Tara's wall, as if its soul were fled. I doubt if it ever did, for, gentlemen, its lost chords have sounded for generations here in our own America with a new and richer beauty, and a new and stronger resonance. Wherever the sons of Erin or their descendants have found themselves—whether on the thin parapet at Bunder Hill, or looking into each other's eyes down the long rifle barrels at Spottsylvania or at Shiloh, or in the Argonne and at St. Mihiel, or on the bloody beaches at Anzio, Leyte, and Normandy; whether building the railroads of the West, in the forum, or the shop, in the professions, the pulpit, or the mart, on the plain, or on the farm, or leading quiet but purposeful lives all over this broad land of ours, the sound of Tara's harp reechoes again, not only in the hearts of Irishmen and their descendants, but in those of all of us.

This, then, it seems to me, is the meaning in aggregate of the day we celebrate. To each, of course, undoubtedly it means something specifically different—something indefinable, yet real—something that touches yet cannot be touched.

To some it may be the dash of the salt spray at Kenmare, as the swelling Atlantic rolls into the bay, although they may have never seen it; or the sight of Cashel of the Kings in the golden vale of the plain of Tipperary; the mist that lies heavy on Killarney's lakes, or the smell of burning turf, riding lightly on the cool air of a summer's night from some little white cottage alone and alight in the quiet beauty of the Wicklow hills.

To others it means a voice now stilled forever; the touch of a hand when words lack meaning, or the lilt of a song long since forgotten; or more often just something deep and deeply moving known and understood, yet too deep and beyond our poor power to fathom and to capture.

For Ireland, no more the dark Rosaleen or the dear dark head, but a nation once again, her face at last no longer turned to the shadows but radiant with the flush of youth once more, in the glory of the morning sun.

For all of us—our better selves—if only for a day. God grant it could be so always, with our feet on God's footstool and our hearts in God's stars.

Downhill Toward Marietta

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. HENDERSON. Mr. Speaker, the Corps of Engineers and the Congress have justified the need for and have constructed 14 flood-control dams in the Muskingum Valley. Work on a 15th has been commenced and one-third of the funds needed have been appropriated and expended. This 15th project has as great justification as the first 14.

The following editorial, which appeared in the Marietta Daily Times, Marietta, Ohio, on Friday, March 23, 1956, explains in a convincing manner that the justification for the Dillon Dam is greater in terms of effective flood control than the first 14:

DOWNHILL TOWARD MARIETTA

There is, and has been for more than 15 years, a great degree of protection in the system of dams and reservoirs on upper tributaries of the Muskingum River. They have decreased but not eliminated the threat of too much water at the wrong time in the lower Muskingum Valley. A vital link is missing from the system. There is no control over the Licking River, which joins the main stream at Zanesville.

It is of the need for this that Congressman JOHN E. HENDERSON, of the 15th Ohio District, has been telling the public works subcommittee of the House Appropriations Committee.

Dillon Dam and reservoir were authorized in 1938. Planning was completed years ago and much work has been done on the site 5.8 miles up the Licking from its confluence with the Muskingum. But the work and money already expended will have been wasted if the dam is not completed. HENDERSON asks a new appropriation of $2,600,000, which is the amount the Corps of Engineers has estimated could be profitably utilized during the first fiscal year in which construction is resumed.

The Muskingum River, where it passes through Marietta, is the drainage trough for a watershed covering 8,038 square miles—about one-fifth the surface of Ohio. Nearly 25 percent of the watershed's area lies this side of the existing dams. Every drop of rain falling on the land making up that 25 percent contributes to the flow through Marietta, and moves just as freely toward us as did the rainfall on the other 75 percent of the watershed before the conservancy district dams were built.

A new publication of the Ohio Forestry Association gives a breakdown of each of the State's major watersheds into its component parts. That for the Muskingum, Ohio's largest, shows that the Licking River is one of it greatest water collectors. Excessive volume of this water would be temporarily impounded if the Dillion Dam were completed.

The Licking proper drains 492 square miles. Added to this are the 288 square miles of its tributaries, South Fork and Raccoon Creek, making a watershed totaling 780 square miles.

Entering the Muskingum below the Licking are Jonathan and Moxahala creeks, which together collect runoff from 301 square miles. The Muskingum itself, with the help of smaller tributaries, drains 911 square miles on its way from Dresden, above Zanesville, to the Ohio, with 436 square miles of that collecting area between McConnelsville and Marietta.

Control on the Licking, when it eventually materializes, will contribute toward maintaining normal flow between Zanesville and Marietta in both extra wet and extra dry periods.

Alabama House of Representatives Approves H. R. 7848 by Mr. Roosevelt, and H. R. 7225 by Mr. Cooper

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the CONGRESSIONAL RECORD a resolution approving and endorsing H. R. 7848, introduced in the United States House of Representatives by the gentleman from California [Mr. ROOSEVELT]; and approving and endorsing H. R. 7225 introduced in the United States House of Representatives by the gentleman from Tennessee [Mr. COOPER].

The resolution of approval and endorsement was introduced in the House of Representatives of the Legislature of Alabama by the Honorable Jack Kelly, a member of the legislature from Winston County, Ala.

The resolution was adopted by the House of Representatives of Alabama on February 7, 1956.

The resolution follows:

House Resolution 25

Be it resolved by the House of Representatives of the Legislature of Alabama—

1. That the House of Representatives of the Legislature of Alabama hereby lends its endorsement to House Resolution 7848, introduced in the House of Representatives of the United States Congress by Representative JAMES ROOSEVELT, Democrat, of California, which calls for a sweeping overhaul of the public-assistance section of the Federal Social Security Act, the making available of additional Federal funds for public-assistance purposes, and the requirement of uniformity in the public-assistance laws of the 48 States by the establishment of a single standard of qualifications for the applicants and recipients of such assistance.

2. That the house of representatives of the legislature also endorses House Resolution 7225, introduced in the House of Representatives of the United States Congress by Representative JERE COOPER, Democrat, of Tennessee, and sponsored by the majority of the House Ways and Means Committee, which calls for the payment of disability benefits to workers at age 50, and to disabled children over 18; the lowering of the eligibility age for widows, wives, and women workers from 65 to 62; and extension of the coverage of the Federal Social Security Act to include certain classes of professional people. This will bring millions of Federal money to Alabama for the widows, chil-

dren, handicapped, and the aged, which they would not get otherwise, if 7848 and 7225 become law.

3. That the clerk of the house of representatives transmit duly authenticated copies of the resolution to each of the following: George McLain, chairman of the Old Folks Lobby, Hotel Congressional, 300 New Jersey Avenue SE., Washington, D. C.; Representative James Roosevelt; Representative Jere Cooper; each member of the Alabama delegation in the United States Congress; the Clerk of the United States House of Representatives; the Secretary of the United States Senate; and the Honorable James E. Folsom, Governor of the State of Alabama; and that the clerk of the house also transmit a copy of this resolution to the members of the press, and cause a copy to be spread on the journal of the House of Representatives of the Legislature of Alabama.

Adopted by the house of representatives, February 7, 1956.

Text of Former President Truman's Address Given at Friendly Sons of St. Patrick Dinner

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a statesmanlike address delivered at the Friendly Sons of St. Patrick dinner the evening of March 17, 1956, in Scranton, Pa., by former President Harry S. Truman:

TEXT OF FORMER PRESIDENT TRUMAN'S ADDRESS GIVEN AT FRIENDLY SONS OF ST. PATRICK DINNER

Following is the text of former President Truman's address Saturday night before the Friendly Sons of St. Patrick of Lackawanna County.

"On this day our thoughts naturally turn toward the subject of freedom. After all, you know the Irish are the most incorrigible exponents of freedom mankind has even seen. They have not been content to confine their battle for freedom to the Emerald Isle—but have exported it all over the world. I think perhaps this love of human freedom has been Ireland's most important product.

"The Irish have been leaders in revolts against tyranny on every possible occasion. I ascribe this not to any general belligerence of character, but rather to a love of freedom, pure and undefiled. As all of you here well know, the Irish passion for freedom served us nobly in the American Revolution.

"This Pennsylvania county is a living testimonial to the Irish heroes of our movement for independence. John Barry, Thomas Fitzsimons, Gen. Stephen Moylan, the first president of the Friendly Sons of St. Patrick in Philadelphia—Timothy Murphy, the hero of the Battle of Saratoga, and many another of Morgan's riflemen—all of them gave us something to be proud of and thankful for.

"The Irishman's love for freedom has persisted through the years and is very much alive today. This is most fortunate, for the world has a great need today for a firm and unrelenting opposition to the gravest threat to freedom in the last thousand years. This threat is world communism with its godless atheism and its imperialistic ambitions for world conquest. The Irish have taken their place in the forefront of those who stand hard and fast in the defense of freedom against the Communist threat."

HITS GOP ADMINISTRATION

"Unfortunately, things have been going badly of late in the free world's struggle against communism. The political leaders of the present administration keep telling us that the Communists are failing throughout the world and that our position is improving. However, this is in absolute contradiction of the facts as they are known to every impartial expert on foreign affairs.

"When you look at the world today you see communism pushing ahead, building up its forces, extending its influence.

"While we are not engaged in active warfare anywhere, still the Soviet Union keeps up its tactics successfully. With this approach it can bring the rest of the world under the thumb of communism without even firing a shot.

"Just take a look around the globe. In Korea, since our surrender there by this administration, the Communists have reinforced their military position north of the 38th parallel, and the country remains divided and in danger. And Korea was set up as a Republic by the United Nations from the Yalu to Pusan."

CITES RED GAINS

"Formosa is in a state of siege and is threatened by a strong Communist buildup on the mainland of China.

"In Southeast Asia, half of Viet Nam has fallen under Communist control, and the other states of Indochina are under heavy Communist pressure. India and Burma are being courted hard by the Russians. The Southeast Asia Defense Pact has few adherents on the mainland of Asia and is unpopular with most of the free nations there.

"In the Middle East, we are sitting around a powder keg, watching the fuse burn. Instead of accomplishing peace between the Arabs and the State of Israel, our foreign policy seems to be designed to infuriate both camps and to invite Soviet intermeddling.

"There is growing danger in Africa. Criticism of American policy is mounting among our best and most reliable friends in Europe. The growth of Communist political influence is noticeable in Greece.

"And even in the lands of our good neighbors in Latin America, the Communists are stepping up their brazen efforts.

"All over the world Communist inspired propaganda against the United States is mounting—and more and more people are being persuaded that this Nation, the leader of the free world, is a dangerous friend if not a potential enemy.

"The Communist threat is supported by an ever increasing array of armaments and weapons of destruction. There is a constant increase in the military and air power of Communist China. The Soviets have far more military aircraft than we and are threatening to overtake us in the quality of aircraft. They have the atom and hydrogen bombs and are far advanced in the development of guided missiles. Their ground forces, of course, are far bigger than ours.

"They are using these arms and armaments with growing arrogance to further their political intrigue and pressure. Witness the planes, tanks, and submarines they are pouring into the Middle East.

"At the same time, the Communists have stepped up their efforts at economic penetration of the free nations and are attempting to win the uncommitted nations to their side through trade and loans for economic development."

NEED NEW MEASURES

"To meet the growing danger, we need new and creative measures to restore confidence in this country and to rally the free nations. A few years ago we developed a policy to halt the rush of communism. Today, we do not seem to have any policy. We seem to jump from one thing to another, improvising answers to what the Russians do and say and having no plans of our own.

"If this struggle against communism were not so desperately important, we might be able to muddle along like this—at least for a time—and live through it. But the struggle against communism is desperately important. It is the struggle to preserve freedom. The Communists are powerful and implacable foes of human liberty. They are making grave and serious inroads on the freedom and independence of many peoples throughout the world."

STRESSES CENTRAL ISSUE

"The United States cannot continue to exist as a free and independent nation if the rest of the world falls under the yoke of communism. This is the central issue for us today. This is what our foreign policy is all about. We are not concerned about foreign policy merely because of our friendly interest in people of other lands—although we are interested in the people of other lands and want to be their friends. We are not concerned about foreign policy merely because we want to live in friendship with other nations—although we do want to live in friendship and at peace with every other nation in the world.

"Our primary concern with foreign policy is because we want to live as free Americans in Scranton, Pa., and Philadelphia, and Independence, Mo. Our primary concern is to preserve the freedom and independence of the United States of America. And the threat to liberty in the world today is a very grave and present danger to that freedom and independence.

"The Secretary of State professes to take comfort from the fact that the Soviet leaders appear to be making some changes in Communist doctrine. I do not know why this should be so comforting. If there be changes in Communist doctrine, you can be sure they are not being made for the benefit of the free peoples, but in order to lull them into letting down their guard against communism."

MASK OF FRIENDSHIP

"The Communists have put on the mask of friendship before. Back in the 1930's they posed as defenders of freedom against fascism and nazism. They fooled a lot of people then, but that was 20 years ago and I do not see why they should fool anybody with that same old line in 1956, least of all the American President and the American Secretary of State.

"It may be that the Communists today are fixing up a united front to beguile the free nations as they did in the 1930's but there will be a difference. The united front of the 1930's was directed against Germany. This new united front will be directed against the United States of America.

"What are we going to do, my friends—what are we going to do about communism's terrible threat to our liberties? I can tell you some of the things we ought to do.

"First, we ought to let the revealing light of honesty and truth into reports about the state of affairs in the world today. The American people can stand the truth, and they will respond to it. But if they are told that all is well, when all is not well—if they are told that we are winning the battle of freedom versus communism, when in fact we are losing ground—if they are told that every move our Government makes is a success, when in fact all too many of them are failures—if they are fed pap and platitudes for reasons of political expediency—then the American people are deceived, then they are lulled to sleep, and they will not understand why they must support the strong measures necessary to meet the fateful challenge that faces us.

"Second, we must maintain our defensive strength. The military power of this Nation is the greatest asset of the free world. If we lacked military power, other nations would be paralyzed by fear of Russia, and they would become easy targets for Communist expansion. Keeping our military strength up, whether we ever use it or not, is indispensable to keeping our freedom. It is an essential deterrent to aggression.

"We must not relax in the development of new weapons. We must not let the Russions forge ahead of us in planes and missiles—as they are threatening to do. We must not cutdown on our Army, Navy, and marines. For if we fall behind the Russians—if we become manifestly second-rate in these things—we can expect the strength and unity of the whole free world to fall unto ruins.

STRENGTHEN AID PROGRAM

"Third, we ought to strengthen our foreign-aid programs to meet the new Soviet economic offensive. Military aid to other free nations has been essential, and is still essential, to deter outright armed aggression and subversion. But we should not let it overshadow the kind of aid that our allies prize most highly—aid to raise their people to new levels of economic well-being, and open for them the road to progress. We pioneered in this kind of aid, knowing that it was the only sure foundation of freedom. We embodied it in our point 4 program, our trade programs, our programs of economic development.

"The only way to beat the new Soviet economic offensive is to continue and strengthen these programs of ours, proving to the underdeveloped or the uncommitted countries that our way is best—that we can and will help them to improve their conditions, over a long period, and for their own benefit. In this field of competition, we ought to be able to beat the Soviet Union hands down. But we can't do it if we keep trimming our foreign-aid programs down, tying them in political deals, and wringing our hands over the cost.

"There are some who say we cannot continue and strengthen these defense and foreign-aid programs—because they cost too much—because they will keep us from balancing the budget, because our economy can't stand the expense. Poppycock and nonsense. To preserve liberty, our economy can stand a lot more than it is being called on for today. How much is freedom worth? Who will swap it for lower taxes or a balanced budget? Freedom is not something whose price you haggle over. Freedom is priceless—and we cannot compute its value in terms of dollars and cents or even in terms of life itself.

CALLS FOR LEADERSHIP

"Fourth, our Government can get back to the real basis of our leadership of the free world. We did not get into this fight against communism because we were looking for political arguments. Wet got into it because we believe in freedom—freedom for ourselves and for others. We offered aid to other nations, not because we wanted to use them as pawns in a power struggle, but because we sincerely wanted to help them maintain their freedom and independence. America has always stood for independence for all peoples. We have always wanted to help people in other lands improve their well-being. We believe that all men—all men, as the Declaration of Independence states—are endowed by their Creater with certain inalineable rights. This must be the fundamental basis for the conduct of our foreign affairs.

"If we do these things: If we face the facts as they are and make the call to serve the cause of freedom firm and clear; if we keep our defenses at top strength; if we reshape our foreign-aid programs and stand behind them to the full measure of our economic resources; if we show real consideration and understanding of the needs and problems of other free nations, then we shall be able to rally the free nations once again to work together in mutual trust and confidence, then we shall be able to regain the ground we have been losing, and then the cause of freedom will be sustained throughout the world."

Tribute to a Great Buckeye and a Great American

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mr. HENDERSON. Mr. Speaker, Ohio and the Nation suffered a great loss last week with the death of Louis Bromfield. It had been my privilege to meet Mr. Bromfield and with thousands of other Americans I was privileged to read his books and his many newspaper articles. His death has brought to us a realization of the great contribution that Louis Bromfield made to literature, to agriculture and conservation practices, and to philosophy which the comman man could understand.

These qualities and others have been summed up in a marvelous fashion in the following editorial by Wilbur Matson, editor of the Morgan County Herald of McConnelsville, Ohio, a close friend and admirer of Louis Bromfield:

TRIBUTE TO A GREAT BUCKEYE AND A GREAT AMERICAN

"We live in deeds, not years; in thoughts, not breaths." Louis Bromfield was 59 years of age when his life came to an end at University Hospital. That is young in an age since gerontology has become a problem and the average life span has been stepped up from the Biblical threescore years and ten. But even so, measured by deeds, not years, he achieved greatly and leaves the whole world indebted for his example.

There were many in Morgan County who knew Bromfield personally and who were among the thousands who had made the pilgrimage to Richland County and lovely Malabar. Here, Bromfield had purchased 1,000 acres of wornout soil and restored its fertility so that, once more, it became productive as it had been when the first settlers cleared the land and established homes in the wilderness. By a proper use of fertilizer, lime, the legumes and good farming methods these mined-out acres became the most famous farm in the world. He told them what he had done and showed them how they could do it. Malabar is known from Land's End to John O'Groat.

There are many local conservationists and soil enthusiasts who will recall Morgan County day 6 years ago at Malabar. It was an interesting and highly informative trip. They will remember the master of Malabar with his jeep and his boxers leading the caravan of soil zealots to the top of an emonence on his farm from which a portion of the Muskingum conservancy district is visible. Here the master pointed out what could be done with worthless soil. His half hour lecture was inspiring beyond words. Filled with enthusiasm and zeal for his subject, he kindled an undying resolve among his listeners to dedicate themselves to a great and worthy cause—the preservation of the American heritage of soil and natural resources which had been pretty much frittered away by a generation who knew little of soil and less of wise methods in soil building and conserving natural resources.

Most men of genius are especially endowed in one field only. Bromfield was great in many fields of endeavor. A soldier in World War I, he came home with the Croix de Guerre and the star of the Legion of Honor. He was a journalist, a novelist, a critic in art, music, and drama, achieving distinction in these widely disparate fields. A newspaper columnist, in addition to his more than 20 outstanding novels, he wrote numerous magazine articles, and gave thousands of lectures.

Where did he get the time, vitality, and incredible energy to excel in these varied and difficult fields? Obviously he grasped the significance of Franklin's maxim that "Time is the stuff of which life is made," and he must have had few idle moments in the 24 hours each day when not engaged in some of his variegated and multifold activities. In his lecture tours, one day would find him at his experimental farm at Malabar, and the next in Texas or Brazil, thousands of miles distant, addressing audiences composing all races, creeds, and nationalities and spreading his gospel of conservation throughout the length and breadth of the world.

One could discourse at length on a unique and rare individual such as the Sage of Malabar. We shall bring to an end this somewhat discursive and desultory tribute to a great Buckeye with a few of our own reflections upon a unique character with whom we quite by chance developed a friendship through community of interests, and especially, in restoring wornout soil.

To us, above everything, Bromfield was a rugged individualist. He was, as Gibbons said of the Germans whom Rome was attempting to subjugate—"the forests and morasses of Germany were filled with barbarians, who despised life when it was separated from freedom." Above everything, Bromfield prized his liberty, his right to think and to say what he pleased, and to do as he pleased so long as his actions did not impinge upon the rights of others. Heterodox in many of his beliefs, it mattered little to him whether or not his opinions were popular. Developing along the lines by which he believed himself to be endowed by nature, like the Norsemen, he considered "the round world is our home, and we call no man master." Freed from any fear of economic or political reprisal, he could, and did, say what he honestly thought and believed. This very honesty and independence gave great added weight to his utterances and opinions.

How long Bromfield's literary works will survive the erosion and ravages of time, we do not essay to forecast. We do believe his work in conservation will be of permanent benefit not only to America but throughout the world. No other individual could have dramatized and publicized its importance as he did both by tongue and by pen. The Master of Malabar was Ohio's and America's greatest and foremost conservationist.

With its thousands of acres of depleted soils, Morgan Countians are especially indebted to this greatest of all apostles of soil-building and preserving our heritage of the land. Most Morgan County farms have, through the past century, taken a fearful beating through poor farming methods. Endowed as we are with limestone, a basic need of good soil, our wornout hills are more easily restored to production than are those of glacial origin, such as Malabar. Our hills could have been made into the finest grazing and stock raising portion of Ohio. But Bromfield could not have competed with the power shovel. There was no coal near or under Malabar and he did not live to see adjoining farms ruined and despoiled and a lovely landscape transformed into hideous spoil banks.

In 1950, several thousands of our home folks heard Bromfield and Taft on field day at Sentinel Mound farms. They enjoyed the privilege of hearing two of the greatest Americans of our generation, now alas, gone forever from the land they loved. The one gave his life to the cause of preserving sound government and our liberties, guaranteed by a written Constitution. Grateful Americans are now engaged in erecting a fitting monument to his memory. The other gave his tremendous energies and abilities to a cause just as vital to us all—the cause of preserving and building the soil, which, after all, in the final analysis is the basis of all wealth. Bromfield contributed greatly to the lasting well-being of America, and, like Taft, a grateful people should erect a monument to his memory. Another lustrous star has been added to the galaxy of the great whom Ohio has given to the Nation.

Mr. Speaker, Ollie E. Fink, who has been associated with Friends of the Land, an organization dedicated to the saving of soil on American farms, writes in the March 25 issue of the Sunday Times Signal, of Zanesville, Ohio, as follows:

A MAN WHO LOVED THE SOIL

Louis Bromfield, who departed this life a week ago, was a kind, humble man with a magnificent mind. He was a man of many interests and talents and lived in a world of great ideas. It was a privilege and a high pleasure to have the opportunity to serve in close association with this great American conservation leader.

For more than 15 years I have experienced a warm and personal friendship with him. In the early days of Friends of the Land we were brought together and have served this society. For years Louis Bromfield traveled the length and breadth of this land telling the story of the Friends of the Land and all those other people, who love the soil, and who would like to restore this country not to what it once was, but to what it could be—a kind of dream. He expressed his love for the land in our publications.

Speaking of Dr. Charles Holzer of Gallipolis, one of the founders, Mr. Bromfield said, "He feels as I do. What he has made in worldly goods means nothing to him. You could take everything the doctor has, everything I have, and it would not make the least difference. We would go on doing what were are doing, go on being interested in what we are interested in, go on loving what we love.

"That is what Americans have to think about. We have been too lucky. I have seen what has happened to other countries. I know it can happen to this one. It worries me, keeps me awake sometimes at night.

"This is a great country. We are only going to keep it great, preserve it, realize its immense possibilities by working together in the understanding that this was something given to us to take care of. If we don't, we shall destroy ourselves."

Insight into Louis Bromfield and his deep feeling for the land is shown in the fiction story "My Ninety Acres" published in Pleasant Valley and in The Land. "I felt again a sudden lump in my throat. * * *" He had pictured the lief of Walter Oakes, the best farmer in the county. On one of his frequent visits to this farm as he walked down the hill he thought, "this is the most beautiful farm in America—the most beautiful, rich farm in the world—'My Ninety Acres.'

"The corn stood waist-high and vigorous and green, the oats thick and strong, the wheat already turning a golden yellow. In the meadow the bumblebees were working on clover that rose almost as high a man's thighs. In all that plenty there was something almost extravagant and voluptuous. The rich fields were like one of the opulent women painted by Rubens, like a woman well loved whose beauty thrives and increases by love-making."

Nellie was the beloved wife of Walter Oakes who had lived only a brief period with this fine farmer before her death at the birth of a son. Nellie was always right in her farming ideas. "If it wasn't natural it wasn't right, and I never found that she was wrong. She used to say that there are two kinds of farms—the 'live' farms and the 'dead' ones and you could tell the difference by looking at them. A 'live' farm is the most beautiful place in the world and the 'dead' farm was the saddest. It depended upon the man who worked them—whether he loved the place * * *"

And so Louis Bromfield in conversing with this farmer who loved his 90 acres said "I think Nellie is everywhere in that 90 acres. He's never lonely. She's in the garden and the fields and his famous fence rows. She's out there husking corn with him now in the bottom 40." Sometimes I think the old gentleman gets Nellie and the 90 acres a little mixed up. "I understood suddenly the whole story of Walter and Nellie and the 90 acres."

Forty years after the woman was dead, one of the most tragic but beautitful of all love stories, and Louis Bromfield with that understanding writes "I felt a sudden lump in my throat, * * *" and he concludes the the story—"The farm will never be farmed as old Walter farmed it. There isn't anybody who will ever farm that earth again as if it were the only woman he ever loved."

In the story of Ninety Acres, Nellie lived on—"she was everywhere." Like Nellie, the influence of Louis Bromfield will be found by those who love the soil to live on and on. On the four continents, wherever good acres are found on earth Louis Bromfield will be there—everywhere.

Finally as in the story of Abou Ben Adhem who wished to be remembered as one who loved his fellow men, the name of Louis Bromfield will lead all the rest of those who loved the land, and those friends who love it. His passing leaves a lump in the throats of all of us who love the land.

Mr. Speaker, E. B. "Butter" Howard, another close friend of Louis Bromfield and prominent farmer of Muskingum County, Ohio, has written in the same issue of the Sunday Times Signal as follows:

FRIENDLY, HUMBLE, AND HELPFUL

I am indeed grateful that many years ago I made the acquaintance of Louis Bromfield and that this acquaintanceship ripened into a close friendship, for it was through these years that I learned many lessons in conservation, agriculture, and above all, appreciation of better things of life and living from him.

"Louie" was a gracious host, a most affable guest and traveling companion.

He made and kept friends because he was friendly, humble and helpful.

Seldom will one meet a person who has such authoritative knowledge of so many subjects of literature, music, art, theater, and agriculture, and with it all the great ability to write and lecture on these subjects.

In my visits to Malabar, I have met people from many countries and many walks of life and he had the attribute of making all welcome and at ease.

He made Malabar a practical farm, one that would be typical of any good farmer instead of a showplace.

From early spring to the rough weather of fall, he would take groups over his farm and show them wonderful results of bringing one of the most wornout farms that I have ever seen to the most productive. These crowds often numbered 500 to 1,000.

Louie loved Ameirca but, most of all, Ohio. He achieved more, at 59, than most anyone can ever hope to do. He has shown us the way and it is up to all that have benefited from his great teachings in agriculture and conservation.

This great effort no doubt was inspired by his years in India where 80 percent of the people are born, live, and die without the great satisfaction of going to bed without the gnawing of hunger.

Louis has done his job well. He has made the world a better place in which to live. We who love the soil will carry on. May God rest his soul.

School Aid or Not?

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the CONGRESSIONAL RECORD an editorial from the New York Times, dated February 14, 1956. The editorial is entitled "School Aid or Not?"

Progress on Federal aid for school construction has been held up for the last 2 or 3 weeks by the House Rules Committee, which we hope will be induced this week to release the legislation for action. The two principal rival bills are those proposed by the administration and by the House Education and Labor Committee; but the differences are mainly of degree, and a compromise between them can surely be reached without much difficulty.

The real stumbling blocks to any school-aid bill come from two totally different sources that have little if anything in common: (1) the people who are opposed to all Federal help for public schools, basing their opposition on States' right or similarly restrictive grounds; and (2) the people who insist on an antisegregation amendment as a prerequisite to Federal help for the public schools. We think that the evident crisis in public-school education throughout the country has aroused sufficient sentiment to overcome the first of these two oppositionist groups if it stood alone. But when the question becomes confused by the bitter and irrelevant argument over integration, the school bill is really in danger.

Representative ADAM C. POWELL, JR., of Manhattan, may be sincere in offering his amendment that would withhold Federal aid to any school district that failed to comply with the Supreme Court decision outlawing segregation in the public schools; but if he persists in pushing this amendment when the bill does reach the House floor he may well be killing all Federal aid to schools at this session of the Congress. For it will be politically very difficult for a great many Representatives to vote against such an amendment in an election year, and yet it will be almost impossible to get a bill containing this amendment through the Senate.

Quite apart from the practical politics of the situation, we believe the Powell amendment represents the wrong approach to solving the integration question. It is evident from his press-conference remarks that President Eisenhower thinks so too. And so does Adlai Stevenson whose comments on this subject afford a strikingly refreshing contrast to those of his chief rivals for the Democratic presidential nomination, Governor Harriman in particular. The latter flatly supports the Powell amendment, talks vaguely of Federal action to enforce desegre-

gation without specifying how, and at the same time acknowledges that "it is up to the Supreme Court" to deal with the present adjustment period in the South.

In a thoughtful statement that may or may not cost him votes but certainly should earn him respect, Governor Stevenson points out that "we will not * * * reduce race prejudice by denying to areas afflicted with it the means of improving the educational standards of all their people"; nor will we improve the situation "by coercive Federal action that will arm the extremists and disarm the men of goodwill in the South who, with courage and patience, have already accomplished so much." Above all, Governor Stevenson asks that the segregation issue be taken out of the campaign, rightly observing that there could hardly be a greater disservice to the Nation than the political exploitation of the tensions that have inevitably followed the Supreme Court's decision.

It should be remembered that in that decision the Supreme Court left the method of working out desegregation in the schools to the lower Federal courts, which are to cut the pattern in each case to fit local conditions. If there is merit to the thought behind the Powell amendment, it clearly should be tested in the courts, not imposed by the Federal legislature. The important thing, as President Eisenhower said, is to get the school-aid bill through now. Then the people who sincerely believe that Federal aid should be withheld from nonintegrated school districts could bring suit, if they wished, to effect that purpose. The issue would be joined where it properly belongs: in the Federal courts that set the stage for desegregation in the first place.

The Age of Illusions

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. Ted F. Berry, of the Washington State Grange News, concerning the Federal farm program, which appeared in the March 9 edition of that publication:

Life magazine, arch critic of our Federal farm programs, has gotten around to thanking its lucky stars that the free world has an abundance of food. The greatest weakness of Russia and her satellites is a shortage food which in turn resulted from lacing agriculture into a collective farming strait jacket, says the magazine.

Unfortunately, our surpluses inevitably find their way into the hands of the Reds (to our vast detriment) through "dumping" and "giveaway" programs. So, Life's editors reason, the thing to do is make free world farms bigger and fewer, transfer surplus farmers into industry—automatically proceed to solve the food distribution problem and have better quality food for everybody. The first step is to have President Eisenhower veto 90 percent of parity.

Now, if that isn't a prime example of Alice-in-Wonderland logic, we've missed the point entirely. First you bankrupt enough American farmers to eliminate the surplus. What about the rest of the free nations? Are they about to discontinue their high fixed export farm prices, export subsidies and other devices adopted in their unalterable determination to build self-sufficiency in food?

Secondly, having exterminated a sufficient number of American farmers, you will automatically reach an ideal point of balance between food supply and food demand, making everybody prosperous and happy. What has happened, meanwhile, to the hundreds of thousands of workers and merchants who depended upon the exterminated farmers for their living? What, indeed, will have happened to the displaced farmers who can't find jobs in industry? And even if human nature be repealed, can we persuade Mother Nature to stop interfering with food production? If not, how can we be sure of adequate food at all if we don't produce a surplus?

Surely it will be disastrous if Congress heeds the exponents of scarcity with respect to farm policy, or listens to the exploded theory that lower prices reduce surpluses. On the other hand, it is decidedly in the Nation's interest that Congress devise programs that will help farmers now to stay on the farm and maintain a living standard equivalent to that of their city brethren.

This will require what might be termed emergency price-bolstering methods. But the only real incentive to farmers to produce in accordance with demand is a fair price—not from the Government but in the market place—because that is the only way in which you can maintain normal relationships among commodities.

It seems to the writer that our farm troubles arise largely from the fact that we traditionally put the business cart before the agricultural horse. Practically all commodity prices—except agricultural—start at the point of production. Food prices appear to start at retail and move backward through the various middleman charges and profits. The farmer gets what is left, if anything.—B.

One Hundred and Thirty-fifth Anniversary of Greek Independence Day

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. ASHLEY. Mr. Speaker, Sunday, March 25, marked the 135th anniversary of Greek Independence Day. It is fitting that the House of Representatives should take time today to honor those brave patriots who gave their lives for the cause of Greek independence 135 years ago. Yet we could not celebrate Greek independence without paying homage to the many generations of these remarkable people who cradled western civilization and gave first life to the ideas of freedom, liberty, and independence which they practiced more than 2,000 years ago.

The Greeks were among the first of the ancients to appreciate the real worth of these ideas and to fight bravely for their realization. When the Romans overran Greece, Greek concepts of political life and philosophy took firm root in European thought. In the 15th century when Greece fell to the Turks, she continued her struggle, lasting more than 400 years, for the freedom and national independence which she had mothered for the world. Finally, on March 25, 1821, the yoke was thrown off when Greece won her long-sought independence.

It is well for all Americans, and all who cherish freedom throughout the world, to pause today in remembrance of this brave and gallant people who, with unsurpassed courage, have fought every form of tyranny and oppression which has challenged freedom and individual dignity.

We in the United States are fortunate indeed that the attributes of ancient and modern Greece—upon which western civilization is based—have been brought directly to this country by our Greek-American citizens. Their contribution to every phase of our society and culture is beyond measure.

So it is doubly fitting that we commemorate today the significant victory which Greece won 135 years ago—for this was a victory in which countless millions have shared in every part of the world. It was and will continue to be a victory for free people everywhere.

United States Steel

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of David J. McDonald, president of the United Steelworkers of America, AFL-CIO, in reply to the 1955 annual report of the United States Steel Corp., on March 22, 1956:

United States Steel, in the corporation's 1955 annual report issued yesterday, reported record-making production of steel, record-making sales, record-making profits, and record-making dividends for its shareholders.

Instead of congratulating the management-labor team responsible for this achievement, the corporation took this occasion gratuitously to insult both the Steelworkers Union and our Government as being the "two basic roots" of an inflationary trend.

The Eisenhower administration will undoubtedly answer for the Government.

It is my plain duty to answer for the Union.

Only the chairman of the board and the financial managers of the steel corporation, whose horizons are limited by Wall Street, could regard the efforts of steelworkers to obtain better wages, pensions, and security for themselves and their families, to be solely the result of competition between union leaders seeking "always to out-do each other in elevating employment costs in their respective industries." Some of these gentlemen seem to know little about human values. They also seem to ignore basic economics.

The gains won by the workers in the steel industry through their union, have not caused inflation. The central fact omitted in the corporation's report is that the cost of these gains has been more than offset by increases in productivity. Last year, for example, the union won a 15 cents an hour

increase, but each worker, on the average, produced so much more steel per hour that the actual wage cost of each ton of steel went down, not up. United States Steel, to be sure increased its prices last year, but the price increases and whatever inflation resulted therefrom, cannot be laid to the wage increase.

Indeed, the corporation made a neat profit on the wage increase last year. The theoretical "cost" to United States Steel of the 1955 wage increase was approximately $30 million—the actual cost was zero, because of the increase in productivity. But the corporation, immediately following the wage increase, raised steel prices $7.50 per ton. This price increase brought in more than $96 million in additional profits for the last 6 months of 1955—a clear profit of $66 million over and above the theoretical "cost" of the wage increase.

Making a profit on a wage increase is nothing new for United States Steel. The corporation does it every time.

United States Steel says it is concerned about inflation. The Steelworkers Union is concerned about inflation. We suggest that the corporation's financial managers analyze the impact upon inflation of their price and profit policies.

The most recent example of United States Steel's impact upon inflation is their action, after a year of record-making profits, in jacking up the prices of tin plate $8.80 a ton, effective April 1, on top of a like increase last October 1. Anticipated production of tin plate in 1956 by United States Steel will be slightly less than 3 million tons. At an $8.80 increase a ton, this means an additional profit of between 20 and 25 million dollars for United States Steel.

This item alone is almost as much as the total cost of last year's wage increase.

Even their fellow industrialists, the management of the can companies which use the tin plate, felt called upon to protest most vehemently this further spur to inflation.

The steelworkers' union believes in fair wages, fair prices, and fair profits. We also believe that successful collective bargaining depends upon mutual respect.

From the statement, one could easily see an effort to tear down the increasingly better labor-mangement relations so painstakingly built up between United States Steel and our union. We trust this is not the same.

The Wheat Farmer's Position

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mr. MAGNUSON. Mr. Speaker, occasionally I receive a letter from a constituent which is such an excellent discussion of a particular problem before Congress that I am constrained to call it to the attention of my colleagues.

I recently received such a letter from Mr. E. C. Huntley, chairman of the Washington State Highway Commission. Mr. Huntley's letter discusses the position of the wheat farmer, with particular reference to Whitman County in the State of Washington, and how he might be expected to view the farm legislation now under consideration.

Under leave to extend my remarks, I am including Mr. Huntley's letter:

WASHINGTON STATE
HIGHWAY COMMISSION,
Olympia, March 2, 1956.

Hon. DON MAGNUSON,
House of Representatives,
Washington, D. C.

DEAR SIR: After traveling over most of eastern Washington and talking to many wheat farmers, bankers, and county agents, I have decided to write to you because I know you are in a position to talk to the proper officials.

The need to maintain a prosperous agriculture in this country is often not associated with general economic stability by many people. They consider the small percentage of our population who operate and live on our farms as being insufficient to influence our general prosperity. Because actual farmers do represent a low percentage of our total population, many folks seem to think (1) it is unsound if the prices on the products the farmer has to sell are high enough to establish a prosperous agriculture and (2) a nonprosperous or even bankrupt agriculture would affect the general prosperity very little. Moderately heavy agricultural surpluses are considered disastrous for the country whereas surpluses of other things, goods, materials, equipment, etc., are considered as assets in reserve.

I want to point out the unsoundness of the assumptions such as those mentioned above and enlarge upon the importance of an economy that will make it possible for the farmer on a well-managed family-sized farm to receive sufficient returns from his labor and management to carry on. He should be able to maintain the fertility of his soil, the quality of his livestock, to keep his equipment in good repair and replace wornout and obsolete equipment when necessary. His returns should enable him to participate in educational, religious, economic, and spiritual development of his community, State, and country.

Since the production of wheat is the basic pursuit in Whitman County, special reference will be made to the problems of the wheatgrower in this letter.

In determining the importance of a prosperous agriculture to a sound total economy, the following points should be considered: People employed in agriculture include more than just those who farm the land and produce the livestock. It includes, also, those who work in the mines, the factories, and the wholesale and retail stores concerned with the manufacture and distribution of equipment used by farmers. It includes those working in the building and operation of rolling stock necessary to get needed equipment and supplies to the farmer and the commodities he produces to the consumer. It includes the large group of workers employed in the processing of agricultural commodities for the consumer trade. It includes those workers who produce and distribute fertilizers, insecticides, and herbicides used in agriculture. Agriculture also uses large amounts of gas, oil, and electricity. There are many others whose jobs are stimulated by the needs of agriculture. Total population involved in all forms of agriculture has been estimated at 35 million people in the United.

The many taxes from income tax to property tax paid by all agriculture is a sizable part of the country's total tax take. In a county like Whitman County agriculture is the source, directly and indirectly, for about all the tax money.

Extended periods of low income to agriculture have always resulted in increased unemployment. The farmer with little or no net returns from his work is like the laborer without a job—he has very little with which to purchase even the bare necessities. As large segments of agriculture and labor lose purchasing power, additional unemployment develops and supluses pile up not only in farm commodities but in all branches of trade. These surpluses are not caused by overproduction but, instead, by a lack of buying power by large groups of our population.

In general, farming is a business. It requires the planning and work of not only the farmer alone, but also the planning and the work of the farmer's family. The fact that farming is still largely a family business in this country is one of the big factors upholding our fine democracy.

How big is a farm business in Whitman County? The average farm unit in the county at present contains about 580 acres of cultivated land. The 240 acre farm (one of the smaller family-sized farms) has a market value on land and buildings of about $60,000. Sales have been made at higher values. Necessary farm equipment to operate this farm would, at the present time, cost over $20,000. Many farms of this size would require over $25,000 to replace the farming equipment they now have.

The farm with 1,000 acres of cultivated land would have a value on land and buildings of about $250,000. Necessary farm equipment to operate this would cost at this time about $40,000 to $45,000. So most of our farms represent sizable businesses.

Very few farms have been purchased at the above values and paid for unless the purchaser had supplemental income to that derived from acreage purchased. Most of the equipment, on a large majority of our farms, was paid for during years of unrestricted productions and high supports on grain crops.

Another factor that is very important in modern day farming and especially so in commercial wheat production is the necessary daily cash outlay. I am referring to gasoline, diesel oil, and electricity. During the days of horse and mule power, the power fuel (hay and grain for feed) was grown and stored on the farm for the following years' operation. During the base period for the old parity formula (1909 to 1914) the average price for wheat was about 88 cents per bushel. All the farming was powered by horses or mules during that time. Usually the horses and mules were also raised on the farm. At that time, the cost of the farm equipment on the 240 acre farm did not exceed $2,500 to $3,000 and day by day cash costs for operations were very low.

Because of vastly improved farm equipment, of superior varieties of crops, of better cultural practices, of crop rotations and use of fertilizer, per acre yields have increased. Much of this increase per acre yield has come in the last 10 years, but the increase in per acre yield has not kept pace with increased costs of operation during the last 10 years.

During the years of what is now called the high Government supports on grain crops many farmers in Whitman County improved their home and farm buildings, bought new farm equipment, and laid aside a little reserve. Also during that time they paid the largest Federal income tax that they had ever paid. Their local taxes were paid on time. They were fairly prosperous as were operators of other types of business and surely this prosperity of agriculture made its contribution to the general prosperity of the country. No doubt, it made jobs for millions of workers throughout the United States. It has been said that the high supports on wheat increased the Federal income tax paid by our wheat farmers more than the cost of the support program to those same farmers.

While I have no way to prove the above statement, I am familiar with some farmers' tax statements for 1955 as compared with those of 1954 and 1952. In the general downward trend of 1955 statements I can

see some evidence of the lower prices on livestock and the lower supports on wheat and barley.

If the costs of producing crops were going down, prices received by farmers could go down on the same scale without much damage. But with costs still going up, even a little reduction in prices received will be quickly reflected in the general economy of every farming community. Of course, the necessary acreage reduction program on wheat reduces the bushel output per farm at the same time.

Compliance with the wheat acreage allotment program in Whitman County has been near 100 percent during the period of high supports on wheat. Will that high percentage of compliance continue under a program that will bring lower and lower prices for wheat? I don't think it will. Production from the farm at a price is the only way to farm income. Volume of production can be cut if price received is sufficient to pay cost and keep the land and equipment in a good state of repair. Price received can be cut if volume can be held up to pay costs and keep the plant in good working condition. But, any program that cuts volume of production and price per unit (bushel) at the same time and also while costs of production are holding or still rising will accomplish only one thing: It will create an agricultural condition similar to the one that existed during the early 1930's.

What does the Whitman County wheat grower think of the proposed soil bank program? Will he cooperate with it as he has with the allotment program to date? Of course, those two questions can only be answered by speculation at this time. The farmer appreciates the surplus wheat problem and will be inclined to want to cooperate with any program or programs that work toward some reduction in that surplus. The real question will be whether he feels he can cooperate with the new program. Possible costs of his production and upkeep are going to be uppermost in his mind. If any additional cut is made in his 1956 wheat acreage, it will be because the payment per acre is sufficiently high to approach the expected income he would receive by harvesting the wheat.

The second phase of the soil bank program which contemplates annual rent payments from the Government for acreage retired from crops and seeded to a conservation crop has merit. But, again, its acceptance by wheat farmers will depend upon the amount that can be paid per acre. If the per acre payment (rent) is relatively small, only the least productive parts of fields will be turned to the program. Reduction in total bushels produced would not be great.

Wheat farmers in the county are now greatly concerned about the possibility of rapidly reducing returns from their labors. They are anxious to get an improvement in methods of establishing wheat bases on the separate farms. A recent mass meeting called to discuss the present procedure for determining wheat bases and recommending improvements voted about 85 percent in favor of 90 percent of parity support on wheat.

It appears that the higher support would justify more cooperation with the soil bank program than would the lower supports. Our farmers desire to get at least sufficient income from their farms to continue to pay taxes and operation costs and to keep their plants in good repair. Programs that promise such returns on the basic average crops will receive their cooperation.

Perhaps you will be surprised to receive such a long and detailed letter from me, but I am much concerned and have given this problem much thought, and have taken considerable time to get all the facts.

Hoping that after you have read this letter you will be sympathetic with the problems of the wheat farmer and be in a position to get results, I remain,

Sincerely yours,

E. C. HUNTLEY,
Chairman, State Highway Commission.

Problem of Segregation

EXTENSION OF REMARKS
OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement of David J. McDonald, president of the United Steelworkers of America, AFL-CIO, before the 19th annual convention of the Pennsylvania Industrial Union Council, Hotel William Penn, Pittsburgh, Pa., on Thursday, March 15, 1956:

Mr. President, secretary-treasurer, fellow delegates and friends; I want to talk to you, you people of Pennsylvania who are not particularly bothered as yet by this problem; I want to talk to you about the problem of segregation.

The newspapers are filled with stories concerning the problems of segregation in the school system of America. And I have been traveling around the country recently, and I have been in several parts of the Deep South in recent weeks, and I have talked to leaders of labor, leaders of Government, and leaders of industry. I have tried to express the views of the organized labor movement on this subject, and I have listened to the views of industry, and the views of politicians. In addition thereto, just as recently as last night, I was talking with a businessman who said to me that he is very concerned about this problem. Many people are becoming considerably apprehensive about the future of our country. Men of good will and common sense are giving serious heed to finding ways and means to eliminate this dissension and to enable America to really hold up her head in the ranks of free nations in regard to the question of a man's color.

I view what is going on today—the rise of these so-called citizens councils, and the general attitude being expressed by, yes, millions of people in our country—I regard this as the most serious challenge to the American democracy in the past 100 years.

If one were just to read his history books of a century ago describing life in our land then, he would say to himself: This sounds like 1856, not 1956. I have taken occasion too, to review the history of those troubled days of a hundred years ago. I do not fear that men will be so foolish as to carry this thing on to the stage which we reached in 1861. No, I do not fear that. But I do fear that some stupid people may try to take us down that road and rather than find a solution to these problems of segregation, will create greater and more serious problems which will set back this battle for democracy for all of our people by several more generations.

You know, this is a rather strange thing about which I speak—segregation in the Deep South. I feel lots of times it disappears when a man enters a factory. Segregation may exist in classrooms, hotels, places of public assembly, but when a man goes into a mill or a factory and he becomes part of a working machine, all color seems suddenly to drain from his body and he just becomes a man.

Let me attempt to illustrate what I mean by this statement. I would like to describe an industrial operation which I witnessed with my own eyes, and which told a tremendous story to me, and I hope I get my point over to you.

I was in a room where a certain type of metal was being melted and poured from a ladle into pigs—iron pigs—and the operation went something like this. There was a man operating a ladle crane. The crane operator was a white man. When he got the ladle over the bed of pigs, another white man, a fellow about 50 years of age, a big powerful man stripped to the waist, reached up and took hold of a handle on the ladle and tilted it to pour the metal into the pigs. Working with him was a big brawny young Negro, a fellow perhaps 27 or 28 years of age, and he, too, was stripped to the waist, because it was very hot. This Negro was an assistant or a helper to the pourer. It was his job to take a long scraper and scrape the scum off the top of the metal and let it fall down into a pit.

There was a fourth man working in that particular room. He was relining another ladle over at the side, and he, too, was a Negro. So this was the scene: Two white men and two Negroes involved in an industrial operation. They were pouring metal in order that this metal might be sold on the American market, and be manufactured into useful goods.

Now, as this huge white man, I am talking about, pulled down on the lever, naturally, as more and more of the metal flowed out, it became more difficult for him to pull down on the lever. So the next thing you know, I saw his assistant, this Negro, giving him a hand—helping him to pull down the lever. And before very long, the craneman was down out of his crane, and this other man who was relining the spare ladle joined the other three. Some of them brought out a piece of 2 x 4 wood which was shoved into the loop on the edge of this handle, and before you knew it, the four of them were pulling on the 2 x 4, in order to do what? In order to get the last drop of metal out of the ladle so that it could go to market.

What did we see there? Was there segregation? Oh, no. These were 4 men, 4 masses of muscle all engaged in 1 operation, and the sweat of the white man was streaming upon the sweat of the black man, and the sweat of the black man was streaming upon the body of the white man. They were an intermingled mass of humanity engaged in an industrial operation. Did some foreman walk up and say, "Separate"? Did some superintendent say, "You cannot do this"? Rather to the contrary, this was their job to do to produce goods for America, and they were doing it, and they thought nothing of it. One didn't push the other and say, "Get away from me." Rather they cooperated.

Now, what do I mean when I tell you this story? I mean simply this: The factories of America can certainly be made the classrooms of democracy in America if people will go about it in the right way.

The minute the whistle blew these men separated and went their separate ways. Some went to one part of the community and some went to another part of the community. Some rode the front of the buses and some rode the rear of the buses. The children of some of them were sent to one school and the children of others were sent to another school.

There are great organizations in our country which are constantly preaching the idea of democracy, some I fear preaching the idea of democracy without a full realization of

what we really mean by democracy in our land.

When I say that the factories can be made the classrooms of democracy of America I call upon such organizations as the National Association of Manufacturers and the National Chamber of Commerce to speak out truly as believers in American democracy, to speak out on this subject, and to help to provide ways and means to eliminate this threat to the American way of life.

We of the American Federation of Labor and Congress of Industrial Organizations have certainly done our jobs. It is true that there are still a few members of our organization who do not recognize the modern-day world, but they are mighty few.

In the United Steelworkers of America there is no discrimination. There is no segregation. There are no Jim Crow locals. There are no Jim Crow lines of progression, even in the South. If there are I have never heard of any, because we faced up to our responsibilities and we recognized the basic creed of our land that all men are created equal.

What can be done about this in a practical sense? I have already said the NAM and the chamber of commerce could do something about it. What can be done about this by management? In our land it is impossible to separate economics from politics or politics from economics. We know that. In many of our great universities there are schools of economic and political science. Thousands of young men and women study these sciences each year. There is no real separation of the two.

I have a suggestion to make which I believe is practical.

Many of us here come from small towns and we know that in many instances the general manager of a plant in such a small town is the most important citizen in that town. In many instances his importance even transcends that of the mayor of the community. In many instances every word he utters is needed by the community. In the southern part of our country this is even more true. The man who lives in the house on the top of the hill is a man of extreme importance and his word, particularly in the nonunion towns, is law. The political leaders bow to his will and they shudder at his anger. In places where the community workers are members of unions, the situation is not quite the same as it is in nonunion towns, but nevertheless the factory manager is a man of great importance.

What is a factory manager? He is an employee, the same as the most humble wheelbarrow pusher or machinist or typist or chemist is an employee. He too must take orders. Take orders from whom? From topside management and from the owners of the operation.

What is my suggestion? Topside management of American industry, such as the steel industry and the textile industry, the furniture manufacturing industry and the lumber industry and the chemical industry, all of which are great entities in the southern part of our land, is usually composed of men from the northern part of our country. I call upon them to institute a system of education among their plant managers in the southern part of our land. This is an obligation of American industry. I call upon them to institute a system of education whereby these leaders of economic and ofttimes of political thought in the South can raise their voices in a plea for the continuance and advancement of our system of American democracy and forthwith put a stop to the sort of thing which confronts us today, the sort of thing which has caused over 100 Members of Congress to affix their signatures to a document defying the edicts of the Supreme Court of the United States.

It is not alone labor's role and it is not alone the role of the Republican Party and the northern Democrats to uphold this edict of the Supreme Court of the United States on the subject of segregation. It is also the responsibility of American industrial management to speak out affirmatively on this and to do something about it, and here is a practical way to do it.

We must wipe out the Mason-Dixon line in American culture. We must do it.

I hope my few words will fall upon some fertile ground. I hope that there will be some leaders of American management who will heed these words and will forthwith tell their leaders in the South that they must help to revise the type of thinking which is going on in the minds of so many people down there today. Economics and politics in our country are inseparable. Let those who speak out in behalf of American democracy do something about it. Let those who constantly berate the activities of the Communists, both here and abroad, do something about this subject.

When we of organized labor berate the activities of communism both here and abroad we do something about it, so let these associations of businessmen do something about it. Let them help us to restore America to a position of outstanding leadership in the minds of all the people of the world. Let them remember that the vast majority of people in this world are men whose skin is not colored white, and let them help us to bring a realization of this fact to the unthinking who unwittingly would destroy us because of some simply stupid ideas which are inbred in them.

Prejudice is not something which is natural in a man. Prejudice is something which is imbued into the minds of children by people who have grown to hate other people, and usually without good cause.

The Supreme Court was right in its decision. The Supreme Court of the United States must be upheld, or God help our land.

The Chiropractic Profession Sponsors Correct Posture Week, May 1–7

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mr. DOLLIVER. Mr. Speaker, the general health of all our citizens in America is of increasing importance, not only in Congress but throughout the Nation. For that reason, may I call the attention of my colleagues to a very fine contribution to our national health which has been made by the chiropractic profession of America.

Correct Posture Week, May 1 to 7, is being observed all over the United States. Many of the governors of our great States and mayors of our metropolitan centers have issued special proclamations for this observance. In many schools, both public and private, special attention will be given during the week to the posture of schoolchildren by the Nation's teachers.

Correct Posture Week, May 1 to 7, is sponsored as a public service by the chiropractic profession of America and has been for many years past.

This sponsorship is particularly appropriate because doctors of chiropractic are particularly and acutely aware of the damage done to the human body by bad posture habits.

They long have preached to the American people that millions of dollars in expenditures for health could be saved by better posture—better posture taught to children in their formative years and better posture practiced by adults.

Under leave, I am inserting at this point in the RECORD a statement prepared by Dr. F. Lorne Wheaton, of New Haven, Conn., who is publicity chairman of the chiropractice public-relations conference committee. The text follows:

STATEMENT BY DR. F. L. WHEATON

A great contribution to the health and welfare of the Nation is being made by the chiropractors of America in improving the posture and thus increasing the efficiency of all our workers. Poor posture is expensive, and poor posture habits are responsible not only for many days of lost time but for poor response to job needs and eventually for a shortened life of top efficiency.

To aid this posture improvement is the sole aim of the chiropractic profession when it annually sponsors Correct Posture Week, May 1–7.

This is the time when chiropractors use every means of publicity to draw public attention to this primary aim of chiropractic. They believe, preach, and practice that correct posture will promote better health and appearance.

In that belief we are in complete agreement with every branch of the healing arts, and we are sincere in our constant efforts to cooperate with all Americans in improving the standards of our national health.

It is encouraging to note that many agencies of our Federal Government have been in the vanguard of those advocating correct posture as a definite aid toward sound health and long life.

These include, among others, the Children's Bureau and the Women's Bureau of the Department of Labor; the Department of Health, Education, and Welfare; and the White House Conference on Child Health.

THE WHITE HOUSE CONFERENCE

The White House Conference on Child Health, as early as 1930, recognized the importance of body mechanics in relation to health, as noted by the following quotations from its report:

"The part played by body mechanics, or 'posture' as it is generally termed, in the health and well-being of the child, is another subject receiving more and more attention.

"While the majority of medical schools give instruction on this subject, it is usually scanty or incidental and very inadequate. Definite information on the prevalence of bad body mechanics, its recognition as a casual factor in disturbances of health, and the methods of satisfactory treatment are needed.

"The idea that correct posture contributes to good health is based on the mechanics of the human body and is as sound as any principle that operates anywhere in the field of mechanics. The idea is gaining ground more rapidly now than ever before. And when it is finally accepted for its true worth by the whole populace, there will be a vast improvement in the health and vitality of men, women, and children, everywhere."

CHIROPRACTORS PLAY DECISIVE ROLE

The problem of poor posture and the low efficiency of workers which it brings on can be approached in two ways.

The first is a long, careful, and well-planned program to teach Americans how to walk and stand and sit in ways which will promote health and efficiency. We have such an educational program under way, and it is having its effect.

However, that takes time. Meanwhile, many postural faults can be helped by direct treatment, or the bad effects can be modified or eliminated.

In both programs individual doctors of chiropractic can play a decisive and important role.

They can continue to carry out the program of education. They can explain to their patients how to walk, stand, sit, and lie for the best effects on health. They can give their patients the publications of the subject and win the patient's cooperation.

They can also continue to relieve the bad results of poor posture by correcting the misalignments of the spine. Workers who have to work in strained positions should go regularly to doctors of chiropractic for adjustment to ward off serious bad effects. It is well to remember that we are as old as our backs.

OFFICIALS ENDORSE POSTURE WEEK

Realizing the importance of Correct Posture Week, it is interesting to note that without the wholehearted cooperation of the American people, it would be a meaningless phrase.

It is the wonderful assistance of school teachers and school authorities, of State legislatures, of governors and mayors, of Members of the United States Congress, and of the people themselves that has made Correct Posture Week an increasingly important observance in the United States.

The active members of the chiropractic profession lead in observance of Correct Posture Week, because the science of chiropractic is dedicated to the elimination of postural faults which rob human beings of the health they should have.

SECOND LARGEST HEALING PROFESSION

Chiropractic, as an organized professional body, is 61 years old, and now ranks as the second largest healing profession.

Licensed by law in 44 States, District of Columbia, Hawaii, Alaska, Puerto Rico, and 5 Provinces of Canada, there are some 25,000 chiropractors in the United States (against a population of 165 million) and 1,030 in Canada (against a population of 15 million).

Chiropractic is an established but growing and dynamic profession, which has adopted high professional standards and ethics and is officially recognized as 1 of the 4 major healing professions in America by the Executive Office of the President of the United States, Budget Bureau, Washington, D. C.

FOUR-YEAR COURSE IS EDUCATION STANDARD

Chiropractic colleges are required to give 4,000 academic hours in a standard 4-year course to obtain appoved ratings from the accrediting committee.

The curriculum and hours of study parallel the minimum requirements of the American Medical Association for class A schools. Up to 2 years of preprofessional (college) education is required by State chiropractic laws of licensure. A large percentage of students entering approved chiropractic colleges today have college degrees.

A SIGNIFICANT CONTRIBUTION

This brief listing of professional training is encouraging, when we are told that one-half of all adults suffer from poor posture with resulting bad effects on health efficiency. The chiropractic profession has made exhaustive studies which showed that 53 percent of adults and 76 percent of our children suffer from the effects of poor posture.

We may well conclude, then, that Correct Posture Week as sponsored by the chiropractic profession of America is a significant contribution to national health and welfare. Active participation by everybody in observance of Correct Posture Week can bring many health benefits to the people of America.

Is TV Making Beer Drinkers of Our Children?

EXTENSION OF REMARKS

OF

HON. EUGENE SILER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I now wish to insert an article which appears in the April issue of Home Life, which is a Christian family magazine and has a nationwide circulation, written by C. Aubrey Hearn and entitled "Is TV Making Beer Drinkers of Our Children?" The article is as follows:

What effect do television's beer commercials have on children? Many thoughtful parents are asking that question today.

Several interesting incidents were brought out in the hearings in Washington on the Bryson and Langer bills, which sought to prohibit liquor advertising in interstate commerce.

A 6-year-old bought a carton of beer at the grocery store with his own money, took it home, and put it in the refrigerator. Questioned by his mother, he said that he had seen beer on television and it looked so good he wanted his parents to have some.

The father of a 4-year-old asked his daughter at the dinner table if she wanted some milk, and her shocked parents heard this answer: "No; I'd rather have some of that beer that made Milwaukee famous." She had been watching a television program, of course.

A father took his 10-year-old son to a baseball game and bought him a soft drink. After asking, "Daddy, what will you have?" the boy handed the soft drink back to his father and said, "Make mine Pabst Blue Ribbon."

The 13-year-old daughter of a United States Senator told her father that she felt they ought to have beer in the house because everyone else had it and if you didn't have it you were old fashioned.

A COMMERCIAL COMES HOME

The radio announcer of a well-known beer-sponsored program tells of his 4-year-old son kneeling beside his bed for his prayers before retiring. "Now I lay me down to sleep," he began, and continued to the end. Then as his father listened to the closing "Amen," the youngster added, "This was brought to you through the courtesy of the Fort Pitt Brewing Co."

Twin 3-year-old boys entertained the passengers on an Oklahoma City bus by singing the popular beer jingles of the day that were being heard over radio and television.

Incidents like these help explain why beer sales in food stores last year topped all soft drink sales 5 to 1. The attorney for the United States Brewers Foundation said, "Beer is served in the homes of more than two-thirds of the 40 million families in the United States."

The Association for Childhood Education in its bulletin Children and TV answered the question, "Do children recall the products advertised?" as follows: "The most recent study was made by asking 400 children between the ages of 6 and 12 to list as many products advertised on television as they could remember. Time was called in 15 minutes and many remonstrated, saying that they knew at least twice as many as they had written. The average number listed by the youngest children was 20 and the 11-year-olds about 50. The total number of products was 597. One detergent, unlikely to be used by children, was mentioned 110 times. Fifteen brands of beer and 13 trade names of cigarettes were given, some of them being mentioned 50 times or more. Next in rank were drugs, cosmetics, and automobiles. Candy and desserts, also advertised on children's programs, were far down the list, and milk was near the bottom."

Parents are watching with growing concern the tendency of brewers to sponsor athletic events. The attorney for the brewers boasted, "The broadcasts and telecasts of most major and minor league baseball games are today being sponsored by brewers. * * * Indeed, the brewers are rendering a great public service in bringing to the American people broadcasts and telecasts of baseball, professional football, boxing, basketball, hockey, and other sports events, and in providing educational and entertainment programs."

A BOY WANTS TO KNOW

JOHN V. BEAMER, a Member of the House of Representatives from Indiana, received the following letter:

"DEAR MR. BEAMER: My name is David Rushton. I am 9 years old. I am pretty young, but still I'm old enough to know what alcohol can do to a man. I watch television a lot and I don't see why about all the good television programs are presented by beer. So I wish that there wouldn't be so much beer advertisement. There are a lot of good things to advertise that are good for people.

"Sincerely,

"DAVID RUSHTON."

In his reply to David, Congressman BEAMER said, "I want to thank you and compliment you on this very excellent letter, and I hope that the results for which you so justly ask will be accomplished."

In commenting on this letter, Representative JAMES C. DAVIS, of Georgia, observed that the good programs seem to be sponsored by beer and cigarettes. The National Grange has accused the television industry of putting an unwanted barroom in every living room. Many parents have made the same observation and are wondering what can be done about it.

Apprehensive parents, disappointed over the failure of the House of Representatives and the Senate to report on the Bryson and Langer bills, are rightfully insisting that something be done about the sickening, insidious, and vicious beer propaganda emanating from the radio and television stations.

Beer-sponsored programs may be boycotted by the family. Objection may be expected from the children, even after proper explanations are made, but if enough Christian families adopt this course, and let their objections be known by personal letters, some changes will be made. Of course spot beer telecasts often come on at unexpected moments and these present a problem.

WHAT YOU CAN DO

Objections to beer advertising on television should be made by personal letter to: (1) the United States Brewers Foundation, 535 Fifth Avenue, New York 17, New York, (2) the company sponsoring the program, and (3) the station on which the program appears. In all cases reasons should be given.

A partial solution was furnished by the Long Run Baptist Association, of Louisville, Ky. Tired of baseball broadcasts in Louisville being sponsored by brewers, the Long Run Association decided to buy the time. They handed the radio station a check for the season's baseball broadcasts. Listeners heard suggestions about churchgoing, the value of prayer, and other worthwhile activities instead of beer commercials. The project was so successful that at the end of the

season the station decided to drop all beer advertising.

A seminary professor, testifying for the Langer bill, pointed out that children are not able to discriminate critically between truths and half-truths, between the obvious and the hidden. Declared he, "At least in all fairness the liquor industry ought to be required to show the alcoholic as well as the glamor girl, the crumpled body of the mother on the highway as well as the man of distinction, the dirty, hungry, neglected children as well as the bubbling glass."

Since the liquor industry is not likely to do this, it must be done by Christian parents who want their children to avoid alcohol. They must teach their children that beer contains alcohol, that it is drunk mainly because of its alcoholic content, that people get drunk on beer, that beer is mainly responsible for the multiplication of liquor outlets, that many alcoholics began drinking with beer and progressed to stronger alcoholic beverages, and many other facts that are never seen in beer advertisements.

THE FAMILY FIGHTS BACK

Christian families may "buy dry and say why"—that is, patronize only grocery stores, restaurants, and other businesses that do not sell beer. The supermarket which sells beer is more responsible than the beer tavern for the increasing use of beer in homes. Christian parents could by their judicious patronage of nonalcoholic places of business put a stop to some of the beer selling.

The best solution is the increasing devotion of the members of the family to the principles of the Bible, to purposeful activity in the various meetings and organizations of the church, and to the projection of Christian ideals in everyday living. For it is emptiness of spiritual life that leads people to drink, and it is dedication to Christ who gives the abundant life that not only makes alcohol unnecessary but also fills the Christian with loathing for it.

Thirty-eighth Anniversary of Independence of Byelorussia

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. KEATING. Mr. Speaker, in our concern over the fate of the countries which have come under the tyrannical domination of Soviet Russia since the end of World War II, we often tend to overlook those groups which have for many more years been subjected to the rule of the despots in the Kremlin. March 25 marked a significant day for one of these groups, the Byelorussians or White-ruthenians.

This group, which is now spread out over the face of several countries behind the Iron Curtain, is estimated to number about 15 million, making them the third largest group in the European part of the Soviet Union after the Russians and Ukranians.

Despite strong nationalistic feelings throughout their history, the Byelorussian people have, with a single exception, been prevented by geographical and other reasons from gaining their independence. The one exception came for a short period in 1918. At that time various groups within the Byelorussian people united their forces to form the Great National All Byelorussian Congress. The congress organized a group called the Rada, and it was this group which on March 25, 1918 proclaimed the independence of Byelorussia.

The new government set to work quickly to expand its activities in all fields of national life. Significant achievements were recorded in the fields of education, culture, and social protection. Diplomatic recognition was secured from a number of countries.

With the withdrawal of the German armies in November 1918, however, came the advance of the Russians into the new Republic. Unfortunately, the Byelorussians had not been able to build up their armed forces and they were soon overrun by the Red Army.

Since that time the Byelorussian people have been under the domination of the men from Moscow. But the people of this brave land have never knuckled down to the Communist government and have continued to work for their freedom. The dynamic growth of the national political consciousness of the Byelorussian people has caused the Russians to take sereve retalitory steps. A policy of calculated and open terror has been pursued. Mass arrests and deportations, deliberate murders, public hangings, and rigid systems of control have been the order of the day. Millions have perished under this regime.

The Reds have not limited themselves solely to physical anihilation of the people. They have also tried to liquidate the cultural achievements of Byelorussians as well. To this end they have removed from circulation and destroyed patriotic works and publications and have pushed vigorously a campaign of Russification in the schools of the land. The churches have been severely persecuted. It has been, truly, a campaign of cultural genocide.

All of these reprisals, rather than crushing the spirit of the people, have served to increase their efforts for national liberation. Over the years there have been armed revolts and constant passive resistance to the rulers in the Kremlin. We hear reports that there are numerous underground, patriotic organizations at work today in the country.

Mr. Speaker, the citizens of this brave land have never accepted the domination of the Communists and have continued to work and hope for the day when freedom will again be theirs. We must sustain them in their endeavors. By observing, as we did Sunday, the occasion of their declaration of independence, we give encouragement to the people of Byelorussia and let them know that we are supporting their never-ending struggle for independence.

Let us continue these observances in the hope that some day soon the Byelorussian people—who have suffered so very long under the heavy yoke of Communist rule—will rejoin the ranks of the freemen of the world.

New Facts on Small Tracts

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mr. YOUNG. Mr. Speaker, perhaps the most gratifying experience I have had as Representative of the State of Nevada has been to see the approval of a bold and effective new small-tract program to meet the needs of the people of the Las Vegas area.

To my mind, this recognition of a problem that had touched nearly every family in southern Nevada and the forthright action taken to solve that problem constitutes a vivid example of the strength and wisdom of our democratic system.

Those who secured the direct-purchase small-tract program for Clark County have made an outstanding contribution to the continuing development of the southern Nevada area.

I would like to give particular praise to the southern Nevada Home-Siters, Inc.—a grassroots organization of private citizens who provided inspiration, motivation, sound advice, and much-needed support and public education in the achievement of this happy end.

To Edward Woozley, Director of the Bureau of Land Management; Harold Hochmuth, lands officer; E. R. Greenslet, State supervisor; and to the fine staffs of these excellent public officials, credit is more than due.

The approximately 300 southern Nevada families who each month are now receiving title to their small-tract lands can especially appreciate the long months of work involved in breaking the Nevada small-tract logjam. However, every citizen in southern Nevada will enjoy the resultant development of that area, and all of us can take pride in this satisfying governmental response to important human requirements.

I have found that the well-publicized new program has done much to halt the flow of inquiries received by my office from small-tract applicants. However, there are still many questions raised by Nevadans seeking to learn the deatails of the new small-tract program.

I have just obtained from the director of the Bureau of Land Management an authoritative and up-to-date response to typical questions on the new small-tract program.

I hope that the publication of this data will further serve the thousands of Nevadans anxiously awaiting the day they will receive their small-tract patents:

1. What are the latest developments in the small tract program in Clark County?

We believe we have arrived at some pretty sound workable rules for selling the small tracts in Clark County. As you know the Bureau has worked closely with your office, the Homesiters, and local officials and are ready to begin a speedup program. We are offering all small tract lessees and applicants an opportunity to purchase a small tract outright.

2. Will the lessees and applicants have to construct any improvements before they can make their purchase?

No.

3. What price will they have to pay for the tract?

The price stated in the classification order covering their particular tract.

4. Are these the original prices established for the tracts or have the lands been reappraised?

These are the original prices.

5. Why did you decide to make this offer?

Officials of Las Vegas and Clark County and groups of small tract lessees made various commitments to the Secretary to insure the orderly and proper development of the tracts. We prefer local control of community development so long as the public interests are protected. The commitments made to the Secretary permit us to waive Federal controls in the case of Las Vegas.

6. Are you notifying the lessees and applicants of their opporunitiy to purchase the lands?

Yes.

7. Are you following any particular plan in sending these notices?

Yes. We have on hand almost 25,000 leases and applications. It is impossible for us to notify everybody at once especially since we want to tell them exactly how to proceed and how much money to send in.

8. In what order are you sending out notices?

First we notify those whose leases will expire in the near future. We do this to help those who may have become careless about the expiration dates of their leases.

9. Should holders of leases write to you about their leases?

Only if their leases will expire in a month or two. Although we are trying to notify everybody, this is just a courtesy and we may have the wrong address or something else may be wrong. Nobody should allow his lease to expire without notifying us of his desire to purchase in advance of the expiration date. However, if his lease has a considerable period to run, he should wait until we notify him or until the lease has only a month or two to run. If we receive too much mail, we won't be able to get our notices out promptly.

10. Who will be notified next?

While we keep current with our notices to the lessees we mentioned, we are notifying all lessees of lands classified prior to Classification Order No. 95. Then we will work on Classification Order No. 95 and finally on Order No. 106.

11. In other words, you will notify all lessees before you will notify people who have an application and not a lease.

That is correct. The main reason for this is that we have to adjudicate the applications in accordance with the law and regulations. This will take some time.

12. I understand that in this adjudication you will be faced with many problems. For example, what will you do if you have two or more applications for the same small tract?

We will offer the tract to the first qualified applicant. We call the first qualified applicant the "senior applicant." If the senior applicant buys the tract, we will hold the other applications until we adjudicate all senior applications.

13. I believe you call these other applications "junior applications." What will you do about them?

We will give junior applicants the opportunity to purchase another tract which may be available.

14. Will the tract you offer as a substitute be of the same size and price and in the same section as the tract applied for?

We can't guarantee that. Actually we could reject these applications outright but the Secretary wants us to do everything reasonable to permit people to acquire a tract under their applications. We will be able to offer only those tracts which will be available after satisfying all preference applicants.

15. Should people who have applications but no leases write to you?

It would be most helpful if they do not write. However, they are free to write and should if they have a special problem that needs consideration.

16. Are the mining claim problems all solved?

No, not at all. This is a time-consuming process and the contests and hearings have really just begun. We have no way of judging when they will be completed.

17. What will you do with applications in conflict with mining claims?

Until the mining claims are finally adjudicated, we can do nothing. If some or all of the claims are declared invalid, we will then offer the small tract applicants an opportunity to purchase their tracts. If some claims are found to be valid, we will offer the small tract applicants a substitute tract.

18. How long will all this take?

Except for the real difficult problems, such as conflicts with mining claims, we hope to have the bulk of the work completed within a year.

19. You say that you will offer the applicants an opportunity to purchase a tract. Is this the only choice they will have?

No, they will have the choice of either purchasing the tract now or of accepting a 3-year lease. The lease will not contain any improvement requirements but will call for an annual rental. Applicants will save money if they buy now. However, if they want the lease while they're making up their minds or saving the purchase money together, they can choose to do so. If they take a least and hold it for 3 years, they will generally have to pay 15 percent more than if they bought now.

20. If they choose to take a least and want to purchase the lands during the first year of the lease, can they do so? Will they have to improve the lands? Will they lose the rental for the full 3 years?

They will be able to purchase the lands without making any improvements and without any reappraisals. They will also receive credit for the rentals paid for each full year of the lease still to run after they make application to purchase.

21. Quite a few people have already purchased tracts under the so-called four options which we might call the construction option, reappraisal option, the well option, and the convenience-factor option. If anyone exercised the reappraisal or convenience-factor options, do they have any legal right for reimbursement if the amount they paid was higher than the original purchase price?

No. Once the transaction is completed, we have no authority to change it if everything was done properly.

22. If they have no legal right, do you think they have the right to equitable consideration?

No; I do not see how that would be reasonable. The various options which were offered were offered as the result of local requests for help. The people claimed that they were having difficulty securing financing and gave other reasons for their requests. We tried to help them as much as we could. We clearly indicated that the alternatives were options. Everybody had the equal chance to live up to their original agreements to improve the lands or to choose one of the options. Some chose to improve their tracts, some chose one of the other options, and some even chose to surrender their leases. It was a matter of free choice. We assume that everybody exercised the option that would be to his particular advantage.

23. You mentioned that some lessees surrendered their leases. Can they revive them now?

No. That would interfere with the rights of other lessees and applicants and in any event we have no authority to revive them.

24. Suppose someone exercised a reappraisal or convenience-factor option but had not received patent when the new plan came along. Can he be reimbursed to any extent?

Our lawyers are studying that question now, and I do not know what the answer will be.

25. Would you hazard a guess?

My guess is that we will not be able to return any money because of the law governing contracts.

26. Can any new small tract applications be filed for lands in Clark County now?

No; all Clark County is closed to small-tract application until further notice. We do not propose opening new lands until we can issue patents for a substantial portion of pending leases and applications. We will work closely with local officials and groups in planning future openings. Our present efforts are directed to getting the presently classified lands into private ownership so that development may proceed. After that is done, we will proceed with the consideration of the further needs of the community.

27. Now for the 64-silver-dollar question. When can we expect to obtain a substantial flow of patents? That little piece of paper to which the small tracter can refer and say "This is my little piece of the great State of Nevada on which I can plan my future."

We are now issuing small-tract patents for Nevada at the rate of 200 a month. It is gaining momentum rapidly, and we anticipate that perhaps 7,000 to 10,000 will be issued in the next 12 months. Of course, that is assuming that the majority of the lessees and applicants will want to buy their tracts at the earliest opportunity and not continue under the leasing system.

28. What has been done with regard to providing proper surveys so people who receive patents can be sure they are building their homes on the right tract?

We have obtained additional field engineers and allotted additional funds for cadastral surveys in the vicinity of Las Vegas to facilitate the small-tract program. We have an objective of resurvey of 50 sections for this fiscal year. Our regular field reports indicate that this work is proceeding satisfactorily.

Mr. Taber Supported

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mr. KILBURN. Mr. Speaker, over the years the Members of the House realize perhaps more than anyone the great job that JOHN TABER has done for our country. We all respect him even though some disagree on occasions with his position.

It is especially pleasant for his friends to find out how highly he stands even outside his own district. It is nice to note that he is generally recognized as one of the outstanding Members of the House over the past 30 odd years and it is especially heartwarming to those of us who have closely followed his work to have him get this recognition.

I include an editorial from the Oswego Palladium-Times, of Oswego, N. Y., one of the leading papers of my district:

MR. TABER SUPPORTED

Bernard J. Donoghue is an Auburn attorney who has taken upon himself the monumental task of running against Representative JOHN TABER in the Republican primary in June. The 46-year-old congressional aspirant, in announcing his candidacy Monday, said that he will advocate the establishment of a United States science academy, similar to the service schools, and that he would have it located at Sampson Air Force base, of course. He is also for 90 percent parity supports on dairy products.

Now we have nothing against Mr. Donoghue, but on a more positive note, we have a lot of admiration for Mr. TABER. The latter has been in Washington since March 4, 1923, and has been a distinguished figure there ever since.

Mr. TABER is a sincere conservative; a man who takes a dim view of much of the so-called liberal legislation that is introduced by both parties these days. He opposes it when he feels that it represents a threat to our country as he knows it by leading to big government and incipient Socialism. He is a vigilant watchdog of the United States Treasury, and from his influential position on the House Appropriations Committee has presided over the excision of many a questionable expenditure. Conversely, he has used his very considerable influence to secure appropriations that otherwise might have been lost when he was convinced of their worth.

Mr. TABER, who will be 76 on May 5, has 33 years of outstanding service behind him. He represents a school of legislators that is too fast vanishing from our halls of Government—the individualist and conservative. As such, he stands as a balance against too sharp swing toward the welfare state and the left. While we don't always share his apprehension along those lines, we do admire his honesty, his convictions and his service and suggest to our Cayuga County neighbors and others of the 36th district that they would do well to continue him in office.

Argument For Interposition as Inherent Right of States

EXTENSION OF REMARKS

OF

HON. JOHN. J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks, I hereby place in the Appendix of the RECORD the following article from the February 15, 1956 issue of the Fort Worth Star-Telegram, written by Mr. R. M. Randolph, a student at Texas Christian University. I feel this article is one of the best written and clearest statements that I have read on the doctrine of interposition. I submit it for the consideration of all persons who believe in the principle of government under law instead of a government by men who substitute their personal views for established law and precedent:

ARGUMENT FOR INTERPOSITION AS INHERENT RIGHT OF STATES

(By R. M. Randolph)

(EDITOR'S NOTE.—"Interposition," a doctrine little known to the United States in the last century, is one of the legal weapons dusted off by some Southern States in their fight against the Supreme Court's school desegregation opinion of 1954. In essence, interposition is a challenge by a State or States of a Federal action deemed to be in violation of the compact among the States. The theory and basis of this doctrine is summed up in the following article by a TCU political science major from Houston, whose interest in it first was aroused 4 years ago by his study of the life of the South Carolina statesman, John C. Calhoun.)

Interposition has been revived, to the confusion of most and the anger of many. What is interposition, and is it legal?

The first statement of doctrine was by the father of the State rights school, Thomas Jefferson, in the Kentucky resolutions of 1798. These asserted the right of a State to interpose its sovereignty against the Federal Government's Alien and Sedition Acts. Due to a change of administrations and the repeal of the acts, interposition was not necessary.

During the War of 1812 the New England States adopted the reasoning of the Kentucky resolutions and threatened to secede. The end of the war made this unnecessary. In 1831 Georgia defied the Supreme Court and executed an Indian freed by the Court. The doctrine in its purest form was given by John C. Calhoun in his South Carolina Exposition in 1828. The arguments for State rights and sovereignty advanced in this paper have formed the basis for the State rights school ever since. In 1832 South Carolina interposed against the tariffs of 1828 and 1832. A substantially lower tariff was passed at the next session and the South Carolina ordinance was repealed.

PERSONAL LIBERTY LAWS

In the late 1850's the abolitionists in many Northern States passed personal liberty laws, which interposed against the Supreme Court's Dred Scott decision, giving slave owners the right to take their property with them into free States. In 1859 the Wisconsin Assembly, in an interposition action, used the same wording as the Kentucky Resolutions. Thus the doctrine has been applied more times by Northern than by Southern States.

Is interposition legal? The basis of State rights theory is that of State sovereignty. What was the nature of the States previous to ratification of the Constitution? Of many indications of State sovereignty, the best is article II of the Articles of Confederation: "Each State retains its sovereignty, freedom, and independence * * * " Was the ratification of the Constitution the act of a single sovereign, the people from New Hampshire to Georgia, or was it the act of 13 sovereigns?

In the Constitutional Convention, in accordance with international law, the States were equal and had but one vote each. The Constitution was ratified by a convention in each State, which drew from the sovereign, the people of that State. Ratification by such a convention bound only that State, not the whole binding the parts. If a State refused to ratify it, it was to become a foreign power to those that did. Thus the Constitution is a compact between sovereigns.

CHANGED BY RATIFICATION?

Did the ratification change the seat of sovereignty from the people of the several States to the people of the Union taken as a whole? One or the other must possess it, as sovereignty may not be divided, though sovereign powers, the exercise of sovereignty, may be both delegated and limited by the sovereign. Thus the States either lost their sovereignty or remained sovereign and delegates limited sovereign powers to the Federal Government.

The answer must be found in the terms of the compact itself. In it, sovereignty is not renounced by the States, denied to the States, or granted to the Federal Government. Nor does sovereignty change its seat through any inherent nature of the compact, for the Ninth Amendment says, "The enumeration in the Constitution of certain rights, shall not be construed to deny or disparage others retained by the people."

Sovereignty is retained by the people of the separate States, since all the people on whom the compact is operative, having never formed a sovereign entity, cannot retain that which they never possessed, i. e., sovereignty. The 10th amendment states, "The powers not delegated to the United States by the Constitution, or prohibited by it to the States, are reserved to the States respectively, or to the people." Since sovereignty was not delegated to the Federal Government nor prohibited to the States, it is reserved to the separate States. In addition, the amending power, which may only be exercised by the sovereign, rests with the individual States, all having an equal voice.

RESTS ON THIS CONCEPT

On this concept of State sovereignty the theory of interposition is based. The Constitution created a government of limited powers, and whenever it exceeds those limits, its actions are void and of no effect. Madison wrote in The Federalist Papers, No. 14, that, "Its jurisdiction is limited to certain enumerated objects." In No. 33 Hamilton wrote, "These (acts of the larger society which are not pursuant to its constitutional powers) will be merely acts of usurpation, and will deserve to be treated as such." Thus no unconstitutional act is binding on the States.

Who is to decide when an act of the Federal Government is unconstitutional? Since article III does not give the Federal judiciary the express power to pass on the constitutionality of an act, the Supreme Court does not have the power to declare an act unconstitutional, John Marshall notwithstanding. In The Federalist, No. 83, Hamilton declares: "In like manner the judicial authority of the Federal judicatures is declared by the Constitution to comprehend certain cases particularly specified. The expression of those cases marks the precise limits, beyond which the Federal courts cannot extend their jurisdiction, because the objects of their cognizance being enumerated, the specification would be nugatory if it did not exclude all ideas of more extensive authority."

ANOTHER ARGUMENT ADVANCED

A second argument against judicial interpretation was advanced by Calhoun: "It is idle, and worse than idle, to attempt to distinguish, practically, between a government of unlimited powers, and one professedly of limited, but with an unlimited right to determine the extent of its powers." To allow the Federal Government, in any of its branches, to decide the extent of its own powers, would remove all limitations on the power of the Federal Government. Yet it is plain that someone must have that power.

Declaring an act unconstitutional is the exercise of a sovereign power, one not delegated to the Federal Government nor denied to the States, and therefore retained by them under the 10th amendment. Since such a power is necessary, and cannot be vested in the Federal Government without destroying the concept of limited government, it must logically reside in the States, the seat of sovereignty. Therefore a State may decide that an act is unconstitutional and declare it null and void within that State.

WOULD REMOVE DOUBTS

Thus a State legislature, acting as the representatives of the sovereign people of that State, may interpose their sovereignty against the act. A preferable procedure, however, would be to call for a special convention or for a referendum. This would remove any doubt that the sovereign's desire was being truthfully reflected and enforced.

If three-fourths of the other States amended the Constitution to give the Federal Government the specific power which the interposing State held it did not have, that State would have to yield.

Without such amendment, the act would remain void within its borders. Some may say that this would lead to chaos, but what could be more chaotic than rule by a court which has reversed itself 36 times in 18 years?

Is this theory of State rights still applicable today? It is maintained that the Civil War decided the question in the negative. However, such a statement implies that might possesses the superior right. If the theory was correct in 1860, it is still correct today. Interposition may be defeated by power, but not by right. To cringe before power has never been typical of the American people in general or of Southerners in particular.

What Is Academic Freedom?

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial entitled "What Is Academic Freedom?" which appeared in the New York Daily Mirror of Saturday, March 24.

In connection with this editorial let me say that the report of the committee denouncing in the strongest terms those colleges and universities discharging members of their faculty for the manner in which, as the statement charged, they refused to testify concerning their alleged communist affiliations and commending other universities for their defense of "academic freedom" is somewhat revealing in view of information concerning the professors who signed this report.

According to the files of the House Committee on Un-American Activities one of the signers, Prof. Robert K. Carr, Dartmouth University, is the author of the book, The House Committee on Un-American Activities, 1945–50, an extremely partisan attack on the work of the committee and its members.

Prof. Ralph F. Fuchs, Indiana University School of Law; Prof. Russell N. Sullivan, University of Illinois College of Law; and Prof. Bentley Glass, of Johns Hopkins University, were among the signers of a letter supporting Dr. Edward U. Condon at the time he was under investigation as a security risk and criticizing the "imperfect procedures" of the Committee on Un-American Activities.

It is extremely interesting to note that Prof. Bentley Glass of Johns Hopkins testified as a defense witness for Junius Scales at the time Scales was chairman of the Communist conspiracy in North and South Carolina. Scales later was sentenced to 6 years' imprisonment after conviction under the Smith Act.

Five of the institutions named were placed on the association's list of censured administrations for the way they handled charges against professors. These universities, which in my humble opinion should be highly commended, are the University of California, Ohio State, Rutgers University, Temple University, and Jefferson Medical College.

It is significant that, as is typical in an attack of this kind, not a single example is cited of any professor who has been unjustly dismissed by a university. Nowhere does the association identify any person who has been penalized for a pure quest of academic freedom rather than for participation in the Communist conspiracy.

The editorial follows:

WHAT IS ACADEMIC FREEDOM?

The heads of two great universities, Ohio State and California, have slapped back at a recommendation of censure levelled against them by a special committee of the American Association of University Professors.

These universities, along with others, have been under the investigation of the professorial association because of alleged practices violating civil liberties and academic freedom.

The practices objected to are ones that make it tough on Communists, fifth amendment takers, and persons who refuse testimony before congressional committees.

WITHOUT A HEARING

In the case of Ohio State, recommended for censure because of the firing of an associate professor in 1953, the university's president, Dr. Howard L. Bevis, cracks the committee's knuckles on two counts.

First, he says, the committee published a finding about the university without notice, without a hearing, and without knowledge of many important facts.

Second, the committee finding, according to Dr. Bevis, is based upon the premise that the dismissal of a college professor is not warranted solely on grounds of membership in the Communist Party—a premise with which Ohio State emphatically and to the satisfaction of the great majority of Americans does not agree.

THE LOYALTY OATH

Ohio State contends that such dismissals do not violate academic freedom.

The University of California incurred the Committee's ire because it requires an affirmation of loyalty—the so-called loyalty oath—from members of its faculty.

The association of professors, which claims a membership of 38,000, will take action on its committee's recommendations at a meeting in St. Louis April 6–7.

If final censure is voted, it means that the institutions complained against are placed on a list informing the profession that "unsatisfactory conditions of academic freedom and tenure have been found to prevail at these institutions."

Why should any professor, any American, feel that a declaration of loyalty is counter to the principles of academic freedom?

Should we not teach our children to be proud of patriotism and loyalty to our country, our free ideals?

OLD-FASHIONED?

Is loyalty out of date? Is it something to be sneered upon by persons in high academic positions, some of whom have been allied with the Communist conspiracy which is the antithesis of all human freedom, including academic freedom?

In view of the vast and shocking disclosures about the Communist conspiracy before congressional committees, can the leaders of our intellectual life—the supposed leaders, at least—seriously believe and suggest that affiliation with communism is not of itself enough to warrant the dismissal of a teacher of our children?

If so, those institutions which are censured may wear that censure as a badge of distinction and honor. Americans will feel reassured in sending their sons and daughters to those institutions.

We Need This Protection

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. VAN ZANDT. Mr. Speaker, the following editorial from the pen of Mr. Robert W. Boyer, editor of the Altoona (Pa.) Tribune, appeared in the March 21, 1956, edition and supports the new version of the Bricker bill.

Editor Boyer through the columns of the Altoona Tribune for years has championed constitutional government and for that reason his views on the Bricker bill are timely:

WE NEED THIS PROTECTION

Critics of the new bill presented by Senator BRICKER, of Ohio, to preserve American liberties again are more active and vociferous than the defenders of American freedom.

Actually, the new version of the Bricker bill appears weak, and obviously is a watered down measure aimed at getting around objections by the President * * * objections which we believe are wrongly taken or wrongly advised.

Briefly, Senator BRICKER is one of those who are disturbed by our increasing tendency toward making international treaties. We make them so lightly these days that now we are tied up with so many such pacts that recently, even the State Department forgot an important one, and an embarrassing situation developed over the shipment of arms to Saudi Arabia.

Some hasty searching shortly brought forth information from the State Department that we had an agreement with Saudi Arabia to provide the tank shipment in question.

But, our point is the vast multiplicity of foreign treaties now binding the United States to one thing or another. The creation of the United Nations has compounded the problem, since all conclusive action taken by this country with the members of the U. N. becomes automatically a treaty, binding upon us as the law of the land.

This is in accordance with the constitutional provision regarding treaties, and was written in a day when treaties were relatively rare, and made only for purposes of peace, alliance in war, or to effect trade.

The U. N. has complicated this situation. Treaties no longer are generally restricted to these three essentials of foreign relations.

Instead, they may relate to anything acted upon by the U. N., and this, by the nature of the U. N., could involve the internal laws of our Nation. For example, a U. N. committee report on freedom of the press, or of religion, could be adopted by the U. N., and, if we were a signatory, such could become the law of the land, even though it may have been written by foreigners unfamiliar with American principles of independence and freedom.

Senator BRICKER has proposed two bills which would place restrictions upon the treaty powers. The State Department has taken the position, and so has convinced the President, that such restrictions would hamped the President's treaty-making powers, and also, the State Department's.

Even Secretary of State Dulles has admitted that a treaty could cancel out our Bill of Rights.

Strangely, with all our constitutional safeguards for our liberties, we have left a wide-open loophole. It has taken our wider adventuring in the realm of foreign relations in the last decade to reveal it. But, it has been revealed. Our country is the only one of the major nations of the world in which such a weakness exists.

This leaves us very much at the mercy of any foreign schemers. Britain, France, all other world powers and most of the other nations, have national laws which definitely prohibit any treaty with any nation from countering any of its internal laws.

But, under present conditions, the reverse is true for Americans. A treaty, which includes all actions with the U. N., once ratified by our Senate, becomes the law of our land.

Also, executive agreement can become the law of the land, similarly. The Supreme Court has ruled this. And, in the case of letters between the late President F. D. Roosevelt and Russian Ambassador Litvinov, an agreement by FDR which canceled certain property rights guaranteed under the fifth amendment was accepted as the law of the land.

Senator BRICKER's original bill was much the stronger. It provided that "No treaty or other international agreement in conflict with the Constitution shall be of any force or effect. 2. "No treaty or other international agreement shall become effective as internal law in the United States except by valid legislation duly enacted by the elected representatives of the American people."

Why Not 100-Percent Preference Cargoes?

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. TOLLEFSON. Mr. Speaker, my distinguished colleague, the gentleman from Washington [Mr. PELLY], has introduced a measure, H. R. 8997, which would provide that 100 percent of all Government-sponsored cargoes shall be carried in American-flag ships. An editorial appearing in the March issue of Marine News strongly supports Mr. PELLY's bill. I insert it in the RECORD for the information of the Members of the House:

WHY NOT 100-PERCENT PREFERENCE CARGOES?

The recent public hearings on the Cargo Preference Act have brought some interesting facts to light. Repeal the 50–50 law and we will do what the Nazi U-boats could not do—sink the American merchant marine. It has been revealed that foreign ships now carry the lion's share (84 percent) of our exports and by attacking the 50–50 provision they hope to get more. Maritime Administrator Morse reported to the committee that even with the assistance of the law, our vessels are carrying a smaller percentage than at any time during the postwar period and less than what it was before World War II. It was observed that Britain was using discriminatory practices to carry up to 59 percent of her cargoes on one hand, but on the other was objecting to the United States 50–50 law.

When it was proposed to do away with 50–50 shipping rule, in the case of those foreign nations who agree to bring their shipping, and maritime personnel, up to the standards as to wages and working conditions that would be fixed by the United States Department of Labor, the spokesman for a foreign lobby (Norwegian Shipowners' Association) immediately responded that foreign maritime interests would never be able to meet the United States maritime level in this respect.

Senator BUTLER, Maryland, in a Senate speech recalled from the very beginning the 50–50 law was opposed by various foreign shipowners and that they were direct and frank about it. That "instead of coming themselves to plead for its repeal they apparently have convinced certain good and true friends of the American farmers that the bill is bad for the American farmers, and therefore, we should have it repealed, or sterilized." Later Senator BUTLER protested that the subversion by high Government officials of congressional intent in connection with 50–50, has progressed to an alarming extent. "And our own State and Agriculture Departments and foreign-assistance officials, not only agreed with them, but take up the cudgels for these foreign groups against the American merchant marine and shipbuilding industry."

These foreign interests tell us that we have no right to protect our own shipping by assuring a portion of the total American export and they tell us—we should subsidize American shipping.

Let's follow their advice the American way—Representative PELLY, Washington, has introduced a bill (H. R. 8997): Amendment of the Merchant Marine Act of 1936, so as to provide for the transportation of all waterborne cargo in United States-flag vessels in connection with the foreign assistance program. Let's support—100 percent preference cargoes.

Resolutions, Division of Christian Life and Work

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. BRAY. Mr. Speaker, under leave to extend my remarks, I wish to insert the resolutions of the division of Christian life and work of the Indiana Council of Churches, which were endorsed by the Indiana Council of Churches:

RESOLUTIONS, DIVISION OF CHRISTIAN LIFE AND WORK

"MARRIAGE MILLS"

We urge our constituent denominations to educate their people in the sanctity of marriage and the dangers of the system of "marriage mills" in Indiana. We intend to work for legislation that would eliminate hasty and ill-advised marriages.

LOCAL OPTION

We urge our churches to work thoughtfully for legislation that will make it possible for the people of Indiana in local communities to oppose the sale of alcoholic beverages where the majority of people feel that such sale is not for the public good.

DISARMAMENT

Recognizing the fact that armament races lead to war and that war with modern weapons is suicidal, we commend the President of the United States for his efforts to establish a department of government to work for disarmament. We urge the United States to lead the nations in a plan for universal disarmament.

THE UNITED NATIONS

We reaffirm our support of the United Nations and its agencies in the effort to bring about world understanding and peace.

REFUGEE RESETTLEMENT

We urge our constituent denominations to encourage their people to arrange to welcome to our communities our fair share of the refugees eligible to come to our shores.

LIQUOR ADVERTISING

We lament the obnoxious advertising of alcoholic beverages on radio and television and magazines and newspapers in interstate transit. We urge our people to use their influence in their own communities with Congress to put a stop to this practice. We would encourage the elimination of all drinking scenes from television plays.

CIVIL DEFENSE

Recognizing that there is no defense against nuclear weapons we urge our people to examine carefully all efforts to militarize the populace by civil defense drills, but we commend positive efforts to prevent panic and allevate human suffering.

EXCHANGE STUDENTS

We commend our Government in its efforts to build world-understanding and friendship through its support of the exchange-student program. We urge the continuation of this program.

INDIANS

We urge our Government to try to find ways of ministering to the needs of our Indian Americans without pauperizing them or destroying their basic rights.

DRUNKEN DRIVING

Recognizing the increasing death toll on our highways, we urge our people and elected officials to find ways of eliminating from our highways drivers who are drunk or who have beclouded their judgment with alcoholic beverages.

SURPLUSES

We commend our Government in its efforts to make our agricultural surpluses available to the hungry of the world through voluntary agencies.

LIQUOR IN THE AIR

We urge the airlines now serving liquor to discontinue this dangerous and disagreeable practice.

UMT

We reaffirm our repeated opposition to any efforts which would fasten upon the American people any system of universal military training. We urge our Congress to resist all efforts to introduce compulsion into the recruiting of our military forces.

CIVIL LIBERTIES

In a day when people become fearful and disturbed, we commend all efforts to preserve the civil liberties guaranteed by our Constitution and Bill of Rights.

LABOR MANAGEMENT

In a day of industrial disputes we call upon both management and labor to use Christian methods of mediation.

RACE

We urge our constituent churches to serve their communities without regard to race or national origins.

GAMBLING

We reaffirm our repeated opposition to any form of gambling within the State of Indiana.

The Deterrent Value of Tactical Air Power

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. DEANE. Mr. Speaker, it was my privilege and pleasure a few weeks ago to extend an invitation in behalf of the Wilkes Chamber of Commerce, North Wilkesboro, N. C., to Gen. O. P. Weyland, USAF, commander, Tactical Air Command. General Weyland was able to accept and made a deep impression.

Developments in aircraft, in weapons systems, and in techniques since the Korean war have given our tactical fighter bomber and tactical jet-bombardment aircraft the capability of being deployed in a matter of hours to almost any threatened area of the globe. The flexibility and mobility which our tactical air power now has is provided by a global base structure and supported by a global air lift which did not exist in 1948

Tactical forces are designed for quick deployment and with their nuclear weapons they can be so effective as to provide the decisive balance of power.

Our tactical air forces today have therefore a tremendous deterrent value and a tremendous power for peace. We must not let them be weakened by falling behind in research, development, or production. The greater the scientific and engineering advances made in this field, the greater the deterrent value of tactical air power and the greater the hope for lasting peace.

Mr. Speaker, these are some of the thoughts which General Weyland expressed in an unusually clear, understandable and impressive address. The problem of maintaining the peace is the greatest challenge to the free world today. We would be derelict in our duty if we permitted this Congress by any action or failure to take action to lessen in any way the value of our air power as a deterrent to peace. Therefore, with the consent of my colleagues, I wish to extend my remarks and insert General Weyland's earnest statement of the value of tactical air power as a deterrent to war in the CONGRESSIONAL RECORD. The statement follows:

Gentlemen, national security is not a problem restricted to the soldier, the airman, or the sailor—the ramifications of the defense of our Nation and those of the free world in the face of Communist expansion affects every citizen. Therefore, I am glad of this opportunity to meet with you businessmen and professional leaders of this community to acquaint you with some of these problems and what we in the Air Force can and are doing to overcome them.

We are living in what may well prove to be the most critical period in the history of the United States, one in which the threats to our security and to our very way of life have never been greater. The Communists, in posing this threat are using every possible pressure and threat—political, economic, and psychological, as well as military—to expand their sphere of control in the world.

In naive good faith, the United States precipitously demobilized after World War II. The Communists did not. Rather, they retained their forces and further deployed them to solidify and perpetuate their control over such areas as East Germany, Poland, Lithuania, Estonia, Latvia, Finland, Czechoslovakia, parts of the Balkins, and vast areas of the Far East. These now comprise the satellites behind the Iron and Bamboo Curtains.

Soon after it became apparent that the Communists not only intended to consolidate and strengthen their grip on those nations behind the Iron and Bamboo Curtains, but were striving to bring other nations into their area of domination.

Korea brought the realization that the Communists were even willing to use military aggression where they thought it was expedient—using satellite forces as the tool to achieve their aims.

When the free world became fully aware of the extent and seriousness of the threat to their security, they took such collective measures as the formation of the North Atlantic Treaty Organization and the Southeast Asia Collective Defense Treaty Organization to protect themselves against the divide-and-conquer techniques that the Communists love so dearly.

It would be foolhardy for us to ignore the fact that the Communists have numerically superior land armies, and air and naval forces second only to our own. We know that their military strength is supported by vast natural resources and an expanding industrial base. Theirs is a controlled totalitarian economy, making it possible for them to allocate large sums of money for production of military equipment, disregarding the other economic needs of their peoples. Last, but far from least, is the fact that their atomic stockpile is on the increase and that they have developed nuclear weapons and the means to deliver them.

The Communists then pose a double-barreled threat to our peace and security. If we become weak, we may expect a major war. As long as we remain strong, we can be reasonably sure that they will be in no hurry to become involved in a decisive military campaign in which they surely would be subjected to the awful retribution of American airpower. But the Communist timetable is flexible. As long as we remain strong, any armed conflict of their choosing may be of limited nature and we may be faced with the possibility of a series of "little" or periphery wars designed to whittle down our strength and increase our vulnerability.

The United States national policy of security is therefore based on this realization. We are preparing for what the Chairman of the Joint Chiefs of Staff calls the long pull. Our policy now is not to build for an expected war in any particular year, but to be ready this year, the next year, or 10 years from now, for either an all-out conflict or a limited war.

The economic implications to the long pull military policy has placed heaviest emphasis on technology and airpower, in which we are strong, as distinguished from masses of manpower in which we obviously cannot compete with the Communists.

As part of the long pull we subscribe to the concept of collective security, wherein our allies furnish the forces and the facilities or weapons of war that they are most capable of providing to the common goal of defense against aggression. Allied contributions, of course, will vary according to the ability and economy of each country. Some have larger manpower resources represented in their armies, while others contribute the facilities of their navies, their ports or their airbases.

Because we are highly industrialized nation, it falls to us to furnish a major part of the more complicated and technical forces—airpower.

Airpower is the supreme expression of military technology, and we must capitalize on the superiority we now hold in the technology, industry, and nuclear development that supports our airpower strength.

The Communists have overwhelming strength on the ground. In size, the armies of the free world are mere outposts by comparison. The Communists need not unduly fear our strength at sea, for with internal lines of communication, they are not dependent upon using the seas. The Communists fear but one thing primarily—our power in the air—and airpower has been the primary reason for our peace and safety during the past few years.

It is my earnest conviction that we must never permit ourselves to be led into a conflict in which massed manpower becomes a decisive factor, for by so doing we would be giving the enemy a gratuitous advantage they should not have.

Since it is not our traditional forms of military power that have held the Communists in check, then it is most imperative that we exploit every means to increase our strength in the air, for by doing so we weaken the Communist threat posed by their superiority in raw manpower.

I must emphasize that I am not recommending that we do not need armies or navies—we do. But airpower, as exemplified in the United States Air Force, is the fundamental military threat restraining the enemy, and it is the prime force giving our country and those others of the free world the initiative in developing a climate of freedom in areas that otherwise would be enslaved morally, politically, and economically.

United States Air Force air power is therefore the decisive, dominant force assuring a continued free world. Today, control of the air determines success or failure in all forms of conflict. Our air power has spectacular mobility, both in its Strategic Air Command and Tactical Air Command, which, coupled with a completely versatile arsenal of modern weapons, outmodes, without replacing, the older traditional services.

The domination of air power can be applied anywhere, anytime, in any strength. It can affect a decision in small wars independently or in combination with surface forces. It is the only existing United States military force capable of applying total nuclear warfare.

In the light of the military advantages inherent in air power, we have patterned and developed the organizational structure of the Air Force to take advantage of these complex capabilities and keep it ready for any of several contingencies.

We are all aware of the necessity of maintaining our long-range striking forces in instant readiness should all-out war occur. It is generally accepted that our strategic air forces, which have successfully deterred a global war since 1947, still remain the greatest deterrent to major Communist aggression.

We must keep these forces strong, especially in the light of the cold, hard fact that we no longer monopolize long-range nuclear air power. We are still ahead, but if we are to remain ahead, it is vital that all of us, the people in the United States, must understand the true military aspects of why our Air Force is the mightiest in the world, and having understood, to act swiftly and with decision in supporting it.

Referring again to the pattern of Communist conspiracy, it is abundantly evident that with the capability of our strategic Air Forces to deter global war, we are, whether we like it or not, possibly faced with an era of periphery or brush-fire wars. To meet this new threat, we have placed increasing emphasis upon tactical air power, and today the ability to inflict instant punishment on an aggressor is shared equally by our strategic and tactical Air Forces.

In Korea, our intent to use tactical Air Forces was not established until after the aggression had begun. Our national policy in this regard is now clear cut. With the mobility and striking power of today's tactical air forces, we can make clear our intentions to use these forces against limited, as well as all-out aggression, anywhere, anytime. This should make the Communists realize that limited aggression will cost more than it is worth.

Even in Korea, in spite of the stringent restrictions placed upon us, tactical air power was the dominant element which prevented the Reds from achieving their objectives in that area.

We know that there are a number of freedom-loving countries, who have the manpower for ground units and who will fight in defense of their country if they are assured of tactical air assistance from us. We now stand ready to offer that assistance and have made this fact known. We are prepared to use modern tactical air forces capable of responding to any hostile action very quickly and with the appropriate degree of force.

The realism of this capability is reflected in the fact that our tactical fighter-bomber and tactical jet bombardment aircraft can now be deployed in a matter of hours to almost any threatened area of the globe by inflight refueling, and then deliver nuclear weapons to any military target. The flexibility and mobility required for this is provided for by a global base structure and supported by a global airlift which we have in being today.

I emphasize nuclear weapons because as I mentioned before, our strength lies in our superior technology, industry, and nuclear development. To fight a war based on pitting massed manpower against massed manpower would result in a war which, although we may or may not lose, we certainly could not win decisively.

We should never again, in my opinion, restrict our selection of weapons or target areas as we did in Korea. The best weapon to do the job with the least loss of life should be selected for each target under consideration. In a periphery war, the allies whom we might be supporting would almost certainly want us to support them in the most efficient and expeditious manner possible.

In our organization of mobile tactical strike forces, we have designed them to deploy very quickly, using inflight refueling techniques, to any threatened area of the globe. With nuclear weapons, these forces can be compact and yet be so effective as to provide the decisive balance of power.

Tactical nuclear weapons are not weapons of mass destruction. With them we can be selective, limiting our air attacks to primary military targets with much greater effectiveness. This is especially true when you consider that our Nation's stockpile of nuclear weapons now includes a range of yields which permit accurate and optimum attacks on the entire spectrum of military targets.

Actually, our tactical combat aircraft have only reached the threshold of attaining the ultimate possibilities in the scope, variety, and magnitude of tasks they can perform. We are now in an in-between position in regard to the aircraft themselves. We are fast getting the newest high performance jet day fighters, fighter-bombers, and tactical bombardment aircraft we need, as well as larger and faster airlift transports, but we still have to use some of the older types to meet operational commitments.

One of the best examples I can think of to illustrate the advances we have made in our new type combat aircraft is the first of the Century series, the North American F-100 Super Sabre. This is in operational use in four wings of the Tactical Air Command today. These aircraft represent a jump in speeds from the subsonic to the supersonic in level flight. In the tactical reconnaissance field, just a few weeks ago, the first aircraft for several squadrons of Douglas RB-66 tactical reconnaissance bombers was delivered to our recce wing at Shaw Air Force Base, S. C., representing not only a faster aircraft, but one with a 24-hour all-weather capability.

Because of the tremendous power for peace inherent in our tactical air forces of today, it is vital that we continue to be supplied with the most modern tools to do our job. In this day of sudden, undeclared war, our tactical air forces would be caught short if we fall behind in research, development and production. Right now in the engine field we need greater power combined with lighter weight. In aircraft, the lead time must be cut between the drawing board and the operational flight line. We need more speed and better all-around performance, with shorter landing and takeoff characteristics, if we are to maintain our qualitative superiority over our potential enemies. Our scientists, engineers and the aeronautical industry are working with us as a team to solve these problems.

We are achieving these things, and I am confident that even greater scientific and engineering advances will mark the next few years. We have been living in a decade of security through global airpower, made possible through our strategic air forces and our tactical air forces as a deterrent to aggression anywhere in the world; and our strong air defense forces to guard us here at home.

Gentlemen, we are all aware that the problems of maintaining the peace are the greatest challenge to the free world today. Be assured that the United States Air Force is prepared to meet that challenge and to make the next decade one of security through airpower, working closely with our sister services.

Antarctica Claims

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. TOLLEFSON. Mr. Speaker, I have introduced a resolution which in effect directs the Government to make claims to that part of Antarctica in which the United States has concentrated its explorations. An editorial in the March 19 issue of the Tacoma News Tribune comments on the resolution. I trust that Members of the House will subscribe to the views expressed in the editorial and lend their support to my resolution.

The editorial follows:

ANTARCTICA CLAIMS

Representative THOR TOLLEFSON, of Tacoma, is the author of a resolution now before the House Foreign Affairs Committee which would direct the Government to make claims on that part of Antarctica in which the United States has concentrated its explorations. A Navy expedition is in the area now.

Mr. TOLLEFSON is showing much vision in this matter. While most Americans think of Antarctica as a frozen wasteland, inhabited mostly by penguins, he sees the great potentials of the region and he is alarmed by the slowness with which this Nation is moving to assert its claims. The Representative, aware that the executive branch is unlikely to act in the matter without a congressional directive, is now appealing to President Eisenhower to prod Congress into action on his resolution.

It was Adm. Richard Byrd who said of Antarctica claims:

"The rest of the world has stuck its finger in the Antarctica pie while Uncle Sam is still sucking his thumb."

What's in this Antarctica pie? Admiral Byrd, and two predecessor American explorers, Capt. Finne Ronne and Lincoln Ellsworth, have reported that the frozen real estate at the bottom of the world is actually a storehouse of fabulous riches. TOLLEFSON quotes Byrd as saying he saw a vein filled with enough coal to supply the whole world. The admiral brought back to America evidence that invaluable deposits of oil, copper, silver, molybdenum, iron, gold, and uranium lie beneath the ice, waiting to be tapped. He believes atomic energy and new mining techniques can uncover these vast resources.

The fact that Representative TOLLEFSON is pressing for claims is evidence enough he believes they are valid in the light of explorations by Byrd and others. At the very least he is entitled to early hearings on his resolutions.

Remarks by His Excellency, the Most Reverend Amleto Giovanni Cicognani, Apostolic Delegate, at the Fall Convocation of Georgetown University, October 13, 1955

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. McCORMACK. Mr. Speaker, at an academic convocation of the faculty and students of Georgetown University held on October 13, 1955, honorary degrees were conferred upon His Excellency, Most Rev. Amleto Giovanni Cicognani, D. D., appostalic delegate to the United States, and to Tibor Kerekes, Ph. D., V. M., chairman, department of history, Georgetown University and myself.

This great honor will always be one of my most valued possessions.

In my extension of remarks, I am pleased to include the inspiring remarks made on that occasion by Archbishop Cicognani, the distinguished personal representative to our country of His Holiness, Pope Pius XII:

It is my pleasant duty to express my warm appreciation to the Very Reverend Father Bunn, the staff and faculties of Georgetown University for the distinguished honor bestowed upon me. It is a high privilege to enjoy a bond of union with this center of culture; and I am sure that this favor is likewise appreciated by the Honorable JOHN MCCORMACK, and Dr. Tibor Kerekes. Georgetown is a bulwark of doctrine and virtue exemplified by a long and honored series of valiant teachers, both Jesuit and lay, who have prided themselves on dedicating their lives and talents to the spread of the light of truth and the flame of goodness among youth. This work has been going on for a century and a half, and thousands of families, the church, and the country, along with

numberless alumni, are joyfully grateful for it.

May I be allowed to direct but a few words to our students. The purpose of your presence at Georgetown, as you well know, is to acquire doctrine and knowledge, a store of intellectual light. You have need of this intellectual light in order to know properly the subject which you have selected and which later you will make your profession in life. In a few years, you medical students will be approached by those afflicted with diseases; you students of law will be consulted by those in need of advice and direction; and you in the Foreign Service and other schools will find yourselves treating many matters and problems of private and public concern. From your answers and your work will depend very often the well-being and happiness of many individuals as well as the good order and prosperity of your community.

I wish, as do we all, that you acquire a plenitude of light in your specific subject; this is the tradition of Georgetown University. May you study and treat it with full vision, with that fullness which is appropriate for man, who is born for this brief life in time and for the immortal life of eternity. The vision which man enjoys in heaven is certain broad. The blessed there see God "just as He is (I John III, 2); they see with the light of glory and this light gives perfection to the intellect, which rises to the vision of the divinity; and from this vision or act of the intellect there follows necessarily the act of the will, the heart leaps with joy and unbounded love; once that great good is known, the soul (or man in heaven) is content, is satisfied with that light, is blessed in full peace; it is for this reason that paradise is called the "beatific vision" as we know from revelation and from the teaching of Christ.

Onto this earth man has been born for such a vision, broad and of clear and open horizons. Here he must strive for the acquisition of truth, a truth not obscured, not confused or mistreated by prejudices and errors. Since God is the Supreme Truth, man must center himself upon Him. When Jesus, our Divine Master, said, "I am the light of the world; he who follows me does not walk in darkness" (John VIII, 12), He was not pronouncing a merely rhetorical expression but intended to announce a fundamental truth and to give man a program, a key to investigation. It is obscurantism to ignore God, and worse to deny Him; it removes the light which is most brilliant and most useful. Every teaching based on materialism which tends to injure or suppress in man the spiritual and immortal soul is a deviation, a coercion, and a deceit. It is precisely because of the soul that man is man. It is an outrage on the sacred and inalienable rights of man to introduce to him false, partial and restricted visions of his destiny. Man is made to the image and likeness of God, and this likeness is chiefly in the soul because the human soul has understanding and free will and is destined to live forever. Let this be your basic thought throughout life.

Students, may the light of Christ which has enlightened and guided you in your homes accompany you in these years of study. Both you and your neighbor will enjoy its sublime and vital advantages. The teaching of Christ and His moral precepts have never been disproved; it is a teaching of universal love, strengthening and elevating man's intellectual vision, offering him a broader view of the postulates of justice and love—to give to each one his due, to God, to his neighbor and to himself.

John the Evangelist, whose story of Christ is symbolized by an eagle soaring to the heights and looking at the sun, gives this advice—and it is the fraternal counsel of everyone who holds affection for you—"Believe in the light that you may become sons of the light" (John XII, 36); and we may add, both in this life and in the next.

Southern Six

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. THOMPSON of Louisiana. Mr. Speaker, the February 1956 issue of Oil, a trade journal of the oil industry in Louisiana, tells a story that could happen only in America. The article, entitled "Southern Six," is indeed written with well chosen words by Mr. George M. Leppert and relates how six courageous young men in my district parlayed an ambition into a really terrific and profitable enterprise.

The president of the Southern Six, Mr. Harry Kron, Jr., who has been my good friend for years, along with the others in this endeavor, have no doubt made a record which will serve as an inspiration to others who aspire to success by development of the vast natural resources which are in the South.

Under leave to extend my remarks in the RECORD, I include the article, Southern Six:

SOUTHERN SIX—A CASE HISTORY AS TO HOW THE DEPLETION ALLOWANCE PROVIDES AN INCENTIVE FOR SMALL-BUSINESS MEN TO INVEST IN THE EVER-EXPANDING OIL INDUSTRY

(By Geo. M. Leppert)

The last frontier of really free enterprise in the United States is the oil industry. This is a fact well known for many years to the liberals, the deeper dyed socialists and the super state planners of every hue. Every session of Congress provides an arena in which the planned-economy boys, the deep left field liberals, and that general coterie of screwballs who deplore healthy industry without Government control, scream to the high heavens about the horrible inequity of the depletion allowance in the mining industry, particularly in re oil. Whenever a Hollywood actor millionaire buys into an oil deal which produces, the newspaper wire services herald the item throughout the Nation. Enviously, throughout the land the public is urged, at least by implication, to resent the fact that people can make and keep a substantial amount of their profits from oil production.

Dry holes make no headlines. The heartaches and the headaches and the pocketbook aches, so common to the independent producer, are ignored. Oil production is presented to the American public as a closed circuit operation, available only to the chosen few, and, it is of course assumed that the chosen few are major colosii or well heeled individuals who can bet a half million as readily as John Doe puts two bucks on the daily double.

So much for the eyewash which is presented to Congress every session in an attempt to whittle down, an eventually to eliminate the healthy incentive of depletion allowance.

Comes now a single example as to some of the byproducts of the present depletion allowance system which might be duplicated ad infinitum throughout the United States. A group of five men from Opelousas and a lawyer from Baton Rouge realize that the independent production of oil in Louisiana and adjoining States is in a very healthy condition, thanks to the incentive and protection of the Federal depletion allowance. They realize further that independent producers are constantly in need of good drilling contractors and so the Southern Six, a brandnew outfit, decided to supply the demand.

Owned mostly by citizens of Opelousas, La., Southern Six began with a paid-in capital of $6,000—$1,000 from each of the original six and an in-business maximum capital of $73,800. The company was organized and chartered in 1944 by a group of oilfield men working in Baton Rouge. The original six were:

Alton G. Linder, president, A. A. Gianfala, Henry J. Hudson, C. F. Kelly, L. W. Yates, and Isom Leon Spaulding.

Southern Six began with secondhand equipment, but the success of their operations enabled them to parlay this into their own half-million-dollar drilling rig with the Opelousas Daily World headlined in its January 6 edition as "the most modern of its class in south Louisiana."

The Daily World also saluted the energetic new president (and the lawyer who drew the original charter for Southern Six, Harry Kron, Jr.) declaring that the new Opelousas based industry was indeed a blessing to the community.

Such are the curses of the depletion allowance. It does nothing but spread dastardly prosperity for everybody and his brother, whether they own royalties or not. Amen.

Briefer the Better

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Amsterdam Recorder, Amsterdam, N. Y., which speaks for itself and is something that thousands and thousands of Americans have had on their minds since the indictment of the 12 Communists, 11 of whom were later tried and convicted in the city of New York.

To me it has been more than a wonder as to why William Foster has not been prosecuted on his indictment under the Smith Act. Many years have gone by and the claim of ill health to me does not seem to hold up inasmuch as he has been making speeches all over the country in addition to his other activities on behalf of the Communist conspiracy in this country.

The editorial follows:

BRIEFER THE BETTER

It is almost 7 years since William Z. Foster was indicted, along with 11 other Communists on charges of conspiracy to teach and advocate the violent overthrow of the Government of the United States. But the national chairman of the Communist Party has managed to dodge trial by claiming he has a bad heart and a courtroom ordeal would endanger his life.

Since his indictment in 1949, however, Foster has continued to function as the No. 1 Red in this country. He also has found the time and energy to write half a dozen

books and innumerable columns for the Daily Worker, in addition to making many speeches all over the country. The schedule he has followed would tax the health of the most robust of men.

Foster's reprieve may be about over. A court order will be sought this week to bring him before a Federal court. A physician has testified that he is perfectly able to stand a "short trial."

The brevity of the trial depends upon Mr. Foster and his legal counsel. As a matter of fact, this could be one of the briefest trials on record. After all, the man who proudly announces that he is the national chairman of the Communist Party can hardly deny he is a member of it.

The LUAU for Baptiste

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. PILLION. Mr. Speaker, the following clippings from one of the leading Honolulu newspapers reveal the continuing communistic pattern of political infiltration and influence in Hawaii.

This subversive celebration dishonors the patriotic citizens of Hawaii. It is intended to spread contempt of and ridicule for our form of government. It attempts to encourage disrespect for law and order.

[From the Honolulu Advertiser of March 16, 1956]

RECEPTION TERMED IN POOR TASTE

(By Ron Bennett)

A gala Kauai "coming out" party planned for County Chairman Anthony C. Baptiste, Jr., doing time in prison on an income-tax offense, was termed "poor taste" by the judge who sentenced him.

Convicted of failing to file his 1952 tax returns, Baptiste will leave Oahu prison March 31 after serving a 1-year sentence, minus 2 months off for good behavior.

A big "welcome home" airport reception and luau have been planned by his political backers and his friends in the ILWU, community and county government. A Democratic Party leader said it would be the biggest Kauai event ever.

"It may be perfectly legal, but it's in poor taste," Federal Judge J. Frank McLaughlin commented.

"This is showing very little, if any, respect for the law. It appears to me to be an attempt to make him a martyr for political purposes." Both Judge McLaughlin and Baptiste are Democrats.

It is generally believed in political circles that Baptiste, who continues to draw his county chairman salary in prison, will be a candidate this fall for reelection.

Frank Silva, an ILWU sugar-business agent on Kauai, is serving as temporary chairman of the Baptiste welcoming affair, which already has accumulated a sizable amount of donations. Silva is one of the "reluctant 39" witnesses who refused to testify before the 1950 congressional Un-American Activities Committee.

Sources say Baptiste intends to spend a week in Honolulu after his release before returning to Kauai.

[From the Honolulu Advertiser of March 20, 1956

THE LUAU FOR BAPTISTE

EDITOR, THE ADVERTISER:

The tentative staging of the welcome home of Kauai's incarcerated chairman borders on the ludicrous and hilarious. But there is the grim side.

This affair has all and every earmark and smell of being Communist-inspired in origin, strategy, tactics, and planning—down to the very smallest detail—and they are masters of detail.

First the opportunity, then the victim, now the palming off of the victim to the public as a hero and martyr, together with all the attendant planning; publicity—reams of this in every media, newspapers, radio, television, hundreds of signs, placards, etc., etc.; fanfare and enunciations—preceding, during, subsequent, and more yet to come.

And the duped, misguided, and misled John and Martha Does, not only shelling out to pay the salary of the incarcerated at over $800 per month for the 10 months of the incarceration are now asked and have dug down to pay for the homecoming and luau and what have you.

If the parents of the children of Kauai are going to condone and support this Communist-inspired affair which is nothing less than a conspiracy to hold aloft the incarcerated as a hero, martyr, and model worthy the emulation by your children as against our American system of jurisprudence—then as the Bible puts it, "They shall be your judges."

Rather, let the people of Kuai face the issue squarely, on two feet with honesty and integrity; thinking clearly and decisively—seeing this affair as the burlesque that it really is, then to act with courage, equanimity, and honor.

HENRY K. AHI, Jr.

KAPAA, KAUAI.

Lower Cumberland Dam Important Link in Flood Control

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. EVINS. Mr. Speaker, under unanimous consent I am inserting in the RECORD a timely editorial appearing in the Nashville Tennessean dated March 22, 1956, with reference to the need for adequate funds to begin construction of an important flood-control dam to be located in Kentucky on the lower reaches of the Cumberland River.

The editorial follows:

LOWER CUMBERLAND GAINS

Chances for an early start of construction on lower Cumberland Dam appear to have brightened materially. West Kentucky sent to Washington a strong 20-man delegation to present to House and Senate Appropriations Committees a series of convincing arguments for the dam.

In addition, Representative NOBLE GREGORY, of Kentucky's First Congressional District, appeared for the first time before the committees as an open proponent of the $167 million project.

Representative GREGORY wisely asked for a full $2 million appropriation for a start of construction next year and for continuing the planning and design of the dam. He pointed out that the Army's Corps of Engineers has said that this amount could be used to full advantage in the starting phase of the dam.

Mr. GREGORY is correct. The erroneous impression among some Members of Congress that $1.3 million was an adequate amount to start construction and continue planning was based upon testimony some months ago by Washington officers of the Corps of Engineers. The point the corps then made that the barest minimum necessary for a start of construction was $1.3 million resulted in an unfortunate misunderstanding that this was an adequate amount to get construction off to a fast start.

Mr. GREGORY is to be commended for setting the record straight. In his fight for the larger amount, it is hoped he will have the support of fellow members of the Kentucky congressional delegation and of the full Tennessee delegation.

Congressman Brooks Hays, of Arkansas, Ambassador of Good Will

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. EVINS. Mr. Speaker, we all realize that our esteemed and beloved colleague, Congressman BROOKS HAYS, of Arkansas, is indeed a Christian gentleman and we like to call him our lay preacher. Appearing in the March 1956 issue of the Bible Society Record there is a very interesting article of a personal experience by our colleague while on a mission of goodwill in Europe. This article proves again that BROOKS HAYS is an ambassador of goodwill, a Christian gentleman, and a promoter of world peace. It is a story which should be read by all and is worthy of being repeated both in the pulpit and on the platform.

The article, entitled "It Belongs to All Men," follows:

IT BELONGS TO ALL MEN

(By BROOKS HAYS, Member of Congress from Arkansas)

In 1944 I went with a group of Congressmen to the European war theater. We got as far as General Eisenhower's headquarters and were with him on September 23 in the last year of that fateful struggle. In the course of the conversation he remarked that we ought to see the place where the first fighting for the possession of Normandy, one of history's decisive battles, took place. He sent one of his engineers to show us the scenes. That night we slept in the spacious guest house at Cherbourg which had been the headquarters of a German military staff. I slept in the room that had apparently been occupied by a German chaplain, for I found some books printed in the German language in a corner of the room the next morning. I remembered enough of my college German to recognize it as Biblical literature. One book was the Bible itself, and the other a

personal book. I could translate the little inscription in the personal book, "Presented to our beloved chaplain, the Reverend Alvin Ahlborg, by the Ladies' Aid Society of Duesseldorf."

With military permission I brought the two books back to America, put them on a shelf in my Washington office and thought very little about them, but occasionally read some of the familiar lines.

Three years later, in 1947, a German churchman dropped in to visit with me. As he was leaving I thought of the two books. I said, "Here are some books that ought to be returned to their owner. I have made no effort to locate him. I wonder if you can help me."

"Alvin Ahlborg!" he exclaimed, as he looked at the name. "Why, he is my good friend, and he is still preaching in Duesseldorf."

"When you get back to Germany," I asked, "will you please tell him I have his Bible and another book of his?"

A SYMBOL OF HOPE

In a few weeks I had a letter from Mr. Ahlborg saying that he was thrilled to learn that I had found his books at Cherbourg. He wrote, "I want you to keep them as a symbol of the hope that we of Germany have for a Christian occupation policy and the rebuilding of our world on Christian foundations." In reply I said that I did not think it fair for me to keep both the books. I suggested that I return the gift of the Duesseldorf ladies and that he keep the Bible as a symbol of the hope that we of America maintain for him as a German churchman, and for all the German people. His book had crossed the Atlantic twice when it reached his library in Duesseldorf.

In 1951 I was again sent with a congressional committee to the European area, this time on a mission of peace to meet with Chancelor Adenauer to discuss occupation policies. At Frankfort a dinner was given in my honor. The chairman asked if there was anyone I should like to invite. I said, "I know no one in this great city, but there is a pastor in Duesseldorf that I would be delighted to have here." We had written each other, you see, in the intervening years and had become good friends, though we had never seen each other. My hosts invited him to come. When we sat down at dinner at 6:30 that evening, I did not even know whether pastor Ahlborg had gotten the message. (I learned later that he had traveled 5 hours on a bus to get there.)

"YOUR PREACHER IS HERE"

I was making my speech when Alvin Ahlborg walked into the room. Because I was speaking on foreign policy, I thought the newspapermen would put my address on the front pages of the Frankfort papers the next morning. They were not, however, interested in my political views; they were interested only in the story of my friendship with Alvin Ahlborg, so they tugged at my coattails as they said, "Your preacher friend is here." Just then he came forward, and you can imagine how fine it was to meet him.

I was surprised to find pastor Ahlborg a young man, just a little older than my own boy. Here I was, a veteran of the First World War, greeting a veteran of World War II. We represented countries that had fought bitterly twice in one generation.

With a twinkle in his eye Ahlborg said, "I wonder if Mr. Hays has read my Bible." I was ready for this question. I said, "As proof that I have, you will find in one of the Psalms these words: 'Gutes und Barmherzigkeit werden mir folgen mein Leben lang, und ich werde bleiben im Hause des Herrn immerdar.'" Pastor Ahlborg was delighted and translated for those of the audience who could not understand German, "What Mr. Hays has said is this: 'Goodness and mercy shall follow me all the days of my life; and I will dwell in the house of the Lord forever.'"

What I have tried to say with this little story is that the Bible, with its wonderful good news, is something that overleaps the barriers of ocean, nationality, and language. It belongs to all men and must be proclaimed to all.

Food and Drugs Act

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. PRIEST. Mr. Speaker, as you know this year, 1956, marks the 50th anniversary of the Food and Drugs Act of 1906 and the meat inspection of the same year. Both these historic laws were signed on June 30, 1906, by President Theodore Roosevelt.

They have touched the lives of millions of Americans during the last half century through their wise enforcement by the Food and Drug Administration and the Department of Agriculture.

To pay proper honor to both of these laws the Governor of the great State of Tennessee issued a proclamation proclaiming a Pure Food, Drug, and Cosmetic Laws Week and invited all Tennesseeans, individually or through their organizations, to observe this anniversary during 1956 with appropriate ceremonies and observances.

Therefore, under unanimous consent I am having this proclamation printed in the RECORD in recognition of the action taken by Gov. Frank G. Clements:

PROCLAMATION BY THE GOVERNOR, STATE OF TENNESSEE

Whereas the year 1956 will mark the 50th anniversary of Tennessee food and drug laws subsequently revised and enacted as the uniform food, drug, and cosmetic law of 1941 and 77 years of progressive legislation and enforcement of standards for purity and integrity of foods, drugs, cosmetics, and chemicals used by the people of Tennessee; and

Whereas June 30, 1956, will mark the 50th anniversary of our national pure food, drug and cosmetic law, first enacted on June 30, 1906, as the Federal Food and Drugs Act, mainly through the inspired leadership of Harvey W. Wiley, then chief chemist of the United States Department of Agriculture, and subsequently revised on June 25, 1938, as the Federal Food, Drug, and Cosmetic Act, and the 50th anniversary of the Federal Meat Inspection Act; and

Whereas, during 1956 the national organization of administrators of national, State, and municipal food, drug, and cosmetic laws in this country, now known as the Association of Food and Drug Officials of the United States, will hold its 60th annual convention; and

Whereas we are indebted to our Commissioners of Agriculture and legislators and other farsighted men and women in industry and in government, as well as the protection afforded by our national pure food, drug and cosmetic act and meat inspection act, for their essential protection of the public health by prohibiting injurious adulteration and misbranding of food, drugs and cosmetics; and

Whereas these laws are the major legal foundation upon which the food, drug and cosmetic industries have established and maintained for the American people during the past 50 years the highest possible food, drug and cosmetic standards through the dynamic exercise of their creative genius in our free enterprise system; and

Whereas such laws have a profound social, economic, and legal significance to every one of our people:

Now, therefore, I, Frank G. Clement, Governor of the State of Tennessee, do hereby proclaim the week of January 30, 1956, to be Pure Food, Drug and Cosmetic Laws Week in Tennessee, and I invite and urge that all of my fellow citizens, individually or through their interested organizations, observe this anniversary sometime during 1956 with appropriate ceremonies of their own.

In witness whereof, I have hereunto set my hand and caused the Great Seal of the State of Tennessee to be affixed at Nashville this 17th day of January, 1956.

FRANK G. CLEMENT,
Governor.

Nix Is Honored by Masonic Order

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. BROWN of Georgia. Mr. Speaker, under leave to revise and extend my remarks, I include an article from the Athens, Ga., Banner-Herald, March 2, 1956, issue concerning honors accorded Hon. Abit Nix, of Athens, by the Masonic order.

Mr. Nix is a prominent lawyer and one of the most outstanding men in the State of Georgia and the South, and he deserves the honors paid him.

The article follows:

NIX IS HONORED BY MASONIC ORDER

(By J. J. Newberry)

Friends of Abit Nix filled every seat and left standing room at a premium at a meeting in his honor at Mt. Vernon Lodge No. 22 last night. Mr. Nix was presented the grand master's pin by B. Lee Amon, grand master, and an illuminated scroll electing him to the South's Hall of Fame for the Living, by Hubert Lee, editor of Dixie Business magazine.

Dan W. Locklin, grand secretary, served as master of ceremonies and introduced Mr. Amon and G. Starr Peck senior grand deacon of the Lodge of Georgia. Mr. Locklin also introduced Mr. Lee and Judge J. Wilson Parker.

The men of this group spoke briefly, praising Mr. Nix and his accomplishments as a long time citizen of Athens and a worker for the South. Mr. Nix was requested to say a few words and complied as follows:

"It is given to but few men to attend their own funeral. Now I know how it is and I am satisfied. As a man grows older, he begins to wonder what impression he has made on his own community; he is concerned whether the ideals and purposes he tried to live by are being transmitted to a younger generation.

"I am not worried. I see the youngsters of the State and they compare with young leaders anywhere. This is my greatest joy to see them that way.

"They tell me I have been selected as one of the group of Georgians to enter the Hall of Fame for the Living—that is a surprise and a pleasure. I know that I can serve as a master of ceremonies at a meeting—don't

take a back seat to anyone there, and I am probably the best law professor I ever met—but to be selected for the Hall of Fame, that is indeed a pleasure.

"But they told me it was not so much what I had accomplished, that it was the young leaders of the Southland who had attributed some of their purposes and ideals to a statement made by me.

"We are on the crest in the South. I have always tried to sell the youth of this State on that fact. The last half of the 20th century belongs to the South if we will take it and use it.

"Masonry has been good to me, and I am apreciative of everything, but most of all I appreciate you folks coming out here tonight. I was not worried about the folks away from home—I am just as happy as I can be."

Learn Proposed Objectives of the Community

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am pleased to herewith present the text of what is manifestly a very worthwhile statement of the Objectives of the Community. This was by the Downey Chamber of Commerce at Downey, Los Angeles County, Calif., which is one of the very important areas which I have represented now for these five terms.

Mr. Speaker, increasingly I recognize that at the grassroots of American citizenship is the early place and the most intimate place where unselfish, vigorous, vigilant citizens can best serve their community, State, and Nation in terms of having at their very fingertips their own home-town community problems and to help solve them. You will note the breadth of vision which this Downey Chamber of Commerce has in its statement of objectives.

This statement by the newly elected chamber president, Mr. R. J. O'Leary, appeared in the Downey newspapers. Such a statement thus appearing could not help but be a dynamic, inspiring, and constructive bit of cooperation between that chamber of commerce and the splendid newspapers published in the important Downey community.

"Future unlimited" is the significant and appropriate designation of Downey which became a town on October 13, 1873, just 13 years after California was admitted to the Union of the United States as a State. The town was named after Gov. John G. Downey, distinguished Civil War Governor of my native State of California. It is situated about 10 miles from the shore of the Pacific Ocean and the same distance from the downtown Los Angeles city hall. About 12,000 students are enrolled in the schools which have a combined staff of almost 400 teachers with an annual salary outlay of approximately $2 million. It is an unincorporated area governed by the Board of Supervisors of Los Angeles County. It has a magnificent free library and civic center and an area boundary of over 12 square miles.

The 1948 population was only 23,000; November 1, 1955, the population was 73,000; 1948 post-office receipts were $93,000 and November 1, 1955, they were $401,000. As for the real estate in the Downey area, in 1948 it was 80 percent home-owned; 1953, 85 percent; and November 1, 1955, 90 percent; 1948 building permits were but $3,587,942; November 1, 1955, approximately $18 million; 1948 bank deposits were only $12,700, while November 1, 1955, they were over $39 million.

I give you this important information, Mr. Speaker, based upon information given me by the Downey Chamber of Commerce.

The statement referred to follows:

LEARN PROPOSED OBJECTIVES OF THE COMMUNITY—CHAMBER OF COMMERCE PREXY TELLS GOALS, COMMITTEE WORK

Work of the Downey Chamber of Commerce was outlined in a speech by R. J. "Bob" O'Leary, chamber president, at a recent chamber of commerce community banquet, when O'Leary and other officers of the organization were installed. Following is the complete text of O'Learys talk:

"We must, of necessity, have objectives for the chamber of commerce.

"The main objective should be to learn the proposed destines of the community as it affects its citizens. We must learn this from those who have assumed the role of God in presuming controls over us.

"We must then convey these proposals to the citizens for approval or disapproval. If disapproved, so to notify vehemently, with strength of numbers, that branch of government involved.

"These objectives should include an overall plan for our community as related to zoning, planning, traffic, etc. These plans should be known to our citizens prior to them becoming a reality and we should be consulted prior to their execution.

"As proof of our endeavor to follow these objectives, for the first time, the zoning committee has considered the entire population of Downey. It has been presumed that many people in Downey complained of operations of previous committees. In order to avoid this, John Nordbak, as chairman of the zoning committee, has elected to invite a representative from each civic association in Downey to participate as a member of his committee. This should be an insurance that all areas of the community are represented, as well as any majority and/or minority groups, so there shall be no personal misunderstanding relative to zoning or its implications in the future.

"As you have previously heard, John Nordbak is an architect. For this reason, he has a much closed relationship to the possible planning of Downey than any other member of the board of directors. He has an interest as a citizen of Downey, but a more prime interest as a businessman, because, to parpaphrase from Kim Stevenson, 'he makes square pegs out of round roles.'

"Each committee of the chamber is most important, and it is difficult to differentiate as to their importance. But, being typically Irish, I will stick my neck out and say that the next important committee is membership. The reason I say this is that every citizen, in some manner, should be affiliated with the chamber of commerce and, if they are so inclined, should become a voting active member.

"Our 1956 membership committee is chairmanded by Jerry Collins, manager of the local branch of the Bank of America. Jerry, in assuming his duties, realized that every director and current member of the chamber of commerce should be on the membership committee but, to insure contacting of new residents, businesses and industries, he has added active members who will assist him in contacting these new people.

"Another most important committee is that of industrial relations. Downey is comprised of considerable industry, as well as many residents from these industries. C. L. Millman, or 'Mill' as he is known, personnel director of Rheem Manufacturing Co. is chairman of the industrial committee, and doing a tremendous job. It almost seems like a thankless job because industry does not stream into Downey but flows rather slowly, and because of this 'Mill' and his committee members must contact these people of industry on a day-to-day basis.

"Another important committee, and perhaps as important as any that we have in the chamber, is the merchants division, headed this year, and well, by Bob White of Byron White Furniture Co. Between Bob White and Bob Weglin of Millers Men's Store, these men have established 'block captains' so that theoretically, in a matter of approximately 30 minutes, the entire merchants division can be contracted without any one person having many calls to make. It is indeed very discouraging to find that a program intended for the merchants is not attended by them. No one else can achieve any benefits from such a program unless the merchants themselves are in accord.

"We have a division of the Downey Chamber of Commerce known as traffic, streets and safety. Dan D. MacKenzie is the current chairman. He has as members of his committee, people who know the problems and can assist in making them known to the proper authorities, whether county or State.

"It is interesting to note that the chairmen of all of these major committees have selected as members of their committees, persons familiar with their particular problems, irrespective of whether they are directors of the chamber of commerce or not. This is one way we feel that the entire membership can have a part to play in the chamber of commerce.

"It is also one way we can invite new residents, businessmen, or industrial firms to participate in all chamber activities for the betterment of the entire community."

O'Leary commended Edward W. Koehler, executive secretary of the chamber for a "remarkable job in carrying out requests of the board of directors, and particularly in obtaining excellent cooperation from the press in publicizing Downey as the best place in which to live and work." He continued:

"It has been decided that the chamber of of commerce would take an impartial attitude toward the question of incorporation. The Downey Chamber of Commerce has a purpose, and that is to publicize Downey with its many wonderful attributes, and explain why we wish more residents, more business, and more industry, to move to Downey. The chamber is nonpolitical and nonsectarian and is for all in Downey.

"There are at present several programs affecting the people of Downey and I would be remiss in not at least mentioning them.

"February is designated as heart month, and a drive will be conducted during the month for contributions for the heart fund.

"A most important project, which will affect the entire community of Downey, and which will help us keep our juvenile delinquency at its current low level, is the YMCA drive. This is not a drive for membership or current year's dues, but rather one of a nature that will enhance the entire community of Downey, and you and I as individuals will benefit. It is the expenditure of $213,000 for the purchase, revamping of current buildings, erection of new buildings, and the

provision of athletic equipment, of the Dr. Altig property on South Downey Avenue.

"This type project is an indication of where the chamber of commerce can serve tremendously by corraling all service organizations for a common cause, which will materially assist the community of Downey.

"The YMCA has endeavored to secure the financial support of not only industries of Downey, but those of immediately adjacent communities, for whose supervisory employees Downey provides a home. This drive needs the support of us all."

The chamber president concluded with a "bit of philosophy that should be the objective of each and everyone of us":

If there be righteousness in the heart; there will be beauty in the character.

If there be beauty in the character; there will be harmony in the home.

If there be harmony in the home; there will be order in the Nation.

If there be order in the Nation; there will be peace in the world.

Cancer Month

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. RODINO. Mr. Speaker, the disease that is the Nation's second largest killer is cancer. It causes 1 out of every 7 deaths of this country. It will strike 2 out of 3 families. If present death rates continue 24 million Americans now livwill die of this dread disease. These are hard facts and cruel facts, I know, but they are facts that will come true unless we continue and make ever stronger our fight against this vicious killer.

The organization that is leading the fight against this killer is the American Cancer Society. Made up of units like our own Essex County chapter, the American Cancer Society is the only voluntary national health agency engaged in a program of cancer education, research, and service. The society, then, presents a three-pronged attack against cancer.

The first line of attack in this campaign against cancer is by education. Through films, speakers, exhibits, panel discussions, mobile education units, forums and literature our local Essex County chapter is carrying out a year-round program to give us as much information as possible regarding the nature and prevention of cancer. The seven danger signs must become known and watched for by everyone. The importance of immediate and prompt treatment at the first sign or suspicion of cancer must be stressed. Oftentimes cancer, in its earliest stages, cannot be detected by the average person, yet can be diagnosed by a physician. Therefore, the society emphasizes the importance of a yearly physical examination.

But education is not confined to laymen alone. Members of the medical profession also benefit from our contributions. Technical publications and a film library are made available to them by our local chapter. In addition, the national organization provides many more technical aids. For instance, doctors may attend clinics where they are informed of the latest developments in cancer, detection, surgery, and X-ray and radium treatment.

The second line of attack is through research. Perhaps your dollars for the 1956 campaign will finance the research project that will unlock the key to the ultimate control of cancer. The fight for the discovery of the causes of cancer and a practical cure to this killer must continue. Our contributions will help 1,000 scientists and 3,000 laboratory technicians and assistants in this fight for the control of cancer. Today the only approved means of curing cancer are X-ray, radium, and surgery. This is not enough. There are still types of cancer for which almost nothing can be done. These scientists and technicians, supported by our dollars, must continue to do their utmost to find the answers to the cure of this dread disease.

The third line of attack is by service to those already suffering from cancer. Dressings and medication are made available through our local chapter. Articles contributing to the comfort of the patient can also be borrowed. Transportation is provided to and from clinics and even nursing care, including treatment and administration of drugs are provided.

The American Cancer Crusade is a voluntary organization. It can succeed only if we support this campaign with the same generousness, the same unselfishness, that the American people always support a worthwhile cause. This is the American way—the democratic way. I am sure that all of us will open our hearts and give generously. The quota for the Essex County Chapter of the American Cancer Society is $199,200. This must be reached for the unit to continue its activities.

Let us each resolve to keep the red sword, the symbol of the American Cancer Society, ever raised—ever ready to strike back at one of our worst enemies. We must succeed in this campaign in order to give hope to those already afflicted and to those who will become afflicted. Remember that now 1 out of 3 of these cases of cancer can be cured if treated promptly. Let us give our dollars to the cancer crusade with the hope that during the coming year an even greater number will be cured—that during the following years canacer will be eliminated completely. Let us make this crusade a success.

Pro-Western Trend Coming to End in Yugoslavia

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mrs. ST. GEORGE. Mr. Speaker, the following article by Dr. John Crane, who has recently returned from an extended visit to Europe, is informative, and something on which the Congress should take thought.

The great trouble in Europe today is that everyone is trying to get on the winning horse, and Russian propaganda has made most of Europe believe that the winning horse belongs to Russia.

Dr. Crane makes this very clear in the case of Yugoslavia's dictator, Marshal Tito. This gentleman has been on a tightrope between the United States of America and the U. S. S. R. for some time, but he is getting ready to take his seat on what he believes to be the Russian bandwagon:

PRO-WESTERN TREND COMING TO END IN YUGOSLAVIA

(By Dr. John B. Crane)

The pro-Western trend in Yugosalvia appears definitely to be coming to an end.

This is the only conclusion one can draw after studying the remarks made last week at meetings in Belgrade of the Central Committee of the Yugoslav League of Communists.

Marshal Tito himself addressed the gathering and complained of the spread of foreign influences and ideas throughout the country as well as the growing lack of interest among young people in politics and socialism.

He declared, further, that steps must be taken immediately by the Communist Party to attract youth, to free it from influences alien to socialism and above everything else to protect it from the waves of destrictive Western ideas and influences which have succeeded in pervading Yugoslavian life.

On my recent visit to Yugoslavia I was surprised at the many evidences of Western influence, particularly American influence. American movies were very popular. American jazz music was the rage. Night club entertainers were mostly from Western countries.

The many people I talked with were eager to buy Western-made products since these were so superior in quality to those produced within their own country. I recall distinctly two different Communist Government officials who proudly pointed out to me that they were wearing American suits purchased in America.

The decision now of Communist Party leaders to try to check the growing pro-Western sentiment among the people, especially Yugoslavian youth, is without question in large part due to the Soviet Union's denunciation of Stalin and alleged renunciation of Stalinism and all that word conveys to the popular imagination.

Now that the Kremlin leaders have purged Stalin and converted him from Saint Joseph to Ivan the Terrible, Marshal Tito no longer has any ideological basis for remaining outside of the Communist bloc of nations. Tito has always maintained that the true principles of socialism were those enunciated by Lenin and that he, Tito, had never deviated from the original line of the father of the Russian Revolution. It was Stalin who was a deviationist, Tito consistently argued in his long feud with Uncle Joe. Stalin thought he had won the argument when he summarily kicked Tito and Yugoslavia out of the Cominform for refusal to obey orders and to follow the Moscow-dictated line.

Now it appears that Tito is the final victor, for the new collective leaders in the Kremlin made a personal pilgrimage to Belgrade a few months afo to see Tito and beg him to return to the fold. They confessed Stalin was wrong.

At their recent Communist Party Congress in Moscow the Red leaders went much further. They declared, as all the world now knows, that Stalin was a tyrant, a dictator

and a cruel murderer of thousands of innocent people.

In such circumstances, it appears inevitable that Communist Yugoslavia will identify itself in the future much more closely with Moscow and the Communist bloc than during recent years.

Conversely, it seems probable that Yugoslavia's ties with the west will gradually be relaxed and that western influence in Titoland will decline.

Another factor which may lead to the decline in western influence in Yugoslavia is this: The country is slowly moving ahead economically and is not likely to be so dependent on America financial aid as in the past. During recent years such aid has averaged $100 million per year, a substantial part of it being in the form of food.

But during the past 2 or 3 years Belgrade has been pushing hard to raise farm productivity and has meet with considerable success due to much heavier use of fertilizers, more efficient methods and the use of improved seeds, including hybrid corn seed imported from America.

Hence, the return to a state of agricultural self-sufficiency, which prevailed before the war in Yugoslavia, now appears to be in sight.

Whether Yugoslavia will identify itself increasingly with the Communist East, or will remain a neutral country friendly to both East and West, can be determined by noting whether it continues to secure its military equipment for its armed forces from the West. If it starts shifting its purchases of weapons, tanks, airplanes, etc. from the West to Russia and its satellite countries, then it will be clear that Titoland has been lost to the West.

Floods Threaten Northeast Section of Our Country

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. MACDONALD. Mr. Speaker, spring is here again. This is a signal for all to rejoice, nature is reborn, growing things are budding, and soon the land will be green again. I dislike to strike a discordant note at this juncture, but may I call attention to a threatening peril, poised like the sword of Damocles, ready to strike.

All who read or listen know of the vast blanket of snow covering the ground of the northeastern section of our Nation as a result of the blizzards of the past week. I have just returned from Massachusetts, and I shudder to think of what would happen if spring should descend upon that region all at once with warm breezes and gentle spring showers. I am informed by competent authorities that the nightmarish experiences of the 1936 floods would be surpassed by far. Even the hurricane-caused floods of last August and October will fade into sad memory when that snow melts at one time and the water pours toward the sea, leaving death and destruction in its wake.

It is true that this might not happen, but it is a distinct possibility, in my opinion a probability, and something must be done to prevent the chance of it occurring. There are engineering plans which, when put into effect, will control these melted snow waters and/or additional rains. They would, when constructed, save many lives and untold millions of dollars of damage to property, to homes and factories, to stores and theaters, to churches and schools, to roads and bridges and railroads. This has been demonstrated beyond the shadow of a doubt throughout this vast land. The Corps of Engineers has estimated that of a potential annual loss due to floods of $900 million, flood-control works already in being are now preventing up to 54 percent of such damage over the Nation.

There are of course other sections of the country where the snow cover represents a threat of floods should a sudden warm period melt it in the space of a few days.

Should this occur in my New England States, and a disastrous flood result, there will be many an outraged voice raised to cry why isn't something done about it? This has happened year after year, disaster strikes, a great demand for action, then inevitably memory fades, apathy sets in and little gets done. I hope the cycle does not repeat itself again this year. The memory of the floods of 1955 is still fresh in the minds of the citizens of Massachusetts and the other Northeastern States. Let us not shirk our responsibilities. Congress declared in 1936 that control of floods was a Federal responsibility and instructed the Corps of Engineers to study the problem and develop plans for countering them. The engineers have done so and within the limits of funds provided them have done a marvelous job. But the work is far from complete. Appropriations for this purpose rose to a peak of over $352 million in 1950, but due to the Korean crisis fell off progressively till 1954, when they struck bottom at $137,574,000.

The present Congress has given a ray of hope to potential flood sufferers by quickly passing the Urgent Deficiency Act which enabled the engineers to start 6 vitally needed projects in the New England States and complete detailed planning for 17 others. This is a good start. But I earnestly hope that it will not be necessary for us to be shocked into action by another disastrous flood. I cannot emphasize the urgency of this problem too much. Action, immediate and forceful, is needed.

There is now before the Appropriations Committees, requests for funds for construction of flood-control works in the amount of $214 million, an increase over 1956 fiscal year. This is still only 60 percent of the appropriation for 1950 of $352 million. Practically every State in the Union has one or more flood-control projects underway, authorized or planned. Certainly no special pleading should be needed. Floods are great levelers. These projects call for protection of areas which have experienced one or more disastrous floods in very recent years, and even now lie helpless, at the mercy of any new floods that may come. These projects are of vital necessity. They must be carried out immediately before more thousands of lives are lost and millions, if not billions, of dollars of damages are suffered. Losses from floods cannot be entirely reckoned in terms of dollars. The economic dislocation, the human suffering, loss of loved ones, disrupted families, loss of jobs, none of these can be counted in dollars. All who have undergone such losses once know that, and look forward to the day when there will no longer be a constant threat. The Corps of Engineers has a program, the trained personnel and the responsibility to give the protection to which the Congress has pledged itself. There remains the problem of the necessary funds. To be sure, there are many demands upon the public purse, but certainly the protection of the lives and property of our people should rank near the head.

Mr. Speaker, I do not want to be an alarmist, but New England is in a precarious situation and, if any further floods should occur before protective measures have been completed, additional, enormous damage will be done. It is for this reason that I appeal to the Democratic and Republican leadership of both the House and Senate Appropriations Committees and urge that immediate action be taken to provide the necessary funds for flood-control projects that are necessary to control raging waters of seasonal storms and spring freshets. A promise to help is a good start but it will not stop floodwaters. Something should be done, something must be done and done now. We need action, not speeches.

The Idol Smashers

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. BOSCH. Mr. Speaker, in evaluating the new face of the present powers that be in Soviet Russia, we must be on the alert and not lulled into a false sense of security. Actions speak louder than words, and I agree with the President that we must see deeds to back up the words.

Under leave to extend my remarks, I include an editorial on this subject from the New York Daily Mirror:

THE IDOL SMASHERS

Robert Murphy, Deputy Under Secretary of State and one of our topflight diplomats, speculates cautiously that the smashing of the Stalin idol in Soviet Russia is designed to make it difficult for any one man to rise above the ruling clique.

The iconoclasts pounded the deified Stalin into mortal dust at the recent Red party congress in Moscow, with Nikita S. Khrushchev swinging the heaviest hammer.

Results have been intense interest in the free world and consternation among Communists everywhere. Khrushchev and friends are finding it harder than expected to wash that man right out of their followers' hair.

Pending further information, Murphy emphasized that our State Department isn't forming any fixed conclusion. He noted that more people close to Khrushchev are being moved into the party machinery and considers it possible that Nikky, currently the strongest Red figure, may himself assume Stalin's role.

For our part, we'll make a long guess that the new emphasis on more democratic leadership in Soviet Russia and collective rule is just a party of the tricky new look the Reds are donning to lure the free world into complacency.

Again and often, the question must be asked: What deeds have accompanied the Soviet avowal of more liberal attitudes?

President Eisenhower is absolutely right in stressing this point as he continues his exchange of letters with Bulganin; we are not averse to better United States of America-U. S. S. R. relations, but we would like some indication of concrete action first.

What about the captive states? What about Lithuania, Latvia, Estonia—overrun by brutal military force? The seized Balkan nations? The promise of free elections in Germany? Limitation of armaments? Control of nuclear weapons? The subversion directed from Moscow against countries now free?

Until actual happenings demonstrate the abandonment of barbarism, the free world must not be sucked into the vortex by the mask of siren smiles.

House Memorial 10, Introduced by Mr. Warner, of Maricopa: A Memorial Petitioning Arizona's Congressional Delegation for Public Commendation Expressing Gratitude to 12 Jurors So That All Men May Know by These Presents: That We, Citizens of the United States of America and the State of Arizona, Are Grateful to Almighty God for Our Liberties, Including the Right, if Charged With Crime, to Trial by a Jury of Our Peers, and Grateful to Our Fellow Citizens That, When Called To Serve on a Jury, They Perform That Public Duty at Whatever Hardship to Themselves So That This Right May Be Preserved to All of Us

---

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD a copy of a house memorial of the State of Arizona introduced by the Honorable Hal F. Warner, of Wickenburg, Ariz. This memorial is now pending before the house of representatives of the State of Arizona:

House Memorial 10

A memorial petitioning Arizona's congressional delegation, for public commendation expressing gratitude to 12 jurors so that all men may know by these presents: That we, citizens of the United States of America and the State of Arizona, are grateful to Almighty God for our liberties, including the right, if charged with crime, to trial by a jury of our peers, and grateful to our fellows citizens that, when called to serve on a jury, they perform that public duty at whatever hardship to themselves so that this right may be preserved to all of us

To Arizona's Congressional Delegation, To wit: The Honorable Carl Hayden, Senator; the Honorable Barry M. Goldwater, Senator; the Honorable John J. Rhodes, Representative, District No. 1; the Honorable Stewart Udall, Representative, District No. 2

Your memorialists respectfully represents:

Whereas the preamble to Arizona's Constitution is:

"Preamble: We, the people of the State of Arizona, grateful to Almighty God for our liberties, do ordain this constitution"; and

Whereas Arizona's Constitution states:

"ARTICLE II. Declaration of Rights:

"SECTION 1. A frequent recurrence to fundamental principles is essential to the security of individual rights and the perpetuity of free government"; and

Whereas 12 men and women, our fellow American citizens, were called to serve as jurors in the United States District Court in New York; and

Whereas these jurors served in the trial of 11 men indicted by a grand jury for conspiring between April 1, 1945, and July 20, 1948, knowingly and willfully, to teach and advocate the overthrow and destruction of the Government of the United States by force and violence, and the duty and necessity of so doing; and

Whereas the trial in which the 12 served as jurors commenced on January 17, 1949, and did not end until October 21, 1949; and

Whereas these 12 fellow citizens, in performing their public duty, received only the usual subsistence pay; and

Whereas these 12 jurors served an unusual length of time, with patience and forbearance, at whatever hardships to themselves and their families; and

Whereas on October 13, 1949, before the jurors retired to deliberate, Judge Harold R. Medina instructed them as follows:

"Ladies and gentlemen of the jury, you now approach the performance of one of the most sacred duties of citizenship, the meting out of justice. Just after you were sworn in as jurors I took the occasion to make a few remarks which I shall now repeat in somewhat different form, as the thoughts I then expressed are peculiarly applicable to the period of your deliberations in order to reach a just and true verdict. I then told you to be patient and said that there are few qualities in life so important. I said that if you once get yourself in the frame of mind where you know that you have a task ahead and it has to be done carefully and it has to be done just right and you know that it will be wrong to let little things disturb you, then there comes a certain calm and peace of mind which are of the essence in the administration of justice. When you get yourself in that frame of mind, you find not only that the task ahead becomes much easier, but, in addition, that the quality of your work in the administration of justice is of the quality that it should be. Justice does not flourish amidst emotional excitement and stress.

"The rich and the poor and persons of every race, creed, and condition stand alike before the bar of justice; and you must consider and weigh the evidence carefully, calmly, and dispassionately, without the slightest trace of sympathy or prejudice for or against any party to the proceeding. The very importance of the case makes it all the more urgent that you heed these words of caution. In this connection you will bear in mind at all times that these 11 men are charged here as 11 individuals, the guilt or innocence of each of whom must be passed on by you separately, pursuant to and in accordance with the instructions which I am about to give you. * * *"

And whereas Judge Medina instructed the jurors as follows:

"Thus it is that these defendants had the right to advocate by peaceful and lawful means any and all changes in the laws and in the Constitution; they had the right to criticize the President of the United States and the Congress. * * * They had a right thus to assert that what they call the democracy of Russia is superior in all respects to American democracy. * * * Whether you or I or anyone else likes or dislikes such or similar and analogous views or agrees or disagrees with them is wholly immaterial and not entitled to the slightest consideration in deciding this case. Unless a minority had a right to express and to advocate its views, the democratic process as we understand it here in America would cease to exist and those in power might remain there indefinitely and make impossible any substantial changes in our social and economic system or in the texture of our fundamental law.

"I charge you that if the defendants did no more than pursue peaceful studies and discussion or teaching and advocacy in the realm of ideas, you must acquit them * * *

"But no one could suppose nor is it the law that any person had an absolute and unbridled right to say or write and to publish whatever he chooses under any and all circumstances"; and

Whereas it is well for us to recall that freedom of speech and press is guaranteed to us in Arizona by these words in our Constitution:

"ARTICLE II. Declaration of Rights:

"SEC. 6. Every person may speak, write, and publish on all subjects, being responsible for the abuse of that right"; and

Whereas Judge Medina also instructed the jurors as follows:

"* * * Furthermore, should you find from the evidence that defendants organized or helped to organize and assumed or were given leadership in the Communist Party as a legitimate political party solely with the view of electing candidates to political office by lawful and peaceful means and advocating reforms and changes in the laws or the adopting of policies by the Government favorable to their contentions in the matters just referred to, you must render a verdict of not guilty"; and

Whereas, Judge Medina also instructed the jurors as follows:

"I charge you that it is not enough for the prosecution to show the existence of an agreement and the membership therein of any particular defendant. This alone would not prove that such defendant participated in the agreement 'knowingly and wilfully.' With respect to each defendant, the prosecution has the further burden of proving beyond a reasonable doubt that such defendant participated in such agreement wilfully; that is, the prosecution must prove that such defendant entertained the specific intention to teach or advocate the duty or necessity of overthrowing or destroying the Government of the United States by force and violence

and that in either case that he intended to teach or advocate such doctrine with the specific intention and for the evil purpose of bringing about the overthrow or destruction of the Government of the United States by force or violence, and not that he intended some result other than that.

"If you are not convinced beyond a reasonable doubt that such defendant acted 'willfully,' your verdict must be not guilty"; and

Whereas Judge Medina also instructed the jurors as follows:

"Never in all my long experience as a lawyer and in my brief experience as a judge have I seen a jury exhibit so much patience and pay such careful attention at all times to the testimony of the witnesses and the reading of the exhibits, despite the prolonged duration of this trial. Let me express my sincere appreciation of the way in which you have performed your functions. You deserve special commendation and you are entitled to the gratitude of all citizens of the community for the sacrifice you have made and for the services you are rendering in the faithful performance of a public duty. And so I beg of you to continue on in the same spirit until the end"; and

Whereas the jurors did continue on in a trial lasting over 9 months, deliberating at length and finding that each of the 11 did conspire as charged; and

Whereas, public memory is short; and

Whereas we have not previously expressed our gratitude to these jurors for the sacrifice they made in the faithful performance of public duty; and

Whereas these 12 men and women, our fellow citizens, are entitled to our gratitude and are deserving of special commendation: Now, therefore

We petition Arizona's congressional delegation that they, on our behalf, and for us, publicly express the gratitude of Arizona citizens for the sacrifice of these 12 men and women, fellow American citizens, who, residing in New York, and in the performance of public duty, served as jurors in the District Court of New York in a trial lasting from January 17, 1949, until October 21, 1949; and

We petition Arizona's congressional delegation that they publicly acknowledge the debt each of us owes to all those who serve as jurors at whatever personal hardship, and especially these 12, inasmuch as that in the very performance of that public duty, the right to trial by jury is itself preserved to each of us; and

We petition Arizona's congressional delegation that they take whatever means is reasonable and proper to express our gratitude to these 12 fellow citizens of ours in New York, and to their families, including the insertion of this memorial in the CONGRESSIONAL RECORD so that our gratitude may be known throughout the United States and recalled in perpetuity.

One Hundred and Thirty-fifth Celebration of the Independence of Greece

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, from the time when we were children and studied the early history of our country, there is a thought which lingers with us and seems to ring through our minds whenever we think of freedom. We are thrilled with that memorable day many years ago on the 19th of April, 1775, when the embattled farmers met the British at Lexington Common and fired the shot heard around the world. This was the beginning of the struggle for freedom, and it stirred the hearts of mankind throughout the world.

Over the next 46 years, the people of a very courageous and brave Greek nation followed in the steps of the embattled farmers at Lexington and won independence for Greece from the Ottoman Empire on March 25, 1821. This is the 135th celebration of the day when Greek independence was achieved. It is indeed an honor for me to have this opportunity to mark this great occasion in the history of freedom. It is not only an honor but it is very fitting because I have the high and noble privilege of representing in the Congress Lexington, Concord, Bedford, Woburn, and all of this hallowed area of soil where the surrounding farmers banded themselves together in 1775 and gave notice that from thenceforth they intended to be free men and fired that shot heard round the world.

One hundred thirty-five years is a long time, but in every one of these 135 years, the Greek people have thanked God for their freedom. America is a vast country. Greece is a small country, geographically speaking. For the inspiration of freedom which the Greeks received on Lexington Common and at Concord Bridge they have endowed America over the years with their centuries of culture. Without the greatness of Greece the world would be a hollow place in art, literature, philosophy, and learning in general. In all of our American cities, it is easy to see the influence of the art and learning of Greece.

These 135 years have not been easy and they have not been without struggle. Just as in ancient times when the great conquerors of those days considered Greece a choice prize, Greece has had to fight long and hard to maintain her freedom. In June 1917, Greece entered World War I, fighting on the side of America as one of the Allied Powers. In World War II, it might be said that in all of her brilliant history, Greece reached her finest hours, for it was in World War II that the courageous Greek people stalled for a long time the great military forces of the Fascisti-Nazi powers. Finally, Greece was occupied by the Nazi forces of Germany, and the destruction was enormous.

In 1944, when Greece was liberated, primarily through the might of American power, its ports were in ruins, three quarters of its merchant fleet destroyed, the vital Corinth Canal was wrecked, major railroad lines were torn to pieces, highways were useless, hundreds of bridges shattered, and the Greek farmland was unproductive. But what is more, over 1,500 villages and towns were destroyed and the Greek people by the thousands and thousands were homeless. Living standards reached a dangerously low level. For this tremendous sacrifice, Greece earned the respect of America and of the entire free world.

But the struggle was not over. It was at this moment of weakness that the Communists chose, as they always do, to strike. By blocking all efforts to rehabilitate and rebuild Greece, the Communists believed they could force a shattered Greece and a weary nation of people to accept orders from henceforth from the Kremlin. The Communists, however, failed to take into consideration, as they always do, the strength and courage and determination that dwells in the hearts of free men. On this occasion, free men joined hands and worked together—the free men of America with the free men of Greece. America joined in helping to revitalize the Greek Army. America joined in revitalizing Greek economy. America joined in the rebuilding of Greece. Although the cost of this reconstruction has been great, America is amply repaid in the knowledge that today there stands once again the great free nation of Greece, and America is proud of the fact that in Greece our great American Nation has a great and trusted friend.

In the eastern end of the Mediterranean Sea, Greece stands today as the fortress of freedom. Greece and the United States are partners and share the great defense responsibilities of NATO. America, in joining with Greece in helping her to again stand independently as free men, not only has saved the cradle of western civilization but has cemented a friendship with a dependable and courageous people. Today, on this 135th celebration of the independence of Greece, Greece is in control of all of her territories including the Ionian Islands, Crete, and the Aegean Islands, and the Dodecanese Islands. There remains Cyprus.

Today, Cyprus represents the only Greek island under foreign domination. In view of the fact that four-fifths of the population of Cyprus is represented by Greek people, and in view of the long history reaching way back into ancient times, the Island of Cyprus is a natural part of the nation of Greece. It is my view that only time separates the people of Cyprus from achieving their freedom and joining with Greece. People everywhere should have the right to determine their government and their future welfare. Certainly this doctrine applies to the people of Cyprus. In view of the fact Greece stands in friendship with America and all of the allied nations in NATO, certainly there is no reason at all for any fear in Cyprus once again being a part of the great nation of Greece.

In my historic congressional district, where freedom was born and throughout the great Commonwealth of Massachusetts, there is a large population of Americans of Greek descent. They are among our finest citizens. They have made great contributions as Americans to our national life. They are among my finest friends. On this eminent occasion, I say to them, "You have so much to be proud of in your Greek heritage.

You have so much to be proud of for the great contributions your ancestry has given to the world, and you have so much to be proud of as American citizens in helping to build this great Nation of ours and in cementing its friendship with your ancient homeland. I am proud to know so many of you and to have you as friends.

As we face the future, we know that the strength and courage that is Greece and the strength and courage that is America will carry us through, and we know that together we will always stand as free men in the defense of a peaceful world.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, ———, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Barkley, Anderson, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

Social Security for Farmers

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 27, 1956

Mr. WILEY. Mr. President, I was interested to read in the March 17 issue of the Wisconsin Agriculturalist and Farmer, a great periodical issued in Racine in my State, a brief but important editorial on the subject of needed changes in the old-age and survivors insurance statute, affecting the Nation's farmers.

The editorial raises some exceedingly significant points on adequacies in the present farm pension program.

The editorial is designed, basically, to try to help equalize treatment of our farmers in relation to that accorded nonfarm people.

I was please also to read in the daily press that there is under consideration by the Milwaukee Cooperative Milk Producers and others, a private pension program to help provide added security in the later years for farmers. The program has the support of Mr. Lyman McKee, president of the Madison Milk Producers and vice president of the American Dairy Association, as well as the support of other dairy leaders.

I append, therefore, the text of the article as published in the March 15 Milwaukee Journal on this subject.

I ask unanimous consent that both of these materials be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Wisconsin Agriculturist and Farmer of March 17, 1956]

SOCIAL SECURITY CHANGES

As least 400,000 farmers in this country will soon be eligible for social security. Many of them will find their monthly payments to be smaller than they figured.

Under present law the income from the last couple of years will be used as the base in figuring payments. For dairymen, these years have seen a big drop in net income.

Wage earners can drop the poorest 5 years when figuring their social security income base. This would be more fair for farmers, too.

Farmers usually have less net income as they approach 65 and aren't able to work so hard. Wage earners are often at their peak at that time because of seniority rights.

Social security regulations won't allow income from the normal sale of milk cows. This needs to be corrected, too. These, and other changes, must be made if the social security system is to properly fit the retiring farmer.

[From the Milwaukee Journal of March 15, 1956]

SIFT PENSIONS FOR DAIRYMEN—TOPIC FOR CONFERENCE

The feasibility of developing a private pension system for the Nation's dairy farmers will be explored at a conference April 4 in Chicago.

The idea was divulged Wednesday afternoon when the Milwaukee Cooperative Milk Producers in annual meeting at Mequon town hall authorized its directors to join in the study. The aim, it was explained, is to try to find a way to put milk producers on a par with industrial workers in retirement benefits.

The Chicago meeting will bring representatives of cooperatives from several Midwest States together. It follows preliminary discussions held by some of them with specialists from the Universities of Wisconsin and Michigan and officials of the Wisconsin Department of Agriculture.

Lyman D. McKee president of the Madison (Wis.) Milk Producers association and vice-president of the American Dairy association, supported the proposal at Wednesday's gathering of farmers representing two-thirds of Milwaukee's milk suppliers.

PLANTS COULD HELP

He said that those interested in a retirement plan were trying to see whether it would be possible to devolop one that would enable farmers to get a pension at 65 just as factory workers do. He said that survey showed that only 1 percent of the country's farmers had enough potential assets to retire. Another observer said that few farmers today would have enough to live on if they decided to quit at 65 and let their heirs run the place.

It has been suggested that each farmer could pay a small portion of his monthly milk check into a general fund for perhaps 30 years. It is felt by proponents that bottlers of milk and manufacturers of other dairy products also could make payments into the fund of a similar amount covering the farmers supplying them.

The dairy plants have not been approached. But proponents feel that it would be to their advantage to help to keep the dairy industry going at a high level. The plants, it was stated in an interview, could pass their contribution on to the consumer just as fabricators of tractors add the cost of pensions for their workers to the price of the machine.

FOUR HUNDRED AT MEETING

A private pension plan, it was said by one of those desiring to look into the idea, would be more acceptable to farmers than social security. Most farmers oppose Federal old-age benefits as a form of taxation with too limited returns to those covered.

Those weighing the pension suggestion believe that it would provide more security for farmers and make farming more appealing to youth. Young men, influenced now to take factory jobs by the prospect of income on retirement, might be more willing to stay on the farm if they knew that they'd get a pension there, too.

About 400 of the organization's 1,600 members attended the meeting. They were advised by Herbert H. Erdmann, Federal administrator of the Milwaukee marketing area, that under the 1956 price outlook for milk they probably will realize about 10 cents a hundred pounds (46.5 quarts) more for the first 6 months of this year than last. The price each month during the second half should be about the same as 1955, he said.

DIRECTORS ARE ELECTED

Erdmann said the movement toward bulk handling of milk had grown to where 29 percent of the 2,602 farmers on the Milwaukee milkshed now had tanks on their farms from which tank trucks pumped milk for hauling to the dairy, abolishing cans. Those 755 farms now supply 40 percent of Milwaukee's milk, while the other 1,847 still shipping in cans are down to 60 percent.

The rapid transition to bulk handling presents a serious problem to small producers, who fear loss of a market if they don't change over because they feel that the $1,800 minimum expense is too steep. The co-op, therefore, instructed its directors to take every possible action to find a market for those dropped when a dairy goes 100 percent bulk, as two major ones will by fall.

The cooperative voted continued financial support for the Milwaukee Dairy Council and the American Dairy Association, complimenting their promotions in increasing milk consumption. It also supported the Federal school-lunch program. It reiterated its faith in Federal supervision of the market, holding that this plan and its administration by Erdmann have been of great value to the producers.

These directors were elected: Emil Bichler, Belgium; Henry Kurth, Tess Corners; Reuben Gauger, Rockfield; and Edward Schmidt, Brookfield, for 3 years; and Harold Schrubbe, Waterford, for 1.

The Minnesota Primary

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 27, 1956

Mr. LANGER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "Clear Call for Direct Action," written by Doris Fleeson and published in the Washington Evening Star of last evening.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CLEAR CALL FOR DIRECT ACTION—MINNESOTA VOTE SHOWS FARMER THINKS IN TERMS OF TAKE-HOME PAY

(By Doris Fleeson)

If the Minnesota upset could be traced to a disgruntled labor force which had had its pay cut one-fourth to one-third, no one would be in any doubt why it happened.

It appears that the farmer these days is thinking also in terms of take-home pay.

He has in effect taken a pay cut. Not only is he receiving less income but the prices of what he buys continue to increase.

The Minnesota vote suggests that he thinks of the President and the Congress as his employer in the sense that they can and should do something about it. This may be very wrong of him, but no politician would dispute that such was his message at the polls last Tuesday. It was a clear call for fast and direct action.

The Republican National Committee has sent staff members to the Farm Belt to investigate what happened. The GOP learned the hard way in President Truman's surprise victory of 1948 that farmer unrest can be a political time bomb. It is important to Republicans to learn if it is again ticking away in the midst of general prosperity.

Mr. Truman picked up six farm States which more than compensated for his losses to the Dixiecrats. The whole area voted for President Eisenhower in 1952, but in all its elections since then Democrats have gained power—in Congress, in State legislatures, and in the courthouses.

These post-1952 returns suggested that farmer difficulties were beginning to be reflected in the cities and towns dominated by agriculture. Minnesota is fresh evidence that this is true, for its urban voters went along with the Democratic sweep of the agricultural counties.

Gov. Orville Freeman of Minnesota is privately confessing that "we didn't know our own strength" on the farm issue. The Democrat Farmer-Labor organization did not at any point complain that their candidate Adlai Stevenson was being too moderate in his approach to the farmers; they sincerely expected him to prevail.

Their advice at this point to Democrats is that the Democratic nominee now has no choice but to take the simple Kefauver line on farm policy. The victorious Senator promised 100-percent price supports for farmers with less than $7,000 a year income.

He has been widely tagged as "outpromising" Stevenson, as indeed he did. But he tackled the trouble where it exists chiefly, which is among the individual and so-called marginal farmers. They produce the smallest percentage of surpluses but they are the greatest in number and they feel the cost-price squeeze the most.

Congress has never made the individual farmer the focus of its farm program. The justification for doing so is that the family farm represents social values which should not be lost to the country.

Social planning is out of fashion in Eisenhower's Washington. It is obviously still appealing to any group of Americans that is falling behind in the general march to prosperity.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. McVEY. Mr. Speaker, we shall soon have before us the Mutual Security Agency appropriation, which in more understandable terms to the public means our foreign aid spending program. The amount of aid extended to foreign countries, since the inception of this program 16 years ago, has reached staggering proportions. The total is much larger than many people realize.

The latest statistics I have been able to obtain carries this program down to June 30, 1955. A summary of aid extended up to that date follows:

Lend-Lease:	
I. (a) July 1, 1940–June 30, 1945	$46,728,287,000
I. (b) July 1, 1945–June 30, 1955	2,039,490,000
Total	48,767,777,000
Grant-in-aid:	
II. (a) July 1, 1940–June 30, 1945	1,400,010,000
II. (b) July 1, 1945–June 30, 1955	42,059,148,000
Total	43,459,158,000
Net Authorized Loans:	
III. July 1, 1940–June 30, 1955	16,620,844,000
Summary total	108,847,779,000

The above totals do not include United States capital investments in the International Bank for Reconstruction and Development—$635 million—and the International Monetary Fund—$2,750 million—although these programs add to our foreign commitments. It is estimated that our foreign-aid programs, together with interest charges for which the American taxpayer is liable, amount to almost half of our Federal debt.

The arguments, put forth by proponents of this program to the effect that we are buying good will with our dollars, are certainly dispelled by the ravaging of our consulates in the various parts of the world and the disdain that many foreign peoples have for the word "American." Certainly if one needs a pointed example of this situation he need only to refer to China. The records show that we have given to China in lend-lease and grants-in-aid a total of $2,861,376,000. There is probably no country today more antagonistic to American principles of democracy than that of China.

We hear it said today that we must counter Russian economic assistance with an increased program of our own. The formula seems to be when Russia makes loans, we must see that we counter with a greater amount of grants-in-aid. Why not counter the Russian program of loans with a similar program of our own? Why is ours a giveaway program? The American taxpayer is interested in finding the answer to some of these questions.

The Chicago daily newspaper, noted throughout the years for its intelligent stand on the subject of foreign aid, has given us some outstanding thinking on this subject in an editorial under date of March 20, 1956. The reader of these remarks would do well to ponder carefully the editorial of the Daily News, which follows:

GIVEAWAY RACE

President Eisenhower asked for $4.9 billion in foreign-aid funds to meet Russia's new departures in foreign policy. Back in January, before these new departures had appeared, he wanted this sum to meet the old departures.

We had the Marshall plan to put Europe back on its feet so that, we were told, we wouldn't have to pour in billions for rehabilitation. Then we tossed in more billions for economic aid, so that the free-world nations would be strong enough to defend themselves without a gigantic arms-aid program.

Then we sent and still send gigantic sums for military aid.

When the Russians were pursuing a policy of economic isolation, we were urged to take advantage of the opportunity to cement friendships with the underdeveloped countries by assisting their industrial growth. Now that the Russians are doing likewise, we are told that we must increase our own contributions.

The Russians, however, are making loans and barter deals, getting a ruble's worth for every one they put out. According to the theory prevailing in Washington, under Republican or Democratic administration, this is the sure way to make enemies. But we seem not really to believe it, for we aren't content merely to watch the Russians make enemies. We must, says the President, match their loans with gifts, and for every tractor they promise, we must deliver two.

India is expecting aid totaling nearly $2 billion for her 5-year plan. That is one reason the President wants authority to make committments for periods up to 10 years. India is embarking on a Socialist experiment. Without foreign help, it won't work. So our cue, apparently, is to prove that socialism really can be made to work.

All this is in the face of a study of communism recently made by the Senate Internal Security Committee. The findings were that it wasn't poverty and hunger that made Communists, but a thirst for power among demagogs and a deluded idealism among intellectuals.

There is something craven in the spectacle of a rich and powerful nation which thinks it must scatter candy around the world lest it find itself alone and friendless. The facts seem to be that our largess bought no friends and earned us more resentment than good will. But we still fear to change the formula.

American capital is willing and even eager to seek investment abroad, and under private management it would produce results. But in very few places is there any reasonable assurance that such investment would be secure against confiscation, or nationalization, in the name of Socialist progress. So it is not made.

It is certainly true that a shortage of capital is the great handicap to industrial development in the countries on our aid list. But we don't know why it can't be obtained on the same terms that America obtained the funds that developed this country. Are we selling democratic capitalism or socialism?

World Affairs and Election

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 27, 1956

Mr. LANGER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled World Affairs and the Election, written by Constantine Brown and published in the Washington Evening Star of last night.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLD AFFAIRS AND THE ELECTION—FOREIGN POLICY REGARDED AS ISSUE OF MAJOR IMPORTANCE IN CAMPAIGN

(By Constantine Brown)

The far-from-optimistic realities of the foreign situation will be helped little, if at all, by the report of Secretary of State Dulles on his just-concluded far eastern trip.

Mr. Dulles made a confidential report to a bipartisan meeting at the White House called by President Eisenhower less than 24 hours after he returned here. Later, congressional leaders present permitted themselves to call the report "mildly optimistic."

One lawmaker, undoubtedly deeply concerned by the impending political battle, was moved to use the phrase "highly encouraging," but he didn't really appear to believe it.

To the Nation at large, of course, the Secretary's report had to follow the standard pattern of mixing a lot of optimism with a lot of caution, so that most of us were left with a feeling of wonderment that things could be so bad and seem so good.

Mr. Dulles, of course, is a member of the Eisenhower team. He certainly isn't going to paint the picture in an election year any blacker than he needs to.

At the same time, he also shares the general confidence in the Eisenhower ability to defeat any possible candidate the Democrats can find. He is therefore unlikely to add a spurious rosy hue to his picture of the United States in a hostile world just to make the administration look good.

More than that, Mr. Dulles is extremely fond of his foreign policies to date. He is known to feel that it speaks for itself in what he insists is a generally more favorable outlook for peace and progress since he took office.

The Democrats have charged, and will continue to charge, that the Eisenhower-Dulles foreign policy is basically the same as the old Truman-Acheson policy, except, they hasten to add, the GOP team has made a disgraceful record in failing to take and uphold a firm stand in Korea and Indochina and on the troublesome challenge of the Formosa and offshore islands controversy.

In making the charge, the Democratic strategists know they have enough specious generalities at hand to make the charge sound more reasonable than it is. We must admit it is of itself quite reasonable, indeed.

Many close observers here see the basic foreign policy unchanged, although they feel for the most part that the general attitude of the Government throughout, including foreign policy, has been vastly improved on the subject of communism under the Republicans than it ever was under the soft policies of the Democrats.

In an earlier column we discussed the inevitable gains for Comunist skullduggery arising from the fact of our presidential election. The influences of campaign considerations are indeed sure to temporarily weaken the prestige and power of the United States throughout the world.

There has been little criticism of that statement in itself, but commentators have questioned the role that foreign policy issues will actually play in the campaign. If it is of minor importance, they argue, why should it at all weaken the hand of American diplomacy?

The answer obviously is that foreign policy, all pious pledges of bipartisanship to the contrary notwithstanding, will decidedly not be a minor issue at all.

Not only Democrats are unhappy over the Dulles policies. There are plenty of good, solid Republicans who are more deeply and more genuinely unhappy over them than all the Democrats together. And, unlike the Democrats, the changes these men would make would in no wise return the Nation to the days of the Truman-Acheson regime.

The extent to which the issues of world affairs will intrude themselves in the forthcoming political campaign will depend, to a great extent, on the events in the world over the next few months.

An explosion in the Middle East, for example, would blow the lid off domestic politics here as well as in Britain and France.

Another setback in Southeast Asia, a further weakening of France, already dangerously undependable in the NATO concept of the defense of free Europe, or a Chinese Communist attack on Quemoy and the Matsus would put foreign policy in the forefront of all election issues here.

But to whatever extent events may dictate, foreign policy will be an election issue of major importance. Let's face it.

Hoover Commission Recommendations Would Increase Consumers Rates in REA Areas

---

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

EFFECT OF HIGHER INTEREST RATE ON OUR COOPERATIVES

(Speech given at the congressional dinner on March 26, 1956, by H. G. Downey, member of the discussion panel of the Illinois Electric Cooperatives)

Before I acquaint you with my findings as to financial results from increased interest rates there are a few fundamentals I would like to mention:

Fundamental No. 1: We in cooperative movements are motivated from an entirely different philosophy than those engaged in profitmaking enterprises. We find there is far more satisfaction in providing our services at cost to our fellow man than charging him all we think he can stand.

Fundamental No. 2: Cooperative organizations desire and take pride in ownership. They are governed by individuals, farmers, who don't like to be in debt, who don't like to pay interest. Other suppliers of electricity consider interest as a business expense the customer must pay. We look on interest as an item to reduce as fast as possible, by prepayments or other means to permit us to maintain our present retail rates to our members. In this program we are dealing with philosophy. The desire to render service to our fellow man versus the desire to take our fellow man for all he can afford. Let's not forget these fundamental differences in business belief.

The effect of an increase in interest rates is shocking. Interest is our second largest cash expense item in the cost of doing business, with wholesale power costs being the largest item.

The aim of electric cooperatives is to set their rates so that margins after operating expenses will equal or be greater than interest and debt payments. In this manner we can eventually be free from the debt and interest payments and continue to provide low-cost electric service to our patrons.

I have made calculations on our cooperative showing effect of 4½ percent and 6 percent interest for the period 1950 through 1955 and have projected these costs through 1960. Our rates are the same as they were when founded in 1938. As you will forget dollars and cents figures, my information will deal with margins before interest and principal payments, and percentages thereof. Assuming interest and debt payments to be 100 percent and margins available as a percentage of this item we find the following:

For the 6-year period, 1950 through 1955, assuming we were paying 4½ percent interest, I find our margins were only 75 percent of the 100 percent needed. Looking ahead through 1960 I find expected margins to be 71 percent of what would be needed assuming 4½ percent interest and assuming 6 percent interest margins would be only 60 percent of needs.

What does this mean as concerns our rates for service. It means a 30-percent increase in rates in the minimum figure to meet 4½ percent interest rates and 40 percent rate increase to meet 6 percent interest.

As any adjustment must look several years ahead we would have to increase our rates 40 percent for 4½ percent interest and 50 percent for 6 percent interest.

Let's look at it from the consumers standpoint. The average farmer in our area, hard hit by two droughts and falling prices, would see his $7.23 average bill in December 1955 rise to $10.12—an increase per month of $2.89 to pay 4½ percent interest.

These figures are taken from our cooperative which is ranked in the upper one-fourth of the electrical cooperatives in the State of Illinois. Any rate adjustments by cooperatives in the remaining three-fourths will have to be larger and in some cases could reach 75 to 90 percent.

Raising retail rates of cooperatives is extremely distasteful. A recent survey of cooperatives showed there were three ways of increasing revenues.

1. Increase power use activities—this we are doing.

2. Effect operational economies—this we have been doing in all phases.

3. Increase retail rates—this we do not want to do.

Eighty-five percent of those surveyed stated higher rates would decrease revenue rather than effect an increase; higher rates means less usage and invites greater competition from other fields.

Let's talk about the next logical source of money—the National Bank for Cooperatives. The Rural Electrification Administration was established for the purpose of extending electrification to rural areas and providing the necessary financing which was unavailable. By the same reason the Farm Credit Administration was established to provide financing for farmers and farm cooperatives that was unavailable. The Federal land bank, originally financed with Federal funds, now is financed with its own funds and is wholly owned by the national farm loan associations of their respective districts.

As our financial needs are special, $400 to $600 of capital per consumer and as margins do not permit us to repay our indebtedness in a period shorter than 35 years, it would appear we could eventually reach the same goal the Federal land banks, organized in 1916, have reached, provided, we are not pressured into an increase in interest rates at a time when we are approaching maximum debt service.

Legislation would be required before the National Bank for Cooperatives could even consider loans to electric cooperatives. Their present limit is 60 percent of the cost of new facilities and a 10-year repayment schedule.

The Government has wisely recognized the need for special financing in various areas of our economy. It must still recognize we need 2-percent money to provide reasonably priced rural electric service. Thank you.

The Good Neighbor

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PATTERSON. Mr. Speaker, in August 1955, severe flood conditions existed in the State of Connecticut which destroyed lives and property. Towns, cities, and countryside were inundated. The flood started during the night of Thursday, August 18, 1955, and continued at its crest until the following day.

As is usually the case in times of great disaster, it sometimes requires several days for the general public to become aware of the terrible hardships and suffering caused by such disasters. Of the many public-spirited citizens in Connecticut who came to the aid of the stricken areas, the name of Tad Jones, of New Haven, must be mentioned. With the same alertness and alacrity which he used in directing the famous Yale football teams, he started his organizations, the Tad Jones Co. and the New Haven Terminal, in furnishing aid to the stricken areas. Mr. Jones remained in his office day and night watching with great concern the progress of the flood and all it meant to the people and businesses in its path. Before the water started to recede, he was on the telephone, offering his services and the facilities of his entire organizations in any manner in which such services could be utilized. His first move was to have the New Haven Terminal sterilize and make immediately available nine large tank trucks, fill them with drinking water, and supply the Naugatuck Valley with drinking water. The cost and expense involved did not concern Mr. Jones, he was interested only in rendering aid and assistance to the suffering people.

Tank trucks—containing drinking water—began moving Friday, August 19, and continued for the greater part of 3 weeks.

In addition to the tank trucks of the New Haven Terminal, additional tanks, as well as empty milk cans were secured. All were steamed, sterilized, cleaned, filled with drinking water and loaded on trailers and sent into the disaster areas.

Through the cooperation of the Red Cross and civilian defense, drinking water was furnished to critical areas. This work was further supervised by civilian defense authorities. The days following the flood were extremely hot. This made the cleanup task much more difficult and the need for pure water more acute. Water was supplied to each area until the authorities notified Mr. Jones that they no longer needed the equipment.

The important fact remains that Mr. Jones did not wait to be called, but upon seeing the need for assistance, he went quietly to work with no other thought in mind than to render every possible assistance in order to relieve personal suffering and to help the Naugatuck Valley neighbors to get back on their feet. And now, the Naugatuck Valley neighbors say, "A work well done. Thank you, Tad Jones."

Hoover Commission Report Causes Concern Among REA Cooperatives

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks I include opening remarks given by Moderator L. C. Groat at congressional dinner held March 26, 1956, under sponsorship of the Illinois Electric Cooperatives. Mr. Groat's remarks follow:

Senator DOUGLAS, Senator DIRKSEN, Members of the 84th Congress, fellow cooperators, and friends, we are particularly honored this year to have with us our elected representatives from the great State of Illinois.

The report of the Hoover Commission on the Rural Electrification Administration and the rural electric cooperatives has caused us some concern. We are all farm people. We have little knowledge of political science or of proper methods of protecting our interests on the national scene. We feel sure that you people, as the elected representatives of the people of Illinois, are vitally interested in the welfare of that great and important segment of the population of Illinois, the farmer, and that if we can present to you factual information concerning the effect on the Rural Electrification Administration and on the local electric cooperatives of the inactment of the legislation to implement the recommendations of the Hoover Commission with regard to REA and the cooperatives, then you will protect our interests. With this thought in mind, we will attempt this evening to stick closely to facts, and to provide you with concrete information on this subject.

As Americans interested in reducing waste in Government, we feel that the overall work of the Hoover Commission is commendable, and that many of its recommendations, when enacted into law, will serve the Nation well, but it is not surprising that in an undertaking as vast as that assigned to the Hoover Commission, some mistaken conclusions have been drawn.

Because popular opinion seems to interpret all recommendations made by the Hoover Commission as being in the best interests of the public, we are fearful that Congress may approve proposed legislation which will wreck the rural electrification program. Though only a minor part of the Hoover Commission's investigations, REA and the rural electric cooperatives are a major part of the lives and hopes of millions of farm people in our State and throughout the Nation.

H. R. 7343, 7357, 7359, 8239, 8242, and 8243 have been introduced in the House, and 2 bills have been introduced in the Senate, that would, among other things, require REA to fix its rate of interest and fees or charges to do the following:

(1) Pay all of the operating expenses (now about $8 million per year) on the Rural Electrification Administration; and (2) pay the Treasury interest. In this connection, the legislation would require REA to pay the highest rate of interest the Treasury pays, and require that the rate of interest be set by the Secretary of the Treasury. This legislation would also make REA subject to the Government Corporation Control Act.

This proposed legislation sounds innocent enough until it is analyzed in the light of the Hoover Commission's recommendations which it is supposed to implement. Because these recommendations are based on misunderstandings, implementing them by legislation will make the rural electrification program unworkable and bring ruin to many cooperatives. In addition, implementing the recommendations, supposedly designed to save the Government money will actually increase the expense to the Government and also will impair the ability of most cooperatives to repay their debt to the Government.

In an analysis of the Hoover Commission's recommendations last May, Ancher Nelsen, Administrator of REA, had this to say:

"We believe that if the Hoover Commission's recommendations were to be adopted, REA would be unable to accomplish the objectives in rural electrification and rural telephony which have been established by the Congress.

"The Commission's recommendations would result in termination of the rural telephone loans program, with less than half of the Nation's farms having telephones and slight prospect for alleviating the situation.

"Further progress in rural electrification through REA loans—connection of unserved farms and system improvements to serve expanding loads—would be drastically curtailed under the Commission's recommendations.

"Borrowers in both programs would be unable to meet the loan requirements."

The erronous conclusions drawn by the Hoover Commission in regard to REA were stated as follows in its report to the Congress:

1. The financial setup of the cooperatives does not make adaquate provision for such rates for power or for telephone service to enable them adequately to build up reserves, and provide for extensions or replacements.

2. Under this method of financing, the Government has subsidized the sale of electric power to the members of the cooperative associations at considerably less than its economic cost, the subsidies being provided in the following ways:

(a) The charging of interest at 2 percent per annum which is about 1 percentage point less than the interest which the Treasury has to pay on long-term issues to provide the money.

(b) The granting of the 5-year moratorium period with a delayed payment of interest which results in an effective rate of return of even less than 2 percent.

(c) Granting exemption from all Federal taxes. (In some States these bodies are exempt from all or some local taxes.)

(d) Providing the administrative expenses which, in the past 5 years, have averaged about $7,750,000 from Federal funds annually.

3. In view of the great advance made in farm electrification, it is our belief that the time has arrived for the reorganization of the Rural Electrification Administration into a self-supporting institution, securing its own finance from private sources in a manner similar to that of the other agencies discussed previously. Moreover, the operations of Rural Electrification should be made subject to the Government Corporation Control Act in order to secure the advantages of more efficient organization under that act.

Based on this type of fallacious reasoning, the Commission then made the following recommendations which the aforementioned proposed legislation seeks to implement:

Recommendation No. 36: (a) REA be reorganized on a self-supporting basis; (b) secure its financing from private sources, and (c) be made subject to the Government Corporation Control Act.

While the intent of this recommendation may be commendable, it has been clearly pointed out by the REA Administrator that it would be unworkable, and a little later in the program, members of this panel will show in more detail some of the reasons why. Briefly, however, to carry out such a recommendation would mean that REA would have to double or triple its interest

rates, plus adding to each loan a service charge to cover administrative expenses. The interest rate on loans would have to not only cover the cost of REA's borrowings from the Treasury at the highest rate the Treasury pays for money, but also the cost of servicing $3½ billion which has already been loaned.

Under these conditions, few cooperatives could afford to borrow from REA, nor could REA prove loans feasible when they had to carry greatly increased charges. Moreover, it is unlikely that most cooperative could borrow elsewhere. Also, the fact that REA holds a 100 percent mortgage on all cooperative's facilities surely would deter private lenders.

Without a source of credit, it would be only a matter of a few years before cooperatives went out of business. Lines could not be expanded, electricity would have to be rationed, service would deteriorate, electric rates would increase, and cooperatives would have to refuse service to unprofitable areas. Wholesale rates would certainly go up. The feasibility of generation and transmission loans would be out of the question, leaving power suppliers free to charge cooperatives any rate they cared to.

Could the Commission have been aware of the problems of REA and the cooperatives and have recommended such crippling changes? We think not, and we believe that the recommendations were made without full information on the part of the Committee and the Commission. The telephone program could not hope to survive under such conditions.

Besides spelling eventual doom to most of the electric cooperatives in the country, and nearly all the telephone cooperatives, the effects of such recommendations enacted into law would jeopardize the billions of dollars that the Government has loaned to cooperatives. Hundreds of cooperatives would be unable to meet their repayment schedule. In addition, the number of loans REA could expect to make would be few. Consequently, the agency would have to operate at a deficit which would have to be made up by Government appropriation. We contend, and will show, that at present REA is self-supporting, that the 2-percent interest rate paid most of its expenses including the cost of the money to the Treasury. Furthermore, we think it is unfair that new loans by REA should be expected to carry the burden of servicing old loans. This, we consider, would be a breach of faith as well as a breach of contract.

According to Administrator Nelsen, the 2-percent interest from the inception of REA to June 30, 1955, was sufficient to cover the cost of money to the Treasury during this period, and to produce a profit of $48,985,226. As for the $7¾ million annual administrative expenses which Congress appropriates for REA, it is one of the best investments the Government has ever made. Compared to the billions given to domestic and foreign enterprises by our Government, the $7¾ million pales to insignificance, especially when you consider what the REA program has meant to the life and happiness of the farmer and to the economy of the Nation. We say that this small investment has paid billions in dividends to the country and its people.

As to the recommendations that REA be made a corporation, we see no good reason for this since it would require that REA keep records both as an agency and as a corporation and thus increase its expenses.

As to recommendation No. 43, which directs the Secretary of the Treasury to fix the rate of interest REA must pay the Treasury, we feel that it gives to one individual too much power, and that this power could be abused to the serious detriment of rural electric cooperatives. We feel that in a matter such as this, which vitally affects the welfare of millions of citizens, our duly elected representatives, not one individual, should set the interest rate.

Now, I want to call on members of this panel to clarify some of the misconceptions about cooperative management which the Hoover Commission report contains. I might say that the members of the panel whom you see before you represent over 150 years of experience in the electric cooperative business. Most are real dirt farmers who are actually engaged in the business of producing foods and fiber from the prairies of Illinois. They are men who have been chosen to act as members of the various boards of directors, and, by such boards, to hold the office of president of the cooperative. Others of the panel are employed by the cooperative boards of directors for the management of these organizations in accordance with the policies fixed by these boards. I doubt that in any place in our country, or in the world, could a group be chosen who would be closer to the actual day-to-day operations and problems of the rural electric cooperatives.

These men and the topic they will discuss are: (1) Adequate Reserves, Carl Edwards, president, Coles-Moultrie Electric Cooperative; (2) Five-Year Moratorium, Floyd Ruble, manager, Illinois Valley Electric Cooperative, Inc.; (3) Effect of Higher Interest Rate on Our Cooperative, H. G. Downey, manager, Tri-County Electric Cooperative, Inc.; (4) Effect of Higher Interest Rate on Generation and Transmission Loans, Everett Read, member of board of directors of Jo-Carroll Electric Cooperative, Inc.; (5) Has REA Lost Money on 2 Percent Interest? Fred Harms, vice president, Rural Electric Convenience Cooperative, directors of NRECA; (6) Is Administrative Expense of REA Justified? Joseph H. Heimann, manager, Clinton County Electric Cooperative; (7) Effect on the Farmer, Robert Wagner, president, Western Illinois Electric Cooperative.

A Great Celebration

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. JENKINS. Mr. Speaker, there is located in southern Ohio, on the edge of my congressional district, a gigantic atomic-energy plant. I was very much interested in the decision of the Government in deciding to locate this enormous plant in our section of the State.

It took several months to build this great plant. At one time during the building of the plant there were about 25,000 workers employed. They finished the plant sooner than they expected, and thereby saved the Government more than $400 million. This was such an unusual matter that it was commented on in the papers very extensively.

One of the principal reasons was that there were no strikes called at any time during the construction. The friendly relations that existed at all times between the contractors and the workers led these two groups to decide to have a big celebration. This was done, and there were hundreds of people at the celebration, which was addressed by the Secretary of Labor. In other words, fair dealing brought faithful work from those employed, and the Government saved more than $400 million.

I was proud of the fact that I had something to do with encouraging and planning for this big celebration.

I am glad to report that from all indications there is a fine spirit prevailing in that section that will continue for a long time.

A Letter and Resolution From the Organization for the Defense of the Four Freedoms for Ukraine, Inc.

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include a letter from the Organization for the Defense of the Four Freedoms for Ukraine, Inc., signed by Dimitro Mandybur, president, and Hilary Papiz, secretary, with resolution unanimously approved by the American Ukrainians of the Twin Cities, Minneapolis-St. Paul, Minn., at the annual memorial ceremonies commemorating the death of Lt. Gen. Taras Tchuprynka, commander in chief of the Ukrainian Insurgent Army, fallen in battle against the Russian invaders of Ukraine on March 5, 1950.

The letter and resolution follows:

MARCH 20, 1956.

Hon. ROY W. WIER,
United States House of Representatives, Washington, D. C.

DEAR SIR: We are honored to present you with the copy of a resolution unanimously approved by the American Ukrainians of the Twin Cities at the annual memorial ceremonies commemorating the death of Lt. Gen. Taras Tchuprynka, commander in chief of the Ukrainian Insurgent Army (U. P. A.), fallen in battle against the Russian invaders of Ukraine on March 5, 1950.

The memorial ceremonies were held on March 11, 1956 at Minneapolis, Minn.

We sincerely hope that this resolution will be of help to you as an informative material in your work in the United States Congress.

Sincerely yours,

DIMITRO MANDYBUR,
President.

HILARY PAPIZ,
Secretary.

Resolutions unanimously approved by all present at the annual memorial ceremonies commemorating the death of Lt. Gen. Taras Tchuprynka, Commander in Chief of the Ukrainian Insurgent Army (UPA), fallen in battle against the Russian invaders of Ukraine. March 11, 1956, Minneapolis, Minn.

"We, the American Ukrainians of Minneapolis and St. Paul, Minn., gathered together on this day to commemorate the heroic death of the great Ukrainian fighter for freedom, Lt.-Gen. Taras Tchuprynka, unanimously proclaim the following:

"1. The Ukrainians never accepted Russian occupation of their country, and for hundreds of years have never ceased fighting to restore their freedom and independence.

"2. During the World War I, the Ukrainian Parliament—the Ukrainian Central Council, expressing the will of the Ukrainian people, on January 22, 1918, in the capitol city of Kiev, proclaimed the independence of the Ukrainian National Republic.

"3. The Russian Bolsheviks attacked Ukraine and destroyed the newly established Ukrainian independence.

"Moscow destroyed millions of Ukranian people, some merely by shooting outright, some by tortures, others by starvation or deportation to Siberian slave camps.

"4. During the World War II, the Ukrainians organized the Ukrainian Insurgent Army (UPA), of which Gen. Taras Tchuprynka was from the first till his death the commander in chief. The fight was conducted against both enemies, the Nazis and the Communists.

"5. After the war, the resistance against the Russian occupation of Ukraine did not diminish. The Ukrainian Insurgent Army (UPA) showed the heroic fight as an example for the whole world. On March 5, 1950, Gen. Taras Tchuprynka met the fate of millions of his countrymen at the hands of the Russian aggressors. He was killed in battle, but the resistance of the Ukrainian people was not broken. The fight is being waged on all lands of Ukraine in different forms, as a passive resistance and as an armed conflict which is being conducted by the Ukrainian Insurgent Army (UPA).

"6. Two months ago, just before the 20th Congress of the Communist Party at Moscow, the Russian leaders released an appeal to the Ukrainian insurgents urging them to give up their fight and surrender to communism. This proves once more that there is an armed resistance against the Russian rule in Ukraine 11 years after the end of World War II. Ignoring Russian appeals and terror, the Ukrainians oppose the Russian rule not only in Ukraine but also in the Siberian camps. (The appeal directed to Ukrainian insurgents was published in the Red Flag, Communist paper in Ukraine, on January 2, 1956.)

"II

"Today, when the inevitable conflict between the two irreconcilable opponents—the world of tyranny and the world of liberty—is approaching more and more, we feel it is our duty to draw the attention to the following:

"1. The combination of the two elements, historical Russian imperialism and its present tool, international communism, forms the foundation of the present Russian policy aimed at the domination of the whole world.

"2. All peaceful declarations and propositions made by Moscow are, in reality, propaganda to cover its preparation for the decisive action and to demoralize the world. This propaganda will facilitate the way to achieve their targets.

"3. The only way left to the free world to secure peace is to destroy the source of today's international crisis, Russian imperialism and its tools. It is necessary to combat not only communism but also Russian imperialism, which is the actual moving force behind the communism.

"4. To secure the victory, four things are necessary: (a) To maintain the physical and moral strength of the free world; (b) to win the sympathy of oppressed nations behind the Iron Curtain by supporting the national movements for freedom and the political and military underground organizations within the U. S. S. R.; (c) to recognize the necessity of partition of the Soviet Empire into independent national states on ethnic principle; (d) to stop the support of certain Russian groups abroad which still cling to the idea of indivisibility of the Russian Empire.

"5. We firmly believe that the freedom and independence have the same meaning for all nations and the ignorance of these principles by some Western statesmen will enable Moscow to build up more strength to terrorize the free world. There will be no peace and security in the world as long as there are oppressors and oppressed.

"6. We express our firm support and loyalty for the United States Government in its long efforts to obtain justice and freedom for all nations. We urge the American people to be aware of false Russian peaceful declarations and friendly smiles which hide the mortal enemy of America and the whole world."

Meet the Press Program at Dickinson High School, Jersey City, N. J.

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I include herewith the program which took place March 9 at Dickinson High School in Jersey City, N. J.

The program was conducted in a Meet the Press fashion and was intended to familiarize the students with procedures of Congress and problems facing Members of Congress.

I had previously distributed to the students copies of How Our Laws Are Made, by Charles J. Zinn. I include this program in the RECORD to show the profound knowledge of the students of Dickinson High School for our legislative process.

Vice Principal Francis J. McCarthy and Vincent M. Donovan, teacher of history and program supervisor, are to be highly commended for their interest.

On Friday, March 9, 1956, in the auditorium of the William L. Dickinson High School in Jersey City, N. J., a program was presented by the Honorable T. JAMES TUMULTY, Congressman from the 14th District of New Jersey. The program was conducted in a Meet the Press fashion and was intended to familiarize students with procedures of Congress and problems facing Members of Congress.

ASSEMBLY PROGRAM, HOUSE OF REPRESENTATIVES IN ACTION, MARCH 9, 1956, WILLIAM L. DICKINSON HIGH SCHOOL, JERSEY CITY, N. J.

(Guest speaker: Hon. T. JAMES TUMULTY, Congress of the United States; student panel: Frank Andretta, Charles Luciano, Lorraine Pfleger, Joan Rabbino, Arlene Schnider, chairman; Frederic Rehhausser, Herbert Silverman, David Sparta, Eleanora Zodda; Vincent M. Donovan, teacher of history and program supervisor)

OPENING ADDRESS

ARLENE SCHNIDER. We are signally honored this morning by the presence of the Honorable T. JAMES TUMULTY, Congressman from the 14th District of New Jersey. He has taken time out from his extremely crowded schedule to spend these minutes with us, to acquaint us with some of the processes of the Federal legislative body which guards our liberties and protects our prosperity.

Some students from Mr. Donovan's history-8 class are going to ask our Congressman pertinent questions and we assure you that he has not rehearsed on this program.

QUESTIONS

LORRAINE PFLEGER. Mr. Congressman, what is the reason for a Representative speaking in the House when he has a small and inattentive audience?

Mr. Congressman, do you like your job? Why?

CHARLES LUCIANO. Sir, don't you think that the 2-year term of a Representative is too short when compared with that of a Senator?

Sir, do you believe that the burdens of a Representative are increasing or decreasing since 1954?

DAVID SPARTA. Mr. Congressman, how long does it take the average bill to go through the House from introduction to final approval?

Sir, what steps are taken by a Representative to become a member of a particular committee?

JOAN RABBINO. What is the difference between a bill and a joint resolution?

Sir, why do so few Representatives sit through the average session of the House?

Sir, do you think a President is seriously handicapped when the House is controlled by the opposition party?

ELEANORA ZODDA. Mr. Congressman, how many Representatives are women? As a group do you think they have done as well or better than the men?

Mr. Congressman, to what extent may the House punish its Members for unbecoming conduct? How frequently does this censuring occur?

Mr. Congressman, what is the difference between a standing committee and a special committee?

HERBERT SILVERMAN. What has been the most gratifying work you have done as a Member of Congress?

Sir, how do all the committee chairmen make a complete report on Calendar Wednesday? Please explain.

Do you, Mr. Congressman, understand all the procedures of the House, or is it just as confusing to you as it is to me?

FRANK ANDRETTA. Sir, what does the average Representative do when the House is not in session?

Sir, do you think that the House does the best possible legislative job? Why?

Sir, what uses do the Congressmen make of the CONGRESSIONAL RECORD?

FREDERICK REHHAUSSER. Sir, who takes the place of the Speaker when he is inconvenienced?

Sir, what outside activities may a Congressman indulge in?

Sir, in 1952 you supported Senator KEFAUVER for the Democratic nomination. Will you do so this year?

Sir, since there is a shortage of scientists and engineers, and many students wishing to enter these fields are unable to do so because of the high cost of education, do you think it a good idea for the Federal Government to sponsor some sort of scholarship plan?

CLOSING ADDRESS

ARLENE SCHNIDER. We thank you most cordially, Mr. Congressman, for a most profitable and informative session. We hope that we may have the honor again of playing host to you.

We extend our sincere thanks to our panelists this morning for participating in this program.

I call upon our audience, now, to show its appreciation and gratitude by a standing vote of thanks.

Farmer Bulletin-Questionnaire

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. MILLER of Nebraska. Mr. Speaker, every other year, since I have been a Member of Congress I have sent out

a farmers bulletin list to the folks in my district, generally enclosing a short questionnaire, which is as follows:

DEAR FRIEND: If you desire some of the bulletins on the enclosed list, check not more than five and return the list with your full name and address to me.

A few of the problems facing Congress are listed below in the form of questions. Would you care to express your opinion on these? If you need additional space in replying to the questions, return a letter along with the bulletin.

1. In what order should these come: Cut debt _____, reduce income taxes _____, balance budget _____.

2. Should postal rates meet expenses? Yes ☐, no ☐.

3. Do you favor Federal aid to education? Yes ☐, no ☐.

4. Do you favor 90 percent of parity on farm prices: _____, 100 percent _____, or flexible support? _____

5. If eligible, would you participate in the soil bank? Yes ☐, no ☐.

6. Should there be support prices on livestock? Yes ☐, no ☐.

The Legislative Reference Service

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, may I take a few minutes of the time of the House to say publicly what I know many of you have said privately, and that is to acknowledge the remarkable aid rendered us by the Legislative Reference Service of the Library of Congress. I am doing this in part because it is quite possible that a number of you may not realize how many different facilities are open to us in that very fine body.

I do know that everyone of us personally or through our staff has made some use of the Service within the past year. In many instances this has only been to obtain assistance in securing information or material to answer some one of the innumerable letters which we receive. Even this service, humble though it is, I know is tremendously appreciated by our hard-working office staff even more than by ourselves. It is important for all of us and for our constituents that the facilities of the Library of Congress are available in this fashion to assist in obtaining information of importance to them. In a very real sense this makes our library also the library of our constituents.

However, it is not particularly of this work of which I wish to speak. What is far more important to me is that we have in the Legislative Reference Service at least one place to which we can go for research, information, or a report on any subject of public interest and know that the agency will have done everything humanly possible to make its reply accurate and unbiased.

It is small wonder that the Service has grown tremendously. In 1930 it handled only a little over 2,000 inquiries in the entire year. The latest figure, that for 1955, is 56,666. In 1940, the number during the year was slightly over 10,000, and in 1950 it had reached 41,602. The Service answers such questions without reference to our political party or point of view. The use by our two parties is approximately the same anyway you measure it. Since 1941, the number of inquiries handled by the individual researcher has grown from 157 to 286. This shows an efficient management of the Service, and the hard work of its staff.

Many of its findings have been remarkable. For example, it was the Service which discovered and proved that the margin by which the economic strength of the West exceeded that of the Soviet bloc has been increasing rather than narrowing during recent years. Incidentally this study was published by the Joint Committee on the Economic Report about a year ago.

We know that our committees have excellent professional staffs, but as individual Members we frequently have no place to turn for our own information and research. It is all the more gratifying to know that the Legislative Reference Service by direction of our Committee on House Administration treats inquiries from us as individual Members on a par with those which it receives from the committees. I believe we are the only national legislative body in the world, with the possible exception of Japan, that has any such facility open to the ordinary individual legislator. The start of a similar agency in Japan was itself the direct result of visits of Japanese legislators to the Library of Congress and their study there of what is available to us. It was the feeling of the Japanese that they as representatives of the people had a better chance of being free from the domination of their bureaucracy with such an independent factfinding source at their disposal. Already representatives from at least 15 other nations have visited our Legislative Reference Service to examine its feasibility in their own government.

I would like to close by inserting into the RECORD, under unanimous consent of the House, the list of services which the Legislative Reference Service is in a position to render. This list was furnished me, at my request, by the Service and I am inserting it here with the thought that it might be useful to many of you to have such a list available. Surely here is one agency that deserves all the support we can give it.

SERVICES FURNISHED TO MEMBERS OF CONGRESS AND COMMITTEES BY THE LEGISLATIVE REFERENCE SERVICE

(NOTE.—Members should, in making a request, indicate the form in which the reply is desired—e. g., written report, preliminary speech draft, oral discussion, telephone message, a selection of books, or other marked material. Where the deadline and other circumstances permit, the reply will be in the form requested.)

I. RESEARCH AND INFORMATION

1. Thorough analysis of a problem facing Congress, typically including background history, the various proposals for solution with indications of supporters and opponents, the arguments pro and con, factual information on key points in controversy.

2. Reports limited to any desired aspect of a problem, as e. g., the pros and cons, a survey of press or expert opinion, history of action in other countries, etc.

3. Legal reports, such as surveys of Federal or State legislation on a subject, legislative history of a given measure, arguments on the constitutionality of a bill, analysis of court decisions, etc.; the law in foreign countries on a given subject.

4. Evaluations of reports or documents or recommendations originating in Government agencies or outside organizations. (Recommendations are avoided, but points in question are noted, together with indications of the views of experts, etc.)

5. Locating specific information: Searches of newspapers, congressional records, or other documents, identification of quotations, biographies, identification and description of organizations, citations to Federal or State law, rollcall votes, or the voting record of an individual Member (this last will be done only for the Member concerned, or with his permission).

II. STATEMENTS FOR USE BY MEMBERS OF CONGRESS

On particular request of a Member, statements will be prepared for specific use in connection with remarks on the floor or elsewhere, releases of a historical or commemorative nature, etc. These may be in the form of general or detailed outlines, or suggested drafts. In any case, instructions should be as detailed as possible to insure a report to meet the Member's exact needs. Any statement concerning political issues will avoid partisan comment, although one side only of a particular question may be developed, if this is the Member's wish.

III. MISCELLANEOUS SERVICES

1. Consultation on any subject within the special competence of the Legislative Reference Service staff experts, at either a Member's office or the Library.

2. Assistance in organizing hearings; suggestions as to witnesses, order of business, subjects to be explored.

3. Congressional reading room: Members, their staff and families have use of this room. A desk may be reserved, if desired; staff assistance is available. A browsing collection is maintained of current books, from which Members may also borrow. Current periodicals for reading on the premises are available. Hours: Monday-Friday, 9 a. m. to 10 p. m.; Saturdays, 9 a. m. to 6 p. m.; Sundays, 2 p. m. to 6 p. m.

4. Translations for official use: From the more frequently met foreign languages.

5. Photostating:

a. For official use, photocopying is available without charge—within certain necessary financial limitations.

b. For unofficial use, or for work beyond the limitations noted, photocopying is supplied at stated rates.

6. Charts, graphs, and maps: Consultation and/or preparation according to specifications in various media.

7. Indexing of committee hearings or other documents. Extensive indexing projects can be undertaken only on a reimbursable basis.

8. Procurement of information from other Government agencies when Members of Congress prefer not to make direct contact.

9. Bibliographies.

IV. SERVICES FOR CONSTITUENTS IN RESPONSE TO OFFICAL MAIL

(NOTE.—Extensive research or translations cannot be undertaken for constituents. It is also helpful if the original letter accompanies the office request. It will be returned with the reply.)

1. Miscellaneous information is supplied, especially when constitutents do not have local facilities for research or have exhausted same.

2. Material on various subjects can frequently be supplied from a small stock of surplus bulletins, reprints, clippings, etc.

3. Selected references on particular subjects.

V. GENERAL NOTE

Services are rendered on request only and usually in order of receipt of the inquiry. Especially when Congress is in session the workload is frequently such in particular fields that prompt service is difficult, if not impossible, except at the sacrifice of quality.

Hoover Commission Disregards Facts in Recommending REA Interest Rate Increase

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

FIVE-YEAR MORATORIUM

(Speech given at the congressional dinner on March 26, 1956, by Floyd I. Ruble, member of the discussion panel, of the Illinois Electric Cooperatives)

One of the erroneous conclusions drawn by the Hoover Commission report is that referred to by Mr. Groat as the 5-year moratorium.

The misleading contention is, that the 5-year period allowed the cooperatives to get their funds and put them to use, results in a rate of return to the Government of even less than 2 percent—or that during this period, the funds are actually interest free.

Nothing contained in the report is further from the truth. I have here an exact copy of a page from the loan agreement which is one of the documents that were executed by the cooperative which I represent in connection with the most recent loan approved for us by the Rural Electrification Administration.

The terms contained in this agreement are clear and concise and will prove that 2 percent interest is charged against the loan from the time it is requisitioned for use, for the entire period of 5 years as deferred, accumulated interest; and, that at the end of the 5-year period it will be paid in regular quarterly installments, along with and in addition to the payments of current interest and principal then due and paybale at a rate of so much per $1,000 borrowed until it is all paid in a little over 30 years.

I would like to read a few paragraphs in this agreement, that will support my statement:

"Interest accruing on the principal hereof to a date 5 years after the date hereof (hereinafter called the accumulated interest) shall be allowed to accumulate and shall be payable as hereinafter provided. From such date to and including a date 35 years after the date hereof the corporation shall make a payment on the last day of February, May, August, and November in each year at the rate of $11.10 per $1,000 on the principal amount hereof unpaid 5 years after the date hereof. Each such payment shall be applied first to the payment of current interest on the principal hereof and then on account of such principal. In addition to the above-mentioned payments the corporation shall on each such payment date make a payment at the rate of $8.33 per $1,000 of the amount of the accumulated interest unpaid 5 years after the date hereof, which shall be applied on account of the accumulated interest. Thirty-five years after the date hereof the accumulated interest and the principal hereof remaining unpaid, if any, shall become due and payable.

"The corporation on any payment date, as hereinabove provided, may pay all or any part of the accumulated interest or the principal hereof then remaining unpaid, but so long as any of the accumulated interest or the principal hereof shall remain unpaid, the corporation shall be obligated to make the quarterly payments on account of the accumulated interest or the principal hereof, or both, as the case may be, in the amounts hereinabove provided, unless the corporation and the holder of this note shall otherwise agree."

Now, there is no reason why any group seeking accurate information for a report should misinterpret the meaning of this agreement. However, because of the conclusion of the Hoover Commission report as to this item, we can only assume that the committee did not see one of these agreements or after seeing it, did purposely misinterpret its meaning.

All of us on this panel have specific information to give you tonight—information vitally important to us for you to know if we are to continue in furthering the cause of rural electrification in Illinois. We want you, our representatives, to know the facts and may I say that there is no one group of your constituents that comes before you that has more sincerity of purpose, and will give you honest answers about itself or its activities than does this group representing the electric cooperatives in Illinois.

You have not had to investigate us. We have never offered you bribes to induce you to vote our way. We have always come to you with clean hands, and we believe with common horse sense. We only ask that you help us to keep doing the job that nobody else wanted to do for the farmer in Illinois until we showed that it could be done.

We hope there is time for you to ask us questions later on this program, for, believe me, we are loaded with the facts.

Thank you.

Labor Slap at Steel

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. WIER. Mr. Speaker, under leave to extend my remarks, I desire to insert in the CONGRESSIONAL RECORD an article appearing in the Washington Daily News, Friday, March 23, 1956, entitled "Labor Slap at Steel," by Fred W. Perkins, a staff writer.

The article follows:

LABOR SLAP AT STEEL

Labor didn't turn the other cheek today after a hefty verbal slap from Big Steel. It slapped right back.

David J. McDonald, president of United Steelworkers (AFL-CIO), accused United States Steel of giving his union a gratuitous insult in its annual report.

He had a few uncomplimentary things to say in reply about profits.

The corporation's annual report noted that two basic roots of the inflationary tendency are discernible. One, it said, is "the institution of industrywide labor unions, headed by leaders who, with the power to bring about industrywide strikes, seek always to outdo each other in elevating employment costs in their respective industres."

Not so, said Mr. McDonald. It was the efforts of steelworkers to better themselves and not competition between union leaders that produced wage and other benefits.

He continued:

"The gains won by the workers in the steel industry through their union have not caused inflation. The central fact omitted in the corporation's report is that the cost of these gains has been more than offset by increases in productivity.

"Last year, for example, the union won a 15 cents an hour wage increase. But each worker, on the average, produced so much more steel per hour that the actual wage cost of each ton of steel went down, not up.

"United States Steel, to be sure, increased its prices last year. But the price increases, and whatever inflation resulted therefrom, cannot be laid to the wage increase. Indeed, the corporation made a neat profit on the wage increase last year."

The union leader said the theoretical cost of the 1955 wage increase to United States Steel was $30 million, "but the actual cost was zero because of the increase in productivity."

"But," Mr. McDonald said, "the corporation immediately following the wage increase raised steel prices $7.50 a ton. The price increase brought in more than $96 million to the corporation, a net profit for 1955 of $66 million over the theoretical cost of the wage increase.

"Making a profit on a wage increase is nothing new for United States Steel. The corporation does it every time."

Relations between the union and Big Steel have been amicable since the 55-day strike in 1952. Mr. McDonald said he could easily see an effort in the report to disrupt that harmony. "We trust," he added, "this is not the case."

United States Steel's annual report identified the other inflationary factor as "the Government's 'full employment' policy under which the money supply must be inflated fast enough to accommodate the inflating employment cost, lest that mounting cost bring about its natural result of pricing some people out of their jobs, even though only temporarily."

The Current Soviet Challenge—I

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, the developing challenge posed by changing, nonmilitary tactics of the Soviet Union constitutes, in the long run, an extreme danger to the interests of freedom. We cannot sit through this election year, postponing the devising of new, imaginative means of meeting this challenge. The policies that are so vitally

needed are of far greater importance than any partisan advantage which may be gained through delaying action till after the election.

With this in mind, I have attempted to make a small contribution to the thinking which I believe is needed by introducing House Concurrent Resolution 216, which urges the President to take certain steps designed to strengthen the Atlantic alliance and to set up a share-the-cost program with our allies for providing development capital for have-not nations.

In this connection, I would like to call the attention to the Congress to an article by Harrison E. Salisbury, Russian expert of the New York Times, which outlines in detail the nature of the new threat posed by the Soviets. Mr. Salisbury views this threat as greater than that posed by Stalin's static communism. I concur in this thought.

I would also like to call the attention of the Congress to a January 27 editorial in the Christian Science Monitor, which argues eloquently for increased emphasis on the type of programs proposed in House Concurrent Resolution 216:

[From the New York Times of February 26, 1956]

SOVIET POSES A NEW AND GREATER CHALLENGE—STALIN'S STATIC COMMUNISM IS ENDED AS NEW ERA OF DYNAMISM BEGINS

(By Harrison E. Salisbury)

It is too much to say that Moscow has been going through a second revolution in the past 10 days.

But not since 1917 have changes been recorded in Russia that appear to be fraught with greater potential significance—and danger—for the democratic western world. than those associated with the Communist Party's 20th Congress, just closed.

What happened is this:

The hollow plaster image of the 30-year Stalin epoch has been smashed from its iron pedestal. And from the tremendous dust cloud and drab debris has emerged the glistening outline of a new—and far more threatening—Communist dynamic.

The threat and the danger lie in two major factors: The style of the new Communist dynamic is fresh, self-confident and original. And the content of the dynamic is pragmatic, supple and designed deliberately to appeal to many men of varied political convictions, social status and economic situation.

CHALLENGE TO SPIRIT

Let no one mistake this—the new doctrine and the new course the Moscow leaders have unveiled in the past few days confront the democratic western world with an awesome challenge.

It is not a challenge that democracy cannot meet, but it is a challenge that will put the west on its mettle and draw upon its material and spiritual resources. And it is going to require thinking and planning and imagination on the part of western leaders.

For here is no mere military challenge—although behind it, Marshal Georgi K. Zhukov affirmed, lies the fast mounting stockpile of Soviet nuclear weapons, the Soviet development of 1,500-mile ballistic missiles, the glimmering silhouette of Soviet intercontinental jet aircraft.

Of course the Soviet regime has not suddenly reversed the world balance of forces, or cut the Gordian Knots of all its basic economic, social, and political problems at one fell swoop. Vast problems lie ahead of the Soviet leadership and the Communist world.

Nothing that was done in Moscow the past 10 days proves that the Communist Party Secretary, Nikita S. Khrushchev, and his comrades have found a solution to Rissia's chronic problem of agricultural underproduction.

Nothing that has been done demonstrates that the Soviet Union is going to be able to eliminate the coercions of police power and state-wielded terror.

Nothing that was accomplished by the Communist Congress proved that the Soviet leaders would be able to abolish the kind of intrigue and ambition which led to the rise of Stalin.

ASIAN ARGUMENT

Nor did Moscow's new definition of alternate roads that lead to communism suggest that Russian and Communist China may not, ultimately, fall apart in an argument over who shall be master of Asia.

The Russian leaders did not suddenly acquire the technological know-how to enable them to surpass America's industrial and economic lead.

In all these respects—and a good many others—the United States and its Western allies maintain enormous advantages over Moscow and its allies.

But the decisions and the speeches of Moscow put the Western world on fair warning; Russia is not going to stand still and the free world cannot expect to retain its advantages by a policy of drift and inaction.

The storm signals are up and flying plain for all to see.

The essential thing that has emerged from the addresses of Mr. Khrushchev, Premier Nikolai A. Bulganin, Anastas I. Mikoyan and the others is that Soviet Russia has broken with the ideological and political clichés of the Stalin regime.

Taking a realistic look at the world around them the Soviet leaders have set full sail on a new course that they confidently anticipate will gain world leadership and ultimately, a Communist world.

MORE THAN TACTICS

It is easy to shrug off the Communist speeches as just a tactic or a revision of the party line. They are both. But they are considerably more than mere tactics and they reflect a startling Soviet self-confidence.

The theoretical basis for the new course proclaimed in Moscow was in the repudiation of three doctrinal theses, originally proclaimed by Lenin but reduced to a catechism by Stalin.

The repudiated theses were:

1. The inevitability of wars so long as capitalism exists in some countries.

2. The impossibility of establishing communism except by armed revolution and civil war.

3. The existence of "capitalist encirclement" of Russia, constituting an ever-present threat to Soviet security.

The new Communist platform declares:

That war is no longer inevitable because of the factual balance of forces between East and West; that there are many routes to communism including parliamentary pathways (a doctrine that sails so close to the Fabian gradualist socialism that the Moscow orators were hard put to show how it differed), and that in place of capitalist encirclement there are now two-world systems, one capitalist and one Communist.

It is the new, free, and easy interpretation of the Marxist dialectic that enabled Moscow to restore relations with the heretic regime of Marshal Tito in Belgrade; to find comradeship in the quasi-socialistic nationalist movements of India and Burma; to reopen the long-barricaded avenues toward rapprochement with Socialist and leftwing movements everywhere.

But these doctrinal changes—revolutionary as they are—are only surface indications of the deep break with the Stalin regime.

SHATTERING OF STALIN

The true drama of the past 10 days has come in the new leadership's treatment of images. Not only has the statue of Stalin been hurled from its fundament. The leaders have danced upon the fragments.

Director of this Bolshevik ceremonial was Mr. Mikoyan, one of Stalin's earliest protégés but now emerging as a man to whom the name and memory of Stalin are as much anathema as that of Leon Trotsky was to the late generalissimo.

Not only did Mr. Mikoyan speak with open contempt for the economic theses of Stalin; not only did he toss aside the falsified Stalinist history of the Communist movement; not only did he call for rehabilitation of many accused victims of Stalin's purges; not only did he strongly indicate that the absolute anathema on Trotsky himself was to be lifted, Mr. Mikoyan went further.

He went so far that a question could legitimately be asked as to what, if anything, the new leaders propose to preserve of Stalin's reputation.,

What Mr. Mikoyan did was to sneer, publicly, at the holiest ikon in the Stalin reliquary—the quasi-religious, semimystic oath to Lenin that Stalin took at Lenin's funeral bier.

Mr. Mikoyan coupled his sneer about those who "swear by Lenin" with an equally acid reference to one of Lenin's most famous documents—the "will and testament" left as a guidance to the party.

The testament was suppressed by Stalin.

(Lenin spoke of Stalin's hastiness, administrative impulsiveness, spite, rudeness, lack of patience, loyalty and impoliteness and called for his removal as party secretary.)

LENIN'S VOICE

Now, it is apparent, the testament will be published, as well as a wealth of anti-Stalin material written by old Bolsheviks and long concealed in the party archives.

But it is not only to the past—their own past—that the new leaders are looking with hard, fresh eyes. They are looking around themselves at the world with a good deal of the bright and naive wonder of men who have suddenly cast off bandages that shuttered their view for many years.

They do not appear to be frightened by what they see. Thus, an address by Dimitri T. Shepilov, the editor of Pravda and Communist Party secretary, who may be being groomed to replace V. M. Molotov in the Foreign Office, takes a good, hard look at propaganda toward the United States—not in the clichés of "Fascist beasts" and "warmongers," but in terms that would make sense on Madison Avenue.

MALENKOV'S CONTRIBUTION

Thus, when former Premier Georgi M. Malenkov, now Minister of Electric Power Stations, discussed Russia's power situation he cast the body of his address in the form of a discussion of the American power industry that gives some credit to the vision of American electricity magnates.

This new free-wheeling kind of communism once again compels the foreign Communist parties to make a hairpin turn at a high rate of speed. Some of their leaders certainly will be dumped over the precipice.

But by junking most of Stalin's heritage—except the concentration on basic heavy industry and No. 1 priority for defense—the men in the Kremlin have relieved themselves of a heavy burden and thus made the Soviet challenge to the West more serious. They have gone far in what from a moral standpoint has been their prime task—to restore to communism some of the viability and dynamism it lost in the long years of Stalinism.

[From the Christian Science Monitor of January 27, 1956]

THE SOVIET ECONOMIC CHALLENGE

If the Soviet Union succeeds in carrying out its sixth 5-year plan it will increase its reported steel production by 23.5 million

metric tons between last year and 1960. This will mean that whereas 5 years ago Soviet steel output equaled barely over 30 percent of the United States total, and today is less than 45 percent, it will in another 5 years have climbed to around 55 percent.

Here is one measure of the economic challenge contained in the overall production blueprint unrolled this month in Moscow. There are other possible measures, such as planned increases of electric-power production, petroleum, and so forth. But the significant point in all of them is that the area in which the Communist planners intend to invest the greatest effort is the area of heavy industry.

This might be understandable in consonance with Marxist concepts if an avowed goal were to lay an industrial base on which might go forward the production of consumer goods for the comfort and enjoyment of Russian and other Soviet-bloc toilers. But no such promise is held out to the masses by the Kremlin.

CONSUMER COMES LAST

In the production of food the plan contemplates an increase of approximately 10 percent for grain production, but this is not much more than the rate of increase of the Soviet population, and the difficulties of First Secretary Khrushchev with his corn planting and new land programs are well known.

In housing, the Communist government has not done a great deal for the proletariat. According to Abram Bergson in Foreign Affairs the city dweller in the Soviet Union in 1952 had an average living space of approximately 5 square yards, whereas in 1928 the average was better than 7 square yards.

As for such luxuries as automobiles, the Kremlin plans only to bring the output of these up to 650,000 in 1960, of which two-thirds will be trucks. (American auto production last year was over 9 million passenger cars and trucks.)

Now, if Communist economic planning were setting out visibly to improve the prosperity and standard of living of Soviet-bloc peoples, that might be taken as a welcome form of competftive challenge, because with reasonable freedom of trade a prosperous area or nation makes a better market than a backward one.

But Soviet trade is an instrument of Communist political and ideological policy, as is evident from the speeches of Mr. Khrushchev and Premier Bulganin on their sales tour of India and Burma. From Mr. Bulganin's subsequent overtures to Latin America and from statellite feelers for business with Pakistan it is clear that Moscow expects to use a growing industrial strength to extend its international trade—and with trade could go infiltration and influence.

FOREIGN AID IMPLICATIONS

Herein lies the overt challenge to American and free-world commercial acumen. Russia has the advantage of being able to take agricultural goods (gladly) in barter. Also its technical advisers can meet dwellers in underdeveloped nations more nearly on their own level of experience.

To meet the new Communist competition a line of spades, hoes, and cultivators may be better sales material than two-tone cars with power steering. And there is likely to be more customer interest in some financing for power dams than in gifts of fighter planes and tanks which take a lot for upkeep.

In other words, economic aid is probably more important than military aid in the foreign-assistance programs of the United States for the next several years. But it cannot be said that either arm of defense alone is adequate to contain the thrust of aggressive Marxism. For the massive body of heavy industry—steel, coal, nonferrous metals, and so forth—which Soviet planning has built under Stalin and his successors can be turned readily to the manufacture either of machinery for export or of heavy arms for the Red Army.

EXPLOITATION, RED STYLE

If an oligarchy of capitalists conspired to devote so great a proportion of a nation's wealth and toil to the amassing of industrial plant under their unquestioned control and for purposes to their liking, Marxist propagandists would pillory them as robber barons, exploiters of labor, and imperialists.

But the Kremlin can raise money by force bond sales, make compulsory collections of grain at its own prices, pay sweatshop wages on a piecework basis, and it is the only employer, the only investment broker, the only overseas sales agency. That is the kind of competition America and the free world face in matching steel mills with the Soviet Union. But still the advantages are on the free nations' side both as to the industrial levels from which they start and as to the vigor of free methods properly used.

Fish Farming in the Fields

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 27, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Let's Grow Fish in Our Fields," and published in the March 1956 issue of the Arkansas Farmer.

The author, Mr. Roy Prewitt, is a widely known fish farmer who has an extensive operation near Lonoke, Ark. Largely through the efforts of Mr. Prewitt and others who have pioneered in fish farming, large-scale production of fish has begun on Arkansas farms. Not only has the farming of fish been profitable through the sale of fish in commercial channels, but the program is also contributing to Arkansas agriculture by conserving surface water and by increasing the fertility of the soil in reservoir areas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S GROW FISH IN OUR FIELDS

(By Roy Prewitt)

Large-scale fish production has begun on Arkansas farms. Thousands of acres of fish are now in cultivation. Reservoirs are being built as rapidly as earthmoving equipment can do the job.

Farmers who ventured into the business a few years ago are now harvesting crops of fish. The yield is better than they are getting for their other livestock.

Fish farmers are learning (1) improper preparation of reservoirs can raise the cost of harvesting and cut down profits; (2) improper stocking can lower production; (3) diseases and parasites can reduce production and lower the value of the crop; (4) low-value species—like rats in a feed trough or weeds in a cotton field—get into the ponds and compete with more valuable species for the available food; and (5) there are marketing problems.

Fish farming has been helped in Arkansas by the Soil Conservation Service, the Agricultural Extension Service, and by the Alabama Polytechnic Institute. Some agencies and private organizations are still discouraging fish farming.

NEW CO-OP

A new step has been taken by fish farmers that will help solve a lot of the problems. A cooperative has been formed—the Arkansas Fish Farmers Cooperative. H. H. Harvill, of Humphrey, was elected president; Steve King, of Lonoke, is secretary. The board of directors is: Taylor Prewitt, of McGehee; P. E. Smith and Frank McCartney, of Newport; George Ryland, of Star City; J. D. McGehee, of Pine Bluff; Marvin Dickson, of Brinkley; and Clarence Lilly, of Lonoke. I am also a member of the board of directors.

The officers and board members of the organization are pioneers who have made a success in fish farming.

With the setting up of this agency to work with and speak for all members, things began to happen immediately.

First, a new respect for fish farmers was created. Fading of organized opposition became noticeable in a few days. Fish buyers became aware of the organization and the price per pound of farm-grown fish increased over wild fish.

Processing and canning plants became interested, and started negotiations for fish supplies and locations in Arkansas. Dog- and cat-food processors became interested in the trash-fish production.

Orders began arriving from State game and fish commissions from as far away as Utah for live game fish for stocking purposes. These orders will be filled mostly from farm ponds in the hills that are overstocked with crappie, bream, and bass.

POND PROFITS

Correspondence received at the Lonoke office of the cooperative indicated that many States find it more economical to buy fish for stocking than to attempt to grow them. This will make every farm pond in Arkansas a potential source of profit since all of them hatch more fish every year than the ponds will support.

The board of directors of the co-op has set a membership fee of $1 for owners of ponds of less than 5 acres, and a $5 fee for owners of ponds above 5 acres.

Inquiries from States about fish for stocking purposes caused the co-op officers to give a closer look at the possibilities of selling surplus game fish from farm ponds to State and Federal agencies. They found that the United States Department of Agriculture is in need of about 30 million game fish a year for stocking purposes. Moves are being made to capture this market. The 40,000 farm ponds of Arkansas could supply that amount.

An interesting sidelight to the organization of the co-op has been a lower fish harvesting cost. Reservoir owners have employed commercial fishermen to harvest fish—usually on a 50–50 basis. The harvester got half the production for doing the job. Contracts are now going with commercial fishermen getting 25 percent of production for harvesting.

Fish farming has arrived in Arkansas. Production on a vast scale will always be limited to the level lands of eastern Arkansas. But there is hardly a farm in that State that doesn't have some land adapted to growing fish.

FISH ARE NEEDED

During the last 20 years a tremendous change has occurred in our coastal and inland waters. The take of fish from coastal waters is rapidly decreasing. The take of fresh-water fish from inland waters now is almost nonexistent. About 90 percent of our fresh-water fish were supplied from the Great Lakes until the sea lamprey invaded the lakes and destroyed that industry.

Drainage, flood control, drouths, and restrictive laws have nearly destroyed the fresh-water fish industry in our lakes and rivers. Fresh-water fish are the highest-priced item poundwise on our menus today. The wholesale price of buffalo fish has

jumped from 2 to 18 cents a pound in 10 years.

A tremendous shortage has developed in fish and fishery products, such as fish meal.

The outlook for fish farming is good. We believe we have taken a step forward in Arkansas by organizing the Arkansas Fish Farming Cooperative. We hope that farmers already growing fish and minnows, and owners of farm ponds and others who are interested in growing fish, will get in touch with the organization through the secretary, Steve King, of Lonoke.

REA Cannot Carry Additional Interest Burden Recommended by Hoover Commission

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

ADEQUATE RESERVES OR FINANCIAL REQUIREMENTS OF A TYPICAL RURAL ELECTRIC COOPERATIVE

(Speech given at the congressional dinner on March 26, 1956, by Carl Edwards, member of the discussion panel, sponsored by the Illinois Electric Cooperatives)

Cash to supply our needs comes from two sources:

I. REVENUE FROM ELECTRIC POWER

(Contributions by our member consumers for electric service.)

This is used for:

1. Paying back principal, with interest, to our Government on money already borrowed.

2. Operating expenses (including the wholesale power bill).

3. Renewal and replacement fund (reserve). (This fund is for the purpose of replacing wornout units of property in the amount of their original cost. For example, such items as poles, wire, anchors, transformers, meters, and a multitude of others. Actually, because of inflation, because we will not have the benefit of mass construction at replacement time, replacement costs will be many times higher than the original cost. Poles that cost $6.50 in place originally will cost $30 to $40 each to replace them. Other replacement costs will be in proportion.)

II. BORROWED MONEY

This is needed for:

1. Constructing original electric distribution system.

2. Replace wornout units (the actual cost at time of replacement less original cost).

3. Line and service extensions.

4. Increase capacity of present system to meet increased demand for such as enlarging present substations, heavying up lines and building new feeder lines, increasing size of service installations and transformers, constructing new substations and transmission lines to power them. The power companies in our State will furnish neither the substations nor the new transmission lines needed.

III. MAP OF MATTOON

Actually, it is just a tiny dot. This tiny dot contains 4 square miles. Concentrated within these 4 square miles are residences at the rate of 6 per block. There are 12 blocks per lineal mile. There are two sides of the street. The local power company has more than 144 consumers per mile of streets, for many of the dwellings are duplexes and apartment houses.

In addition, within these 4 square miles there are many, many commercial consumers, whose monthly power bills amount to hundreds of dollars each. There are many industrial plants such as Kuehne Furniture Co., General Electric Co., Gar Wood, Brown Shoe Co., two major railroad repair shops, all of whose monthly power bills amount to thousands of dollars each per month. The local power company has approximately 8,000 consumers concentrated in this area of 4 square miles. Its paved streets make for quick and economical servicing.

IV. MAP OF CO-OP AREA INCLUDING MATTOON

Now compare this with our situation. We have but 4,500 consumers, slightly over half the number in Mattoon, but ours are scattered out over an area of over 4,000 square miles.

I repeat, the power company has 8,000 consumers concentrated in 4 square miles. We have 4,500 scattered over an area of 4,000 square miles with no duplexes, no apartment houses, no commercial, and no industrial consumers.

V. OUR RATE SCHEDULES CAN

1. Pay back (money) borrowed from our Government, with interest).

2. Pay expenses (of operating our cooperative).

3. Provide a renewal and replacement fund (provide money for replacing wornout equipment).

VI. OUR RATE SCHEDULES CANNOT

1. Finance heavying up present system. (It would be impossible to support rates that would bring in sufficient money for this purpose.)

2. Risk greater competition. (Raising rates materially would only subject us to greater competition from heavier-than-air fuels which is getting rougher every day.)

3. Enable us to carry the additional load proposed by the Hoover Commission.

We believe we can pay our way under our present contracts and through the present Rural Electrification Administration—and we are doing so with much pride. But we cannot carry the additional load on our backs proposed by the Hoover Commission.

We sincerely ask that you most gravely weigh the facts I have just outlined, as well as those to be presented by my colleagues. I thank you.

The Osborns Sell Only Quality Eggs

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. KNOX. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Osborns Sell Only Quality Eggs," written by John Matheson, and which appeared in the Michigan Farmer.

Mr. and Mrs. Osborn are my close personal friends. The article displays their ability and determination to map a future for themselves in the production of a high quality product for the consuming public. It portrays a typical farm couple, whom I have the privilege to represent in Congress.

The article follows:

THE OSBORNS SELL ONLY QUALITY EGGS

(By John Matheson)

Within earshot of whistles of steamboats plying the famous Sault Ste. Marie locks, Mr. and Mrs. Lawrence Osborn quietly go about their farm operation which has made their eggs one of the most well-known agricultural products of Chippewa County.

The Osborns, who reside 5 miles south of the Sault on U. S. No. 2, operate a 160-acre diversified farm, with a specialty in eggs.

Ask nearly any housewife in Sault Ste. Marie about Osborn's eggs and chances are she'll know that they stand for a quality product. For it is quality the Osborns have aimed for in their farm operation, not only in their eggs, but also in their sheep. And they have found that quality pays.

The emphasis on egg production started some 30 years ago, when D. H. McMillan, then agricultural agent of Chippewa County, got Osborn interested in producing eggs on his father's farm. He started with 250 Barred Rocks, and, as Mrs. Osborn says, "just kind of evolved from that."

Their farm was acquired by his father in the 1880's, and Osborn was born there. He has lived there all his life, with the exception of 1 year when he was 22 years old when he worked as a grinder in the old Willys-Knight plant in Pontiac.

WENT BACK TO FARM

Osborn recalls that when he was younger, he didn't really want to farm—it just happened that way. Many friends of his youth thought they did want to farm and "they wound up in other jobs."

But his year in the shops of lower Michigan was enough, and he returned to his father's farm. The elder Osborn generally kept 9 or 10 milk cows, sheep, and a few chickens. "He was always more or less interested in feeding stock," Osborn says, "and anything he had, he liked to take good care of."

After he had returned to the farm and started in what later developed into his well-known egg specialty, he married the former Alice Earl of Sault Ste. Marie, in 1930. She had lived in the city all her life, with the exception of a year during which she taught in a rural school in a neighboring township. Her marriage was her actual introduction to life on a farm.

At that time, her husband was "just getting nicely started" in business and Mrs. Osborn remembers "it wasn't easy." She knew nothing about chickens, and during a spell of upper peninsula cold weather, she felt sorry for the chickens in a cold coop. This led her to build a fire to warm them. The upshot was that the whole batch suffocated. "It was liable to happen to anybody," her husband adds.

Then too, there were the other usual hazards which the Osborns lump into fox, skunks, and humans. But despite these, they plunged in the middle of the depression of the 1930's and borrowed on their insurance in order to expand their egg business. They adopted the present design of their egg carton, which states simply, quality eggs from the Lawrence Osborn farm.

STARTED HOUSE-TO-HOUSE

Their first method of distribution was a retail route, house-to-house in Sault Ste. Marie, with some retail store outlets. This grew over the years until finally, after World War II, the route got too big and the Osborns found themselves making deliveries three times a week.

It was then they switched to their present pattern of distribution. Theirs is now primarily a wholesale operation, with their eggs marketed through six retail-store outlets in Sault Ste. Marie. Their emphasis is on a quality product, and to insure this, they

gather eggs three times daily, cool them quickly in wire baskets, candle them, grade them, and deliver them promptly.

They market only grade A eggs, generally in small, medium, and large sizes, and their quality is guaranteed. Throughout the years, this has built a reputation for their products, which, of course, also include chickens for meat. Generally speaking, they have never had any difficulty selling their eggs and the Osborns will very conservatively admit that surplus was never a problem.

In fact, the Osborns found that their summertime demand so exceeded the supply that they started to stagger their production. Originally, they followed the practice of starting all their pullets in the spring, but they have now changed this. They buy their first chicks the last part of January for summer production, and get the remainder through March, April and the first part of May. At the peak of the season, the Osborns have a capacity of 1,300 layers. They favor Leghorns and White Rocks.

Hoover Commission Recommendations Could Increase REA Interest Rates to 5 or 6 Percent

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

(Speech given at the congressional dinner on March 26, 1956, by Everett R. Read, member of the discussion panel, of the Illinois Electric Cooperatives)

EFFECT OF HIGHER INTEREST RATE ON GENERATION AND TRANSMISSION LOANS

In my capacity as a director of the Jo-Carroll Electric Cooperative, whose service area covers the two northernmost counties of our State, I also serve as Jo-Carroll's representative on the board of directors of Dairyland Power Cooperative, a federated generation and transmission cooperative with headquarters at La Crosse, Wis.

I have been asked to comment briefly on the effect of higher interest rates on generation and transmission loans if recommendation 36 of the Hoover Commission Report on Lending Agencies is put into effect.

Jo-Carroll Electric Cooperative, having 1,735 members, is the only distribution cooperative in Illinois which purchases its power from a generation and transmission cooperative; namely, Dairyland Power Cooperative. Jo-Carroll, years ago, started operating with a combination of small portable diesel units to serve our needs, supplemented with an inadequate and costly commercial power source. Despite the very high cost of such power it was the only way we could get started. Fortunately, we were later able to connect with and become a part of the Dairyland system. Dairyland has 26 member cooperatives, who in turn serve 93,000 farmers and rural businesses at cost. The Dairyland system and other areas in that section of America's Midwest, is located in an area which is one of the highest fuel cost areas in the entire Nation. This is due primarily to the lack of hydroelectric sites which causes importation of high-cost coal to run the steam power stations. Dairyland, of course, has an additional problem in that it operates only in rural areas and cannot take advantage of certain efficiencies which come when serving urban areas with the attendant concentration of population and industry.

Rural electric cooperatives now secure loans from the REA at 2 percent interest, repayable over a period of 35 years. It should be remembered that the first 5 of the 35 years represents a moratorium period. The interest that was due during the first 5 years is added to the principal and this total amount, plus interest, as later accrued, is then repaid to the REA in quarterly installments over a period of the subsequent 30 years. A number of economists and accountants have estimated that if the Hoover Commission recommendations went into effect rural electric cooperatives would have to pay interest rates ranging between 5 to 6 percent, plus a service charge, contrasted to the present method.

In preparation for my remarks here I asked the general manager and chief accountant of Dairyland Power Cooperative to compute the additional cost to Dairyland should interest rates beginning January 1, 1957, go to 3½ percent on the one hand or to 4½ on the other. I am neither an accountant nor an economist, but I want to give you the results of their carefully compiled estimates. Based on present loan procedures Dairyland as of January 1, 1957, will have $58,200,000 owing to the REA on unpaid principal. Assuming that no further loans are made, this debt will be fully liquidated during the year of 1992. During the period between 1957 and 1992 the interest charges which will have been paid will amount to $16,959,000. Let us assume, on the other hand, that the interest rate goes to 3½ percent, an increase of 75 percent, as of January 1, 1957, and let us further assume that the outstanding principal with interest must be repaid in 35 equal parts annually thereafter. The total interest payments under this plan will amount to $34,524,000, or an increase of 103 percent. Again, if the interest rate on January 1, 1957, should go to 4½ percent—an increase of 125 percent from the present 2 percent figure, then the total interest payments during the subsequent 35-year period will amount to $46,175,000, or an increase of 172 percent. This later figure is also an increase of more than $29 million in interest rates over the 35-year period, a needless, intolerable burden to an electrical system admittedly operating in "skimmed milk" or marginal territory. Other generation and transmission cooperatives throughout the Nation will be similarly affected. Their economic strength would be sapped. It is recognized, of course, that the higher interest rates proposed by the Hoover Commission would affect only new generation and transmission loans, but Dairyland's projected studies show that over the years it will be doubling its investment in order to meet continuing demands from the farm, as farm operations more and more become food factories on an automatic basis.

Under the Hoover Commission recommendations rural electric systems will be forced into the open market for funds, a recommendation which we believe would either deliver the cooperatives into the hands of the banks and insurance companies, if it did not force them into bankruptcy first. Looking over the makeup of the members of the Hoover Commission, we can only reluctantly conclude that the only possible motives which they could have had in mind in making this recommendation would be to either destroy competition in the rural electric field by destroying the cooperatives, or to deliver up the rural market as a place where higher interest rates could be earned by investor groups.

In behalf of Dairyland Power and all other generating and transmission cooperatives, I respectfully request that members of the Illinois congressional delegation give most serious consideration to the overall effects which will ensue should the Hoover Commission recommendations be put on the statute books of the Nation. I respectfully suggest that these recommendations be shelved.

The Dairyland Power Cooperative has always met all interest and principal payments on time and had made advance payments or repayments on principal of $1½ million. Financially strong, as Dairyland is, it could not stand up under recommendation 36, nor could other generation and transmission cooperatives throughout the Nation. Generation by generation and transmission cooperatives is limited to areas of high-power costs, or to areas where existing suppliers have felt unable to provide the farmers with rates which could be measured against the cost of supplying themselves. Generation and transmission power generation is important to all rural electric distribution cooperatives whether or not they get their source of power from a generation and transmission. As has been demonstrated so thoroughly and so factually in the area which Dairyland serves and in the areas adjacent to it, it gives all distribution cooperatives real bargaining power to negotiate for fair rates from their supplier.

Because we now have the right to generate power if we can't negotiate a fair rate, we have a real leverage from which we can negotiate for rates low enough to make our distribution operations feasible while assuring a fair return to our supplier. If we should lose the right to generate or should other conditions such as these task-force recommendations be imposed which makes it impossible for us to operate, then we actually lose the only real assurance we have of adequate power supplies at a fair rate. Thank you.

Uncle Sam's Dental Bill

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PRIEST. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Washington Post and Times Herald under date of February 18, 1956, entitled "Uncle Sam's Dental Bill":

UNCLE SAM'S DENTAL BILL

In any movie travelog disparities in the physical fitness of peoples are strikingly revealed by the condition of their teeth. Even Americans for all their medical advance, do no score too well in such a test. Tooth decay is the most prevalent disease in this country, and less than a half the Nation is receiving adequate dental care. This shows up particularly in draftees. Uncle Sam is spending $100 million a year for dental care of servicemen, and has spent $250 million in the last 5 years for veterans' dental repairs.

The chief means of attacking this problem, and cutting this expenditure, is through dental research, according to Dr. Harold Hillenbrand of Chicago, secretary of the American Dental Association. He told the House Subcommittee on Labor, Health, Education and Welfare that the 1957 appropriation for research grants by the National Institutes of Health ought to be increased by $3,055,000 to bring it to $6,026,000. As a result of the fluoridation of water supplies, tooth decay in children is being cut. Now a research attack needs to be made on pyorrhea, chief cause of tooth loss among adults, as well as on other dental diseases. Since dental re-

search is wholly dependent on Federal funds—no private fund drives for it are held—it seems necessary, as well as prudent, for the Government to back it as far as possible.

Small REA Investment Has Repaid Billion in Dividends to the People of the Country

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

IS ADMINISTRATIVE EXPENSE OF REA JUSTIFIED?

(Speech given at the congressional dinner on March 26, 1956, by Joseph H. Heimann, member of the discussion panel of the Illinois Electric Cooperative)

We managers and trustees of the electric cooperatives are aware that the Federal Government through appropriations voted annually by Congress of the United States spends approximately $7¾ million per year on the administration of the Rural Electrification Administration.

This Rural Electrification Administration was established by Congress to assist in making electric service available to the rural areas of this country. Congress at the time of inception of REA and since has consistently voted these funds to accomplish the purpose of the Rural Electrification Act.

The social and economic gains made by the farmer with the use of electricity, we believe alone has justified the expense of this program. All other parts of our economy such as manufacturers, dealers, and labor groups have benefited by the purchase of wiring, wiring devices, and electric appliances by the farmer.

It is reliably estimated that for every dollar spent for rural line construction, rural people will spend approximately from $4 to $5 for wiring, wiring devices, and equipment, with a total of $3.5 billion spent by the electric cooperatives for electric-line construction from 1936 to date.

The farmers have purchased $14.5 billion of wiring and electrical equipment. This additional business for the manufacturer of this equipment has certainly been a great boost for the general economy of this country.

If this is a subsidy we believe that this has been one of the most beneficial subsidies which is made by our Government. I believe it is of interest to us to look at some of the other subsidies that are made by our Government. Let us take a look at the Post Office Department which in the year 1954 was subsidized to the extent of nearly $500 million.

According to the present Postmaster General this loss did not occur from first-class mail which you and I as private citizens mostly use. The biggest loss was on second-class mail, newspapers and magazines, and amounted to $232 million in 1954.

It is estimated that the Department in 1952 lost $8.6 million in handling of Life magazine. This amount is larger than the administration cost of REA. Six million dollars was lost on handling the Saturday Evening Post, $3,700,000 on Reader's Digest.

Doesn't it seem that subsidizing the REA program is better business than subsidizing the delivery of these magazines? Our Government has also subsidized some of the private-power companies by the quick amortization of investment. These amortizations are approved by the Federal Power Commission. We are all acquainted with the subsidy to the shipping industry and the subsidy to airmail.

Again let me say we are not condemning the subsidizing of these interests. Congress has authorized them and maybe it is for a good economy. We feel that criticism from anyone against the expense of the Rural Electrification Administration is not justified unless the criticism be directed against all subsidies of any form.

Let us look at the progress that has been made in electrifying the rural areas of this country since the Rural Electrification Act has been inaugurated. At that time very few farms in this great Nation had the use of high-line electric service on their premises and the rate of extension of this service was so slow that it would have taken at least a hundred years to complete area coverage, charging the farmer for the cost of constructing the line was a normal procedure.

The passage of the Rural Electrification Act and the establishment of the cooperatives completely changed the picture so that as of today 97 percent of the farmers in the State of Illinois have high-line electric service and this service is available to almost 100 percent of the rural areas.

Certainly no one can question the administrative expense of the Rural Electrification Administration. In fact, I believe we could say that there isn't any other $7¾ million spent by our Government that is bringing so much dividend.

In conclusion let me quote from the present Administrator Nelsen's remarks: "As for the $7¾ million annual administration expense which Congress appropriates for REA, we contend it is one of the best investments the Government has ever made.

"Compared to the billions given to domestic and foreign enterprises by our Government, the $7¾ million pales in significance especially when you consider what the REA program has meant to the life and happiness of the farmer and to the economy of the Nation. We say that this small investment has paid billions in dividends to the country and its people."

Brazil Acts To Curb Importation of Autos

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. KNOX. Mr. Speaker, I call to the attention of the Congress an article which appeared in the March 25, 1956, edition of the Evening Star, captioned "Brazil Acts To Curb Importation of Autos."

I believe this to be a shining example of the cooperation we are receiving in the form of lower tariffs and reciprocal trade that has been promoted by our Government. It brings to our attention the barrier confronting our Government in the exportation of automobiles to Brazil. The article should be of special interest to the Committee on Ways and Means, which handles all legislation on tariffs and trade agreements.

BRAZIL ACTS TO CURB IMPORTS OF AUTOS

RIO DE JANERIO, March 24.—The Brazilian Government today took drastic measures to curb increasing automobile imports.

The Ministry of Transport and Public Works announced a tremendous increase in the price of storage for cars while they are at the docks.

They must remain at the docks at least 30 days now. The new rates are 83 cruzeiros ($1.18) per 2.2 pounds for the first 30 days for cars and 20 cruzeiros (about 28 cents) per 2.2 pounds for trucks.

This means that a car in the Oldsmobile or Buick class—which up to now has cost about $35 storage for 30 days—will now cost about $3,500 for storage.

The new rates almost certainly will cause a spiraling price rise in the already skyhigh rates for cars in Brazil. A new medium priced United States car at present will bring $8,000–$10,000 in Brazil.

How Long Can Livestock Producers Wag the Tail?

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Record Stockman of Denver:

HOW LONG CAN LIVESTOCK PRODUCERS WAG THE TAIL?

Experienced political observers are now predicting certain passage of a farm bill featuring both 90 percent of parity price supports on basic agricultural commodities and a soil bank. If Congres comes up with a bill providing for both the administration's soil-bank plan and rigid 90 percent of parity props, as voted by the Senate Agricultural Committee, these observers believe the President may sign it.

Both factors, if put into effect, can be poison to the livestock grower. Both can add materially to troubles of livestock and meat producers. With our industry already in serious financial straits, these pump-priming methods could mean ruin to the livestock man.

Consider what position the feeder would be in if steers being marketed now had been fed on corn that costs $1.75 to $2 per bushel—instead of $1 to $1.25 a bushel.

From the producer's standpoint, a substantial increase in diverted acres could increase beef cattle numbers radically—unless a gestapo of the United States Department of Agriculture inspectors was formed to look after acreages to be sure they weren't grazed or used for feed production.

Time was when a stiff-necked livestock man could ride out price and supply problems. But now, politicians have made a political football out of agriculture and have interfered so much with the laws of supply and demand that we wonder whether one segment can continue to wag the tail of the rest of agriculture.

There is no question in our minds on validity of the fact that present burdensome surpluses are the direct result of high, rigid price supports—maintained too long. Price supports applied to livestock would certainly cause an even larger supply of fed cattle and hogs than now exists.

How long do politicians think they can hide from reality? One thing is certain. In postponing the day of reckoning, they invite the real danger of creating a more severe distortion of the natural laws of supply and demand.

Civil Aviation Medical Act

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PRIEST. Mr. Speaker, I am today introducing a bill to provide for research and training in civil aviation medicine and to set up machinery for the development of medical requirements and evaluation of airman physical fitness.

This legislation would define and broaden the medical responsibility of the Administrator of Civil Aeronautics so as to include the development, promulgation and administration of rules and regulations pertaining to medical matters. It would establish an Office of Civil Aviation Medicine within the framework of the Civil Aeronautics Administration. This bill calls for the creation and equipment of a Civil Aeronautics Medical Research Laboratory in order to organize a counterpart in medicine to the National Advisory Committee for Aeronautics. It would establish an equivalent in the field of civil aviation of the medical research and developmental facilities of the Armed Forces, for the development of technical medical information essential to avaition safety.

For a long time there has been a growing feeling that perhaps civil aviation medicine has not had the Federal support needed for it to keep pace with aeronautical and engineering progress. Civil aviation medicine should keep abreast of new technical improvements in the design and operation of aircraft. Despite the mushroom-like growth of aviation during the past three decades, our civilian pilots are being selected by physical standards which I am told have undergone but little change since they were originally promulgated in 1928. Except for sporadic projects there has been no research conducted to determine the human requirements in civil aviation.

We have provided liberally for military aviation in all its facets—the development of physical standards appropriate to the mission to be performed, extensive training of their flight surgeons both in clinical and research medicine, and research into the human requirements that would be productive of the most effective, though not always economical, operation in a military mission. But we have neglected the civilian pilots who in the final analysis form our reserve pool in times of national emergency, and who in both peace and war, have become the backbone of our essential air transportation. There is a feeling that this neglect may perhaps be due in part to the false premise that civil aviation medical research and training needs are being provided for by military services.

At the present time it would appear that the Administrator of Civil Aeronautics does not have clearly defined duties and responsibilities with respect to the effective medical certification of civil airmen. The Civil Aeronautics Act of 1938, as amended, requires the Civil Aeronautics Board to exercise its functions of rulemaking, including the prescription of rules, regulations and standards, adjudication and investigation independent of the Department of Commerce. My bill will open up for discussion the adequacy of present procedures. It is a field that should be explored.

Why a Ceiling on Income Tax?

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. ALGER. Mr. Speaker, I ask unanimous consent to extend and revise my remarks in the Appendix of the RECORD and to include an editorial entitled "Thinking Out Loud" by Lynn Landrum, of the Dallas Morning News. This commonsense approach to our present income tax in our country provides great food for thought and a partial solution to the problems confronting our great Nation today. For myself, as one believing that Federal Government must be limited in its power to tax, spend, and borrow, I heartily endorse Mr. Landrum's remarks and would like to call them to the attention of my colleagues:

[From the Dallas Morning News of February 8, 1956]

THINKING OUT LOUD

(By Lynn Landrum)

How selfish people get to be
About their honest share
Of what it costs to govern us
And give our needy care.
I get impatient as I see
How grudging are their hearts,
How laggard are their fountainpens
When tax collecting starts.
And here am I, all burdened down—
I tell you only facts—
With all the unfair load of this
Infernal income tax.

TWENTY-FIVE PERCENT

Representative NOAH MASON, Illinois, Representative, proposes a 25 percent tax ceiling on income and inheritance taxes. Some people pay as high as 91 percent on their income. Larger business enterprises pay 52 percent.

Figure it out. A man owns a business. He incorporates it. After it has paid property taxes for school and local purposes, it has a certain amount left. Uncle Sam takes 52 percent of that. Then the corporation can distribute the remaining 48 percent of the profit. If the owner is in the top bracket, he pays 91 percent of that 48 percent to the United States Government.

That leaves the businessman 9 percent of 48 percent as his share of the profits. Let's see, 9 times 48 comes to 432, and when we point it off, the owner can take down 4.32 percent for himself. Less than a nickel out of the dollar is his take-home pay for his risk capital.

And it is risk capital—if he doesn't make the dollar, he doesn't get anything.

KARL MARX

The big income tax, says Mr. MASON, is sending the United States rolling down the road to Karl Marx socialism. It is doing it in two ways. In the first place, it is forcing big business to swallow up little business and little business to hunt up big business to be swallowed by—because only big business can stand the drain of the income tax. And the consequence of that is bigger and bigger government to ride herd on bigger and bigger business, with less and less freedom for anybody to be really his own boss about anything.

In the second place, the heavy tax piles up money for Congress to give away to gimmecrats and to waste in bigger and bigger Government payrolls on all sorts of let-the-Government-do-it schemes. Uncle Sam owns fabulous amounts of land, rubber, tin, copper, cotton, corn, rice, wheat, cheese, powdered eggs, and so on.

If the top take on income tax were 25 percent, big government would reduce itself simply because it couldn't meet the payroll, to say nothing of the give-away drain. Private enterprise would take over more of the Nation's work, and socialism would begin to shrink up for the want of sustenance.

WHAT DO WE WANT?

It is practically a certainty that the States would ratify an amendment to the Constitution limiting the tax to 25 percent of incomes and estates. But when the subsidies began to be pinched off, what do you think would happen?

Personally, the Columntator hopes it will happen. The Columntator would rather pay for his war-risk insurance (which he has kept from World War I) than to get it "free" and then have to pay at income tax time for all his own kick-backs from insurance premiums—plus twice as much again for the wages of all the kicker-backs who shuffle the Columntator's money to and fro before he gets back any of it at all.

That a good portion of what is sent up to Washington stays there, or else sticks somewhere on the way to Washington, the Columntator has never doubted.

Billy Goat Hill may not be run on the latest sociological and ethnological principles as laid down by Missus Roosevelt and Adlai Stevenson. But it can be operated under the Mason 25-percent income tax plan. The Little Lady is smarter than Washington ever was.

Summary of the Congressional Dinner Presentations on March 26, 1956

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

SUMMARY OF THE CONGRESSIONAL DINNER PRESENTATIONS ON MARCH 26, 1956

(By A. E. Becker, manager, Association of Illinois Electric Cooperatives)

We sincerely trust that our presentation tonight will give our Illinois representatives in Congress some basic information which will assist you to intelligently consider future legislation. As you have observed, we have purposely directed our information on the effect the Hoover Commission recommendations will have on our rural-electric cooperatives.

We have tried to be as brief as possible in presenting our subjects. This year we have duplicated all of the discussions which have been presented. This information will be given to every congressional representative from Illinois, whether he is in attendance

here tonight or not. We hope you will keep this material in your files for future reference. We also offer to furnish any further information upon your request.

I feel sure that you now have a better understanding of why we are so gravely concerned over the possible effects of the Hoover Commission recommendations and how these recommendations could seriously retard the rural-electrification program in Illinois, if not in some instances bring it to a complete halt.

The 27 electric cooperatives in Illinois are proud of their part in bringing electric service to the farm people of our State. This service has not only improved the farmers health and living conditions but has assisted him to operate more effieciently with less help.

The major credit for the success of our program in Illinois goes to the 288 directors of our 27 cooperatives. These men and women have given loyal, unselfish service throughout the years they have served on their respective board. They all give their time freely and in many instances it has cost them out of their own pockets to attend the many meetings required of them.

According to REA's latest statistical report dated February 29, 1956, our 27 electric cooperatives in Illinois have received funds in the amount of $85,148,746 ($7,486,535 of this is for generation and transmission facilities). This is to serve 146,187 members over 46,088 miles of line. None of our Illinois cooperatives are in default on their principal and interest payments to REA.

The 1954 report from REA showed that our Illinois electric cooperatives made $18,724,221 in principal and interest payments and in addition had made advance payments on their loans in the amount of $4,591,833.

In closing I want to express our appreciation to our guests for their continued interest in our problems as demonstrated by their attendance. I for one feel confident that you will want to protect our interests in the future as well as you have made the rural electrification program possible in the past. It seems to me that the electric cooperatives have a common problem with our congressional leaders and that is to make the rural electrification program as set up by Congress, a sound business, repay the loans we have received from REA with interest and at the same time give our Illinois farmer members good dependable electric service at rates he can afford to pay.

Mass Murders and Tortures of Innocent Ukrainian People by Communists

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. MACHROWICZ. Mr. Speaker, there have already been presented to the free nations of the world many protests against the barbarism perpetrated by the Soviet regime against millions of inhabitants of countries occupied by the Communists. The only justification claimed by the Communists for this ruthless action is the love for freedom demonstrated by these people.

Two years ago, the Congressional Committee on Communist Aggression, of which I had the privilege to be a member, reported to Congress its findings, based on testimony of eyewitnesses, verifying the truth of these charges of persecution. It recommended that the Secretary of State present these charges to the United Nations and demand action against the guilty Communist criminals. Unfortunately the Secretary of State has not yet seen fit to present these charges, despite frequent denunciation of Soviet guilt.

What the free world needs today and what justice and fairness requires, is not words but action. I sincerely trust that the free world, and particularly the United States, will eventually show by deed that it will insist on Soviet Russia to live up to the standards of a free and democratic civilization or stand accused as an outlaw among nations.

Under leave to extend, I am submitting herewith a resolution adopted on March 18, 1956, at a mass memorial protest meeting of all organized groups of Ukrainian women in metropolitan Detroit in cooperation with branches of the Ukrainian Congress Committee of Detroit and the Federation of American Ukrainians of Michigan. It is my understanding that many similar meetings were staged on that day throughout the United States and the free world.

The resolution follows:

Whereas the Government of U. S. S. R. has been lately attempting to convince the free world that its incredibly inhuman methods of torturing of political prisoners in its prisons and concentration camps were terminated following the death of Stalin and Beria, and subsequently it proclaimed an amnesty and freed a part of war prisoners, held in concentration camps, of German, French, and English nationality; and

Whereas the released prisoners, after returning home, attested to the facts of these tortures (like accounts of Nobel, Scholmer, Piddington, and Varcony) and reiterated that this tormenting of slave laborers continues unabated even to the present time, in hundreds of concentration camps scattered all over U. S. S. R., and that the Government of U. S. S. R. is still keeping millions of human beings in serfdom, among them over a million of women and minors, where they are being forced to perform the hardest slave labor under frightful conditions, e. g., in the quarries at Karaganda (Kazakhstan) or in the gold mines of Vorkuta (northwestern Siberia), as well as in numerous other concentration camps throughout Siberia and other parts of U. S. S. R.; and

Whereas in all these camps the women, no less than men, are forced to work 10 to 12 hours every day in the year, not counting the time of their marching to and from the place of work, in the worst conditions, having no medical care, as the result of which conditions thousands upon thousands have been dying every year; and

Whereas the repatriated war prisoners have brought detailed and shocking reports of the murder in 1955 by the Soviet NKVD of 500 women slave laborers at Karaganda, Kazakhstan, after they had formed a living wall so as to shield their brothers and sisters who were toiling as slave laborers, which act of bestiality is perhaps unique even in Soviet reality; and

Whereas in view of this, we American women of Ukrainian origin, while paying homage to the memory of our 500 brave, and desperate sisters violently slaughtered under Bolshevik tanks, desire to raise our voice of resolute protest: Be it therefore

Resolved, That we bow low before the heroism and sacrifice of these brave 500 victims of Bolshevik terrorism.

We condemn before the whole free world this act as the barbarous mass murder of innocent mercilessly persecuted slave laborers.

We declare our unequivocal protest against bestial torturing of political prisoners, toiling hard as slave laborers, famished and in rags, denied any humanitarian care, which policy of the Soviet regime is known the world over.

We appeal to the conscience of the civilized world for intercession and defense in behalf of the millions of wretched political prisoners, in particular of women and minors.

We ask the United Nations to designate a special committee to investigate in exact places the state of existence and of toiling of millions of political prisoners all over U. S. S. R., and thereafter to communicate its report to the Security Council to verify the state of affairs and to pass a final determination regarding the guilt of U. S. S. R., in violation of the Charter of United Nations.

We petition the United States Government, as the leader of the free world, which is striving to defeat the barbarism, perpetrated and demonstrated by the Soviet regime through 38 years of its misrule, to intercede in the defense of millions of human beings condemned and forced to slave labor.

We trust that the freedom-loving world will not idly stand by when the Bolsheviki torture and butcher the innumerable masses of men and women in the concentration camps of U. S. S. R. for their only culpability—their love of freedom for all humankind.

Report of Professor Harris, Chairman, the New England Governors' Textile Committee

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Boston Herald, March 3, 1956, regarding the first annual report of Prof. Seymour Harris, chairman, New England Governors' Textile Committee.

Professor Harris is a recognized authority in the textile field, and the following excellent editorial forcefully sets forth his views as outlined in the first annual report:

INTERPOSITION FOR NEW ENGLAND?

When the South thinks it is getting a bad deal from the Federal Government it holds up a go-slow sign labeled "interposition." Perhaps it is time for the North to do some interposing, too.

In his first annual report as chairman of the New England Governors' Textile Committee, Seymour Harris points out that our problems resulting from the migration of industry to the South are being aggravated by the Federal Government.

"The Government," he says, "through its agricultural policies, raises prices of raw material and foods for the industrialized regions; provides power and tax subsidies for the newly industrialized regions; and introduces social security programs which put a greater burden on old than on new industrial regions. For all these reasons, the competitive position of the South as against the North improves."

Harris recognizes that the South still lags far behind the North both in industry and in per capita wealth. And he does not say it is a bad thing for the South to be catching

up. But he thinks the losses of some regions and the gains of others may be proceeding at an uncomfortable rate, and that the Government should at least consider whether it is an undesirable speed-up.

We can't see how anybody can quarrel with that.

How far can the professor's case be documented? Mr. Harris recently sent the Senate Banking and Currency Committee some highly illuminating material on the distribution of taxes and Federal disbursements by regions and States. It showed, among other things, that:

Over a period of 20 years, New England has gotten back but 31 percent of the amount of taxes borne relative to what 5 major southern industrial States have gotten back (the corresponding rate for the 10 richest vis-a-vis the 10 poorest States was 19 percent);

In 1954 New England received back as much as she contributed in only 18 of 75 important disbursement programs surveyed;

In the grants and aid programs her receipts were equal to but 81 percent of the amount suggested by her relative income;

New England's receipts per $1,000 of taxes borne exceeded the national total in only 6 of the 75 programs;

In grants and aids the region received only 69 percent of what might be expected from taxes borne.

These figures are not conclusive. New England is still a relatively high income area and it doesn't expect an exactly even break on all distributions. But the disparity between what the Federal Government takes from us and what it gives back is large enough to raise some questions. Is the Federal Governemnt rubbing it in? Is it pushing interstate equalization too fast? Is it creating unnecessary adjustment problems for New England and the other mature regions?

Professor Harris asks Congress to stop, look, and listen. He interposes with some interrogation marks. Washington should take heed.

There's Little Thanks for United States Aid

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. BEAMER. Mr. Speaker, at a time when appropriations for continuing and expanding foreign aid are of great concern to the Congress of the United States I am indebted to the Washington Daily News for carrying a most significant article by Edward Tomlinson in its edition of March 26.

This article is entitled "There's Little Thanks for United States Aid," and I could not think of a newspaper piece more perfectly timed.

We who are fortunate enough to be members of the Interstate and Foreign Commerce Committee have known for many years the competitive problems facing our international air carriers. We know, for instance, that virtually every foreign airline is government-owned and operates with huge subsidies. We know that the wage differential is alarming—that pilots and crews on American-flag international carriers receive, in some cases, one-third again the wages paid comparable employees on foreign airlines.

But some of us may not know, Mr. Speaker, that the United States Government is actually financing our foreign competition. Some of us may not know, either, that these foreign carriers are turning their backs on the very country which put them in business.

It is not pleasant to contemplate the possibility of having foreign airlines receiving American money and then looking elsewhere but toward the United States for purchasing equipment with which to compete with our own international carriers.

Our friends on the Senate Interstate and Foreign Commerce Committee have conducted a series of searching inquiries into the arrangements whereby Lufthansa, the new German airlines, was given unusual freedom in negotiating for landing privileges in this country and in competing with our own airlines on the already highly competitive routes to South America.

Mr. Tomlinson has prepared a remarkable document on some of the things that have been going on in international air transport and I ask unanimous consent that his illuminating article be included in the RECORD:

FROM BRAZILIAN AIRLINE, VARIG—THERE'S LITTLE THANKS FOR UNITED STATES AID

(By Edward Tomlinson)

RIO DE JANEIRO, March 26.—It now looks as if Uncle Sam would get little thanks for granting the Brazilian airline, Varig, the right to operate and carry passengers between New York and eastern cities of South America, not to mention his generosity in supplying money for the planes.

The Export-Import Bank put up a loan of more than $5 million for the purchase of 3 Lockheed super-Constellations with which Varig's service was inaugurated. About the same time, the FOA made a gift of $1,500,000 worth of the latest radar and navigational equipment to the Brazilian Government to modernize its airports in Porto Alegre, Sao Paulo, and Rio de Janeira.

ESTABLISHED

Having been firmly established, in direct competition with our own Pan American World Airways and Braniff, which serves the same area, Varig's management now turns to Europe to buy future equipment. Senhor Rubem Berta, president of the company, has announced that he is ordering British jet planes and other equipment to increase and expand his services.

It also is rumored that Senhor Berta plans to tie up with the pre-World War II German company, Lufthansa, which has already secured rights and mapped out plans to revive its services in the various Latin American countries, as well as between this country and several of the republics.

HASSLE

There was a big hassle in Congress last summer over a State Department agreement permitting Lufthansa to fly between New York, Rio, and Buenos Aires, thereby creating still more competition for Pan American and the other United States lines.

An interesting sidelight is that while Varig is a legitimate Brazilian corporation, entitled to reciprocal consideration in return for the right of our own companies to operate in Brazil, its management and top personnel are preponderantly Brazilian Germans.

The company was set up by local interests in Porto Alegre, capital of the State of Rio Grande do Sul, the heavily populated section of the country, where before the war, Nazism had gained a strong foothold. At any rate, Brazilians point out that most of Varig's pilots and engineers are Germans, and that numbers of them flew for the old Lufthansa and Condor lines, both German companies in prewar days.

SIGNIFICANCE

Significance also is attached to the fact that although the present Lufthansa agreement to fly the New York-Rio route was made more than 6 months ago, the company has made no apparent effort to establish its own service. Nor, for that matter, has it yet established regular service across the South Atlantic between Europe and Brazil.

No one questions Varig's right to buy new equipment wherever it wishes to do so, or wherever it can get the best deal. The point is, its management seems to have a short memory, for the generous assistance it received at the hands of the United States Government.

REA Has Not Lost Money on 2-Percent Interest

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

HAS REA LOST MONEY ON 2-PERCENT INTEREST?

(Speech given at the congressional dinner on March 26, 1956, by Frem Harms, member of the discussion panel of the Illinois Electric Cooperative)

I would like to present some figures taken from exhibit C on page 14 of statement of Clay L. Cochran, director, legislative, research, and management department, National Rural Electric Cooperative Association, which he gave before a subcommittee of the House Governmental Operations Committee of the House of Representatives on the Hoover Commission Report on Federal Lending Agencies:

Interest rates charged by REA and computed annual interest rates paid by U. S. Treasury on interest-bearing marketable securities, 1936–54

Fiscal year	Interest rate charged by REA on new loans	Computed annual interest rate on marketable Treasury issues [1]
1936	3.00	----------
1937	2.77	----------
1938	2.88	----------
1939	2.73	2.526
1940	2.69	2.402
1941	2.46	2.413
1942	2.48	2.225
1943	2.57	1.822
1944	2.67	1.795
1945	[2] 2.00	1.718
1946	2.00	1.773
1947	2.00	1.871
1948	2.00	1.942
1949	2.00	2.001
1950	2.00	1.958
1951	2.00	1.981
1952	2.00	2.051
1953	2.00	2.207
1954	2.00	2.043

[1] Comparable data for years 1936–38 are not available.
[2] During the period July 1–Sept. 20, 1944, REA charged 2.49 percent on new borrowings.

Source: Computed annual interest rate on marketable issues, Treasury Bulletins, United States Treasury Department. Interest rates charged by the REA obtained from records of the agency.

Now, I want to present some figures taken from an excerpt from Report of the Administrator of the Rural Electrification Administration, 1955.

Statement of income and expense of REA from inception to June 30, 1955

LENDING OPERATIONS

Item	Inception to June 30, 1954	Fiscal year 1955	Cumulative to June 30, 1955
Interest income	$275,856,598	$44,512,875	$320,369,473
Expense:			
Interest expense	225,596,741	42,547,494	268,144,235
Provision for possible losses on loans	2,865,616	374,396	3,240,012
Total	228,462,357	42,921,890	271,384,247
Net income from lending operations	47,394,241	1,590,985	48,985,226

You can see from these figures which I have presented to you that REA has not lost money on our 2-percent interest rate.

Time's Editors Fall for Anti-South Lies

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, Time magazine recently made a vicious and unwarranted personal attack on the editor of the Jackson Daily News, Jackson, Miss., Maj. Frederick Sullens.

Under leave to extend my remarks, I include Major Sullens' reply to this attack as it appears in the Jackson Daily News under his byline on Tuesday, February 21, 1956:

CAN'T BACK UP WORDS—TIME'S EDITORS FALL FOR ANTI-SOUTH LIES

(By Frederick Sullens)

Only a short time ago the publishers of Time and Life magazines offered a well-known southern writer a very flattering salary to serve as its southern editorial representative.

The offer carried a salary almost twice as large as the income of the writer at that time.

The Daily News is not at liberty to reveal the name of that writer without his permission, but he is well known throughout the South, especially in Mississippi and Louisiana.

The offer was declined when the writer discovered that his stories would not be printed as written; that they would be rewritten in New York editorial rooms and slanted to suit the ideas of Time and Life publishers. In other words, he refused to become a journalistic prostitute.

You must be a prostitute in journalism if you do any creative writing for Life and Time. They slant all editorial material to fit the narrow and bigoted views of its publisher and corps of editors. They do not hesitate to distort facts if it suits their ideas of what should be a good story.

And never yet has either Time or Life given the South a square deal in handling any story concerning the race question. When you read Time or Life you read journalism at its worst.

The Daily News is in receipt of correspondence between a Birmingham businessman and Time magazine, and between the Birmingham citizen and Hodding Carter, editor and publisher of the Greenville Democrat-Times, which demonstrates clearly the extent to which the publication of Henry Luce, South-hating New Yorkers have become propaganda media for the NAACP.

W. J. Bach, president of Foundry Service Co., Birmingham, and a most reputable business leader of the South, has indeed smoked out Henry Luce and his Time magazine associates as a result of their acceptance as fact and publication without proof of the unsupported statement of a NAACP Negro lawyer.

The story begins with publication of the statement of the Negro lawyer, Thurgood Marshall, in the September 19 issue of Time, page 24. The portion of the article referred to was published by Time as follows:

"The other story happened years later, when Marshall was in a small Mississippi town, waiting for a train to Shreveport, La.—'I was out there on the platform, trying to look small, when this cold-eyed man with a gun on his hip comes up. "Nigguh," he said, "I thought you ought to know that the sun ain't nevuh set on a live nigguh in this town." So I wrapped my constitutional rights in cellophane, tucked 'em in my hip pocket and got out of sight. And believe me, I caught the next train out of there.'"

This portion of Time magazine's publication of the Life of Thurgood Marshall aroused the indignation of Mr. Bach, of Birmingham, as it did other southerners who still read the propaganda of the NAACP, as presented to the public by Time, Life, and Fortune. The record will show that the unfair manner in which Luce publications have handled their articles about the South has caused a substantial loss in circulation for these magazines in the Southern States.

The editor of the Daily News has worked for more than 50 years as a newspaperman in Mississippi, travelled the length and breadth of the great Magnolia State and has visited every city, town and most rural communities within its borders. Never has there been a time during this period when Negroes were barred from any city or town in the State, either during day or at night, officially or unofficially.

Mr. Bach travelled through the Southern States, including Mississippi, for a number of years, as a salesman, while working up to the presidency of Foundry Service Co. Knowing well that Thurgood Marshall had not been ordered out of any Mississippi city or town before dark, Mr. Bach decided to call the error to the attention of Time magazine. In his first letter, after citing the quotation, he stated to the editors of Time:

"Will you please advise the name of the town where this reported incident occurred? Also, please state as nearly as passible the month, day and year of said incident. Can you furnish names and addresses of persons who might definitely state he (Thurgood) was there at that time, and can give assurance that this thing actually happened? Failure to provide sufficient data enabling myself and others to check the authenticity of your story wil cause many to believe that it never occurred, and that the statement is just more NAACP propaganda."

Mr. Bach's first answer from Time was the usual brushoff letter, dated October 6, as follows:

"This is to thank you for writing to Time and to say that your communication has been sent to the department concerned for attention. Sincerely yours, Barbara Porter, for the editors."

Receipt by Mr. Bach of this brushoff letter, of course, further aroused his indignation. The complete lack of courtesy involved was, of course, sufficient to justify the feeling with which he dictated his letter of October 10 to Time, which follows in part:

"In 55 years of business, I have never read a less informative letter—it states neither the date of the communication referred to nor the department to which it was turned over. Does Miss Porter refer to the 2 communications sent your subscription end, 1 at Chicago and 1 to New York, in which I advised I did not care to renew my subscription until information had been published or furnished me direct which was requested in my letter of September 20. * * * What I want to know is exactly the information requested in my September 20 letter, enabling me to prove or disprove the following excerpt quoted from the life history of Thurgood Marshall, found on page 24 of your issue, dated September 19." (There followed a repetition of the "Nigguh, the sun ain't nevuh set on a live Nigguh in this town" quotation of Thurgood.)

"Whether this man was going to Shreveport or Kalamazoo makes no difference whatsoever, but if the thing reported happened in some western Mississippi town then in the interest of honest reporting to your many readers, you should have published the name of the town.

"I asked you to give me this information, and also requested * * * that you state as nearly as possible the month, day or year of said incident. Also, I requested that you furnish the names and addresses of persons who might be able to definitely state that Thurgood Marshall was at that place at that time.

"I have been a consistent reader of Time since volume 1, No. 1 and I find that since publication of this article, I can no longer place the same credence in your writings as had before obtained. You owe it to your thousands of readers, both North and South, to furnish information enabling interested readers to check the authenticity of this article, or if you are unable or unwilling to do this, you should so state, so that those of us who wish to accept it as true can do so, and those who wish to accept it as just another piece of NAACP propaganda can also have that opinion."

The second letter on the matter by Mr. Bach to Time drew a three-paragraph reply from Miss Marie Barry, who signed "for the editors." It was dated, December 20, and opened with apologies "for not having replied sooner." Portions of Miss Barry's letter follow:

"Until now, we have not been able to reach Mr. Marshall direct to recheck his statement regarding his experience in the Mississippi town, as reported to us. He again assures us the incident occurred, sometime during 1939 or 1940, at a railroad junction in Mississippi, but he cannot now recall the name of the place. * * *

"We greatly regret that we were unable to answer all the questions which you raised re the Mississippi incident, but we appreciate your having taken the time to write to raise them."

Mr. Bach wrote to Time again, December 28. He expressed amazement at Thurgood's lapse of memory concerning the time and place of the occasion when, according to his story published in Time, he was told by a white man, wearing a pistol: "Nigguh, I thought you ought to know that the sun ain't nevuh set on a live Nigguh in this

town." Portions of this letter are quoted as follows:

"It is inconceivable to me that anyone experiencing such a happening would not have a very vivid recollection of exactly when and where such incident occurred.

"Don't you think it is fair and honest for you to now publish, not in Letters to the Editors department, but rather under the same heading as the original article appeared, this later statement of Marshall's, thus enabling your reading clientele to place their individual value on this 'I don't recall' statement?"

On the same day Mr. Bach wrote the letter, quoted above, to Time. He also wrote to Hodding Carter. After congratulating Editor Carter on his Saturday Evening Post article about the segregation situation in Mississippi, he reviewed his efforts to obtain from Time facts to substantiate Thurgood's statement he had once been told in a Mississippi community that the "sun aint nevuh set on a live Nigguh in this town." Mr. Bach declared he had "never heard of any town" in Mississippi "with a tradition that Negroes were not allowed in it after nightfall."

The following reply of Mr. Carter to Mr. Bach is self-explanatory:

"DEAR MR. BACH: I seriously doubt that this incident ever occurred. Of course, some individual in some Mississippi town may have told Marshall to leave, but I have never known of such a town in Mississippi. I had heard that there was a community with this policy in Oklahoma, but I repeat my disbelief that there is its counterpart here. And I am sure I would have heard of such a place if it had existed.

"Cordially yours,

"HODDING CARTER."

Mr. Bach enclosed a copy of Mr. Carter's letter when he again wrote Time, January 11. Here is what he stated to Luce's NAACP propaganda weekly:

"I feel sure that with this information, you will be in position, should you so desire, to correct with your readers any false impression they might have gotten from your original article on Thurgood Marshall. Likewise, I would appreciate your answering my letter of December 28, definitely stating whether or not you intend to do so."

It seems that Time was finally smoked out on that one. Time's January 19 letter, signed by Miss Barry and published in full as follows, speaks for itself:

"DEAR MR. BACH: We are very sorry indeed that the Thurgood Marshall anecdote reported in Time's September 19 cover story continues to disturb you.

"We can assure you that from the beginning of our research on the story we have had every reason to accept Mr. Marshall's account, within the margin for error inevitable in recalling personal experiences after a lapse of some 17 years. Before Time's story went to press our researcher checked with Mr. Marshall regarding the locale of the encounter on three occasions and in each instance he stated that a Mississippi railroad junction was the place. After receiving your letter, we telephoned Mr. Marshall to find that he was leaving town for a business trip that included some time in Mississippi where he said he would try to establish the identification of the town in question. When he returned he told us that although he was still not able to give us the name of the town, several people with whom he talked while in Mississippi, had told him that such attitudes as he described could have been expressed there at the time he mentioned.

"We regret that the nature of the question which your letter raised, dependent as it is on the impressions of one individual after a considerable lapse of time, cannot be proved incontrovertibly accurate. In these terms, such a question of fact can be evaluated only on the basis of the good faith of the person involved. In these terms, Time's editors have had no reason to doubt Mr. Marshall. Nor, by the same token, do we gainsay Hodding Carter's honest opinion particularly since we, too, have the greatest respect for his integrity as a newsman.

"As we said earlier, your letter was considered for publication when it was first received and it was with such a possibility in mind that we began our rechecking. However, because of the time involved in our efforts to resolve the situation and because other letters concerned with other aspects of our story proved more representative of the reactions and interests of most Time readers, we decided not to publish it. (The format of Time does not allow for our printing the kind of statement which you suggest in sections of the magazine other than the Letters column.) We believe, however, that you will agree with us that the letters we did publish served fairly to express attitudes both pro and con Mr. Marshall's efforts toward desegregation.

"Although we must end this correspondence without our having been able to accede to your request to publish your letter, we appreciate the interest—and the patience—which has promoted your writing to share your experience and your opinions with us.

"Cordially yours,

"MARIE BARRY

"(For the Editors)."

Mr. Bach then summed up the Time situation in a letter dated January 27 as follows:

SEPTEMBER 19, 1955.

Subject: Times Cover Story.

TIME,

New York, N. Y.

GENTLEMEN: Our interchange of letters beginning with mine of September 20, 1956 and including yours of October 6, December 20, and January 19, 1956, makes Time's editors and Thurgood Marshall on one side, or Hodding Carter and myself on the other side, look pretty silly, and I don't think this classification properly applicable to either, Mr. Carter or myself.

My particular interest was to establish the truth or falsity of the statement that Marshall had been told at a railroad station in Mississippi: "Nigguh, I thought you ought to know the sun ain't nevuh set on a live nigguh in this town," hence I asked you to identify this town by name, which you have not done, even though you state your researcher went into the matter three times, and you have contacted Marshall several times since my orignial letter and once since his return from a "recent trip to Mississippi, and he is still unable to name the place."

As this reported incident was unquestionably the highlight of the article in question, I cannot conceive of any responsible editor putting his O. K. on such an article without at least saying to Marshall: "Boy, this is pretty strong stuff and I cannot conscientiously O. K. it for publication until you supply the name of the town where this thing happened." As the matter now stands you and Marshall have apparently discovered a town which 2 million Mississippians and 10 million southerns have never heard of, and which you are still unable to name.

I therefore conclude this town exists only in Marshall's head and on your pages unidentified, and in future, on matters of interest to me as an individual, I shall rely on the Wall Street Journal and U. S. News & World Report.

Very truly yours,

W. J. BACH,

President, Foundry Service Co.

Mr. Bach has rendered a distinct service to his people in showing up Time magazine for the South-hating NAACP propaganda organ it actually is. The editor of the Daily News accepts as a public duty the assignment of publicly exposing the slanting tactics of Luce publications in misleading the people of other sections of our Nation about the South and her problems.

Both Time and Life have been despicable and contemptible in dealing with the South and all things southern. It seem to be their policy, whenever anything or anybody below the Mason and Dixon's line is concerned is to tell only half-truth, and a half-truth is generally the most damnable form of a lie. Both publications garbled, colored, slanted, and distorted practically everything they published about the Emmett Till case and now they are having a veritable Roman holiday with the case of Autherine Lucy, the 26-year-old Negress "student" whom the NAACP is now trying to force into classrooms at the University of Alabama.

REA Has Brought All Modern Conveniences to United States Farmers

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

EFFECT ON THE FARMER

(Speech given at the congressional dinner on March 26, 1956, by Robert R. Wagner, member of the discussion panel of the Illinois Electric Cooperative)

Before telling the effect of these bills on the farmer, I think it would be well to review how the REA program has affected farm living.

As recently as 20 years ago, if you stood on the street corner in any of our cities, you could pick out a farmer or any of his family just by his appearance and actions. Farm life at that time was a clearly different environment than city life. I personally have heard some of our guests tell of their connections with the farm, and I imagine others have had their start on the farm. I do not know why they left the farm, but I would almost wager that some good reasons were the long hard days' work and then choring in the dark, both night and morning, with the old kerosene lantern, and the same kind of lights in the house. Then too, you don't want to forget the trips out to the little white house out in the back yard.

Prior to the REA program, I tried to get a utility company to build to my farm. They had a line only three-fourths of a mile from my house. Their superintendent came out and looked over the situation and informed me that they would build a line to my place if I would pay the cost of construction, which would be approximately $1,250. There were five other houses along the proposed line, and if any of the others were connected, I would be credited on my future light bills for their share of the construction expense. That is substantially the same policy the utility company in our area has yet today.

Since the organization and construction of our electrical cooperative, the farmer's life has been greatly changed. He no longer has to go to town to see the bright lights. All the modern conveniences are available to him that he could get in town. He has lights to see to chore in the dark. If he is a dairy farmer, chances are he milks his cows with an electric milker. He pumps water for his livestock, heats the drinking water, grinds his feed, and does many other chores electrically. In fact, he has lessened by many hours, the hard manual labor he formerly had to do.

You have heard evidence here tonight that if the proposed legislation is passed the operation expense of the co-ops would increase. You know that whenever there is an increase in the cost of a product it is passed on to the consumer or user, as the case may be. In this case, who is the consumer? Nobody but the farmer—the very person that Congress and both political parties have been so concerned about for the past 6 months. Congress thinks it is doing the farmer a great favor by refunding the Federal tax on gasoline used in farm tractors. In my case, my refund would amount to about $85 per year, providing I could convince some Government agency I was not trying to defraud them, and I would probably have to wait 6 months or more before I would receive the money. If the proposed legislation is passed my electrical bill would be increased by about $100 per year, to be added to my monthly light bill. Is that helping the American farmer by refunding $85 on gasoline tax and increasing his electric bill $100? And all this is coming at a time when the farm income has been lowered by some 26 percent, and the cost of farm machinery and equipment is ever on the increase.

In a recent appliance survey made in our State it was found that only about one-half as many appliances were in use as could be developed on most farms. With the proposed increase in cost, I am sure that very few appliances would be added, if any at all. Not only would it deprive the farmer of some of the benefits of electricity, but it would also have a reflection in the appliance industry and with the dealers.

We know there are some of you who have always been favorable to the REA program. Others, we know, have been opposed to it. My only hope is that what few remarks I have made will convince some of you that we farmers like the REA program as it is. Although the farm population has shrunk until it represents only 13 percent of the population of this country, both political parties are counting on the farm vote swinging the election in their favor. We think the program is working as economically and efficiently now as it would with the proposed changes, and we ask you to leave it alone and allow it to continue to operate as it is. Thank you.

Progress and Achievements of Working Men and Women of Oregon

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 27, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a fine and informative article from the April 1956 issue of the AFL–CIO American Federationist entitled "Oregon Reports With Pride." The authors of the article are J. D. McDonald and James T. Marr, president and executive secretary, respectively, of the Oregon State Federation of Labor.

The article details the progress and achievements of this great body of working men and women in my State—men and women cooperating together, patriotically and effectively, to maintain an American standard of living and to build up our State and Nation.

I call particular attention to those sections of the article by Mr. McDonald and Mr. Marr which emphasize the excellent scholarship program of the Oregon State Federation of Labor to encourage outstanding high-school boys and girls to go on to colleges of their choice, and the sections which discuss the need to preserve for all the people such basic natural resources as the waterpower reserves of Hells Canyon of the Snake River.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON REPORTS WITH PRIDE

Chartered in 1902, the Oregon State Federation of Labor is now in its second half-century of service to the working people of our State. Year by year, the State federation of labor has kept pace with the advances and changes in Oregon's industrial and social relations. In a number of instances we have led the way.

Our record of participation in public affairs is a lengthy one. But this is not to say that the State federation of labor has neglected labor's bread-and-butter problems.

Today, where can one draw a line between the workingman's bread-and-butter problems and the vital affairs of community, State, and Nation? Such is the complexity of modern society that it is all but impossible to draw such a line.

Oregon has 675,000 gainfully employed citizens. About 250,000 of them are members of AFL–CIO unions. Trade unionists and their families comprise a large part of the State's total population.

The Oregon State Federation of Labor has held annual conventions since its establishment. The policies and programs are set by the delegates at the conventions. Between conventions the affairs of the federation are in the hands of an executive board representing all areas of the State and an elected executive secretary. All officers are elected for 2-year terms.

President McDonald has served since 1943. Executive Secretary Marr, who is the executive officer in charge, has served since 1944. The executive secretary has two assistants. One is the president of the State Federation of Labor, who is employed as a full-time fieldman. The other assistant is the director of research and education. The Oregon State Federation of Labor also has a union-label director.

By direction of the 1955 convention, employment on a full-time basis has been given to an able woman whose job is to promote political education among the feminine members of the families of trade unionists. The convention authorized a 1-cent increase in per capita tax to carry out this important work.

The union-label director of the State Federation of Labor is responsible for putting on union-label displays at the State fair and also at county fairs. Our union-label exhibits at fairs are proving to be a most worthwhile investment. Union employers as well as the members of our organizations are beginning to see the value of union-label promotion.

Oregon labor gives a great deal of attention to the field of legislation. Substantial gains have been made in workmen's compensation and unemployment insurance. In 1953 we successfully beat down attempts to adopt so-called "right to work" legislation. That same year Oregon labor tried but failed to prevent the passage of an antipicketing law. Although the State's highest court branded the most vicious part of the law unconstitutional, other bad features of the antipicketing law continue in force.

If in 1956 the working people of Oregon can elect more friendly legislators, repeal of the statute may result in 1957. This law has been a definite boon to lawyers, but experience has shown that it has failed completely to serve the best interests of either workers or employers.

For many years the Oregon State Federation of Labor has been active in the fields of public education and taxation. The federation's work in regard to taxation has played an important part in giving Oregon one of the few comparatively progressive tax systems in the Nation. Attempts to foist a sales tax upon the citizens of our State have been defeated at the polls five times.

A State federation of labor representative assigned specifically to taxation and educational affairs is in constant attendance at the meetings of the legislature's taxation and education committees during the sessions of the lawmaking body. Between sessions of the legislature this representative follows the work of interim committees in the two areas.

The Oregon State Federation of Labor pioneered in college scholarship awards for high-school students. Last year was the ninth in which students were given help in meeting their college expenses. We gave three $500 scholarships and made three additional awards of $100 each.

All the scholarship contestants are judged on their records as students and on their knowledge and understanding of unions and management and of the roles they play, singly and together, in the American economy. The contest judges are always educators of the highest standing in the community and are not in any way connected with the operation of trade unions. Our annual scholarship program is made possible by wholly voluntary contributions by local unions affiliated with the State federation.

How are Oregon's unions progressing in the organization of the unorganized? The anti-picketing law has slowed effective organizational activity, especially in the service trades. However, even the service unions have been able to hold the gains they had before the law curbing picketing was enacted in 1953.

Back in 1939 the Oregon State Federation of Labor offered to sit down with the employers and arrive at equitable settlements of our differences around the conference table instead of the courtroom. This spade-work has paid. Most employer groups in our State deal fairly and honestly with the unions to which working people belong. There are a few exceptions, of course.

Oregon labor's organizational weak spots are found chiefly among department-store clerks, office workers, teachers, and public employees (especially outside of Portland) and in banking, insurance, and related fields.

In 1954 the working people of our State showed a determination to take a very active part in politics. As a result of this determination, for the first time in 40 years a liberal Democrat was elected to the United States Senate from Oregon. This year we predict that these same voters, plus the newly registered and those who will have switched their registrations, will reelect that great liberal, Senator WAYNE MORSE. No difficulty is expected in reelecting Congresswoman EDITH GREEN of the Third District.

As for other congressional tests in this year's balloting, no predictions can be made now because it is not yet known who the candidates will be. But in every contest the working people will be backing those who deserve support and opposing those whose records show that they are against labor's objectives.

Wagewise, Oregon is near the top of the Nation for production workers. Unionized employees in our State do a good day's work for a day's pay. Sound relations between unions and employers are an important contributing factor. In local union elections in Oregon the members of our affiliated organi-

zations, in almost all instances, have chosen excellent officers.

We have had few major strikes. On the other hand, our unions have demonstrated that, while always preferring to settle differences at the bargaining table, they can be tough when the occasion obviously demands it.

We are certain that good times are in store for all the trade unionists of our State in the days to come. Surely much more will be accomplished in Oregon, as elsewhere in the Nation, now that the merger of the American Federation of Labor and the Congress of Industrial Organizations has been effected. We expect little difficulty in working out merger plans in our State. When the amalgamation has been completed in Oregon every labor official will be able to concentrate on the problems of those we represent and on the vital task of organization of the unorganized workers.

The Pacific Northwest has grown tremendously during the past decade. We will experience still greater growth if the Federal Government again recognizes the need for Federal power development in a way that will utilize major streams for multipurpose development. Federal power development has provided the base for the development and expansion of private industrial enterprise in the Pacific Northwest. The record clearly shows that, as industry has grown, the private utilities have prospered.

The executive secretary of the Oregon State Federation of Labor is also the president of the National Hells Canyon Association. He has headed this group for more than 2 years. It has the support not only of organized labor in Oregon but also of unions throughout the Pacific Northwest and some distant areas. The Hells Canyon Association is geared to carry the Federal-versus-partnership development fight to the highest Court in the land if that is what should be required to preserve for all time the Nation's best remaining natural multipurpose site.

Members of organized labor who have selected Oregon as their adopted State, as well as our native-born wage earners who know no other State, are united in their belief that Oregon is the finest State in which to live and work.

The Needs of Our American Reservation Indians

EXTENSION OF REMARKS

OF

HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. HALEY. Mr. Speaker, at this time when we are spending billions of dollars on foreign-aid programs to assist the people of other nations, we should begin to give serious thought to the needs of our own people, particularly the American Indian.

In this session of the Congress, Members from both sides of the aisle have expressed concern over minority groups. Here is a minority group, the American Indians who live on reservations, who are in reality the first citizens of our Nation, and yet they have received little consideration in their problems and in their efforts toward economic and social betterment.

As a Member of the House of Representatives and as chairman of the Subcommittee on Indian Affairs, I would be derelict in my duties if I did not call to your attention the serious needs of our American reservation Indians. In the past few years, many writers and speakers have pointed out that in many instances the reservations on which most of our American Indians live are, in fact, concentration camps. You may consider such a statement to be overly harsh or exaggerated, but I can assure you that in many cases it is a true analogy. It is high time that we begin to do something about fitting the American Indian into the economic and social life of our communities, States, and Nation.

A step has been taken in this direction. It is the voluntary relocation program of the United States Bureau of Indian Affairs. I sincerely hope that this program will have the support of the Members of this Congress. Under leave to extend my remarks, I am including in the Appendix of the CONGRESSIONAL RECORD two items, an explanatory statement which defines the voluntary relocation program and a very pertinent article which appeared in the Boston Christian Science Monitor that reviews this important program. I sincerely hope each Member of the Congress will take the opportunity to study these articles.

THE VOLUNTARY RELOCATION PROGRAM OF THE BUREAU OF INDIAN AFFAIRS

The Bureau of Indian Affairs' voluntary relocation program is designed to assist Indians from reservations to settle in communities away from the reservation, secure permanent employment, and adjust satisfactorily to the new living and working conditions encountered. During fiscal year 1955 approximately 3,461 Indians were assisted to relocate. This number included 2,656 persons in 708 family groups and 805 unattached men and women. Of the 3,461 who received relocation assistance, financial assistance to cover all or part of the costs of transportation to the place of relocation and short-term temporary subsistence at destination was provided to 2,415 Indians, in addition to all other relocation services. The remainder of 1,046 financed themselves but were extended all other relocation services including assistance in obtaining employment and housing at point of relocation.

During the fiscal year 1955 field relocation office staffs were in contact with over 3,500 employers. Indians placed in various jobs earned average beginning hourly wages of $1.62 for men and $1.07 for women. Most women were employed on a guaranteed wage, plus piecework rates. Average rates quoted for females do not reflect piecework bonus rates.

Interest in relocation has increased among Indians. This has been stimulated largely by increased awareness of opportunities offered through the program, and by letters and other reports received on the reservations from Indians, who relocated previously, relating their successful experiences. The presence of several thousand Indians already relocated in the Los Angeles and Chicago urban areas has assisted greatly in removing fears of loneliness and homesickness. More applications for relocation have been received during each fiscal year in which the program has been in operation than can be handled with the funds available.

The decision to relocate is optional. If an individual Indian or family group is interested, application is made to the agency relocation officer. This is followed by discussion and arrangements which require time up to a month or two, giving the applicant opportunity to understand what is involved in the plan, and perhaps to reconsider.

Relocatees have been placed in employment with several hundred different employers in diversified industries and, in general, gave good satisfaction as workers. The capabilities of Indian workers are becoming better known and many employers are asking for additional people. Letters have been received from a number of employers testifying to their satisfaction. This success in adjustment as employees has secured acceptance of Indians as workers in some firms which had never employed Indians before, and has played a big part in the success of the relocation program.

Experience has demonstrated that successful relocation involves much more than securing employment. Relocation offices provide realistic counseling and guidance to relocatees, assistance in securing housing, information concerning community facilities and, when necessary liaison with churches, schools, and appropriate local agencies. It is Bureau policy that Indians who relocate should use established local agencies rather than rely on Bureau staff. Local community groups have cooperated fully and newspapers have given their support to the voluntary relocation program. As a result, a survey made on reservations in November 1954 revealed with less than one-third of the Indians assisted to relocate during the period July 1, 1952, through June 30, 1954, had returned to live on the reservation. And even some of these have gone out a second time.

In December 1954 a new responsibility was given to the Bureau's branch of relocation—that of developing and activating a program of relocation with vocational training for members of tribes for whom terminal legislation acts have been passed. The new relocation and vocational training program was explained to a number of training institutions, and it was, without exception, received with interest and a desire to cooperate. From March 1 through June 30, 1955, agency relocation officers took a total of 170 applications and completed plans for the relocation and vocational training of 113 accepted applicants.

The response of the Indian people to this new program, as well as to the Bureau's older voluntary relocation program, indicates that both are filling an important need in Indian lives, and that through these efforts many Indians are being assisted to achieve the living standards wished for them by people of sympathetic and humane intent.

[From the Christian Science Monitor of February 21, 1956]

JOHN BROWN-HORSE RELOCATES—AN INTIMATE MESSAGE FROM THE PACIFIC COAST

(By Kimmis Hendrick)

LOS ANGELES.—It is any morning. The large waiting room is jammed with men and women facing a new world.

These people—young, most of them—are as American as anybody ever was in the whole long history of the continent. They are Sioux and Apaches, Crows and Navajos. They are Papagos, Choctaws, Taos Indians, Creeks. Their Anglicized surnames are such as Afraid-of-Bear, Stands-by-Him, Kills-Pretty-Enemy, or else as usual as Smith or Lopez or Jones.

This is the Los Angeles field placement office of the United States Bureau of Indian Affairs, Department of the Interior. These men and women have chosen to leave their reservations, to start again in a big city where employment opportunities promise a toehold on completely new economic and social experience.

Mary Nan Gamble, head of the office, has seen a lot of people move themselves about in this United States and take up new homes, new challenges, new futures. She says Indians do it just as successfully as anybody else.

Mrs. Gamble stresses that the Indian Bureau relocation program is voluntary. It is a Congress-backed program which, for 4 years now, has been offering help to reservation Indians who want to adopt the pattern of life characteristic of the larger American world at midcentury.

I saw the way the relocation program begins to work when I visited the Navaho Reservation at Window Rock, Ariz.

A man comes to the reservation relocation officer and asks, "Where are there opportunities?" And he's apt to add, "I'm tired of seasonal work. I want something steady. And my wife wants a house and we want our children nearer school."

They discuss the possibilities. Then the relocation officer says, "Go home and talk it over with your wife." Some days later the officer goes to the Indian's home. He points out in considerable detail the bad things about relocation in a big city.

There are, as a matter of fact, four cities involved—Chicago, Denver, Los Angeles, San Francisco. The relocation officer is well aware that getting adjusted to these places is less easy than falling off a log. He urges the family to think about it.

Sometimes it takes 6 months to reach the point where the family is set to go. But the relocation officer, meanwhile, has got things in order. He has checked the Indian's work record. Maybe he has talked with the tribal police. He knows about the family's health situation.

When the day comes for the Navaho, his wife and children, to leave, say, for Los Angeles, there exists a confidential information sheet about him and his family which is already in Mrs. Gamble's hands.

The Indian and his family, if they need full help from the Government to make the move, get transportation to Los Angeles plus $4.50 per day apiece for subsistence enroute. After they get here, they get money to meet their needs for the first 4 weeks. Then they are on their own. Some 200 relocatees a month come into the Los Angeles office.

Numerous friends of the Indian peoples have shown concern over this relocation program. They point out that some of the families have a hard time adjusting to city ways, and suffer real want. Some go back, disheartened and disillusioned, to the reservations. Some add to the local slum problem.

Mrs. Gamble candidly admits to feeling these concerns herself. It is hardly possible for the average white American, she says, to conceive of the adjustment involved for a family reared, say, in a hogan. The typical American would scarcely find it easier to move suddenly into an Eskimo village with all its differences in culture, economy, language, outlook.

What is remarkable, then, in the success with which most relocatees are making the change. Indians are not aggressive people. They often hide their individualism behind a reserve inculcated by a tradition of deep religious implications, a tradition that puts mutual regard ahead of self-advancement. But they are adaptable people, given the chance and given encouragement.

"I'm John Brown-Horse," a young man tells the receptionist in the field office waiting room, "My brother is here in Los Angeles earning $1.90 an hour. I've got my family out in the car and I want a job."

Mrs. Gamble didn't know John was coming. But her staff gets right to work. A place for the family to spend the night. Next day a job for John—and this is easy, provided he'll take anything to get started, and usually he will. Then a more permanent place to live.

This may not be the easiest experience John ever had, but there is one thing John likes about Los Angeles, and he writes about it to the folks back on the reservation: "Nobody here calls us 'dirty Indians.' There aren't any signs saying, 'Indian business not solicited.' They treat us just like everybody else."

Nixon Is Favorite of Ohio GOP Delegates

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. AYRES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Akron Beacon Journal of Sunday, March 25, 1956:

NIXON BIG FAVORITE OF OHIO REPUBLICAN DELEGATES, POLL SHOWS

(By Clyde Mann)

Vice President RICHARD NIXON will have almost unanimous support of the 56 Ohio delegates at the Republican National Convention in San Francisco August 20.

NIXON'S tremendous popularity with Ohio Republicans is reflected in a poll of the 56 GOP delegates taken by the Beacon Journal.

Although the delegates will not be elected until May 8, all of the 56 candidates are assured of election. None is opposed.

All are pledged to Senator BRICKER, but this is only to honor BRICKER as the GOP Ohio favorite son. BRICKER is in turn pledged to President Eisenhower.

Better than 65 percent of the delegates answered the poll which asked these two questions:

"Will you support RICHARD NIXON for Vice President at the Republican National Convention?

"Do you think national Republican leaders should come out for NIXON for Vice President without any reservations?"

Among those who answered both questions were Senator Bender, Representative Clarence Brown, Speaker of the Ohio House Roger Cloud, State Representative Robert A. Taft, Jr., Ohio Senate President pro tempore C. Stanley Mechem, and a number of GOP county chairmen.

All of these are for NIXON 100 percent. They said they were happy to sign their names to the answers.

Concerning the second question—whether GOP leaders should insist on a second term for the Vice President—the delegates were unanimous in their support for NIXON.

Not one delegate answering the poll voted "no" on the question asking if they would support NIXON for Vice President.

One said "I prefer him," another wrote "Yes, but let's keep the Dems guessing until convention time and give NIXON a little breather."

Representative Brown of Blanchester, national GOP committeeman and a powerful figure at many Republican conventions, said:

"I will of course, confer with other Ohio delegates on any action that may be taken in San Francisco, but at the present time, I expect to support NIXON for renomination unless Mr. Eisenhower demands someone else. However, it seems to me he has clearly let it be known that he wants NIXON for his running mate."

State Representative Taft said: "At present time at least I am of the opinion that I will support Mr. NIXON for Vice President. I think the national Republican leaders have come out for him to the extent possible and that the President's position to the effect that he cannot act until he has been nominated himself is a sound one."

Speaker of the Ohio House of Representatives Cloud said:

"If a convention is to have any freedom of authority, then party leaders should not precommit the convention before it convenes. Moreover, public and political situations have a habit of changing overnight on some occasions.

"However, I am a strong admirer of NIXON and feel that he should be nominated if the situation at convention time is comparable to that existing now. I really can't understand why all this NIXON furor exists at this time, anyhow."

Senator BENDER wrote two big "yeses" alongside the questions. He returned his questionnaire immediately by airmail.

One delegate, H. P. Lauritzen of 2800 Market Avenue North, Canton, said NIXON is as "nearly a unanimous choice for Vice President as Mr. Eisenhower is for President."

He suspects the organized propaganda against NIXON comes from "elements of Communists, fellow traveler, Trumanists and pseudo liberals."

"There is no single Republican anywhere who can add greater strength to the ticket than NIXON," Lauritzen said.

Only one delegate said he had some doubt although very little, concerning NIXON. "NIXON is too young and inexperienced and not dry enough behind the ears to fill the job of President as I would wish should Mr. Eisenhower pass on," he said.

But in the next paragraph of his note on the questionnaire, the delegate said he would support NIXON if Mr. Eisenhower insisted.

All delegates from the 14th and 16th Congressional Districts answered the poll. All are for NIXON.

Former State Senator Carl D. Sheppard said:

"You ask me if I will support NIXON? The Lord only knows. If the convention were today and I was in a position to vote, I would vote for him. I reserve the right to change my mind."

James L. E. Jappe, of Cleveland, has attended every Republican convention for years. An attorney, Jappe has had much experience in dealings with delegates and convention officials. He said:

"It looks like the Republican convention could be conducted by mail as the platform will be the accomplishments of the Eisenhower administration."

Only one of the delegates mentioned another possible candidate should NIXON refuse to run or is pushed out of the running. That delegate prefers Secretary of Treasury George Humphrey if NIXON can't have it.

The Right To Work

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Farm Journal:

THE RIGHT TO WORK

Seventeen States have adopted what are called "right-to-work" laws. These laws say, in effect, that no labor contract shall be valid if it deprives a man of a job, either

because he belongs to a union or because he does not.

The leaders of labor do not like these laws, and demand their repeal. They want to prevent other States from adopting similar laws, and to repeal the 17 now in force.

Some months ago Secretary of Labor James P. Mitchell publicly took the side of the union leaders. He is thus saying that for a man to hold a job it is all right to compel him to belong to a private organization and pay dues to it.

Farmers have a direct stake in the labor laws. The wages of labor enter into the price of everything farmers buy. Wages make up a big part of the high costs of getting farm products to the consumer. Many farmers have occasion to hire union labor directly, while in a few situations farm labor itself is organized.

Above all that, farmers have every reason to want to see tyranny blocked and justice upheld, so that Americans may always enjoy equal opportunities.

Years ago, employers sometimes not only refused to hire a union member, but compelled their workers to sign agreements not to join a union, under penalty of being dismissed. Union leaders called this the yellow-dog contract, and fought it to the Supreme Court, where it was declared illegal.

Now the union bosses want exactly the same principle applied in their favor. They want legal power to make contracts that can prohibit any person from getting or holding a job, unless he pays dues to them.

Their main argument is that nonmembers are free riders, who get the alleged benefits of union organization without paying a share of the cost. Let's look at that:

The Farm Bureau and Grange have benefited all farmers. Should you be prohibited from farming unless you pay dues to one or the other?

The Boy Scouts, the Legion posts, the service clubs, and scores of organizations do work which benefits many. Should memberships be made compulsory on that account? And should children be barred from school if they come from families which do not pay taxes?

A labor union is no different from any other private organization. It may benefit its members. But if the services it performs and the character of its leadership are not enough to persuade a worker to join, no law of the Nation nor of any State should deny his right to work because he refuses.

The freedom of any person to work wherever he can get a job, at whatever wages he is able to earn or willing to take, is a fundamental American right. It is one of the blessings of liberty for which we established a Nation.

The issue may be up in your own State legislature this spring. If so, you will defend your own liberties if you tell your State senators and representatives what you think about it. Let the time never come when you can't farm, or hire a man to help you, unless the overlord of some union monopoly has received his dues, cash in advance.

Some of the Tennessee Valley Authority's Concealed Activities

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. TABER. Mr. Speaker, in response to my request for information as to the commitments made by the Tennessee Valley Authority for new steam electric generating units, the Comptroller General has today furnished me with an astounding report on recent actions of the TVA.

This report discloses the utter disregard the Tennessee Valley Authority holds for the Congress of the United States. It exposes the deliberate withholding from the Congress by TVA of important information on the actions of TVA that are essential to the Congress if it is to properly perform its duties.

This action of TVA appears to be a calculated attempt to deceive the Appropriations Committee of the House at a time when important decisions on TVA appropriations were being reviewed by that committee.

On March 1, 1956, the Tennessee Valley Authority witnesses appeared before the Public Works Subcommittee of the House Appropriations Committee. Testimony was given with respect to construction of an additional steam electric generating unit at the John Sevier plant, and of the issuance of letters of intent for acquisition of major equipment for this unit.

It was also testified that two additional units were desired for the Johnsonville plant of TVA. The budget message indicated that the financing of these two units was expected through the issuance of revenue bonds under measures now being considered by congressional legislative committees.

The Comptroller General's report to me shows that on January 17, 1956, the Board of Directors of the Tennessee Valley Authority authorized letters of intent for 6 additional generating units which with the John Sevier unit would make 7 additional units, totaling 1,170,000 kilowatts at an estimated total cost of $178 million worth of units without advising the Congress and asking for a review and approval of such tremendous additions to the TVA system.

The 1,170,000-kilowatt capacity of these 7 units is equal to more than half the total capacity of all the TVA generating plants in 1948, and will be capable of producing 75 percent as much energy as the TVA system produced in fiscal year 1948.

The Comptroller General's report to me illustrates vividly that current laws, and their peculiar, and to me, erroneous interpretation by TVA counsel and TVA proponents, do not give effective control of TVA operations.

TVA present annual gross revenue is nearly $190 million, or $40 million more than the $150 million Congress was told that the entire TVA development would cost when the TVA Act was passed. Over $100 million of this gross revenue comes out of sales to the Federal Government agencies, and therefore, out of the taxpayer's pocket.

Present net revenue available for plant expansion by TVA without congressional approval, if we are to accept TVA interpretation of the law, amounts to around $100 million annually for the next 2 years.

In view of this utter disregard of the Congress by TVA, the time is long overdue to review and revise the TVA Act, so that there is no question as to congressional control of its activities.

The following is the Comptroller General's report to me:

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, March 26, 1956.

Hon. JOHN TABER,
Committee on Appropriations,
House of Representatives.

DEAR MR. TABER: Reference is made to your letter of March 21, 1956, enclosing a copy of the reports of the Appropriations Committee in connection with H. R. 10004, and directing our attention to the language concerning the Tennessee Valley Authority in both the majority and minority reports. You also request specific information pertaining to TVA's commitments of funds for power projects or parts of projects, the amounts of TVA's revenues in recent years, and the portion of such revenues that resulted from the sale of electricity to the United States Government.

A considerable portion of the language to which you directed our attention, as well as much of the record of the TVA hearings held March 1, 1956, before the Subcommittee on Public Works Appropriations, involves the basic questions of whether TVA has the statutory authority to use its power revenues to install additional generating units at existing powerplants without specific and prior approval of the Congress. The part of the law in question is the following language contained in title II of the Government Corporations Appropriation Act, 1948:

"None of the power revenues of the Tennessee Valley Authority shall be used for the construction of new power-producing projects (except for replacement purposes) unless and until approved by act of Congress" (61 Stat. 577).

This letter is not addressed to the question of TVA's statutory authority, which has been the subject of considerable discussion and disagreement, except to recommend that the present law be amended to clearly state the intent of the Congress with respect to its control over TVA's capital expenditures for power facilities. We believe such legislation is necessary at this time because, in our opinion, (1) the present law is not clear in this respect, (2) there has been a substantial change in the nature of TVA's capital expenditures for power facilities between 1948 and 1955, and (3) the present law, as currently applied, does not give the Congress effective control over TVA's expenditures of public funds for power facilities. It is our view that the Congress can most effectively control expenditures of this character through appropriations; however, if the Congress wishes TVA to use its power revenues, or funds obtained from other sources, to construct or acquire power facilities, it should require TVA to obtain specific and prior authorization from the Congress for such facilities.

There follows the specific information that you requested, as well as some comments on the significant change in the nature of TVA's power facilities between 1948 and 1955.

1. TVA's budget program for fiscal year 1957 was transmitted to the Bureau of the Budget on September 28, 1955, and provided for the use of TVA corporate income to start the installation of 5 additional generating units at 3 existing steam plants. These generating units are:

John Sevier, unit 4.
Johnsonville, units 7 and 8.
Gallatin, units 3 and 4.

Prior to the date of the budget transmittal, TVA had issued letters of intent covering the acquisition of major equipment for unit No. 4 at the John Sevier steam plant. These letters of intent provide for cancellation only upon payment of stipulated costs which are currently accruing against TVA. On September 22, 1955, the TVA Board of Directors, by a 2 to 1 vote, approved the

awarding of these letters of intent based on the advice of the TVA General Counsel that such action was authorized by law.

The Bureau of the Budget did not approve TVA's use of corporate funds to start these 5 units; however, the Bureau did make the following provision in the President's budget, dated January 16, 1956, for TVA expansion:

John Sevier, unit 4 (by supplemental appropriation for 1956 and by issuance of revenue bonds under proposed legislation).

Johnsonville, units 7 and 8 (by issuance of revenue bonds under proposed legislation).

On January 17, 1956, the TVA Board of Directors, by 2 affirmative votes (1 director abstaining), authorized the awarding of letters of intent covering the acquisition of major equipment for 6 additional generating units—units 3 and 4 at the Gallatin steam plant and units 7, 8, 9, and 10 at the Johnsonville steam plant.

The total cost of the equipment covered by the letters of intent that have been authorized for all 7 units is approximately $30 million. Other pertinent information pertaining to these seven units is summarized.

Plant	Unit	Capacity (kw's)	Estimated cost
John Sevier	4	180,000	$28,000,000
Johnsonville	7 and 8	270,000	44,000,000
Johnsonville	9 and 10	270,000	39,000,000
Gallatin	3 and 4	450,000	67,000,000
Total		1,170,000	178,000,000

In effect, the TVA Board of Directors has authorized the initiation of a major expansion program which will add 1,170,000 kilowatts of installed capacity to its system and will cost an estimated $178 million. The expansion program has not been reviewed or approved by the Congress, and further, it includes 4 units which have not been approved by the Bureau of the Budget.

2. As noted above there has been a significant change in the nature of TVA's power facilities. Prior to 1948 TVA was essentially a hydroelectric power system, and additional generating units were of the size of 10,000 kilowatts to 70,000 kilowatts each. Since 1948, however, TVA has added 7 large modern steam plants, and current additional generating units are of the size of from 112,500 kilowatts to 225,000 kilowatts each. The future addition of a number of steam-electric generating units of this size, or larger, represents a substantial increase in generating capacity. At June 30, 1948, the TVA power system was 17 percent steam-electric and 83 percent hydroelectric; after completion of generating units under construction at June 30, 1955, the TVA power system will be 63 percent steam-electric and 37 percent hydroelectric (these percentages, of course, do not include the 7 steam-electric units discussed above).

Further, a single steam-electric generating unit today is very large (the Gallatin units are 225,000 kilowatts each). A single steam-electric generating unit of 225,000 kilowatts is larger than most present-day hydroelectric power plants or most steam-electric power plants in 1948. In 1948 the TVA system had only 2 powerplants with an installed capacity as large as 225,000 kilowatts. As of June 30, 1955, excluding TVA's 7 modern steam plants, the TVA system consisted of 44 hydroelectric powerplants and 8 steam-electric powerplants; however, only 3 hydroelectric plants and 1 steam-electric plant have an installed capacity of over 225,000 kilowatts. The average installed capacity of the 44 hydroelectric plants is 80,000 kilowatts and of the 8 smaller steam-electric plants is 55,000 kilowatts. It is significant to note that technical advancements are still being made rapidly in the size of generators, as shown in the March 15, 1956, issue of Public Utilities Fortnightly, which reports:

"The electric utilities now have 5 generators with name plate ratings of 300,000 kilowatts or over on order; Consolidated Edison has ordered two 335,000-kilowatt units for installation in 1958–59."

At June 30, 1948, the TVA system had an installed capacity of 2,567,402 kilowatts and during fiscal year 1948 average gross generation was 65 percent of installed capacity. The 7 additional units involving the letters of intent discussed above have an installed capacity of 1,170,000 kilowatts, and, being steam-electric units, are sometimes capable of an average gross generation of over 100 percent of installed capacity (during fiscal year 1955, Johnsonville, Shawnee, and Widows Creek all had an average gross generation of over 100 percent of installed capacity). Therefore, the present expansion program of 7 additional units, which has not been reviewed by the Congress, involves installed capacity equal to 45 percent of the entire TVA system at June 30, 1948.

3. It is clear that the language of the 1948 Appropriations Act quoted above prohibits TVA from building a new steam-electric plant at a new location without prior congressional approval; however, it should be realized that TVA has the potentiality for expansion at some of its existing steam plants. The largest potentiality is probably at its Gallatin steam plant which at present is a 2-unit plant with an installed capacity of 450,000 kilowatts, but which could be expanded to a 10-unit plant. The following information pertaining to the Gallatin plant is contained in TVA's annual report for fiscal year 1954 (page 16):

"TVA gave special consideration to the design of the main control and instrument switchboard, since it could ultimately become the centralized control board for a 2,500,000-kilowatt station (the present 1,440,000 installed capacity planned at Kingston makes it the largest station in the world at present)."

4. The final point is a discussion of the financial significance of TVA's power revenues. The TVA system is the largest single integrated electrical system in the country, and it follows that its power revenues are substantial. In the last 5 years, during which period steam generation has become an important factor, there has been a tremendous expansion in TVA's power system—primarily to supply the power needs of the Atomic Energy Commission. The following tabulation summarizes this growth:

Year	System installed capacity June 30 (kw's)	Power revenues fiscal year		
		Total	Federal agencies	All other
1951	3,181,000	$70,329,580	$8,162,812	$62,166,768
1952	3,859,910	95,004,390	25,230,407	69,773,983
1953	5,102,985	104,877,869	31,505,622	73,372,247
1954	6,075,685	133,947,808	54,368,480	79,579,328
1955	7,809,985	188,162,989	102,962,859	85,200,130

In addition to the rapid growth in TVA's power revenues, as shown above, TVA estimates that its power revenues will continue to increase and that in fiscal year 1957 they will be $231,550,000.

It is significant to note the increase in TVA power revenues that has resulted from the sale of electricity to Government agencies ($8,162,812 in 1951 and $102,962,859 in 1955). During fiscal year 1955 such revenues represented 55 percent of TVA's total power revenues.

Based on estimated figures in TVA's statement of source and disposition of power income appearing in TVA's budget program for 1957 submitted to the Congress, TVA's net power proceeds for fiscal years 1956 and 1957 will be approximately $100 million each year. Such amounts are available for the construction and acquisition of power assets and for the repayment of the Government's investment in the power program. The budget program contemplates that TVA will repay to the Government $59 million in 1956 and $75 million in 1957 out of power revenues; however, it should be realized that the actual amount that will be repaid to the Government will be determined by the TVA Board of Directors and will be the amount of money which in the judgment of the TVA board will not be needed in the conduct of the TVA power operation. As of June 30, 1955, TVA was several years ahead of the minimum-repayment schedule required by the law and was 1 year ahead of an average repayment schedule based on a 40-year amortization period.

A copy of this letter is being sent to Gen. Herbert D. Vogel, Chairman of the TVA Board of Directors.

Sincerely yours,

JOSEPH CAMBELL,
Comptroller General of the United States.

E. Burke Finnerty

EXTENSION OF REMARKS
OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. TUMULTY. Mr. Speaker, the Hudson County Bar Association of which I am a member, lost one of the outstanding members of the bar of New Jersey in the death of E. Burke Finnerty. Mr. Finnerty was a preeminent trial lawyer. He was known to be as a generous, wise, and kind-hearted counsellor. In his loss there is a void that no man can fill. Because of his service to city, State, and country I felt it my duty to inscribe on the pages of the Nation's records this lament for a great American. The memorial resolution of the Hudson County Barf Association, introduced by Louis R. Kagan, a distinguished member of the Hudson County Bar Association, formalizes the bar's heartfelt grief at the loss of one of its giants. The memorial resolution of E. Burke Finnerty, Esq., is as follows:

MEMORIAL RESOLUTION

E. Burke Finnerty died on Friday, February 10, 1956, at the age of 66. Mr. Finnerty was a resident of Jersey City during his entire life, having been born in the second ward which is the old Horseshoe section of Jersey City. He was the son of the late Dr. John Finnerty, a prominent Jersey City physician, who practiced in the old Horseshoe section for many years.

Mr. Finnerty was admitted to the practice of law in February 1914, and became a counsellor in 1920. He had been a special master of the former court of chancery and had been a Supreme Court Commissioner. He attended St. Peters Prep and played on the varsity football and basketball teams for 2 years and was active in both debating and dramatics while there. He later attended St. Peters College and Fordham Law School from which he received his degrees.

He enlisted in the United States Army and served as captain in the Ordnance Section of the United States Army in Washington during World War I.

His activities included civic, church, and fraternal groups, and he was a member of

the Jersey City Council, Knights of Columbus, fourth degree, American General Assembly, Knight of Columbus, Jersey City Lodge of Elks, and Skinner Post, VFW.

In addition to practicing in New Jersey he was admitted to practice in the Federal courts in New York and before the United States Supreme Court. He handled litigation involving negligence in the New Jersey State and Federal courts and in the United States Federal Court, Southern District of New York, and specialized in railroad negligence cases.

His first big case came years ago when he was successful in securing a judgment in the case of Irons against the Erie Railroad for $40,000 for a leg off and from then on he specialized in railroad negligence actions in which he was quite successful and built up a reputation as one of the best railroad negligence lawyers in the State.

He formed a partnership in the early years of his practice with the late Charles Hershenstein under the firm style of Hershenstein & Finnerty and their first law clerk was the late Commissioner James F. Murray, Sr., father of the present State Senator, James F. Murray, Jr.

In 1930 the partnership of Hershenstein & Finnerty dissolved and he associated himself with Louis R. Kagan and later was joined by Louis Chodash which association continued until the time of his death.

He taught at St. Peters Prep and also taught at John Marshall Law School where he was professor of torts.

He is survived by his wife, the former Mary T. Craffey; a son, E. Burke Finnerty, Jr.; a daughter, Sister M. Patricia Ann, O. P.; and two sisters, Mrs. Lucy McArdle and Mrs. Rita Caddigan.

Burke Finnerty was one of the friendliest lawyers who at all times counselled the younger members of the bar and gave to them the benefit of his knowledge and experience in railroad and negligence cases. He was consulted by many of the practitioners whenever they had an involved railroad negligence or general negligence case and he always helped them out. He had a keen ability to sway jurors to come over to his way of thinking and sympathize with his clients. He was quite successful in that respect.

The late Governor A. Harry Moore, who also taught at John Marshall, once said of Burke Finnerty, "He is one of New Jersey's greatest lawyers." His passing leaves a great void, not only for his family but for his close associates who knew him well and had the privilege of being his friends; be it therefore

Resolved, That the above resolution be spread upon the minutes of the Hudson County Bar Association and a copy of this resolution be sent to his family.

Billions for National Military Security—Dollars and Lethargy for Civil Defense

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. HOLIFIELD. Mr. Speaker, under unanimous consent, I am having printed in the Appendix an excerpt from the March 26 issue of the American Legion's National Legislature Bulletin on the important problem of our lack of an adequate civilian defense:

Our military forces are pretty well prepared to wage retaliatory war all over the world, if necessary, but it appears that most Americans at home have lost all perspective of the need to band together in common defense of national survival should other military might unloose devastation upon our homeland. If such an attack should come, it would be directed with one objective in view—to destroy the Nation. It's just as simple as that. How could that be done? First, by the mass elimination of so many people that the will to fight back would be destroyed, and, secondly, by the destruction of the industry that makes the tools with which we could fight back—should the people still desire to do so. A gloomy outlook.

Civil defense has been practically harassed or scared to death. Few believe in it. Even the Congress is reluctant to appropriate funds for the present system. The people have not gotten down to serious business about it. Sirens are sounding so often in cities (Washington, D. C., for example) that scarcely anyone would have the slightest knowledge that this time, it's the real thing. Perhaps more of the rest of the program is held in the same light.

There has to be some new and acceptable approach to the business of civil defense, or should we call it national survival—something that the American people understand and will participate in. Much education is needed. We might start with the closing sentence of the Declaration of Independence, "And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

What to do about it is something else, but there doesn't appear to be any alternative to a brand new start. Civil defense or national survival, whatever we call it, has to have a place in the sun. The American Legion proposes that the head of this program be a Cabinet officer, on the basis that department prestige would help cure the ills, and that it would bring about better cooperation with all Government agencies. Other are of the opinion that the CD should be an integral part of the Department of Defense. We question the advisability of the latter which would create a division of responsibility.

The Holifield subcommittee of the House Government Operations Committee is going into the credits and debits of civil defense in an exhaustive manner. The American Legion will testify before that committee at a later date, and will join in supporting any good, sound, and practicable plan for the rejuvenation of our very unhealthy civil defense.

The Manifesto and the Liberals

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. ABBITT. Mr. Speaker, there has been an awakening on the part of many people in our country to the real problem in the South created by the disastrous decision of the Supreme Court of the United States on May 17, 1954, which declared unconstitutional segregation of the races in the public schools.

I believe the manifesto signed by 101 Senators and Congressmen from the South protesting this ruling and the tireless effort of the level-headed editorial writers of the South have done much to present the true picture to the public. I have been most pleased to read in the press from all sections of our country the writings of level-headed leaders on this subject.

There appeared an editorial in the Times-Dispatch, Richmond, Va., on Monday, March 26, 1956, which emphasizes the point I am trying to make. This paper has done much to keep the feelings about segregation on the part of the people in Virginia on a sober and unemotional level. It has helped us to approach the problem in a calm and dispassionate manner. I commend its editorial policy and know that the people realize the great service the paper has rendered in these trying times.

Under leave to extend my remarks, I desire to include therewith the editorial which is as follows:

THE MANIFESTO AND THE LIBERALS

The southern manifesto, signed by 101 Senators and Congressmen from the South, and protesting the Supreme Court's ruling against segregation in the public schools, gets a highly complimentary analysis from one of the most eminent constitutional authorities in the United States—Prof. Alpheus T. Mason, of Princeton University.

Some of our liberal editorial friends have been crying "Wurra! Wurra!" ever since the manifesto was issued, but Mr. Mason pronounces it "a good thing" and adds:

"At the very least it is calculated to give the Court and the country pause."

Alpheus Mason, be it noted, is no jackleg lawyer or political palooka. He has not only been one of the most internationally distinguished members of the Princeton faculty for a long time, but he has lectured at such universities as Cambridge, Tokyo, and Stanford, and has written much in the field of constitutional law, including studies of the great liberal Supreme Court Justices, Brandeis and Stone.

So when he declares that the manifesto "is something that needed to be made, and it has been made in a dignified and effective way," knowledgeable persons from coast to coast are likely to take heed. He says, furthermore, that the protest "attacks the Court at the point where it is most vulnerable," i. e., for its reliance on "two of the flimsiest of all our disciplines—sociology and psychology."

Strength also is added to the South's position by an editorial in the March 10 Saturday Evening Post. Under the caption, "Supreme Court Attracts a New Set of Defenders," the magazine says:

"It seems but yesterday, although it is nearly two decades ago, that the liberals—some of them the very same boys who now regard the Supreme Court's views as sacrosanct—were on the other side. In the early days of the New Deal, when the Court struck down laws which it believed to be unconstitutional, the liberal outcry was that the Supreme Court was attempting to pass laws instead of merely interpret them. Editorials in various newspapers and magazines of the period carried headlines like "Supreme Court or the People?" "Nine Against Labor," "Class Justice," "Liberalism Versus the Court." The whole thing culminated in the effort by President Roosevelt to pack the Court with Justices more favorable to his political ideas."

In other words, when the Court rules in accordance with their preconceived notions, the liberals yell that criticism of its decisions is

subversive, reactionary, bigoted, and whatnot. But let the Court throw out some of their pet schemes, such as some of the legislation adopted in the early days of the New Deal, and there is a great howl that the Court is composed of nine old men, mossbacks, horse-and-buggy judges, and so on.

In the words of Martin Luther, "It makes a difference whose ox is gored."

Statement by Dr. Edmundo Lassalle Before the Ways and Means Committee, House of Representatives, in Support of H. R. 5550, To Authorize United States Membership in OTC, March 15, 1956

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, I want to call to the attention of the Congress a statement on the Organization for Trade Cooperation, in which the United States would participate if H. R. 5550 were passed by the Congress. The author of this statement is Dr. Edmundo Lassalle, who has a rich and extensive background which qualifies him particularly well to discuss the importance of OTC to United States-Latin American trade relations. As a member of the Subcommittee on Inter-American Affairs of the Committee on Foreign Affairs, I believe that Dr. Lassalle's arguments are particularly vital. As he points out:

Latin America represents the most immediate proving ground for testing the competitive economic ideologies of the free world and the Soviet bloc.

The statement follows:

STATEMENT BY DR. EDMUNDO LASSALLE BEFORE THE WAYS AND MEANS COMMITTEE, HOUSE OF REPRESENTATIVES, IN SUPPORT OF H. R. 5550, TO AUTHORIZE UNITED STATES MEMBERSHIP IN OTC, MARCH 15, 1956

My name is Edmundo Lassalle. I am a naturalized American citizen and served in the Office of Strategic Services during World War II. I hold a doctorate in Latin-American studies from the University of California. I was special assistant to Mr. Nelson Rockefeller when he was Coordinator of Inter-American Affairs. I am now the director of the Latin American division of John Moynahan & Associates, a New York public-relations organization, and consultant in international public relations for the Celanese Corporation of America.

My interest in the passage of H. R. 5550 stems from my considered judgment that the United States is faced with a very real threat of economic penetration of Latin America by the Soviet Union and its satellites. I have confirmed this opinion during an extensive survey of Latin America, which I concluded earlier this month. My conclusion is that we must do everything we can to strengthen the trade ties between ourselves and our free world neighbors.

It is my firm conviction that the success of United States policy in Latin America in the ensuing years is linked irrevocably to the continuing expansion of our trade ties with Latin America. There is no question in my mind that the coming into being of the OTC is of great importance in continuing this expansion of trade between the United States and Latin America. Conversely, should we fail to join the OTC, United States-Latin American trade relations will suffer a severe setback; and by the same token the efforts of the Communists to penetrate the Latin American economic structure will have been greatly advanced.

President Eisenhower in his message to Congress endorsing this legislation, stated that failure of the United States to assume leadership in the OTC "would strike a severe blow at the development of cooperative arrangements in the defense of the free world." And, again, just a few weeks ago, in his letter to your chairman, the President repeated this thought and called special attention to the fact that the Soviets have stepped up their activity on the economic front.

I am not an expert in all the technicalities of international trade and the GATT, but I know what the Soviets are doing in Latin America and how our trading position there is endangered—and it is this message which I wish to bring to you today.

It is my belief that OTC, although not an instrumentality for changing tariffs, will earn us important psychological dividends in Latin America because it will be further evidence, in President Eisenhower's words of "our desire to deal with matters of trade in the same cooperative way we do with military matters in such regional pacts as the North Atlantic Treaty Organization, and with financial matters in the International Monetary Fund and in the International Bank for Reconstruction and Development. We would thus cooperate further with the free world, in the struggle against Communist domination, to the greater security and the greater prosperity of all." Thus OTC can become a weapon of psychological warfare to counteract the Soviet propaganda efforts in the Latin American area.

I do not wish to imply that all of Latin America is in imminent danger of Communist domination. I do wish to put in balanced perspective this danger as it relates to the splendid United States investment potential in Latin America. I do wish to predict without qualification that unless some very tangible and aggressive measures are adopted to counter Soviet economic penetration, we face a critical Communist problem on our southern border, conceivably before the turn of the century.

My concern with Latin America in this connection may sound strange to your ears, in view of the fact that our newspaper headlines are occupied with stories of the new Soviet economic offensive in the Far East and in the Middle East. However, it is my feeling that the danger in Latin America is every bit as great, especially when it is considered that, should the Communists gain influence in Latin America, it will bring the advance battalions of the enemy ideology to our own doorstep.

Other witnesses before this committee have testified to the fact that GATT is the counterpart in the field of Commercial relations of the military and political alliances of the free world. If the free world cannot maintain unity and strength in the economic field, then there can be little hope that our common front in defense can endure for long. In Latin America, the Soviet economic pressure is particularly significant, in view of the fact that the military threat of Soviet power cannot very easily be brought to bear in that area.

Permit me now to document for you from my own experience the growing dimensions of the Soviet trade offensive in Latin America.

A little less than 2 months ago, Premier Bulganin—in answering a questionnaire submitted by Vision, a Spanish-language fortnightly published in New York—was quoted as saying:

"The Soviet Union stands for the development of trade with Latin American countries based on mutual benefits. * * * In particular the Soviet Union could export different kinds of industrial equipment and machinery * * * in case of necessity the Soviet Union would supply technical aid and specialists and also exchange experience in industry, power, construction, transport and agriculture."

The importance which the Russians attach to this statement of Bulganin's was quickly evidenced when the Russian embassies in Mexico City, Montevideo, and Buenos Aires bought space in leading newspapers to print the Bulganin statement prior to its release by Vision.

Actions of this nature reveal that the Soviets are conducting their economic warfare in Latin America in very much the same pattern that they have proceeded in other underdeveloped areas of the world. The method consists of ladling out three parts of propaganda for each part of actual trade or aid benefit.

This Soviet device of emphasizing the propaganda aspects of trade arrangements will find fertile ground in Latin America. The reason for this is that the Latin Americans have long stressed the fact that they have been forgotten by the United States foreign-aid program. The figures show that all of Latin America has received only 1.2 percent of our foreign aid; that is to say, less than half of what has been given to our former enemies—Germany, Italy, and Japan.

But we would make a mistake to think that Soviet trade activities in Latin America consist only of propaganda. The fact of the matter is that the volume of trade between the Iron Curtain countries and Latin America has had a sevenfold growth in the last 2 years. Needless to say, had there been no GATT to facilitate United States-Latin American trade patterns, the Soviet increase would have been even larger.

A closer examination of the Iron Curtain trading pattern with Latin America reveals in a striking manner the way in which Czechoslovakia appears to be assuming the role of the chosen instrument for Communist economic penetration.

While Russia maintains diplomatic relations only with Mexico, Argentina, and Uruguay, Czechoslovakia has embassies in virtually all the Latin American countries. Moreover, the chief Communist center for Latin American studies is the Latin American Institute at the University of Prague. To this institute come men and women from all the Iron Curtain countries to study political and economic infiltration techniques for the Latin American area.

A recent example of the Czech economic campaign in Latin America was contained in an article on trade with underdeveloped countries in the Czech Chamber of Commerce Bulletin for February. The article stated:

"Czechoslovakia expresses her willingness to negotiate bilateral adjustments to stabilize prices, firmly supports the interests of countries producing raw materials, and encourages their sensible endeavors for agreements to protect themselves against the chaotic oscillations of the world market."

As large exporters of raw materials, this sort of promise has a tremendous appeal to the Latin American nations, and, indeed, there is no doubt that the price stabilization of raw materials would be a most desirable condition. However, Czechoslovakia's share of the exports of the underdeveloped countries is not such that it could affect world prices. But there might be considerable effect if the Soviet Union and Communist countries joined together to concentrate their joint buying power in an individual country or area.

Already, several overtures have been made to one-crop Latin American countries, with the idea in mind that the Soviet bloc would

make a huge purchase of a basic commodity upon which that country depends for its livelihood. Through this one step, the Latin American country in question could become totally dependent upon the Soviet market. By the same token, the United States would never be able to offer this kind of a deal except in connection with a long-term stockpiling program.

In order to reemphasize the seriousness of the Soviet economic penetration in Latin America, may I call the committee's attention to an item of news that went entirely unnoticed in this country—I refer to the recent trade agreements which Uruguay has entered into with Russia and Red China. At the time of the signing of the agreements, Uruguayan President Berres stated, "We will sell to whomever wants to buy. We will sell anything but our souls to Russia, China, and anyone else."

Obviously, the free world is up against a powerful economic adversary in the battle for the trade of the Latin American countries. In essence, the question resolves itself into whether the forces and economic philosophy of free enterprise, as embodied in the GATT, can win out against the government-controlled totalitarian methods of the Soviet bloc. If American business is to succeed against this kind of competition, they will only be able to do so in an atmosphere of clear trade ties and smooth-running trade machinery. This is the reason why effective United States membership in GATT, facilitated by the establishment of the OTC, is so important in the fight against Soviet economic penetration of Latin America. In the last analysis, the eventual welfare of the Latin American countries must depend not on United States foreign-aid programs but on an increasing relationship between United States and Latin American private enterprise.

The present economic status of the Latin American nations places them on the threshold of tremendous economic growth and development. They are, for example, greatly advanced when compared to the more underdeveloped nations of Asia and Africa. For this reason Latin America represents the most immediate proving ground for testing the competitive economic ideologies of the free world and the Soviet bloc.

If the private-enterprise approach of the free world should become stifled by tariff barriers and creaky trade machinery, we will lose the battle to which we have been challenged by the Soviets. It is for this reason, Mr. Chairman, that I so vigorously endorse United States membership in the OTC.

Ohio's Drive on Segregation Linked to Reds

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. FORRESTER. Mr. Speaker, the Atlanta Journal and Constitution of Sunday, March 25, 1956, page 20A, contains the following news item, entitled "Ohio's Drive on Segregation Linked to Reds," and reading as follows:

COLUMBUS, OHIO, March 24.—The Ohio attorney general's office Saturday said a Communist-inspired drive is on to enlist Ohio youth in a campaign for Federal intervention in Dixie's racial segregation issue.

The office's internal security division said it has intercepted secret directives that call the plan Operation Constitutional Rights.

This is what they said about the campaign:

"The Ohio drive is part of a nationwide move for students and working youth to help pressure the Eisenhower administration into intervention.

"Vehicle for the campaign is the Labor Youth League (LYL), described by officials as the Communist Party's youth arm.

"The objective of this operation," the directives said, "is to mobilize every single member of the league together with friends, neighbors, and fellow workers, to bring maximum pressure on President Eisenhower and the Federal Government to assume their responsibility and intervene against the Dixiecrat terror in the South * * * to uphold the Constitution * * * and bring law and order to the South."

Official publication of the Labor Youth League is the New Challenge. Records of the Ohio Un-American Activities Commission show that copies of the paper were passed out at Cleveland's John Adams High School in 1952 in the first reported attempt of that nature to recruit pupils.

* * * * *

The campaign would be concentrated on youth, the attorney general's office believes, because the Labor Youth League is regarded as the Communist Party's youth arm and would try to influence persons in the age group of its members.

In New York, Roy Wilkins, executive secretary of the National Association for the Advancement of Colored People, said:

"The NAACP has no connection of any sort with any move by leftwing groups to do anything whatsoever on the desegregation problem. Along with many other Americans, we have requested the President to use such legitimate means as he has at his disposal to ease the tensions in the South and to bring like-minded people of both races together with a view to making progress on desegregation. Our association has never urged the use of Federal troops or other force except that inherent in lawful and constitutional procedure."

The NAACP says they have no connection with the move described by the Ohio attorney general's office. One cannot help but wonder.

While I understand thoroughly that the chairman of the House Un-American Activities Committee is doing a marvelous job in ferreting out communism, I sincerely hope that our chairman can find the time to diligently probe this Communist movement in Ohio, and probe the concerted movements going on in this country today to create strife and confusion. I feel certain that all of the State officials will cooperate with the chairman fully.

Congress Should Help Rural Area Libraries

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. MILLER of California. Mr. Speaker, the San Francisco Chronicle on March 12, 1956, printed a pertinent and timely editorial on the libraries of our country, or more specifically on the lack of them, and the parsimonious way in which they are treated.

We not only need new libraries, we need to recognize the great part they play in our culture and our American way of life.

I commend the Chronicle editorial to your reading:

CONGRESS SHOULD HELP RURAL AREA LIBRARIES

This being Public Library Week, duly proclaimed by Mayor Christopher, we should like to call attention to the state of our libraries.

We think they are being neglected by those charged with supplying money for their upkeep, and that this official neglect is a reflection of the general indifference of the public to book reading in an age offering so very many counterattractions.

We believe that public libraries should be more numerous and that they should be more imaginative in their effort to serve the public. As to the need for more of them, we note a report by the American Library Association that 27 million Americans are without local public library service. Almost 90 percent of these live on farms or in small villages. In addition, 53 million more Americans receive library service that is very inadequate.

This is a scandal in the richest Nation of the world. Congress is being asked to do something to correct the condition. A bill, sponsored by the American Library Association and others, would appropriate $7,500,000 a year for a 5-year period to give funds on a matching basis to the States for increased rural library service. The grants would be made in the ratio of the State's rural population to the total rural population of the country. With the requirement that the States match the funds on the basis of their per capita income as compared to the national per capita income. No Government dictation of books is involved.

What the bill will do is to extend, by the use of bookmobiles or other means, the present range of free public libraries. Beyond questions, it will promote the general welfare by broadening the opportunities of farm and small-town dwellers to read books. This is certainly in the national interest, and it is not difficult to justify the National Government's assumption of some of the cost.

Both the House and the Senate are expected to act on the Library Services bill this month. It should be passed.

Mr. Speaker, another timely and pertinent article recently appeared in the Pasadena Star-News. It follows:

CONGRESS ASKED TO AID RURAL AMERICAN LIBRARIES

Because Pasadena ranks far and away ahead of most American cities in the number and use of its libraries, its citizens are rightly interested in seeing that book-hungry Americans, wherever they are, do not suffer for want of access to books.

Pasadena can point with pride that with a circulation of 1,320,071 books last year it reached the height of 11.95 books per capita, while the national average is only 3.90 for cities of 100,000 or more population.

For this very reason Pasadenans will be interested in the Library Services bill now before Congress. A letter to your Senator or Congressman may help bookless Americans enjoy some of the advantages you take for granted.

This measure authorizes an appropriation of $7,500,000 a year for a 5-year period to allot matching funds to States for the further development of public library services in rural areas. The story of lack of books which underlies the project is almost of scandalous proportions.

Approximately 27 million Americans are without local public library services, according to the American Library Association, principal sponsor of the bill. Almost 90

percent of these persons live on farms or in small villages. In addition 53 million more Americans receive only very inadequate public library service.

The fact that 80 million, almost half the population, are ill-served with library books certainly is something that the richest country in the world should feel real shame about. Americans yearly spend many times more for cosmetics, cigarettes, television, or movies than they do for libraries; in fact they spend less than a dollar per year per person on the operating expenditures of public libraries. Books seem to be America's poor relations.

What the bill will do is to extend by the use of bookmobiles and other means the present range of free public libraries. Beyond question, this will promote the general welfare by broadening the opportunities of farm and small-town dwellers. This is certainly in the national interest and it is not difficult to justify the National Government's assumption of some of the costs.

A Bill Goes to Congress—A Skit Written and Produced by a Sixth Grade Elementary School in Compton, Calif.

EXTENSION OF REMARKS
OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to be able to present the text of a skit A Bill Goes to Congress, produced by the sixth-grade class at the Stephen C. Foster School—elementary — Compton, Los Angeles County, Calif. This school is one of the very many splendid school facilities in the great 23d district, which I have the honor and responsibility to represent this my 10th year in this great legislative body.

As further explanatory of the skit, I am also producing a letter to me from the very able principal of that school. You will note that the principal's letter to me mentions that the school glee club sang the Pledge of Allegiance to the Flag. That, of course, refers to the Public Law 396 wherein through the vigilant leadership of Hon. LOUIS C. RABAUT, author of the said amendment, 83d Congress, inserted the words "under God" in the pledge of allegiance to the United States flag.

Mr. Speaker, I know that you and all my other distinguished colleagues will join with me in a feeling of congratulations to the sixth grade class in the writing and producing of A Bill Goes to Congress. Also, I know you will congratulate the school on the use of the musical Pledge of Allegiance to the Flag of the United States.

In this connection, my experience has been that a considerable number of school and church and other community vocal and instrumental musical groups, have not only enjoyed receiving from me the copy of the Pledge of Allegiance to the Flag as set to music; to wit, Public Law 396, but, several of these groups, have already informed me that they have thoroughly enjoyed learning the same and singing it to various audiences. They also inform me that in every case, the musical group rendering it have thoroughly enjoyed doing so and that the listening groups have likewise courteously and cordially received it.

Wherein the letter from the school principal refers to the President's Day program, you will no doubt remember that last year on President's Day the distinguished Chaplain of the House of Representatives gave a special prayer for the President. This was not in any sense, a partisan matter. In many States President's Day has now been officially recognized by the State legislatures. I am pleased to inform you that the National Chairman of the President's Day Committee is a congressional constituent in the great 23d district; to wit, Mr. Hal Fischer, residing at 1816 Tucker Street, Compton, Calif. He and his associates devote, without compensation to them, much effort and money to the furtherance of respect to the office of the President of the United States.

COMPTON CITY SCHOOLS,
STEPHEN C. FOSTER SCHOOL,
Compton, Calif., March 8, 1956.

Hon. CLYDE DOYLE,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. DOYLE: I was pleased to receive two copies of Pledge of Allegiance to the Flag. We used it on our President's Day program. The glee club sang the number, and it was so well received by both parents and children that we would like five more copies for upper grades.

It might be interesting to you to receive a copy of the skit written by one of our sixth-grade classes and used on our President's Day program. The other sixth-grade class studied the procedure in choosing a President and the political party setup.

We are trying to give our children a better understanding and appreciation of our American way of life and the qualities that make for American leadership.

Thank you for the music.

Cordially yours,
Mrs. MARVEL MCCOWN,
Principal.

A BILL GOES TO CONGRESS

Written by a sixth-grade class, Stephen C. Foster School, Compton, Calif.

NARRATOR. Our class is going to try to show you how a bill becomes a law. We chose 2 bills, 1 we consider a poor bill which may not get far. First, I would like to introduce Congresswoman Smith, a Member of the House of Representatives, who is talking to a fellow Congressman.

PART I. CAPITOL BUILDING, WASHINGTON, D. C.

Miss SMITH. I am going to introduce my new bill into the House. This bill says that al children of the United States of America will go to school 12 months of the year.

MIKE. Absolutely not.

Miss SMITH. Why not?

MIKE. Because that is ridiculous.

Miss SMITH. Why, after all, the children need more education.

MIKE. I don't think so. My children are real smart but then they take after their father.

Miss SMITH. I still think children should go to school 12 months so that they will be better prepared citizens.

MIKE. Why, that is outrageous. We couldn't go on vacations or anything.

Miss SMITH. Well, here we are at the Capitol Building. I intend to drop my bill into the hopper just as soon as I get to the House.

NARRATOR. When Congresswoman Smith arrives at the House of Representatives, she drops her written bill into a box called a hopper. Soon a clerk takes it out and hands the bill to the Parliamentarian of the House.

PARLIAMENTARIAN. Let's see—here is a bill from Congresswoman Smith. I shall send this to the Education and Labor Committee.

NARRATOR. The Smith bill H. R. 7236 is sent to the committee and after a brief discussion a vote is taken. We will now hear the chairman of the committee speaking.

FIRST CHAIRMAN. Members of the committee, we did not have to spend much time on this Smith bill, H. R. 7236, to know that it was unsound and impractical. The vote was 30 to 0 against the bill. I now declare Smith bill, H. R. 7236 dead.

PART II. THE SAME; THE HOUSE OF REPRESENTATIVES

NARRATOR. Now we shall see what is going to happen to the Kelley bill, H. R. 7535, which is an actual bill before Congress at the present time. Mr. Kelley from Pennsylvania, will tell you about this bill.

KELLEY. I have introduced a bill which will provide for the Federal Government to aid the States in school construction. I think we need more schools to educate our children. We need to help the States provide money to build schools. I now place my bill in the hopper.

PARLIAMENTARIAN. Here is the Kelley bill, H. R. 7535, which I shall send to the Rules Committee.

KELLEY. I hope I get through Congress. First I must be approved by the committee. I hope they like me.

NARRATOR. Right now this Kelley bill, H. R. 7535, is really being studied in the Rules Committee and it is expected soon to come to a vote. We are going to show you how we hope it goes through Congress and becomes a law. Now let's go to our committee chairman.

SECOND CHAIRMAN. Kelley bill, we like you. We think you are what our country needs, so that all children will have equal opportunities for a good education. We have taken a vote and you were passed by a strong vote in your favor. Congratulations.

KELLEY. Hurrah. Now to the House of Representatives. I'm sure my California friend, Congressman Doyle, will help me get through the House. Californians believe in education.

NARRATOR. Now the 435 Representatives (30 of which are from California) talk about Kelley. Some Members speak for him, some against him. Such talk is called a debate. No Member in the House is allowed to talk more than an hour.

After the debate is over, a vote is taken. Let's see what has happened to Kelley.

Speaker RAYBURN. I represent the great State of Texas and I am Speaker of the House.

The Chief Clerk will now read the Kelley bill.

(Chief Clerk reads the bill.)

NARRATOR. Some time later.

Speaker RAYBURN. After much discussion and debate, I wish to declare that the vote on the Kelley bill (H. R. 7535) passed by a wide margin.

KELLEY. So far so good. Destination—the Senate. I've a long way to go, way over to the other wing of the Capitol Building where the Senate meets. Here's where I meet Vice President Nixon, who is from Whittier, Calif.

PART III. THE SENATE

NARRATOR. Kelley arrives at the Senate, which is composed of 96 Senators, 2 from each State. I now introduce Vice President Richard Nixon, who is Chairman of the Senate.

Mr. NIXON. Now this is a bill for education, so I shall direct this to the proper committee for study.

NARRATOR. Kelley finds this very much like the House committee that he visited earlier. Now we shall hear from the chairman of the Senate committee.

CHAIRMAN. After studying this bill and taking our vote, as chairman I can O. K. this one to go to the Senate for debate.

KELLEY. Whoopee. Now I hope those Senators like me. Seems like I'm doing O. K. I am going to expect the California Senators, Knowland and Kuchel, to give me a good boost. I was told that Senator Kuchel has visited in Compton, where they have such fine school buildings like that Stephen Foster School.

NARRATOR. In the Senate poor Kelley was delayed for those Senators can really make long speeches to delay the voting. This they call filibustering. Now back to the Senate.

Mr. KUCHEL. Mr. Chairman.

Mr. NIXON. The Chair recognizes Senator Kuchel from California.

Mr. KUCHEL. There are almost a million youngsters not getting the kind of schooling they should. The reason is that they are overcrowded in schools and there is a shortage of classrooms. There are a large number of classrooms which ought to be replaced because they are old and unsafe. I think we should pass the Kelley bill.

Mr. KNOWLAND. Mr. Chairman.

Mr. NIXON. The Chair recognizes the Senator from California.

Mr. KNOWLAND. At the rate the number of children is increasing conditions are going to get worse before they will get better. We should have built more schools in recent years than we have. I, too, approve of this Kelley bill.

NARRATOR. The main argument against the Kelley bill was that some members felt that States in the South which would not give the colored children the right to attend schools with white children should not receive help from the Federal Government. However after a lengthy debate Kelley was put to a vote. Now we hear the result.

Mr. NIXON. I wish to announce that Kelley bill, H. R. 7535, has successfully passed the Senate.

NARRATOR. The bill is enrolled, which means printed on parchment paper. The Speaker of the House and the President of the Senate both sign Kelley.

KELLEY. Boy, my luck is good. Now I have a new title. I am called "an act of Congress." I'm going to hike right over to the White House to see President Eisenhower. I think he will sign me. In his message to Congress he asked for $2 billion for schools.

PART IV. AT THE WHITE HOUSE

NARRATOR. Kelley is on his way to the White House where he meets the President. If he is signed, he becomes a bill. Suppose the President does not sign him, then Kelley would have to go back on that long journey through both the House and the Senate and be passed by a two-thirds vote of the Members present. If that failed, then Kelley would be dead. Good luck, Kelley.

Let's see if you succeed. May I introduce the President of the United States.

PRESIDENT. Good morning, Kelley. I'm real glad to see you. I won't delay—where is my pen. (Signs.) How's that?

KELLEY. Thank you, Mr. President. Now, at last I am a law.

PRESIDENT. Yes, you are. Congratulations.

KELLEY (exits). Now that my long journey is over, I wonder what happens to me now. I'm just a piece of paper, what will they do with me?

RAY. I know. After the President signs the bill, the Secretary of State orders the new act published and the State Department preserves the original signed bill.

Opposition to the United States Membership in the Organization for Trade Cooperation

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following communication I have received from the executive vice president of the National Association of Wool Manufacturers, enclosing a copy of a petition to Arthur S. Flemming, Director, Office of Defense Mobilization, wherein the Director is requested to investigate or reappraise what the petitioners consider to be the threat to national security presented by wool textile exports, within the meaning of section 7 of the Trade Agreements Extension Act of 1955.

The operation of the trade agreements and of the GATT has not been helpful to the textile industry and permanent membership would, seriously jeopardize the future of the textile industry.

The letter and petition follows:

NATIONAL ASSOCIATION OF
WOOL MANUFACTURERS,
New York, March 23, 1956.

Hon. THOMAS J. LANE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN LANE: We believe that imports of wool textiles are threatening to impair national security. Therefore, we have filed the enclosed petition with the Director of the Office of Defense Mobilization. We hope that it will lead to Presidential action to curb imports, as provided by section 7, Trade Agreements Extension Act of 1955.

Further, we point out to you that the rapid increase in imports and the threat to national security have resulted from the unwise tariff reductions made by this country under the general agreement on tariffs and trade.

In our view, the situation in the wool textile industry and the threat to national security are merely a sample of what will happen if the Congress, in effect, approves GATT by passing H. R. 5550 to permit United States membership in the organization for trade cooperation. H. R. 5550 does not, of course, deal with tariff rates per se but the whole aim of OTC–GATT is for lower and lower tariffs, particularly those of the United States.

In the national interest, we respectfully request that you support our petition to ODM and urge that you oppose H. R. 5550.

We would be pleased to answer any questions you may have and supply further information.

Respectfully,

EDWIN WILKINSON.

NATIONAL ASSOCIATION
OF WOOL MANUFACTURERS,
New York, March 14, 1956.

Mr. ARTHUR S. FLEMMING,
Director, Office of Defense Mobilization,
Executive Office of the President,
Washington, D. C.

DEAR MR. FLEMMING: Appreciating your heavy responsibilities, under section 7 of the Trade Agreements Extension Act of 1955, to keep the President advised on imports threatening to impair national security, this association feels impelled to advise you of its belief that imports of wool textiles into the United States "threaten to impair the national security."

We believe this because:

1. Past experience in national emergencies has established beyond reasonable doubt that an adequate wool textile industry is essential to national security.

2. The wool textile industry has contracted severely since World War II to a point where there is grave doubt that it could meet mobilization requirements in a national emergency.

3. Imports have contributed to the industry's contraction and now stand as an effective bar to any expansion of industry capacity and one of the most important prospective factors in determining whether or not there shall be even further contraction in the dangerously low capacity level.

The association, by direction of its board of directors, petitions you to investigate or reappraise what we consider to be the threat to national security presented by wool textile imports. We are convinced that investigation or reappraisal by you will lead to action by the President "to adjust the imports to a level that will not threaten to impair the national security."

A statement elaborating on the basis for our belief that imports of wool textiles are threatening to impair the national security is attached.

The statistical data presented originates chiefly in the United States Bureau of the Census or other Government agencies and are set forth in greater detail on the specified pages of the 1954 Bulletin of the National Association of Wool Manufacturers. Available 1955 figures have been inserted. We stand ready to provide further information and to assist you in any other way possible.

Respectfully submitted.

HAROLD J. WALTER,
President.
EDWIN WILKINSON,
Executive Vice President.

WOOL TEXTILE IMPORTS AND NATIONAL SECURITY

This statement discusses in detail the points made in our petition, together with other pertinent information.

ESSENTIALITY OF WOOL TEXTILE INDUSTRY AND ITS PRODUCTS

The industry's essential products include woven wool apparel fabrics, the principal product, which are used in a wide variety of uniforms and other military and civilian apparel. Other essential products include:

(1) Blankets and blanketing are of particular importance to our mobilization base in view of the vast numbers of both military personnel and civilians we are told would need emergency treatment in event of a nuclear attack. During World War II apparel cloth mills were called upon to make and carpet mills converted to make blankets to meet abnormal military demands.

(2) Woolen and worsted yarns are made for sale and, in the case of integrated plants, for their own use. The principal users of sales yarn are knit goods manufacturers, very few of which have spinning machinery. Mobilization requirements also call for a wide variety of wool knit items, such as socks, gloves, and underwear, requiring wool yarns.

(3) Woven industrial cloths and woven and nonwoven (pressed) felts have military and industrial significance. Large amounts of felts are required by paper manufacturers.

(4) An important byproduct of wool scouring is wool grease which in its refined state is known as lanolin.

In World War II the industry supplied vast quantities of these products for our Armed Forces, for civilians (wool clothing never was

rationed), to the forces of our allies, and for civilian relief abroad. Large military requirements also were fulfilled during the Korean war.

The heavy dependence of the military on the industry during World War II is succintly described in this excerpt from "Quartermaster Purchases of Wool Cloths and Blankets for World War II, Textile Series, Report No. 1, Office of the Quartermaster General, February 6, 1946:"

"The Army program on wool cloths and blankets at times during the war made the Quartermaster Corps practically the sole customer of the entire worsted branch of the industry, and, except for the Navy and Marine Corps, almost the only other customer of the woolen branch, to the extent it was capable of operating on blankets and heavier weight cloths."

In the World War II period, the industry delivered to the military services alone a vast quantity of cloth and blankets. Woven wool cloth deliveries exceeded 635 million linear yards. Deliveries of blankets amounted to nearly 79 million. (NAWM Bulletin, pp. 2–133, 2–136.)

High military officials during and since World War II have stated that textiles, including those of wool, are as essential as guns, bombs, ships, and planes. In addition, orders and statements of Government agencies and officials, plus the declared policy of Congress provide ample evidence of the continuing essentiality of the wool textile industry to national security.

Writing in the Daily News Record, New York, January 21, 1954, Brig. Gen. Ira K. Evans, Office of the Quartermaster General, said in part:

"The military does, and will, look to the textile and related industries to find ways of protecting its soldiers in order that our most advanced weapons, as well as the familiar ones, can be effectively brought to bear against an enemy under any possible climatic conditions.

"Operations in these extreme, unfamiliar environments mean that clothing and equipment of increasing complexity and design must be under continual development. * * * The textile and related industries were enlisted in World War I, World War II, and during the recent Korean war to assist in development of more effective military clothing and the need of continuing assistance by these industries cannot be over-emphasized. * * *

"Superiority of clothing and equipment used in Korea is a major tribute to the ingenuity of these industries. Conditions similar to those which destroyed Napoleon's army during his retreat from Moscow and which, to a great extent, stalled Hitler's hordes before Moscow were not only survived by the troops in Korea with the lowest cold injury rate in history but, in addition, these troops were able to operate on many occasions when the cold drove the enemy to shelter."

In connection with Hitler's failure in Russia, Gen. E. L. Corbin, then with the Office of the Quartermaster General, said in a speech during World War II:

"A large part of the suffering of the German (and Axis) armies in the current Russian campaign results from * * * enforced use of substitutes for wool. In addition there was a seriously inadequate supply of clothing for the rigors of a winter campaign in European Russia. Both of these factors are as important to Hitler today as ammunition. There is no doubt that Old Man Winter and the lack of wool in Germany are causing as many casualties in the German army as is powder and ammunition."

Recent positive indications of the essential nature of the industry and its products by Government agencies follow:

Wool textile plants, many of which were severely damaged in the New England floods last August, were automatically recognized by you as necessary to our mobilization base in Defense Mobilization Order VII–7, Supplement 1, August 25 1955.

Loom fixers are on a Department of Labor list of 81 skilled occupations critical to defense production. The list was issued February 21 1956.

Department of Agriculture Marketing Research report No. 89 states that wool grease is widely used industrially in some cases is indispensable and that the Armed Forces have been unable to find a satisfactory substitute for it in certain important uses.

Congress in the National Wool Act of 1954, which was proposed by the President, declared that wool is an essential and strategic commodity and as a measure of national security set a yearly domestic production goal of 300 million pounds grease basis.

We point out here, in the strongest possible terms, that wool of itself is without security value unless this Nation possesses a plant adequate to manufacture it into products required for mobilization.

INDUSTRY CONTRACTION AND NATIONAL SECURITY

The grave doubts that the industry now could meet mobilization needs extend to the military. In a speech in Chicago in the fall of 1955, Arthur V. Farr, chief, clothing and equipage section, Industrial Mobilization Office, Philadelphia Quartermaster Depot, had this to say, as summarized by Daily News Record, New York:

"Changes in civilian textile production and competition of low-priced imports are intensifying the Army QM Corps' problems in preparing for adequate mobilization requirements in the textile-apparel field. * * * Another problem arises from the many woolen and worsted mills which have moved or been liquidated."

To understand why these grave doubts exist it is necessary to review the industry's history in the decade since World War II.

In that period there has been a sharp reduction in the size of the industry as respects both plants and wool manufacturing machinery. Production generally has been declining. Imports have been rising. Since 1952 the industry has been suffering perhaps the severest depression in its history.

The industry was comprised of more than 800 establishments in more than 30 States, according to the 1947 census of manufacturers, but there have been many changes since then. Association records show that approximately 200 wool textile plants have been liquidated or have otherwise gone out of business since January 1949. A few new plants have been built, but the fact remains that what were the largest units in the industry, particularly in the worsted segment, are no longer in existence and they have not been replaced.

The industry is geographically widespread. A rough estimate today would be that about 55 percent of the industry's productive capacity is in New England, with perhaps 20 percent in the Southern States, 15 percent in the Middle Atlantic area, with 7 or 8 percent in the Midwest and 1 or 2 percent in the Far West.

Reports of the 1954 census of manufacturers, which will provide up-to-date information about the industry, are expected to become available within the next few months.

Wool manufacturing machinery in place has declined sharply. Bureau of the Census figures show that woolen and worsted looms in place at the end of 1954 had dropped 28 percent since 1946, from 37,369 to 26,878. Partial reports by the Bureau on looms in place at the end of 1955 indicate a further decline of 4,000 to 5,000 looms toward a total of about 23,000. (NAWM Bulletin, pp. 2–52.)

This would indicate the industry now has only 60 percent of the loom capacity it had at the end of World War II.

In the same period, there has been a sharp reduction in the number of worsted and woolen spinning spindles. At the end of 1946 worsted spinning spindles in place totaled 1,917,000, according to the Bureau of the Census. Current figures are unavailable from the Bureau, but they are believed to have declined to about 1 million, a loss of 48 percent. Woolen spinning spindles in the same period have dropped from 1,600,000 to about 900,000, a decline of about 44 percent. (NAWM Bulletin, pp. 2–54, 2–57.)

Production of woven wool cloth reached an all-time high of 524 million linear yards in 1946 as a result of civilian demand created mainly by returning servicemen. Since then, however, the trend generally has been down.

In 1954, for example, production of woven wool apparel fabrics was the lowest since 1938, 256 million linear yards. During 1955, some recovery was made, with output reaching 295,510,000 linear yards, an increase of only 15 percent over 1954's low level. (NAWM Bulletin, pp. 2–136.) This upward trend for woven cloth appears to be extending into 1956 though yarn and blanket production continues to lag. Trade press reports indicate that garment manufacturers are complaining that there are too few mills to meet their cloth needs. With such a development during a period of moderately increased civilian demand, it is not difficult to forecast a severe shortage of capacity in event of a national emergency.

As cloth production since 1946 has declined, so also has the output of blankets, industrial cloths, semimanufactures, such as yarns and tops, and byproducts such as wool grease. (NAWM Bulletin, pp. 2–104, 2–110, 2–111, 2–112, 2–113, 2–130, 2–133.)

CONCERN AS TO ADEQUACY NOT NEW

E. D. Walen, of Pacific Mills, retiring as president of the association in May 1955, publicly warned that the mill liquidations in the industry "should command attention in the Nation's capital." He said that our "national and international trade policies should be such, in the national interest, as to stimulate the growth and tone" of the industry. Mr. Walen added that while there have been replacements of machinery, and the new equipment is more efficient than the old, the contraction of the industry has been so great that it may be "assumed our overall capacity has been reduced."

As imports continued to rise and later Government statistics on the contraction of the industry became available, the executive commmittee of this association last September became increasingly alarmed. The commmittee directed our secretary to advise the Quartermaster Association of our "concern as to the ability of the woolen and worsted mills of this country to meet mobilization requirements because of the heavy liquidation which has taken place in the industry * * * and which appears not yet to be at an end. By vote, the committee instructed that this concern be conveyed to you with the recommendation that the military services review their mobilization requirements."

Under date of October 7, 1955, the Quartermaster Association, which serves as a liason agency between the Government and Government suppliers, replied that the "Philadelphia Quartermaster Depot is currently surveying the entire requirement and it is anticipated that the study will be completed before the end of this year (1955)."

The findings of this survey have not been made known, but it is suggested that this survey and any others which may have been undertaken by a Government agency should be studied in connection with our petition.

The doubts as to the industry's mobilization capabilities have continued to multiply, culminating in the decision of the directors that this association formally request action by you under section 7 of the Trade Agreements Extension Act of 1955.

IMPORTS AND NATIONAL SECURITY

Imports of wool manufactures and semi-manufactures generally have been increasing alarmingly since the end of World War II. This is particularly true, beginning in 1948, when United States duty reductions negotiated under the General Agreement on Tariffs and Trade, went into effect. The imports have contributed to the decline of the industry in the last decade. They displace rather than supplement production in the American industry.

The effect of imports spreads to all segments of the industry. Imported fabrics, for example, reduce the market for weaving yarns, for wool tops, for commission scouring of wool. They are particularly damaging because of the contraction of the industry and the severe depression which the industry has been combating since 1952.

The industry here is one of small businesses. According to the 1947 Census of Manufactures, 90 perecnt of the mills employed less than 500 persons and 75 percent employed less than 250. The loss of even a small order to a foreign firm may spell the difference between profit and loss to an individual manufacturer, particularly because profits have been almost nonexistent.

Imported wool textiles today stand as an effective bar to any expansion of industry capacity and are perhaps the most important factor in any decision by American wool manufacturers as to whether it is worthwhile for them to maintain or expand their plants rather than contract them further or simply liquidate.

Doubts as to the advisability of maintaing or expanding present facilities are easily understood when the trend of imports is examined.

Imports of woven wool apparel fabrics soared to an all-time high during 1955. They totaled approximately 30 million square yards (20 million linear yards, 54-inch width). In 1952 cloth imports had reached a 30-year high. This record was surpassed in 1953. In 1954 imports declined, as did domestic cloth production, because of poor market conditions here, but the record-breaking influx was resumed in 1955. Indications are that the rate is still rising.

The United Kingdom in past years supplied about 75 percent of the fabric imported here but recently has been losing ground to Japan and Italy. The increase in imports from Japan has been sharp and is of particular concern because of the extremely low wage levels there.

Imports of Japanese cloth amounted to only 178,000 square yards in 1951 but jumped to about 2,262,000 square yards in 1955, an increase of 1,395 percent. In contrast to Japanese cloth seen here before World War II, goods being imported now are of improved quality. Because of our low tariffs and the low wages in Japan, Italy, the United Kingdom, and elsewhere, imports are offered at prices American mills cannot hope to meet. (NAWM Bulletin, p. 2–183.)

Wool yarn imports also are at higher levels than in the past and there are indications that shipments may rise considerably. In 1955, imports of wool yarns were estimated at 1,990,000 pounds, compared with 390,000 pounds in 1947 and 1,257,000 pounds in 1948. In the yarn field also, imports from Japan have soared, from zero in 1953 to about 700,000 pounds in 1955. (NAWM Bulletin p. 2–182.)

Moreover, wool yarns, wool grease, certain wool knit items, and wool clothing of woven cloth are on the United States bargaining list for the current GATT tariff negotiations in Geneva.

Producers of yarn and wool grease would be directly hit by further tariff reductions. Cloth and yarn manufacturers also would be affected by duty reductions on wool knit goods and wool clothing because increased imports of these products would decrease the market here for cloth and yarn.

Imports of blankets and other wool textiles also are at higher levels than they have been and further increases appear to be in prospect. (NAWM Bulletin, pps. 2–175, 2–182.)

UNITED STATES DUTIES AT OR BELOW PERIL POINT NOW

In view of the sharp reductions already made in United States tariffs on wool textiles, it may be readily understood why American manufacturers are reluctant to expand their plants. To the contrary, as previously emphasized, imports stand as a bar to such expansion, particularly an expansion which would reasonably insure the industry's adequacy for national security.

The American tariff on wool manufactures is in two parts, a specific rate to cover the wool content (the woolgrowers' protection) and an ad valorem rate which is supposed to, but does not, equalize the difference in labor and other manufacturing costs in American and foreign mills. It is the ad valorem rate with which manufacturers are essentially concerned because of the vast wage gap between American and foreign mills.

A few examples of the reductions made in American duties will suffice to show how mills here have been left at the mercy of their foreign competitors and why imports are a threat to security.

The ad valorem rates on woven wool cloth in the 1930 Tariff Act were 50, 55, and 60 percent, depending on the valuation. The rate now is a flat 25 percent. (NAWM Bulletin, pp. 3–11.)

For wool yarns, the ad valorem duties were 35, 45, and 50 percent. Now the duty is 15 percent, also without regard for the valuation. Moreover, as we have pointed out, wool yarns are among the products on the United States bargaining list in the current tariff negotiations in Geneva and thus the duty may be cut below 15 percent. (NAWN Bulletin, pp. 3–10.)

The ad valorem rate for wool tops was 20 percent; today it is 6¼ percent. (NAWM Bulletin, pp. 3–9.)

Originally, higher ad valorem rates were fixed for products with the highest valuations. This recognized that the labor content of finer quality products was greater than in lower qualities, and that a higher duty was necessary if tariffs were to fulfill their equalizing function. This precept, however, was ignored when this country agreed to tariff concessions.

The difficulties in competing with foreign producers lie in the high labor content in American wool textiles. In 1953, the last year for which figures are available, the industry paid some $462 million in wages and salaries in the manufacture of its product. This was equal to more than 70 percent of the total value added in manufacture.

Either by increased duties or some other method, the disparity in labor costs must be equalized if the American wool textile industry is to become fully able to meet mobilization needs.

The efficiency of American mills is not challenged. Such greater efficiency as may exist is not enough to offset the wage gap between American and British mills, to say nothing of Japanese mills. Textile machinery is virtually the same the world over and many of our foreign competitors have been reequipped, directly or indirectly, at the expense of American taxpayers.

The average, hourly straight-time earnings in the American wool textile industry for December 1955 were $1.53, according to the Bureau of Labor Statistics. This figure does not include fringe benefits.

By contrast, employees of British and French mills receive about 45 cents per hour. In Italy, the average is about 30 cents and in Japan it is only 14 cents an hour.

American mills do not seek an unfair advantage over their foreign competitors. They do, however, ask for adequate tariffs or other methods of equalizing the wage gap so that they may compete on at least fairly even terms with foreign mills in the American market.

Except for imports, the factors which affect the wool textile industry are problems which mills individually expect to meet in our competitive American economy.

The one factor over which the mills individually or collectively have no control is imports, that is, the trade and tariff policy of the United States. We believe that we have shown you that United States tariffs, at present perilously low levels, are not a hindrance to foreign mills. There is every reason to believe that imports will increase steadily as long as foreign mills provide the types and styles of wool textiles demanded in this country.

These imports will further threaten to impair the national security. We reiterate our belief that an investigation or reappraisal of this threat should be made by you, leading to action by the President "to adjust the imports * * * to a level that will not threaten to impair the national security," as provided by section 7, Trade Agreements Extension Act of 1955.

Introduction of Legislation Amending the Merchant Marine Act of 1936

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. PELLY. Mr. Speaker, I have today introduced legislation amending the Merchant Marine Act of 1936 to provide payment of certain minimum wages to crews of certain non-United States-flag vessels carrying federally financed or owned cargoes.

Under the so-called Davis-Bacon provision Congress has provided that on federally financed construction contractors employing low-wage labor cannot undercut the prevailing wages and living conditions of American labor. When the operators of American ships have sought to undercut standard American wages in the shipping industry by registering their vessels under foreign nationalities and employing foreign low-wage crews, it seemed that in some way it should be possible to protect the American ship owner who paid standard wages against such competition. Accordingly I have introduced H. R. 10226, which simply provides that if foreign ships are to carry government-owned cargoes than the wages and living conditions of the crews must be comparable to prevailing wages and living conditions on American-flag ships. Thus the Federal Government would be removed as a party which discriminates against the personnel on American-flag ships. American ship operators are fully capable and qualified to hold their own in the shipping lanes of the world under reasonable competitive conditions. The American merchant marine does not ask nor does it expect anything more than competing on a fair and equitable basis.

I urge the Members to consider the plight of the sailors and other personnel who have been driven to the beaches by low-wage foreign competition. The pur-

pose of this bill is to lend Federal encouragement to the maintenance of a privately owned commercial United States merchant marine.

H. R. 6376 Supported

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. BARTLETT. Mr. Speaker, once again and for the fourth time I am happy to have opportunity to call the attention of the House to a statement by Mrs. Marjorie Shearon, of the Shearon Legislative Service, in support of H. R. 6376, the Alaska Mental Health Act. Writing in the Shearon Legislative Service bulletin for March 22, 1956, Mrs. Shearon had this to say:

At the request of Senator JAMES E. MURRAY, Democrat, of Montana, chairman of the Senate Committee on Interior and Insular Affairs, the American Medical Association undertook a study of H. R. 6376.

In a letter, dated March 20, 1956, and received by the Interior Committee on March 21, Dr. George F. Lull, secretary and general manager of the AMA, stated, in part:

"With the reservations hereinafter discussed, the American Medical Association supports and recommends the enactment of H. R. 6376."

Dr. Lull pointed out that the AMA itself in 1948 had made the earliest of three recent studies of mental health in Alaska. They had recommended "establishment of a centrally located hospital to provide for the needs of the Territory." The AMA supports the bill insofar as it provides for adequate local facilities and "modernizes existing archaic commitment procedures.

Referring to the difficult medico-legal problems in connection with commitment procedures, the AMA says "* * * in our opinion, the procedures set forth in H. R. 6376 are on a par with the better procedures adopted by the several States, and are superior to those presently followed in Alaska." The AMA, not presuming to express an authoritative opinion on the legal aspects of the bill, suggests the American bar might be consulted.

Pointing out the correct interpretation of section 119 (c), the AMA suggests language clarification because of widespread misunderstanding of the provision as it now stands. Dr. Lull also suggested inclusion of criminal penalties for willfully causing unwarranted arrest of any individual. Those were the only reservations of the AMA. They had thoroughly studied the bill before approving it.

ALASKANS ARE CITIZENS OF UNITED STATES—TERRITORY COVERS ONE-FIFTH THAT OF CONTINENTAL UNITED STATES

It has been clear for some time that there would not have been such widespread alarm and agitation over H. R. 6376 if there had been a proper understanding of its provisions and a reasonable knowledge about Alaska. Since nearly every State now has self-appointed groups of citizens who are writing on mental health in general and on the Alaska bill in particular, we may be pardoned for departing from our usual custom of not discussing State and Territorial bills.

We have received many critical statements to the effect that the United States doesn't owe the Alaskans anything. "Let them take care of themselves" is the burden of the argument. Many people do not even seem to know that Alaskans are citizens of the United States. They fought in two world wars; they fought in Korea. They pay Federal income taxes. Their obligations to this Government are the same as are the obligations of any other citizen of the United States.

Alaskans are neglected, second-class citizens only because the Congress of the United States has failed to grant the statehood they seek, and because for 50 years the Congress has refused to let them legislate regarding mental illness and mental retardation in the Territory.

Alaska is one-fifth the size of the continental United States. Place a map of Alaska on a map of the continental United States. The Aleutian Islands would reach to the coast of California; the Alaskan Pacific Mountain region, a slender strip of mainland fringed by many islands and constituting an extension of British Columbia, would touch our eastern shores in South Carolina. Alaska, superimposed on the continental United States, would thus stretch from coast to coast. The great Central Plateau of Alaska would blot out all of Minnesota and Iowa, most of Wisconsin, Illinois, and Kansas, more than half of Missouri, Nebraska, and South Dakota, as well as portions of Oklahoma, Colorado, and North Dakota. It is an immense Territory of 375,290,000 acres (586,400 square miles).

In all this vast area there is a civilian population of 168,000 (census figure for July 1, 1955). On July 1, 1954, the total military and civilian population was 208,000. H. R. 6376 had to be drafted realistically to take account of the sparse population, limitations of transportation, and absence of mental health facilities and personnel.

LARGEST ALASKAN CITY HAS 11,254 POPULATION; 200,000 PEOPLE IN HALF MILLION SQUARE MILES

The reasons for many of the provisions of H. R. 6376 will be clear if one understands a little about the geography of the Territory, the population distribution, and the problems of transportation. Alaska's largest city is Anchorage, with a population of 11,254 in 1950. Cities of comparable size in the continental United States are Elwood, Ind. (11,362); Douglas, Ariz. (9,442); Athens, Ohio (11,660); and Highland Park, Tex. (11,409).

Youngstown, Ohio, with a 1950 population of 168,330, had about the same civilian population as did Alaska. Syracuse, N. Y., in 1950 had a population of 220,583, which was considerably in excess of the combined civilian and Armed Forces population of Alaska in 1954.

The population of Alaska is so sparse that if it were uniformly spread over the entire surface of 375,290,000 acres, every man, woman, and child would have 1,804 acres in which to roam. There are 42 villages, cities, and districts in Alaska. Of this number, 13 are villages with population of less than 500, 10 villages and towns have populations of 500 to 999. Of the 42 localities, 32 have a population of less than 2,500 persons. The 1950 population of Fairbanks was 5,771; of Juneau, 5,596; of Ketchikan, 5,305; and of Nome, 1,876.

Most of the municipalities hug the Pacific coast or cling frigidly to islands stretching toward Siberia, U. S. S. R., through the Bering Sea. Much of the intercommunication between municipalities and fishing villages or lumber and mining camps is by means of coastwise boats and dogsled. Several of the larger airlines provide service from the States to Fairbanks and Juneau. Alaska Airlines has daily flights from Anchorage to the Yukon area and Kotzebue, north of the Arctic Circle. Once a week a plane flies from Anchorage to the Pribiloff Islands, center of the fur seal area, via the Aleutians.

Because of the mountainous terrain, the great forests, and other natural conditions, it is understandable that Alaska has only 560.1 miles of railroads. The building of highways and other roads has been difficult, often impossible. During World War II, as a military necessity, the Alaska Highway was constructed as a joint project of the United States and Canada at a cost of $113,824,220. It is 1,523 miles long, running from Dawson Creek, British Columbia, to Fairbanks, Alaska, through the very heart of the peninsula.

UNITED STATES HAS HAD INTEREST IN ALASKA FOR A CENTURY—IS OF UTMOST MILITARY IMPORTANCE

The United States has had an interest in Alaska since 1855 when Russia, during the Crimean War, fearing the British might seize that country, tried to sell it to the United States. The deal did not go through until 1867. At that time little thought was given to the wealth of the land itself. For some time it was neglected. On May 17, 1884, Congress provided for a district of Alaska and the organization of a government under a governor. The Secretary of the Interior was "specifically empowered to regulate the enforcement, in the Territory, of United States laws relating to mining claims and to provide for the education of children."

Under an act of May 7, 1906, Alaska was empowered to elect a Delegate to Congress, without voting power. Under the Organic Act of August 24, 1912, the incorporated Territory of Alaska was created, and a bicameral legislature was established to convene biennially. Since that time various additional powers have been given to the Governor and the Legislature of Alaska. But they are still bound by a 1905 act of Congress which specifically forbids them to amend the laws dealing with Alaskan mental-health problems.

Alaska, which almost touches Siberia, U. S. S. R., is the protecting bastion of the United States along the Soviet frontier of eastern Asia.

H. R. 6376 was proposed in, and passed, by the House for the purpose of righting these ancient wrongs. The bill further would aid the Alaskans in constructing needed facilities, and would authorize them to select 1 million acres of their own land to finance a mental-health program.

The bill, far from being any kind of a plot, actually incorporates provisions that have been the law of the land in the continental United States for many decades. The general principles for apprehension, commitment, treatment, and release of the mentally ill have been accepted in the United States for well over a century. There have been recent improvements in State laws initiated by State Governors, lawyers, psychiatrists, and various national societies. The impetus for such statutory improvements was set in motion before anyone dreamed of the U. N. and WHO.

If H. R. 6376 had been a mental-health bill applying to all United States citizens, as erroneously claimed by some, it would have been referred to House Interstate and Senate Labor and Public Welfare Committees, not to Interior Committees.

FRENZIED GROUPS IN UNITED STATES CONJURE UP FANTASTIC COMMUNIST AND PAPIST PLOTS IN INNOCENT BILL

Despite the known history of efforts to improve State mental health laws, witnesses have testified that mental health bills in general and H. R. 6376 in particular are part of an international "Marxist plot." A retired brigadier general in California wrote to President Eisenhower on March 12 urging him to block the bill which he described as "a dastardly attempt to establish a concentration camp in the Alaskan wastes * * *."

Pointing to the language in the bill which defines its various objectives and ends with

the customary phrase, found in virtually all bills, "* * * and for other purposes," this brigadier general spells out his idea of the "other purposes" as follows: "The bill establishes a weapon of violence against our citizenry far more wicked than anything ever known in recorded history—far worse than the Siberian prison camps of the Czars or the Communists, or the violences of the Spanish Inquisition, for these destroyed the body, whereas this horror is designed to destroy the mind as well. These are clearly the 'other purposes' stated in the title of bill."

This same impassioned Californian continued in his letter to the President: "The plot of wickedness revealed in this bill fairly reeks of the evil odor of the back forces of the Jesuits who dominate the Vatican, and, through affiliates in our Government, dominate our policies."

One witness saw in the bill a Jewish plot; others have seen, in their vivid imaginations, the machinations of U. N., WHO, and UNESCO. That there was no foundation of truth in their charges seems not to have bothered them.

Many otherwise reasonable professional people especially physicians in certain parts of the country, have demanded that the Senate Interior Committee make specific changes in the bill. For instance, one physician wanted to know why an Alaskan who went insane couldn't have his family physician accompany him to the psychiatrists who were to examine him. We would point to the difficulties that would be encountered by the inhabitants of one of the many Alaskan villages with populations of less than 500 in finding a family physician let alone 3 psychiatrists, as an Indiana physician suggested should be specified in the bill.

One witness objected to the definition of "State," saying it indicated U. N. influence. Yet thousands of bills and laws define "State."

CONGRESS BELIEVES THAT CRIMINAL PROVISIONS OF H. R. 6376 BELONG IN THE CRIMINAL CODE OF UNITED STATES

In the American Medical Association letter of March 20, Dr. Lull points to the desirability of including in the law some provision for criminal action against persons who wilfully cause, or conspire with, or assist another to cause the unnwarranted hospitalization of any individual, or for the denial to any individual of any rights granted him under the provisions of the measure. We had intended to discuss this point in a previous issue, since opponents to the bill have made a great fuss about the fact that the House in passing the bill deleted the section providing criminal penalties for individuals maliciously conspiring to engage in any of the activities specified above.

This question was thrashed out in the House hearings last year where it was pointed out that criminal procedures belonged in the Criminal Code, not in a mental health bill. The Senate Interior Committee seems to be of the same mind and, we believe, will omit such criminal action from the current bill, while, at the same time, amending the Criminal Code to provide the desired protection of citizens who are not mentally ill or of patients who are denied any of the rights guaranteed in the bill.

Another thing about the bill that has disturbed many persons is the definition of the term "mentally ill individual." Persons who are not Federal laweyrs or legislative analysts fail to realize that the general definition in section 101 (i) cannot be taken as the entire definition. It must be read in conjunction with such limiting sections as 103 (a), 103 (b), 104, and 108. Thus, a mentally ill person cannot be apprehended, hospitalized, or committed unless he meets certain other specifications beyond the definition in section 101 (i).

We should like to point out that factual material has been available for months to those alarmists who have been disseminating misinformation, scare sheets, and bulletins designed to inflame the passions and fears of an astonishingly gullible public. Our mail during the past month has been loaded with warnings of dire "plots," "congressional betrayal," "treason," "Siberia, U. S. A.," "Alaskan concentration camps," and other inflammatory broadsides without factual foundation.

H. R. 6376 will be reported in 2 weeks.

STATES ARE MODERNIZING THEIR MENTAL HEALTH LAWS ALONG LINES PROPOSED IN H. R. 6376, A SOUND BILL

Pennsylvania was the first State to substitute the term "mental illness" for insanity. By 1949, when the Council of State Governments made a survey, they found that half the States had dropped the term "insanity" from their statutes.

In Connecticut, where the term "mentally ill" was substituted for "insane," without definition, confusion ensued and the legislature had to include a precise definition in the statutes. Definitions vary from State to State.

With respect to the definition of mental illness in H. R. 6376, the model bill was not followed exactly inasmuch as the mentally retarded were included. This is not good practice, medically, and there might be some reason for removing mental retardation from the definition. However, it was included because only 22 Alaskan children had been identified as mentally retarded and Alaska is not presently able to set up a separate program.

There has been a strong movement to do away with criminal terminology and procedures in connection with mental illness.

It is not considered sound practice to arrest a mentally ill person, to transport him in a patrol wagon, or to put him in jail. There is a growing feeling that jury trials are painful to patient and family.

"In Illinois, which used jury trials for 25 years (and then abandoned them), it was found that more sane persons were declared insane by jury trials than were wrongfully committed under the earlier system, which had virtually no safeguard against 'railroading'."

It is not our intention to write a textbook on mental health. Those who seek information will find valuable source material in:

1. The Mental Health Programs of the Forty-Eight States, The Council of State Governments, 1313 East 60th Street, Chicago, Ill. 1950, 377 pages, $4. (Quoted material in this column was taken from that report.)

2. State Action in Mental Health, 1955; same place of publication, $1.50.

3. A Draft Act Governing Hospitalization of the Mentally Ill; revised September 1952. HEW Department, Public Health Service; Superintendent of Documents, Washington, D. C., 15 cents.

Now that the AMA has approved the bill, we believe it will be passed without more ado. If you have previously opposed H. R. 6376 through lack of understanding, we trust you will voice your approval of this needed legislation.

Universities and the Chemical Industry

EXTENSION OF REMARKS

OF

HON. D. R. (BILLY) MATTHEWS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. MATTHEWS. Mr. Speaker, under permission to extend my remarks, I am pleased to enclose an address by President J. Wayne Reitz, of the University of Florida, which was delivered before the National Agricultural Chemical Association in Hollywood, Fla., on March 14, 1956.

The University of Florida is located in my congressional district, and I am very proud of the excellent record of achievement which belongs to this great university. I am equally proud of its president, and I hope all of the Members of the House can have an opportunity to read the excellent address by President Reitz, which follows:

UNIVERSITIES AND THE CHEMICAL INDUSTRY

(By J. Wayne Reitz)

Mr. Chairman, members of the association, ladies and gentlemen, I am pleased to have this opportunity to discuss with you some of the problems which are faced daily by our universities and by industry. These are the basic problems related to the kind of graduates we produce and, therefore, the kind of technically trained employee whom you take on your staff. In a sense we are a supplier and you are a consumer. You judge us by our products. And so you sometimes wonder whether we are working at our problems the right way. Doubtless you recall the story of the man who said to his preacher that his problem was to find out whether he could get his shirt over his wings when he reached glory. "No, sir," said the preacher, "your problem is whether you can get your hat over your horns."

The most vital resource in American industry today is its trained personnel; its leaders who give direction to vast enterprises; its inventive and imaginative minds which provide new opportunities new methods, and new products; its broad-minds which proprovide new opportunities, new methods, and new products; its broad-gaged managers of unit activities in production, sales, and distribution; and its highly skilled operating employees. At every level and in every department there must be an almost startling kind of new know-how.

Highly intricate and costly machines have altered our industrial processes. The mere application of muscle to things has nearly disappeared. The machine, now controlled by minute electronic instruments, requires the supervision of a trained attendant. This specialist in turn must be directed by a person sensitive both to the production needs and the human needs created by our new industrial society.

These two areas—production needs and human needs—are your constant concern in industry. I need not, I am sure, elaborate upon your ceaseless search for better and diversified products and for better ways to market them. Nor need I do more than to recall to mind the energy expended to improve the working conditions and the technical competence of industrial employees. Nor need I do more than mention the harmonious relationship which exists between a corporation and its community or between a corporation and the purchasers of its products. The highest quality of teamwork exists wherever industry is alert to production and human needs.

If industry were static in size or in personnel, our common problem would not exist. But the laws of life are growth, development, improvement, and change. Industry calls insistently for more and better prepared personnel to fulfill its obligations and to meet successfully every challenging opportunity for wider service. The solving of that problem is yours—and it is ours in the universities. It is a common—a mutual—problem.

There are, of course, two sides to the problem. Industry must find for itself the competently trained personnel which will fit harmoniously into the organization, so that its

ends shall be well served. The universities must prepare young people for candidacy for these positions, as well as for many other types of employment, in which they can look forward to a long, active, contented, and fruitful service. But the university has another important duty to its students. The university must think of these young people as citizens with responsibilities to their community, their State, and their Nation. They must gain a perspective of their intellectual, moral, and spiritual powers. They must foresee the interrelatedness of their life work with the many other duties imposed upon them: they probably will hold membership in cultural institutions (like libraries, museums, art galleries, and concert halls), in civic associations, in military and civil defense organizations, and in churches. In taking this large view of its duty to its students, a university seeks to give industry—and society—potential leaders whose capacity for growth shall be unlimited.

A very serious shortage of trained scientists and technologists has led to a clamor for short-cut programs of study in which students shall spend all their time at chemistry or at entomology or electronics. It is said that the minimum requirement for new technical personnel in 1956 will be 60,000 graduates. It appears that only 22,000 will be available. The deficit of 38,000 is staggering. The situation in agriculture, the field with which you are primarily concerned, is equally dismaying. The current demand is for 15,000 graduates each year from our colleges of agriculture and home economics. Yet it is estimated that only 8,500 students will receive degrees in 1956. In simpler terms, there are two jobs waiting for every graduate.

These statistics highlight our problems. How can the number of technically trained graduates be doubled? In response to this demand, what kinds of programs or curricula can the universities engage in? How can the universities best fulfill their obligations to the students and to society?

From the standpoint of recruitment and encouraging young people to enter science training, the situation at the University of Florida is quite typical of most land grant and State universities. We find ourselves in a somewhat ironical dilemma. We are bursting at the seams with a heavier enrollment now than facilities were designed to accommodate, and while I am proud to say that our loyal faculty has exerted full effort to cope with the situation, there is a limit to the number of students one instructor can guide effectively through the process of learning. Our modern universities sometimes have been criticized for educational regimentation and mass production of degree candidates, but the situation isn't that extreme. Nevertheless, it is true that after the size of his class reaches a certain point, the effectiveness of an instructor's personal influence diminishes.

The dilemma I mentioned is brought on by the fact that these crowded conditions hardly warrant the universities encouraging higher enrollment; and yet, recognizing the needs of industry for more graduates, they are reluctant to reduce their efforts in encouraging more young people to enter scientific pursuits.

One thing seems obvious. The universities, alone, can neither increase their own resources, nor can they provide the entire incentive for encouraging high-school youths to avail themselves of the opportunities of higher education. The universities can help, by doing all possible to assure efficient and economical operation, and, in the planning of the curriculum, remain alert to the increasingly technical needs of industry. But if competently trained scientists are so essential to industry, industry itself must continue to assume its share of the responsibility.

I would like to digress for a moment, here, and pay a special tribute to you folks in the agricultural chemicals industry. It is well-known that you have enthusiastically supported our institutional activities in teaching, research, and extension. You have done this with grants, fellowships, and in many other ways, including assistance in obtaining legislative appropriations. This support for our efforts has been stimulating and inspirational. I make this statement wholeheartedly, because we are ever mindful of your significant contributions in so many areas. Continued interest, understanding, and cooperation are necessary if both education and industry are to achieve our mutual goal.

Now, I should like to discuss briefly one segment of the educational process which apparently needs some clarification. It relates principally to the kinds of courses required of our students in the professional fields, such as agriculture, chemistry, and engineering. We hear on occasion that our students are "required to take too many courses on subjects not related to the professional field of interest." To put it another way, if a chap is studying to be an entomologist, for example, why should he be required to study history, philosophy, and English. What does an entomologist care about the thoughts of Plato or the works of Shakespeare?

Well—I hope you people realize that we worry over this short of a problem. It is one of continuous concern to department heads, deans, presidents, and the various faculty committees concerned with such matters.

There are several aspects of the problem. One relates to the student's own ideas. If he wants to be an entomologist, he wants to study entomology and, sometimes, nothing else. If he wants to be a chemist, he wants to study chemistry. It is sometimes difficult for him to understand why apparently unrelated courses are required in the curriculum.

Another aspect is that largely through either hearsay evidence or misunderstanding, the public gets the impression that the situation is more extreme than the facts substantiate. It is true that we attempt as far as we can, within our limitation, to see that our graduates have been afforded an opportunity for a well-rounded education. We believe confidently that when our commercial organizations employ an entomologist or a chemist, they want something more than just an entomologist or a chemist. Of course they expect technical competence, but they also want people who have the background to adjust themselves to changing situations, to get along well with other people, and to be able to express themselves effectively. Also they want young people who give promise of handling additional and broader responsibilities as their careers develop.

This is not a philosophy peculiar to the University of Florida. It is held to by practically all institutions of higher learning. It has been expressed rather clearly and succinctly in a recent statement by the Commission on Graduate Education in the Agricultural Sciences, appointed by the Southern Regional Education Board. This Commission at its recent organization meeting developed a formal statement of the scope of its concern. After setting forth definitions of the various needs in specific scientific disciplines, the statement concluded with this sentence: "It is also recognized that full professional effectiveness requires proficiency in written and oral expression and the other fundamental skills of human relations, to the end that technical knowledge can be translated into professional leadership." This statement was compounded, not by an exclusive group of educators, but by a representative group which includes State legislators, research administrators, and industry representatives.

The problem of meeting this requirement, in the face of greatly increased demands for more specialization, is a tough one. As our technological advancement progresses each year, there is more and more for a student to learn.

Just imagine, for example, the content of the typical 1-year course in general chemistry as taught in most universities today, as compared with the content of a course of the same title and duration 25 years ago. Today we offer more courses in chemistry at the University of Florida than any 1 student could possibly take in a 4-year undergraduate curriculum. And yet if we did not afford these specialized courses, neither industry nor Government would get the kind of specialists needed. Contrary to the thinking of some people, and in spite of the fact that someone has said that "changing a college curriculum is like moving a cemetery," the progress has been encouraging.

I would point out that, ordinarily, when you first see our products, they are college graduates—college men and women. When we first see them they are hardly more than high-school boys and girls. The transition is effected while they are under our guidance. These 4 years have a remarkable formative influence. Professional careers are molded. Great decisions are made. The image that each forms of himself throughout life. They came to us as hesitant youths; they join you as vigorous, determined, rather clearheaded, and ambitious young men and women.

We are fully conscious of our tremendous responsibility, but it is not ours alone. Educators alone do not set the course of their programs. These are influenced materially by the society around us. Public opinion, legislation, resources, and the using agencies of our graduates—all have a profound influence on them and on our educational programs and policies.

Right here in Florida developments are occurring which influence our program at the university. The State is growing rapidly in population, in agricultural development, and in the expansion of industry. This progress not only creates additional opportunities for our graduates, but also creates additional demand for them. It is significant to note the growth of the chemical industry itself in this State. According to recent information received from the Manufacturing Chemists Association, Florida in 1955 completed, has under construction, or was definitely planning new construction of chemical installations totaling a value of over $93 million. While back only in 1953 we ranked 26th in the Nation in industrial chemistry, we now are well up the scale, and one could easily predict that a continuation of the present rate could project Florida into the top 10 of the Nation. We feel that we in higher education have made a significant contribution to this development.

May I say, in conclusion, that the University of Florida can serve industry and all the people of this great State by maintaining an ever-improvng balanced program of fundamental education, technological training, graduate study and research, and adult extension work. Each of these areas is vitally important—not merely to some people but to all. Indeed, while we are training technically competent personnel for industry, we must likewise prepare others to understand and appreciate the services of industry and to utilize the products of industry. Even more important, we must provide, through research, better strains of crops and animals; we must reduce the incidence of diseases; we must guarantee the adequacy of our water supply; we must be alert to guide wise land utilization; we must direct inventive minds to the development of new processes and new products; and we must look constantly to the improvement of our social, moral, and spiritual life. The university is the focal point at which converge and radiate nearly all the lines of social and economic improvement. The scholars and research scientists work quietly, without fanfare; yet year by year

through their dedicated labors the University of Florida serves to enrich the life of our State.

More than ever before our universities enjoy a close and sympathetic working relationship with American industry. We share common problems. We work together in harmony. I sincerely hope that this fine relationship will continue.

Is Housing Aid To Leave Us Houseless?

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. THORNBERRY. Mr. Speaker, here is a letter I have received from a constituent of mine, Mr. W. E. Tinsley, of Austin, Tex., who holds the important position of executive director, Municipal Advisory Council of Texas, in which he includes an editorial which appeared in Texas Bond Reporter.

Mr. Tinsley is very anxious that all the Members of the Houes have an opportunity to consider the views which he so well expresses in his letter and also those contained in the editorial.

In view of the importance of what Mr. Tinsley says, I include the letter and the editorial in the RECORD under the unanimous consent of my colleagues. In addition to this, I am taking the liberty of sending the letter and the editorial to the House Committee on Banking and Currency with the request that the views expressed therein be considered when the hearings are held on the legislation discussed.

The letter and the editorial are as follows:

MUNICIPAL ADVISORY COUNCIL OF TEXAS,
Austin, March 23, 1956.

In re S. 3158, proposed Housing Act of 1956; and H. R. 9537 and S. 3302, proposed housing amendments of 1956.

Hon. HOMER THORNBERRY,
Member of Congress,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN THORNBERRY: You may recall prior correspondence from us just prior to the time of the passage of S. 2126, housing amendments of 1955, during last year. This Council was bitterly opposed to certain provisions of that act, and since its passage it has been necessary for municipal bond dealer firms, who are members of this council, to sit idly by and observe the Federal Government taking business which rightfully belongs to them out of their hands. Not only has this occurred, but our members feel strongly about the basic theory of Government loans to institutions at a rate of interest which is lower than the rate available to the Government itself, especially in view of the ability of the borrower to pay a reasonable rate of interest. Title III of S. 2126, passed at the last session, would be rendered much less obnoxious by the passage of S. 3302, which we understand is now in the Housing Subcommittee of the Senate Committee on Banking and Currency.

Title II of S. 2126 was also bitterly opposed by this Council. If you will recall, it placed in the hands of HHFA a fund of $100 million for loans to municipal subdivisions for basic public works when loans at a reasonable rate of interest were not otherwise available. If there has been an occasion to apply the provisions of this act in Texas since its passage, then we are unaware of it although it is our business and duty to keep constantly in touch with all public financing in this State. Now, S. 3158, which is also understood to be before the Housing Subcommittee of the Senate Committee on Banking and Currency, would increase the $100 million, authorized by S. 2126 of the first session, to $1 billion. I can assure you that there was no occasion whatever insofar as Texas was concerned for the original appropriation of $100 million, and it is, therefore, impossible for us to imagine how $1 billion can be justified except that it could be that a part of the long range program of the proponents of this measure might call for later legislation which would authorize the reduction of the interest rate for this type of loan in order to encourage municipalities to avail themselves of it.

We endorse the passage of S. 3302. It is a step in the right direction. It would, under present conditions, result in increasing the rate of interest on college housing loans from the current level of 2¾ percent to 3⅛ percent, and it might allow municipal securities dealers to reenter the field of underwriting college housing bonds from which they have been driven by Government encroachment. Furthermore, it will not be met with opposition from college officials as will be evidenced from an examination of the committee hearing before S. 2126 was passed, and at which time college officials themselves testified that the law was not needed.

This Council opposes the passage of title IV, section 403 of S. 3158 on the grounds that that it is utterly uncalled for in view of the fact that the administrator of HHFA is unable to give away the $100 million already made available to him. How then is an additional $900 million justified?

There is enclosed a copy of our current issue of Texas Bond Reporter, the first page of which carries an editorial to which we respectfully refer your attention. We request that this letter and the editorial be entered in the CONGRESSIONAL RECORD and referred to the Housing Subcommittee which now has these bills under consideration.

Sincerely yours,

W. E. TINSLEY,
Executive Director.

[From the Texas Bond Reporter of March 26, 1956]

IS HOUSING AID TO LEAVE US HOUSELESS?

The Housing Subcommittee of the Senate Committee on Banking and Currency was scheduled to begin hearings on March 20 on various housing bills including S. 3158 and S. 3302.

The latter, it will be remembered, would amend the formula for establishing the rate on Government loans for college housing. Under present conditions the rate would be increased from 2¾ percent to 3⅛ percent. (See p. 629 of last week's Texas Bond Reporter.)

Title IV, section 403, of S. 3158 would increase the amount available to HHFA for loans to municipalities from $100 million, as fixed by the Housing Act of 1955, to $1 billion. (See p. 676 of February 27 Texas Bond Reporter.)

The significance of April 15, which is approaching, should not be necessary to add clarity to the thinking of those who might ponder on the financial wisdom of the Government's paying 3¼ percent on 40-year money so that it may be put out at 2¾ percent for 50 years. S. 3302 would raise the loan rate by three-eights percent which might be enough to allow private enterprise to encroach on "Government business" by underwriting at least the earlier maturities of college housing issues.

Does anyone know of a municipality in Texas which has been unable to sell bonds at a reasonable rate of interest to finance "basic public works" for which S. 3158 would provide $1 billion? Certainly not on the basis of experience in Texas is the increase in $900 million of Federal funds for this purpose justified.

It is doubtful that the Texas Senators and Congressmen will hear very much from their constituents on this subject unless it be from the segment of our business community which is most vitally affected: the municipal securities dealers.

The Farmer in the Dell?

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mrs. KNUTSON. Mr. Speaker, I wish to have this article printed because it gives such a clear cut picture of what the farmers went through to earn their right to a livelihood. This letter was sent to me by the editor of the New York Mills Herald, of New York Mills, Minn. It is good to have reminders such as this lest we forget the farmer in our strive to put the America people on a high economic basis which can only be obtained through a stable farm program.

The article follows:

THE FARMER IN THE DELL?

If all the words that have been written about the American farmer in recent weeks, were put end-to-end, they would still be words. The farmer is unhappy, and that gives many politicians cause for sorrow because they, the politicians, find themselves in a dilemma—they hear two voices, loud and insistent—one the voice of the farmer, the other, the voice of those who say they are speaking for the farmer. Just about everybody from Drew Pearson to John Doe, has said or is ready to say something about the farmer.

Iam not a farmer, and I am not as familiar with farm problems as are those who make their living on the farm. That is why I would prefer to listen to the farmer and not to the "farm expert."

When I was a boy on a small farm in northeastern Minnesota, some 25 to 30 years ago, that area was growing. Old farms were in the process of being "opened up" to cultivation, by removing the remains of once proud forests—the big stumps, and the brush, so new fields could be plowed, and new pastures put into use. New farms appeared along the county and township roads, and the men and boys and often the womenfolk, too, worked, literally, some sunrise to sunset, making use of every daylight hour, in some kind of work, in rain or in shine. The future looked promising—our community was growing, and young people wanted to stay on the land.

Today, when I drive through that area, I find vacant farms, the fields ugly with uncut hay, weeds standing tall in the yard, and around the buildings. Where dairy cattle once grazed, brush creeps farther and farther into the clearing year after year, and empty, lightless windows stare out at the road like the eyes of the dead.

This is not an exaggeration, anyone who doubts my veracity, is invited to go along with me to see for himself.

These were family farms, not big ones, just 80 to 140 or 180 acres each. But now they stand alone like ghosts from the past.

Something happened out there. I am not an expert, so I cannot tell you exactly what happened.

This much I know: Farmers moved away because they could not make a living on a small farm. Young people did not want to stay on the land. Those who owned 180 acres and even less, bought their neighbors' farms because in order to make a living from the soil, they had to have more of it. The farms that were not adjacent to big farms, were not purchased by neighbors, so they are vacant. Farms that looked prosperous 25 years ago, completely disappeared, so when you pass them now, you see only a weedy meadow, and not a trace of buildings that were constructed with such high hopes slightly more than a decade ago. Small township roads that used to lead to the home of the famous farmer in the dell, are mere paths now, used only by hunters in the fall. More and more descriptions appear on the delinquent tax list, and township and county aid roads get worse year after year because there are no funds for repairs. After unusually heavy rains last summer, mile after mile of county aid road lay under water for weeks because ditches are blocked, and cannot carry away the water. Culverts are blocked, and the brush grows ever taller on the right-of-way. The area looks deserted.

What happened there appears to be happening again even in this area of big farms. Many family farms are being bought by neighbors, because they are too small to give a livelihood to their owners. More and more young people look to the cities for their future because farming has become hazardous because of rising costs and falling prices.

That much I know. But since I am not an expert, I cannot tell you exactly what should or what can be done about it. It would seem that these people would stay on their farms, if they could still make a living on the farm.

When farms are vacant, small towns suffer, too. That is evident in the area where I grew up. You find many vacant business buildings in villages that are now surrounded by a half-alive farming community. That much I can see for myself.

Perhaps it is a trend of the times, a trend to bigger farming because small farming does not pay. Be that as it may, to me it is still a cause for sadness because an American institution, the family farm, is fast disappearing from the rural scene.

I will let the experts and the politicians tell me whether this is good or bad, and while they are explaining, perhaps they will also tell us what can be done to keep the small towns alive, when the farmers' dollars no longer come to town to give a livelihood to the village merchants and their help.

First Plane of Long-Range Fleet Due for Pan American Drops In

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. KLEIN. Mr. Speaker, the New York Times of March 22 carried a very interesting article by George Horne concerning the delivery of the first plane of Pan American Airways' new fleet of long-range Douglas DC–7C transports.

It is ironic that this article should appear at a time when Pan American is seeking the right to put these aircraft into economical and reasonable operation.

These planes, Mr. Speaker, were ordered by Pan American several years ago in anticipation of flying the great circle route nonstop from the west coast to Toyko. As a matter of fact, Pan American asked the Douglas engineers in 1939 to begin drawing a big airplane with a 5,000-mile range in the belief that it would have complete freedom to fly nonstop to the Orient over the great circle route which Pan American had surveyed in the early 1930's.

Since then a series of remarkable events has taken place, which at the present time, prohibits Pan American from flying that route and forces it to be content with an island-hopping run to Tokyo, 1,100 miles more distance than the shorter operation over Alaska.

The Civil Aeronautics Board now has before it the question of whether true competition shall exist on the northern Pacific run or whether a single carrier will have what amounts to a monopoly of business over this direct route. Northwest Airlines is now supposedly operating without benefit of Federal subsidy. The fact that Northwest gets virtually all military mail destined for Tokyo and beyond because of the Government's insistance that military mail travel over the shortest route certainly has been a substantial contributor to the nonsubsidy status of Northwest. It seems reasonable that Pan American, which includes in its Pacific operations the national interest route to Australia and New Zealand, should have an equal opportunity to relieve the United States taxpayers of the necessity of continuing Pan American's subsidy in the Pacific.

Mr. Speaker, under leave to revise and extend my remarks, I include Mr. George Horne's New York Times article:

FIRST PLANE OF LONG-RANGE FLEET DUE FOR PAN AMERICAN DROPS IN—DOUGLAS LINER BUILT FOR NONSTOP FLIGHTS ACROSS PACIFIC VISITS CITY BRIEFLY ON TRANSCONTINENTAL TEST TRIP

(By George Horne)

The first plane of Pan American World Airways' new fleet of long-range Douglas transports dropped gently into the slush of an Idlewild runway yesterday.

The new 5,000-mile DC–7C was calling at New York International Airport briefly, on a transcontinental test and certification flight. Around noon, she took off again for Washington, beginning the circuitous journey back to the Pacific coast.

Pan American considers the new Clipper Black Hawk one of the most important airplanes in the line's long history as a world carrier.

In range, it has about 1,000 miles on any commercial transport now flying. It will be the first plane capable of nonstop trans-Pacific flight and the first that can guarantee nonstop flight to Europe 100 percent of the time. It represents one of the last major developments in piston-powered planes, for both Douglas and Pan American are already deep into the exciting world of jets.

1939 PLEA ANSWERED

Pan American asked Douglas engineers in 1939 to begin drawing a big airplane with a 5,000-mile range, and the DC–7C now on its test flights is the answer to a 17-year-old provisional order. The air company has contracted for 33 of the planes at a cost of $88 million.

The new Clipper was designed for the Pacific but will enter trans-Atlantic service first, in June. On August 7 the new carriers will start replacing Pan American's Boeings on the Pacific route to Tokyo.

Pan American has been pressing the Civil Aeronautics Board for the right to fly the great circle route to the Orient, and the DC–7C is the key to the application for this route. The line is now required to fly to Tokyo through the mid-Pacific. The island-hopping route adds 1,100 miles to the trip from west coast ports.

"The new plane will bring about a technical revolution in trans-Pacific aviation and will make our present route restrictions obsolete," a spokesman for the company said yesterday.

PRESIDENT REOPENED CASE

Some years ago the CAB denied Pan American's request, but the case has recently been reopened by President Eisenhower, who asked the Federal air agency to give him new recommendations recognizing recent developments in air transport.

On Monday Pan American filed a heavy volume of exhibits with the Board, depicting changes in Pacific airline business in recent years. Pacific volume has increased from 26,700 passengers in 1952 to 51,800 in 1955. The current year's carryings are estimated at 70,000.

Last year both Pan American and its American-flag competitor, Northwest Orient Airlines, which flies the shorter northern route, operated without Federal subsidy. Northwest, incidentally, also plans to put 5,000-mile aircraft in the Pacific trade.

The new Clipper that called at New York yesterday has a wingspread of 127 feet 10 inches, some 10 feet wider than its Douglas predecessors. The big wings give the plane a tank capacity of 7,860 gallons, the secret of the longer range.

Passenger comfort will be enhanced as a byproduct of the wider wingspread, for the inboard engines will each be 5 feet farther away from the passenger, and the interior of the plane will be quieter.

Democratic Women's Role in Politics

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. EDNA F. KELLY, at the Democratic Women's eastern regional conference in Atlantic City:

I consider it a privilege to address the Democratic Women's Eastern Regional Conference here in Atlantic City. I am glad for all of us that we are meeting in such a beautiful place because I like to think that women not only appreciate beauty in their surroundings but also work hard to bring it about.

Women, as a whole, are new in the field of government. It was many years before they were recognized in the political orbit. Actually, we were always there. (This statement might not be acceptable to those women whose efforts led the fight for actual political participation, and who pioneered in the political field as career women.) But no one can deny that every successful man in public life had, as his inspiration and

partner, a politically minded woman with commonsense.

Now, life calls to all women in proportion to their own stations, to exert their influence in this confusion-torn world. Far be it from me to suggest in doing this that you neglect your home—the most precious pillar and foundation of society. However, there is always that spare time which each of us can use for the benefit of the community. This contribution to society will be, in turn, statewide and nationwide. We are partners with men in the home. Now, we must become partners in politics for the sake of the community, and ultimately, for the free world. This we must do for the achievement of our common goal—a better world—a world where peace is a reality and not a word tossed about without any basis in mutual concord which is its true meaning. This must be our contribution to society.

A common interest has brought us to this conference. We are Democrats, and, as such, are proud of our membership in that party because we believe in the principles to which it is pledged. We have faith in our leaders. We want to protect the laws of our Republic as instituted by our Founding Fathers. They established on this continent, this Nation dedicated to the recognition of the dignity of the human being, and respect for his civil, his social, and his spiritual rights. The Democratic Party is protecting these rights and liberties. The Democratic Party always will protect these rights and liberties.

As a member of the Foreign Affairs Committee of the House of Representatives in the Congress of the United States, I view every act of legislation in the light of its contribution to the goal of world peace. World events may be described as forming a pattern. Let us unravel the pattern and find the threads that make the design. These threads are symbolic of our national and international policies. But, destroying our pattern with ugly, discordant notes, are the prominent red threads which represent the intertwining stronghold that Russia has upon the world body politic. No longer is Russia a threat on the horizon. For all her mouthings of peace talk, she is an actual force which endangers all of us—not one race or color—but all of us who believe in the fatherhood of God and the brotherhood of man. Russia alone under the Soviet regime represents godless, materialistic man. The leaders of the Kremlin have seized power and have enslaved nations and peoples. They rule and liquidate with no regard for moral justice.

When world events forced upon the world the knowledge that the Soviet Union is the implacable enemy of all that the free world stands for, the Democratic Party, under the courageous leadership of President Harry S. Truman, created a bipartisan foreign policy, put the Marshall plan into effect, built up the North Atlantic Treaty Organization, foiled the Berlin blockade, and met the Korean invasion with instant action—with the full knowledge that, and I quote from Mr. Truman's memoirs, "if this were allowed to go unchallenged it would mean a third world war."

What Mr. Truman's place will be in the long perspective of history, we do not know, but all of us who watched the "man of decision" discharge one overwhelming responsibility after another, were impressed and inspired to follow his leadership. President Truman called upon experts in every field regardless of party affiliations, but he always made the final decision himself, for under the Constitution of the United States, that was his responsibility. What is most important to recall, he faced the world unflinchingly, giving intensive study to its problems and shouldering the heavy burden of his high office with the dedication of the great American we know him to be. Thus he bore the brunt of the responsibility along with the criticism of his policies attendant upon his elected office, the Presidency of the United States.

And this is exactly what I had expected President Eisenhower would do when he assumed office in 1953, and it is what I hope he will do now in the remaining months of his term; namely, to bear the responsibility of the issues of his administration both at home and abroad. I strongly resent such statements as were made in an article in the New York Times of Sunday, March 4, written by William S. White, and entitled "Congress Tightens Party Lines." This is a quotation from the article: "The majority Democrats are now on equally clear notice that, barring some unforeseen domestic, economic, or foreign crisis, the principal Democratic issue for 1956 will be not the congressional story but the health of President Eisenhower."

Naturally, the President's health will be discussed. But I say the discussion will emanate from the White House where it always did. I say further, that those who are putting words into the mouths of Democrats are doing so to confuse the issues or at least to evade a discussion of the important measures of legislation. The true issue is not the President's physical condition. It is the more vital issue of the powers of the Presidency that will be delegated to subordinates. Are matters of great domestic import or those of worldwide concern to be held in abeyance while we fight it out on the home front over a matter that has been decided once and for all by the one most concerned?

Much time has been lost in the past 6 frustrating months. United States policies both in the domestic field and in the foreign field have been dormant—dormant during a period of unrivaled crises. For that reason I am glad that the big decision has been made and I am thankful that the President has recovered. I hope President Eisenhower will exert leadership and face these unfortunate realities, that he will guide positive legislation through Congress to meet these grave matters.

You may ask what has ushered in these critical days in a world which is supposedly at peace. Why is America foundering in her role of leader of the free world? My answer is the erroneous leadership of the Republican Party. But before I continue my answer, let me review very, very briefly, some facts of political history.

In 1952, Dwight Eisenhower, as the standard bearer of the Republican Party, was elected President of the United States.

The Democratic Party, rejected by the American people, was labeled by members of the Republican Party, with names of vile derivation, and was charged by the Republicans with lack of administration, with communistic leanings, and with lack of policy including the lack of a dynamic foreign policy. Four years have elapsed and the Republican Party must defend its administration under the leadership of President Eisenhower.

This is a political year in the United States. I realize that discussion of many problems is "touchy." I realize that many want issues removed from political discussion lest we Americans be misunderstood abroad. I ask you why is it that the Democrats are requested to do this? Why did not President Eisenhower as the leader of the Republican administration admit in 1953, on television, on radio, and in the press after 1 year spent in investigation of every phase of Democratic administration that—

1. The Democratic Party had a good foreign policy based on collective security which the Republican administration would attempt to continue but with a New Look?

2. That they would not abrogate the Yalta agreements after the House Foreign Affairs Committee had weeks of hearings?

3. That the huge unexpended balances with which they were saddled were worthy and necessary appropriations for worthy objectives; that they found dire need for these "overhang" authorizations. As an aside, it is only natural that some of these had to be revised and renegotiated. Advances in science alone demanded this.

4. That the budget was difficult to balance due to high security costs of long lead items against Communist aggression and subversion. The Republicans soft pedal the fact that they have increased the national debt annually.

5. That they found little waste in administrative cost of the Federal Government?

6. Why do they not admit when they are wrong? Social security was originally condemned as socialistic. Now, it is not socialistic since the Republicans claim it is their program.

We Democrats are willing to agree on crucial issues. On the other hand, the Republicans distort the truth concerning Democratic Party policies and then ask us to remove them from discussion. I want a complete discussion of the issues and I am sure the Democratic candidate will give it to us.

Thus I say that through erroneous leadership we find the United States in one of the most critical periods of its history. We entered the year 1955 with a comparative vantage of strength which existed up to the time President Eisenhower represented the United States at the Geneva summit meeting. I do not mean that we should never negotiate with the leaders of the Kremlin. We should have hope, but we should warn the American people and the peoples of the free world against false optimism.

The Geneva Conferences (both the summit meeting and the Foreign Ministers' meeting) were failures. They were more than failures, because they opened wide the door for the unprecedented success of Soviet encroachment.

As the chairman of the House Foreign Affairs Committee's study mission to Europe I spent 2 months overseas last fall, and I stopped in at the Geneva Conference. I was convinced when I left Geneva that nothing would be accomplished at the meeting. This was confirmed by the conviction on the part of the European government leaders which was stated in my study mission report:

"While all of the foreign officials talked to were sufficiently restrained as to avoid direct statements to this effect, there were frequent implications that statements of United States leaders last summer had been too optimistic and that the opinion of their own people toward Russia tended to be influenced."

A further quotation from this report tells us:

"Allied unity, the NATO alliance, and the pacts in Europe have been weakened to such a degree by the Geneva atmosphere that bold, new, dynamic programs must be devised on a crash basis to overcome the gains made by the Soviet during this period. The U. S. S. R., encouraged by the acceptance of their smiles, of their new approach, and their new look, again abrogated the trust of the free world, and in this environment established a foothold in the Middle East to further obstruct and divide the free world by igniting historical issues which were at the stage when solution was in sight."

The position of the West has deteriorated in the strategic Middle East. The administration must adopt and follow policies for coping with the increasingly dangerous Arab-Israeli conflict, resurgent Arab nationalism, and Moscow's intrusion into the area. Unfortunately, the truth of these statements has been brought home to all of us in the developments of recent weeks and more recent days.

In the Far East we do not find peace. What do we find? What is the status? Hostilities in Korea ceased in July 1953 under an armistice agreement between the U. N. command and the communistic commander

of North Korea and the so-called Chinese Peoples Volunteers. No final peace settlement has been achieved, and the country is still divided. The negotiators returned. The status is a stalemate.

I am revealing no secret when I tell you that during this period there had been a vast buildup of Red forces and war potential in North Korea and on the China coast facing Formosa to which we have committed United States defense. We find uncertainty over defense of Quemoy and Matsu. We find that during the so-called truce, little Vietnam, a most anti-Communist country, was partitioned and 11 million people, mostly Roman Catholic, were placed behind the Iron Curtain. Had it not been for the quick action of a few members of the House Foreign Affairs Committee, of which I was one, the whole nation would have been swallowed into the Soviet maelstrom.

Threat of Red Chinese aggression, with strengthened, reorganized forces in Asia exists, and subversion is rampant. Neutralism is spreading in the area because of the uncertainty of the type and the amount of help which the West will give. This rise in neutralism can be directly attributed to the spell cast by the Geneva atmosphere.

This breathing spell has been just the right atmosphere to permit the spread of Communist influence and to strengthen its program of infiltration. The Communist strength was aided when the Republican administration agreed to the removal and to changes in the restrictions on exports of strategic materials under the Mutual Security Control Act (the Battle Act). Thus, Russia has secured materials in short supply which increases her war potential. In his press conference on March 7, President Eisenhower defended United States participation in a 1954 agreement that resulted in this broader East-West trade agreement.

In line with this policy, Secretary of Agriculture Benson, in an exclusive interview with Marguerite Higgins, of the New York Herald Tribune, on January 29, 1956, stated he wants Congress to permit the sale of our agricultural surpluses to Iron Curtain countries. It was my amendment that placed the words "friendly nations" in Public Law 480. If these countries need our surpluses, let us be realistic. Give them to them on the condition that we distribute them.

We on the Foreign Affairs Committee await the recommendations of the President's foreign-aid program. It is up to him to recommend its size, scope, and destination.

We now hear little of the huge unexpended balance left over by the previous administration. Now that it has been expended, we hear we will have at least a $1 billion increased recommendation.

On the homefront many important projects are in need of direction—civil rights, housing, education, health, highway construction, broadening of social security, and farm legislation. Other programs need vast revision—the Reserve program, defense plans, and the ever-present treaty-power question being challenged along with the Status of Forces Agreement.

All of these and many more Congress must act on and the President must demand legislation before the 84th Congress adjourns.

We have a challenge of worldwide import to meet. Let us as Democrats carry on and continue our record for all the people. Let us ask the communication services to bring to the American people both sides of all issues.

I should like to make a strong personal appeal to you Democratic women to do all in your power to elect a Democratic President and a Democratic Congress. You have a stake in the future of America and, beyond that, in the future of the free world.

The Politician as Physician

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. BYRD. Mr. Speaker, I recently had the good fortune to read a book entitled "Behold the Glory," by Chad Walsh. Among the many chapters which made an indelible impression upon my memory was one entitled "The Politician as Physician." The chapter succinctly and vividly reveals the politician as physician of the body politic. He is portrayed as an individual through whom the Heavenly Father develops his omniscient plan, a plan which ever evolves toward the ultimate destination of man—the city of God. I have requested and received permission from Harper & Bros., New York, publishers of the book to reprint this chapter, and I commend it to the attention of my fellow Members of the House and also to the men and women everywhere upon whose shoulders rest the responsibilities and the high honor of public office.

THE POLITICIAN AS PHYSICIAN

This is as good a place as any to look again at the voyage of exploration in which we are engaged, and to be quite clear about its purpose.

We began with the private moments of double sight, when a door briefly opens. In all those moments we sensed the presence of God, as the unvarying part of the moment; and what we fleetingly saw we saw His light.

The present voyage is to various landscapes, human and not. In looking at them, in thinking about them, we do not expect any door to open at our command—the moments of opening are deeds of grace, and these cannot be commanded. But it seems reasonable to assume that if at all times we remember the moments of special vision, we shall detect something akin to them—though less vivid and compelling by one degree—in every scene and experience. In a word, we are hoping to find, if not God, at least His footprints.

We know that God is a rover. The Father is every carrying on the work of creation, large scale and small; and He is also in constant search of lost sheep and prodigal sons. His only-begotton Son is filled with the same restless love; it gives Him no peace until all creatures are in His peace. The Holy Spirit eddies like the untrammeled wind to make all things holy.

Therefore the particular places we visit during the voyage of exploration do not greatly matter; if we find God's footprints in one, we can expect to find them in all.

Our recent visit to the city of man revealed the many ways in which it haltingly prefigures the city of God. From the metropolis we travel easily to politics, the art by which the functioning of the earthly city is made possible. If we remember what we saw in the quick eternities of double sight, may we not detect something kindred in the work of the politician?

We can. A good politician is like a good physician. The physician is a trained and dedicated man, who fights a running battle against disease, accident, and death. He does not create the human body, nor is he the inventor of that amazing well of life within it, but he cooperates with what is already there. Most of the time he does relatively simple things. He clears up an infection with miracle drugs; he removes a corrupt appendix. But at times he is compelled to be daring; he removes a kidney or a lung for the sake of the total body; he transplants pieces of bone or artery; he probes the recesses of the brain itself. Often he must work with death in his hands, for death is still more certain if he does not work.

The politician is the physician of the social body. He does not create the life and fundamental health that already exist; that is given by God, implanted, a reflection of the sociability of the Trinity. So great is this heritage that much of history simply records how the social nature of the human race has gradually broadened to take in larger and larger groups. The agony through which the world is now passing is comparable to that of the late Middle Ages and Renaissance, when the petty dukedoms of western Europe were being cemented, by blood and fire, into nations. Today the whole world is agonized at not being one.

The work of the politician exists in all magnitudes from the village to the United Nations; but everywhere it is the same work. The good politician begins by giving thanks for the deep health that already exists, no matter how many diseases may constantly threaten it. Without this God-given health, nothing could be done. The politician can no more create civic health ex nihilo than he can snap his fingers and tell a new solar system to leap into existence.

He cannot create it; but he can cooperate with it. This he does by trying to understand the true goal of society, and by working with those forces that lead toward the goal.

The ultimate goal is love. It must be made to prevail as far and as deep as men will consent. But love cannot be legislated, though legislation can remove obstacles to its free flow. For the most part, the legislator must aim at justice, which is love at a distance of 50 paces. Justice need not be a cold and static word. A gradual process of infiltration has occurred, so that justice has taken on some of the overtones of love. It no longer means, "Leave me alone and I'll leave you alone," or "It is equally illegal for poor men and rich men to sleep in the public parks." Thanks to the prophets whom God sends into all His political parties, justice is becoming positive as well as negative. Justice has come to mean free schools, social security, protection for oppressed groups; in general, an outgoing concern for every one, rather than the mere building of barbed wire entanglements to keep out trespassers. All this is still not the Kingdom of God in its fullness, but it offers clear, shining hints of what that Kingdom will reveal.

The politician is like the physician in his perceptive cooperation with the health that already exists. But there is a further resemblance. A physician repelled by a body not in perfect health would be both a logical contradiction and a dubious friend of the sick; he must learn to work in the sickroom. In the same way, the good politician needs to be equally at home in the booklined study and the smoke-filled room.

In the smoke-filled room the politician quickly becomes aware of the stubborn limitations that exist in a given society at a given moment. He learns the prejudices, rational or irrational, of classes and groups. He senses the fears—all the more powerful for being only half-formulated. He learns the hopes, legitimate and illegitimate, of the interests. He must balance Wisconsin butter against southern cottonseed oil, and both against the housewife's budget. He must weigh simultaneously the concerns of domestic industry, the Swiss watchmakers, and all the ramifications of world trade.

The physician who is too great an extermist has licensed himself as the angel of death. He may remove one diseased lung or kidney; he dare not remove both. The politician, like the physician, is aiming at maximum health, and must judge each situation as he meets it—which course of action will be best calculated to cure whatever diseases are curable, while he avoids the likelihood of excessive shock.

In the quiet study, the good politician sees a hovering ideal—it is the city of God. In the smoke-filled room he learns how far the city of man is from that ideal. He must begin with the earthly city as it is. He does not despair—he has seen the vision; he knows the right direction of travel; he can afford to be patient.

I have been praising the politician who is not ashamed to compromise on half a loaf. But the city of man also needs the person who serves by being an unpopular pathfinder, decades or centuries ahead of his time. The early abolitionists, subject to mayhem in North and South alike, prepared the way for the practical Lincoln, who moved easily back and forth between the quiet study and the smoke-filled room. A doctrinnaire and rigid Wilson was the forerunner of the pragmatic Roosevelt and the United Nations. Churchill, in midcourse proclaiming the unpleasant truth that some infamies cannot be appeased, awoke England into readiness for its ordeal of greatest splendor, and prepared his own path and that of his nation for the postwar rebuilding of a broken world. Thoreau, living in his hut at Walden Pond in a state of virtual secession from society, was actually camped in one of the public parks of the city of man, for his lonely ideas have since become the property of mankind; Gandhi, for instance, was in large part indebted to Thoreau for the concept of civil disobedience.

One scarcely needs to point out how visibly God is at work in the abolitionists or in a Thoreau. It is equally essential to recognize the witness of the endlessly patient men who deal day by day with the hopes, the sicknesses, the fluctuating life of society, and who make themselves at home in the smoke-filled room because it is one of mankind's homes. To adopt an attitude of proud superiority toward them is tantamount to disparaging God because He deigned to be born in a stable.

It is futile to talk about politics and politicians until you have had some experience, however marginal, in politics. I shall speak for myself. It has been my good fortune to know, and even for a short time to work with, one of the really towering political figures of our times. I was able to observe his complete dedication, the solicitude of the dedicated physician. I have seen how he is guided by the hovering vision, though he can talk the technicalities of politics with any precinct captain. I have sensed the agony that is his when the vision collides head-on with the intractable limitations of any society at a particular moment in its history. But I have not seen him turn to bitterness or despair or cynicism. The vision remains; he works toward it as far and as fast as he can.

This experience has made me look again at politics in general. I think I can now see it with flashes of double sight. As I observe the mayors, governors, assemblymen, Congressman, Cabinet members, and other politicians about me I do not admire all of them. Some seem seriously mistaken in their ideas; some are stupid; a few have the evil of demons in their hearts. All this is merely to say that they are human beings, and vary as other mortals do. But in the majority of politicians I now discern, to a varying degree, an awareness of the hovering ideal and some recognition of the city of man as a groping toward the city of God.

All social contrivances are clumsy and imperfect, and those who devise them are mere men. But thanks be to the patient men who are willing to be clumsy and imperfect in order that the eternal harmony and sociability of the Blessed Trinity may be less brokenly reflected and prefigured in the city of man. And praised be God, who sent His Son into a stable, and sends His prophets into smoke-filled rooms.

Water and the West

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, March 27, 1956

Mr. WATKINS. Mr. President, a great problem existing in the West is now under consideration by the Senate Committee on Interior and Insular Affairs. That problem has to do with Western water rights and their standing as matters of law in the irrigation and reclamation program of the United States. Bills dealing with this subject have attracted a great deal of attention. The problem is a very serious one for the people of the West. In my home State, the Deseret News and Salt Lake Telegram has recently published a very able editorial on these bills and on the problems with which they deal. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Salt Lake City Deseret News and Salt Lake Telegram of March 23, 1956]

WATER AND THE WEST

No one has to tell a westerner the value of water. He knows his very life is dependent on it in this semiarid area.

Easterners, however, are used to an abundance of water and only rarely, and usually with difficulty, get to understand the western point of view. The latest case in point has brought a split in the Eisenhower cabinet.

Westerners have been outraged at the way Federal agencies—and particularly the armed services—have disregarded western water law. The Navy, in what is becoming a cause celebre, refused point blank to pay the State of Nevada a $6 filing fee and to sign the standard certificate stating the water would be put to beneficial use, in drilling wells near Hawthorne. The Justice Department backed the Navy in its stand that Federal agencies are not subject to State water laws.

Now the argument has progressed to cabinet level, and the Justice and Defense Departments are still the major opponents of the idea that Federal agencies should conform to State water laws. Interior and Agriculture Departments are supporting pending legislation to require respect for State water laws. It may be significant that both Secretary of Agriculture Benson and Interior Secretary McKay have first-hand acquaintance with the West's water problem.

Wyoming's Senator FRANK BARRETT and Idaho's Representative HAMER BUDGE have introduced bills to require Federal agencies to comply with State water laws, and Senators and Congressmen from other Western States are strongly supporting them. The problem has long been critical, but the comparatively recent boom in the establishment of new military reservations—mostly in the West has brought it to a near-boil.

The Department of Justice has made it plain it considers the Federal Government sovereign in all water matters, and that it wants no nonsense from the States. Justice Department testimony at hearings on Representative Budge's H. R. 741 was disturbing to those who know the West's water problem. And the West's fight is made more difficult by the fact that very few congressmen from the humid areas of the Nation either understand it or particularly care about it.

Westerners do not want to hamper the defense effort by withholding needed water from the various military establishments that are taking up more and more of our land. But we do want to make sure that the military takes no more water than it actually needs, and that the water is put to effective use. After watching the way the various branches of the service have commandeered wildlife refuges, cattle ranges and so on, many people are more than a little suspicious of their high-handed attitude on water. Water "urgently" needed may be just what is implied—or it may be "needed" only to set up a reserve supply or for entirely nonessential uses.

Many of the military leaders are unacquainted with the water problem in the West, and cannot be expected to understand it. For that reason it is doubly important that they comply with the laws of western States, where water is a most precious commodity.

The Barrett-Budge bills should be enacted into law—in the long run they would be in the national as well as western regional interest.

The Criminal Record of Gen. Ivan Serov

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. DODD. Mr. Speaker, the people of the free world were shocked last week to hear that Col. Gen. Ivan Serov, chairman of the Soviet Committee of State Security, had landed at London airport for the purpose of completing arrangements for the springtime visit to England of Communist Party boss Khrushchev.

This shock was well founded because General Serov has one of the blackest records as a Kremlin hatchet man. He has been aptly described as the Himmler of the Russian Communist regime.

This General Serov arrived at London Airport in a new Soviet jet-type passenger plane which immediately attracted widespread public attention and speculation. For a while it appeared as though the jet passenger plane he arrived in would get more public attention than the infamous General Serov himself. This was, in my judgment, precisely what the schemers in the Kremlin expected would happen because it is clear that London is indeed an unusual place for the unveiling of a new Russian jet passenger plane.

The free press of Great Britain and the British people were not taken in by this clever trick and consequently lost no time in objecting to this unwelcome visitor, General Serov, and exposing

some of his major crimes against humanity. The British press and people engaged in public renunciation of General Serov, which no doubt played a major part in causing his early return to Moscow yesterday.

It is understood that this same General Serov will return to England with Communist Party Boss Khrushchev and his traveling companion, Bulganin. General Serov is the close friend and long-time associate of the big boss, Khrushchev. The record shows that Serov served under Khrushchev in 1940 when Khrushchev was secretary of the Communist Party in the Ukraine. So well did he serve in the capacity of Commissar of Internal Affairs for Ukraine that Khrushchev had him promoted in February 1941 to First Deputy Commissar of State Security for all of the U. S. S. R. It was from this position that he made his unenviable record of major crimes against humanity.

Since it is likely that we will be hearing more about General Serov in the future, especially in connection with his next visit to England as bodyguard of Communist Party Boss Khrushchev, the American people should be given the highlights of his record.

In all my experiences, both as executive trial counsel at the international Nuremberg war-crimes trials and as a member of the House Select Committee To Investigate Communist Aggression, 83d Congress, I have never seen a record of crimes against humanity more shocking than that established by General Serov. Here are some of his crimes which have brought him to the highest Communist glory.

First. In 1941, as Deputy Commissar of State Security of the U. S. S. R., he signed and issued order No. 001223, setting forth "instructions regarding the manner of conducting the deportation of anti-Soviet elements from Lithuania, Latvia, and Estonia." This order gives minute instructions on how the secret arrest and deportation of all patriots in the Baltic States were to be carried out. All leadership elements of the population of Estonia, Latvia, and Lithuania were to be rounded up and ruthlessly deported to the huge slave empire of the Soviet Union. It is estimated that up to 70,000 patriots of the Baltic States were rounded up during the nights of June 13–14, 1941, in response to this Serov directive and deported to the slavery of the Soviet Union. This was in addition to another 70,000 freedom-loving Balts who were forcibly deported shortly after the first Russian occupation of Lithuania, Latvia, and Estonia.

Serov Order No. 001223 includes specific instructions on how husbands and wives are to be separated at the railroad station and shipped to different slave-labor camps. Families were to be split and disseminated in a manner unbefitting the treatment of animals. All this was ordered by General Serov in an effort to break the great spirit of the Baltic people and to reduce them to the status of the faceless masses of the Soviet Union.

The full text of Order No. 001223 may be seen on page 464 of the Third Interim Report of the Select Committee to Investigate Communist Aggression, 83d Congress, second session.

Second. In the period 1943 to 1945 this same General Serov supervised the international crimes of genocide against the following nations: (a) The Crimean Tatars. A nation of 500,000 people were forcibly deported from their native Crimea in the course of 48 hours. The entire population was moved from a subtropical climate to the frigid reaches of the Ural Mountains with no preparation whatever as to clothing or housing or food. Thus vanished from the face of the earth the Crimean-Tatar nation. (b) The Kalmyks. These peaceful descendants of Ghengis Khan were uprooted from their autonomous region and scattered to the four winds—including the tundra regions of Siberia and the slave-labor camps found everywhere in the U. S. S. R. A nation once proud and great was erased in a matter of hours by the process of forced deportation and dissemination. (c) The Chechens and the Ingushi. These two ancient nations were located in North Caucaus. Being primarily herdsmen and agriculturists, they were very peaceful. But they too were destroyed by the process of forced deportation. In the course of 48 hours over 350,000 Chechens and Ingushi were rounded up and carted off to the most barren areas of the U. S. S. R., and their native homelands left lifeless and deserted.

Third. From June 1945 to January 1947 Serov served as Security Chief of East Germany. It will be recalled that during this period widespread kidnaping operations were carried out from East Germany against all types of scientists, engineers, and technicians in West Germany. These scientists and technicians were indentured by the Russian Communists in order to better prepare the U. S. S. R. to carry out its unrelenting policy of warfare against all civilization. General Serov was the mastermind behind these kidnapings.

Fourth. In 1952 Serov was awarded the Order of Lenin for his work on the Volga-Dam Canal project. It will be recalled that this canal was dug by slave laborers from every area of the Communist empire. It will also be recalled that the loss of human life in completing the canal dwarfed the horrible human sacrifices caused by Peter the Terrible in carrying out his building program. Thousands of Poles, Lithuanians, Latvians, Ukrainians, Armenians, Byelorussians, Georgians, Slovaks, and Hungarians were among those who perished on this project. Serov was one of the driving forces behind this project, his deportation schemes from all the enslaved non-Russian nations provided the manpower and human sacrifices demanded by the Kremlin.

All this is but a part of the black record of the man sent from Moscow to London by Communist Party boss Khrushchev to complete arrangements for his visit to England in the near future. Serov is a trusted aid and associate of Khrushchev. Khrushchev must depend upon men with black records like Serov's in order to carry out the Kremlin's never-changing plan for world conquest. That is the true nature of the international Communist conspiracy.

The leaders of the free world would do well to measure the sincerity of the Kremlin claims for peaceful coexistence by the character and record of those who now lead the world Communist movement. It is impossible to separate Khrushchev from Serov or Serov from the Russian campaign for peaceful coexistence. Now is it possible to separate Stalin, Khrushchev, Serov, or any other Communist leader from the many crimes against humanity committed by the conspiracy of communism. These crimes are recorded on the conscience of all civilization and the guilty parties remain the same, despite the present Kremlin effort to shift all the blame to the late dictator Stalin.

The British press and people are to be congratulated on the public renunciation given to General Serov and the part they played in bringing about his early return to Moscow. It is hoped that the British diplomats and political leaders will in turn respond to the will of the British people and thus cancel out the return to England of General Serov and his companion in crime Nikita Khrushchev.

Plight of Former Soviet Nationals

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, March 27, 1956

Mr. WATKINS. Mr. President, recently there appeared in one of the New York newspapers a letter to the editor written by Julius Epstein, who commented upon the plight of former Soviet nationals. These people, in choosing freedom and life in America, were obliged to enter our land under false identities. They now live in fear of exposure, and under the present law they are liable to deportation. Yet, if returned to their lands of origin, they are faced with almost certain death or enslavement. I have introduced a bill calling for an amendment to the law, so as more properly to serve the interests of justice in such cases.

At this time I ask unanimous consent that the brief letter referred to be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of February 29, 1956]

REFUGEE BLACKMAIL

To the New York Herald Tribune:

It is a fact that right now probably more than 30,000 former Soviet national, mostly Russians and Ukrainians, are living in this country under false identities.

They had to forge their credentials while in European camps for displaced persons, in order to escape certain deaths or enslavement as a result of forced repatriation to the Soviet orbit. When they later applied

for entry into the United States, they naturally used their forged papers. They cannot be blamed for this. They were admitted to the United States under these forged credentials and are now living in teror and fear under the assumed false identities. According to the law, they are liable to deportation.

These 30,000 or more—nobody knows the exact figure—represent a tremendous potential reservoir to be tapped by the Soviet intelligence apparatus in the United States. Soviet espionage, being what it is, leaves us no doubt whatsoever that Soviet agents are daily trying to blackmail many of these 30,000 into submission to Moscow by becoming Soviet spies or face exposure of their illegal entry into the United States. This situation is a continuous threat to our internal security and should be investigated, if not by a specially created House committee, then by the Senate Subcommittee on Internal Security.

Senator WATKINS, of Utah, introduced on February 8, 1956, an amendment to the McCarran-Walter Act which, if adopted, would clear all those anti-Communists who are now living under false identities.

The most important part of the Watkins amendment reads as follows:

"SEC. 241. (a) Any alien in the United States (including an alien crewman) shall, upon the order of the Attorney General, be deported who—

"(1) at the time of entry was within one or more of the classes of aliens excludable by the law existing at the time of such entry; except that this paragraph shall not apply to an otherwise admissible alien, admitted to the United States under the displaced persons act of 1948, as amended, who misrepresented his place of birth and identity in applying for a visa, if such alien shall establish to the satisfaction of the Attorney General that the misrepresentation (i) was predicated upon the fact that the alien had reasonable grounds to fear repatriation to his former residence or homeland where he would be persecuted because of race, religion or political opinions and (ii) was not committed for the purpose of evading the quota restrictions of the immigration laws or an investigation of the alien at the place of his former residence or elsewhere."

It is to be hoped that the Senate will adopt this amendment. But adoption of the amendment is not enough and cannot be achieved in the near future. What we need is an immediate investigation of the present situation.

JULIUS EPSTEIN.

NEW YORK, *February 24, 1956.*

Address by the Governor of Maryland on the Nation's Educational Problems

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, March 27, 1956

Mr. BEALL. Mr. President, the searching spotlight with which millions of us have been trying to probe the darkest recesses of our Nation's educational problems has now been turned back on our own ranks.

In a speech which should be given careful consideration by every adult American, Gov. Theodore R. McKeldin, of Maryland, recently offered all of us a timely challenge by observing:

You and I, not the schoolboys and girls, are the students who must learn fast.

Such a renewal of academic interest by the people of the United States is necessary these days, the Governor indicated, so that we can obtain the type of national knowledge that will lead to "greatness surpassing all that we achieved in the past."

In making his remarks, the Governor luckily was speaking to members of the Bethesda-Chevy Chase branch of the American Association of University Women. I say "luckily" because I know that the ladies of that particular organization, such as Mrs. William Baier, who is president, and Mrs. Milton Wittman, who is chairman of the group's legislative committee—will heed the Governor's advice enthusiastically in areas where they might possibly find small, personal deficiencies.

Others, too, will find the Governor's words sound and thought provoking. So I ask unanimous consent to have his entire speech printed in the Appendix of the RECORD. The address was delivered to the University Women on March 19, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF GOV. THEODORE R. MCKELDIN, BETHESDA-CHEVY CHASE BRANCH, AMERICAN ASSOCIATION OF UNIVERSITY WOMEN, MONDAY, MARCH 19, 1956

The presence of the word "university" in the title of this organization assures that anyone invited to address you will turn his thoughts toward some phase of education. I have no objection to that, provided it is understood that I shall speak of education, not of pedagogy, what we ought to know, not how we ought to learn it. Teaching methods are so thorny a subject that the prudent layman carefully avoids expressing any opinion about them.

In any event you, as university women, have been exposed to teaching methods and presumably have mastered the learning process. You need no advice from me. But when the question shifts from how to learn to what to learn, I do not hesitate to claim the right to an opinion; for many years in public life have given me a sharp awareness, sometimes uncomfortably sharp, of what Americans need to know here in the middle of the 20th century.

It is not what our forefathers needed to know in the middle of the 19th, or the 18th, or the 17th century. In 1656, for example, an American woman who was, let us say, an ancestress of Mrs. Eleanor Roosevelt, therefore an inhabitant of New Amsterdam, needed to know, first of all, household arts, including the weaving of cloth, the making of soap and the brewing of beer, all then regarded as part of a housewife's work. If she was interested in public affairs at all, the problem that engaged her attention was how to keep the Swedes out of New Amstel, which we now call New Castle, in Delaware; for the Dutch had just thrown the Swedes out of that settlement and they were threatening to come back.

In 1756 an American woman, a descendant of the one first mentioned, lived in a city that had been English for about 80 years. She still needed to know the same household arts, which had not changed much in a hundred years; and if she was interested in public affairs, she must have been worried over the disheartening progress of the French and Indian War, known in Europe as the Seven Years' War, which the British and their allies seemed to be steadily losing, despite the best efforts of young Colonel Washington and his Virginia forest rangers. It seemed highly probable at the time that America was destined to be French.

In 1856 soap, beer, and cloth had become commercial products and up in Poughkeepsie a rich brewer was already turning over in his mind plans for a college that should give women an education equal in every respect to that given in the best men's colleges. His name was Matthew Vassar, and the fact that his thoughts turned to this idea is evidence that American women were showing an intelligent interest in public affairs. One, indeed, had already flung a bomb into American intellectual life, for it was in 1851 that Harriet Beecher Stowe published Uncle Tom's Cabin.

At that, though, the interests of intelligent American women were largely absorbed by the struggle to free themselves from onerous legal and social restrictions imposed on them by reason of their sex. In 1856 an American woman could rank as an intellectual leader if she had a fair acquaintance with American and English history, law, and literature. So could an American man. Our national task then was the subduing of our own continent, and the crux of our international policy was our relation with the British Empire.

But the situation in 1956 is so utterly different that we have not ourselves as yet comprehended it. More than that, it has come about within the lifetime of men and women who are still in early middle age, which is to say, it has come about suddenly, for a single lifetime is not much in the long history of a nation. As late as 1914 an American man or woman, could play the part of an intelligent citizen without knowing much that was not embraced in the Anglo-American cultural tradition. Our whole system of college education was, and for that matter still is, based almost entirely on Roman law and Greek philosophy as they were understood by European scholarship.

That situation prevailed because in 1914 Europe was the unquestioned center of power for the whole world. The United States and Japan were already strong, but they were definitely on the fringes, not in the center of power, while Russia was disorganized and weak, as well as a fringe power.

Forty-two years later the center of power that had existed ever since the Turks were stopped nearly 400 years ago, has split into two segments, one centered in Washington, the other in Moscow. The result is that each center exercises moral, political, and economic influence over something like half the surface of the globe.

Ordinarily such changes are spread over several generations. What the father learns he passes on to the son, and the son to the grandson, so the third generation reaches the center of power more or less prepared for it. But Americans were thrown into it without time for adequate preparation. A man of 56 is indignant if you insinuate that he is old; yet he was 12 years old at the time of the first election of Woodrow Wilson and should be able to remember it without difficulty. That is to say, he has witnessed the whole violent upheaval and, being still in active life, must adjust himself to it.

This is one of the stiffest problems in education ever presented to a nation. Train up a child in the way he should go, saith scripture, and when he is old he will not depart from it. Sound doctrine, without doubt, yet admittedly difficult; how much more difficult is it, then, to train up mature men and women to go in a completely new way for which nothing in their formal schooling has prepared them?

You are university women, presumably exceptionally well-educated women. But how many of you had three stiff college courses, one in the history of the Byzantine Empire, another in Hindu philosophy, and a third in Chinese literature? I dare say only a handful who might have had aspirations to become orientalists. Yet Russia is the heir of Bysantium, India has become one of our chief problems, and China bids fair to become a threat to our very exist-

ence. We have to do something intelligent about all three, or we shall fail in our position of leadership.

It is idle to say that we have specialists who have spent years studying all these things. We have them, yes—none too many, but perhaps enough to do all that specialists can. The trouble is that the most that specialists can do is work out details; they cannot determine the overall policy of a self-governing nation. The final authority is the will of the majority, which specialists cannot control.

Viewed from one angle, this is an appalling situation. If you compare what we Americans know about this modern world with what we need to know, you may well be disheartened. But I invite you to look at it from another angle, and perhaps it will not seem so bad. We have been very much involved in the affairs of the world for 25 years, and we have been in a position of enormous responsibility for more than 10 years. That is not long enough for us to reach a solution of any of the greater problems, but it is ample time for us to have made a complete mess of things, and we have not done so. I am doing no boasting. We as a people have made plenty of errors, and will probably make more. But we have not as yet plunged the world into a third world war, which would be the final proof of incompetence.

The thing that has saved us, as I believe, is that while there is a great deal that we need to know and do not, there is one thing that we know better than any other people in the world. We are expert in the art of self-government.

We ought to be. We have had longer experience at it than any other great nation. Britain did not become really democratic until after the Reform bill of 1832, at which time we already had half a century's experience as an organized nation. As a matter of fact, our training is considerably older than that; it really began with the Virginia House of Burgesses in 1619 and was continued in the New England town meeting, much older than the Declaration of Independence.

I believe that the average American is, as you might say, politically literate to a greater extent than the average citizen of any other nation; and I think it was this skill, shared by the great mass of our people, that has saved us from making any completely fatal blunder since the end of the Second World War left us in our terribly difficult position.

I repulse the suggestion that this implies a sneer at our leadership during these years. Our bipartisan foreign policy has not been administered perfectly, but it has been administered honestly and, on the whole, skillfully. But if we had had the greatest diplomats in the world, if our leadership had been a combination of Elizabeth the Great, Talleyrand, Metternich, and Bismarck, still a self-governing nation would have failed if the people had not been reasonably well trained in the art of government. Throughout these critical years the will of the majority has been fairly reasonable; and with that behind them our leaders could bring us through.

Nevertheless, Americans have a great deal to learn, and a dreadfully short time in which to learn it. We cannot depend on the schools and colleges for this kind of teaching, for they will be too late. You and I, not the schoolboys and girls, are the students who must learn fast; and if we have lost the ability to study and to master new ideas, I shudder to think of what will befall the rising generation.

The fact remains, however, that we have a good start, a far better start than theorists had any reason to predict 10 years ago. The thunderbolt has not fallen. True, we have not yet chained the lightning. It still plays across the horizon in very ominous fashion. But I am persuaded that every day that the catastrophe of a general war is delayed reduces somewhat the risk; and if

"At my back I always hear
Time's winged chariot hurrying near."

I also believe that we are learning, and learning fast.

I urge you as educated women to omit no effort to hasten the learning process. For it is more than prudence, it is also the avenue to a national greatness surpassing all that we have achieved in the past. That there are lions in the path is far less important than that it is the path to a goal that is all men's heart's desire.

Facilitation of the Refugee-Relief Program—Proposals of American Council of Voluntary Agencies for Foreign Service

---

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, March 27, 1956

Mr. WATKINS. Mr. President, consideration of the refugee relief program, and legislation to aid in better effecting this program, is of concern to us all. Among the organizations deeply interested in this matter is the American Council of Voluntary Agencies for Foreign Service, with offices in New York.

I have been furnished by this organization proposals which it is believed will facilitate the program. In the interest of placing these views in the hands of all Members of the Senate, I ask unanimous consent that the material—which is somewhat detailed—be printed in the Appendix of the RECORD.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

AMERICAN COUNCIL OF VOLUNTARY AGENCIES FOR FOREIGN SERVICE, INC.,
New York, N. Y., February 16, 1956.

The PRESIDENT OF THE UNITED STATES,
The White House,
Washington, D. C.

MR. PRESIDENT: As national voluntary agencies accredited by the Administrator of the Refugee Relief Act who represent a large segment of the American population concerned with the implementation of the rufugee relief program, we wish to thank you for your repeatedly expressed interest in this program and to solicit your further help in making it fully effective. We look upon the program as a desirable expression of our American foreign policy and of our humanitarian desire to assist the homeless and oppressed, and believe it is to the best interest of our country as well as to the best interests of the homeless of the world that the terms of the act be fulfilled.

May we respectfully call to your attention the present situation with reference to the refugee relief program? The present rate of security clearance and of visa issuance in some countries is not now sufficient to complete the processing of the registered applicants who now have assurances nor of those applicants who, we believe, will receive assurances through our agencies during 1956. In Germany, for example, the visa rate of 265 visas per week for the last 10 weeks needs to be increased immediately to more than 373 visas per week through December 31, 1956, to cover all refugees now in processing. Also, actual experience over the past 2½ years now clearly indicates that changes in some of the provisions of the Refugee Relief Act would be beneficial in carrying out the true intent of this legislation.

Therefore we are submitting in the attached statement some proposals which, in our judgment, merit your consideration. We hope that through administrative clarification and acceleration of the refugee relief program where it now lags and through your recommending as necessary to the leaders of both parties in Congress certain reasonable amendments, that the Refugee Relief Act can be fully implemented and its important objectives made possible.

To support you in this humanitarian task we are sending copies of this letter and statement to many of the leaders in both Houses of Congress.

Respectfully yours,
Rt. Rev. Msgr. EDWARD E. SWANSTROM,
Chairman, Committee on Refugee Relief Program.

Members of the Committee on Refugee Relief Program of the American Council of Voluntary Agencies for Foreign Service: American Federation of International Institutes, Inc., American Fund for Czechoslovak Refugees, Inc., Catholic Relief Services-National Catholic Welfare Conference, Inc., Church World Service, Inc., International Rescue Committee, Inc., International Social Service, Inc., Lutheran Refugee Service, Tolstoy Foundation, Inc., United Friends of Needy and Displaced People of Yugoslavia, Inc., United Hias Service, Inc., United Ukrainian American Relief Committee, Inc.

SOME PROPOSALS BY AMERICAN VOLUNTARY AGENCIES TO THE PRESIDENT OF THE UNITED STATES FOR FACILIATING THE REFUGEE RELIEF PROGRAM

I. LEGISLATIVE CHANGES URGENTLY NEEDED

1. Redefinition of the terms "refugee," "escapee," and "expellee"

The present definitions require that an escapee or German expellee in order to qualify must not be "firmly resettled"; must be "out of his usual place of abode"; and must be in "urgent need of assistance for the essentials of life and transportation." These phrases have been difficult to interpret, even with administrative clarification and relaxation of the meanings of the term, they have resulted in the exclusion of large numbers of deserving refugees, particularly those who through diligence and hard work have made themselves economically independent in their present places of asylum even though they have never intended to remain permanently in such places. To overcome these difficulties, we recommend that the term "refugee" should apply to the Italian, Greek, and Dutch groups, and the term "escapee" and "expellee" should be redefined to read "any person" instead of "any refugee."

2. Provision for escapees in additional areas

We recommend that the areas to which special nonquota visa numbers for escapees are available be expanded to include Spain, North Africa, Syria, Lebanon, Iraq, Kuwait, and Jordan. Under the present provisions of the law only those escapees residing in NATO countries, Turkey, Sweden, Iran, or Trieste are presently eligible. The additional number of escapees who would be eligible under the proposed amendment is small, but they are in great need and are as deserving as those presently covered.

3. Security and other investigations

Section 15 of the Refugee Relief Act, as amended, reads as follows: "Except as otherwise expressly provided by this act, all of the provisions of the Immigration and Nationality Act (66 Stat. 163) shall be applicable under this act." In other words, each

applicant for a special nonquota visa under the Refugee Relief Act is subject to the same security and other investigations as applicants for regular quota visas under the Immigration and Nationality Act of 1952.

We believe that in view of the above, sections 11 (a), (b), (c), (d), and (e) of the Refugee Relief Act, as amended, are unnecessary and impose time-consuming and costly blocks to the expeditious processing of applicants and should, therefore, be eliminated.

4. Certificate of readmission

Although the majority of applicants for special nonquota visas under the Refugee Relief Act, as amended, are able to obtain certificates of readmission as required by section 7 (d) (2) of the act, nevertheless a small number of otherwise qualified applicants for purely technical reasons are not able to obtain these certificates. Therefore, we recommend that the Secretary of State be authorized to waive this requirement in cases where it is the only bar to the admission of persons otherwise eligible under the Refugee Relief Act.

5. Utilization of unused visas

Developments since the enactment of Public Law 203 indicate that the visa allocations for expellees and escapees in Germany and Austria are greater than will be required by the number of probably eligible applicants. Also the allocations for the probably eligible applicants in Greece, Italy, the Far East, and NATO countries are considerably less than the number of applicants. Therefore, it is recommended that the Administrator be authorized to reallocate surplus quotas to other categories where they are needed, after making proper provisions to safeguard the visas actually needed for eligible applicants from Germany, Austria, and the Netherlands. For practical purposes it is recommended that a partial reallocation of 30,000 be made immediately and that further allocations be made if the program warrants in the interest of the effectiveness of the act.

To insure the fullest utilization of visas unused by applicants in process as of December 31, 1956, and by beneficiaries of assurances received by the Department of State on or before December 31, 1956, and also for the benefit of orphan applicants, we recommend that the termination date of the Refugee Relief Act be extended by 6 months or as much as a year if, in the judgment of the Secretary of State, this extension is required.

In relation to the availability of quota numbers, we also wish to call attention to the fact that there is no provision in the law as written or in the proposed amendments, for taking care of escapees from behind the Iron Curtain who will have fled after December 31, 1956. We would suggest that provision be made in the basic immigration law to take care of these people.

6. Orphans

The 10-year age limit for orphans should be increased to 14 for a principal applicant coming to the United States for adoption by a United States citizen and spouse, and special provision should be made for the admission of siblings of such principal applicant up to the age of 16. The number of admissions under this special section should be increased by 1,000.

7. Admission of persons having tuberculosis to provide for reunion of refugee families

In view of the great desirability of maintaining or restoring family unity, it is recommended that under proper safeguards for care and medical treatment after arrival in the United States, members of family groups who are excludable because of tuberculosis in any form but who otherwise qualify under the Refugee Relief Act, be allowed to accompany or follow their families to the United States.

8. Adjustment of status

The words "lawfully entered" should be deleted under section 6 of Public Law 203, as amended. The requirement that the quota to which the alien is charged be oversubscribed should also be eliminated. The Secretary of State should be authorized to increase the number of aliens whose status can be readjusted under the provisions of this act if additional numbers are needed.

9. United States and the hard core

As an additional factor in resolving the refugee problem, we wish to bring to your attention the urgent need of some new provision for those among the refugees who are the so-called hard core—those thousands for whom no employment-centered resettlement is possible. These are the aged, the infirm, the amputees, the blind, and others for whom humanitarian care is the only answer. Through the United Nations Office of High Commissioner for Refugees and the United States Escapee Program, our Government is helping to provide for these people today. France, Belgium, the Netherlands, Norway, Sweden, Switzerland are offering generous opportunities for some of them and for their families. It is our hope that Congress will make provision whereby a Government-sponsored plan can be achieved to bring 1,000 such persons to this country for permanent care in their declining years. In such a plan provision should be made whereby the families of these hard-core groups, voluntary agencies, and State or private institutions can work together with the Government in assisting these people. Refugees may make good labor, good citizens, good Americans. Also they may be hard core. We believe we in the United States of America should help on this problem not by money only but by offering homes in our own country to a fair share of the victims of oppression.

10. Mortgaging of quotas

Because of its value in the future, particularly for persons fleeing from Iron Curtain countries, we favor the cancellation of mortgages on quotas which became effective as a result of sections 3 (c) and 4 (a) of the Displaced Persons Act of 1948, as amended, and the Immigration and Nationality Act, section 201 (e) (2).

II. ADMINISTRATIVE CHANGES IMMEDIATELY NEEDED

It is believed that the following administrative changes in implementation of the Refugee Relief Act would greatly expedite the present operation of the program.

1. Transportation—A refugee relief program responsibility

The same provisions for ocean transportation which have been made for refugees from Europe should also be made available to refugees, including orphans, from the Near and Far East. In the absence of such provision there is serious discrimination against such persons, causing difficult problems for agencies and sponsors of persons already visaed but for whom no Refugee Relief Act transportation arrangements are available. Fortunately, the law authorized the Secretary of State to make such arrangements (see sec. 8). The estimates of the number of persons who may need such transportation have been in the Department of State since August. The number of visa-ready cases awaiting the transportation arrangements as authorized in section 8 is growing daily; at this moment at least 125 orphans are in this most unfortunate position. We hope this increasingly urgent matter can be arranged without further delay. Several Government agencies have funds and interests which surely can be associated under the specific authorization given the Secretary of State. Transportation provisions for all persons qualifying under the Refugee Relief Act should and can be made uniform under section 8 of Public Law 203.

2. Section 11 (a)

This section requires that for all applicants there be thorough investigations and written reports prepared by such investigative agency or agencies of the United States as the President designates, regarding such persons' character, reputation, mental and physical health, history and eligibility under this act, and that such investigations in each case shall be conducted in a manner and in such time as the investigative agency or agencies shall determine to be necessary. The President has designated the Department of State as the agency of the Government which shall make the investigations and written reports in cooperation with the Department of the Army and any other agencies of the Government which the Department of State may request.

We believe that the administrator of the program has it within his authority, according to the wording of section 11 (a), to conduct these operations in a less cumbersome manner and in a much shorter time. As a matter of fact, in keeping with our recommendations on legislative amendments, we feel that these requirements, which are over and beyond the security and investigating requirements of the Immigration and Nationality Act, are not necessary.

3. Section 11 (d)

This section of the law calls for complete information regarding the history of applicants covering a period of at least 2 years immediately preceding their application for a visa. This section has worked a great hardship on the more recent escapees who have not been out from behind the Iron Curtain for 2 years. In such cases the Department of State has indicated that it is difficult to obtain the 2-year histories and it is attempting to reconstruct them. The latest report on completion of such reconstructed histories, however, is discouraging and indicates that out of a total of over 900 such cases in the processing pipeline, only 68 have completed security clearance.

We believe that the Administrator has the authority to overcome this problem, on the basis of a clause in the section which reads: "*Provided*, That this provision may be waived on the recommendation of the Secretaries of State and Defense when determined by them to be in the national interest." We therefore recommend that a procedure be initiated whereby the right to waive this requirement is utilized.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Easter Address by Senator Wiley and Editorial on Empire State Building Lights

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 28, 1956

Mr. WILEY. Mr. President, I was interested to read in last Friday's—March 23—issue of the Ripon (Wis.) Press, an editorial entitled "The Light Shineth in Darkness." It refers to the revolving beacons which will shine from atop the world's highest building—the Empire State Building—as a symbol of America's faith and freedom, and as a guide to the world.

As was stated by Col. Henry Crown, president of the Empire State Building Corp., these lights may symbolize "not only welcome—but the unlimited opportunities of America and our hopes and prayers for peace."

It is most appropriate, as we approach the hallowed Easter observance, that we turn our thoughts to man's greatest goal, his dearest wish—a just and enduring peace.

I sent to the desk the text of the Ripon Press editorial. I ask unanimous consent that it be printed in the Appendix of the RECORD, to be followed by the text of a pertinent radio address which I am delivering over most of the radio stations of my State on the theme of Easter.

There being no objection, the editorial and address were ordered to be printed in the RECORD, as follows:

[From the Ripon (Wis.) Press of March 23, 1956]

THE LIGHT SHINETH IN DARKNESS

Announcement has just been made of the "air age supplement to the American welcome so long extended to shipborne visitors by the Statue of Liberty." This new aerial symbol of welcome and freedom, which it is hoped can be turned on for Easter Sunday, will be visible to overseas visitors for 300 miles out over the Atlantic.

Described as a spectacular electronic tiara, this bright new welcome will be provided by 4 revolving beacons 1,092 feet above the sidewalks of New York atop the world-famous Empire State Building. These 4 Empire State lights, generating a brilliance of nearly 4 billion candlepower will be the brightest continuous source of man-made light in the world. The 4 huge lamps, weighing a ton apiece, are being installed at the base of the mighty television tower that provides the antenna for all 7 of New York City's TV stations. The synchronized beacons will revolve counterclockwise at approximately 1 revolution per minute, and will be in operation from sundown until midnight.

Air travelers in our own country will see the Empire State lights from as far away as Harrisburg, Albany, Boston, Batimore, and Washington. From the ground, they will be visible in Bridgeport, Conn., Poughkeepsie, N. Y., and Allentown and Bethlehem in Pennsylvania, and on especially clear nights perhaps in Philadelphia, 85 miles away.

It is the hope of Col. Henry Crown, president of the Empire State Building Corp., that these fabulous shafts of light will "symbolize not only welcome—but the unlimited opportunities of America and our hopes and prayers for peace."

Certainly these lights of liberty will give blazing testimony to the achievements possible with peace and opportunity and should likewise impress the beholder with mans ultimate faith in peace and his determination to pierce the darkness of suspicion and ignorance and oppression.

FULFILLING THE MEANING OF EASTER—1956

(Radio address by Senator WILEY over Wisconsin radio stations, Easter, 1956)

Eastertime is once more at hand. And with it, the thoughts of mankind return to the triumphant scene in the Holy Land when the Master, the wayshower proved that there is no death; that life is eternal; that the immortal spirit is triumphant over mortal flesh.

In this beautiful time of year, all of nature tells the story of life returning—in the green earth, in trees, in flowers, in every bud that soon will bloom. Our thoughts naturally turn to this question:

"How may all of us—you and I—truly fulfill the message of Easter? How may we live by the spirit of Easter—of life triumphant?"

And so, during these next few minutes, through the kind courtesy of this station, I would like to share with you some observations on the subject of applying the spirit of Eastertime—applying it in all phases of our lives—in our homes, with our families, our neighbors, our friends, in our business or shop or factory or on our farm.

WORSHIP IN THE FAITH OF OUR FATHERS

Question. Senator WILEY, how best can all of us observe this Easter season?

Answer. The answer to that is, of course, by going to the church of our beliefs and worshipping there in "the way, the truth and the life."

The answer, too, is of course, by applying not simply on Sunday, but 7 days a week, the principles of Him who came that "we might have life, and have it more abundantly."

In other words, it is obviously up to each of us really to demonstrate our creed, our faith in the spiritual nature of man—in the brotherhood of man, and the Fatherhood of God.

Question. And what of our attitude toward the problem of death itself?

THERE IS NO DEATH

Answer. Perhaps, the poet gave us the best answer—the best statement that there really is—that there really can be no death of the spirit of man, that life is truly triumphant, and right and truth.

Thus, in the poem, An Easter Carol, Phillips Brooks wrote of death and life:

"Tomb, thou shalt not hold Him longer;
Death is strong, but life is stronger;
Stronger than the dark, the light;
Stronger than the wrong, the right;
Faith and hope triumphant say
Christ will rise on Easter Day."

RISING ATTENDANCE OF CHURCHES

Question. Senator WILEY, you mentioned going to the church of our choice. What do the statistics show as regards American churchgoing?

Answer. The Gallup poll reports the welcome news that last year the American people set an all-time high church-attendance record. During an average week approximately 49½ million adults attended church.

By contrast, back in 1950 12¼ million fewer Americans attended church during the average week. On Easter Sunday last year an estimated 60½ million Americans—nearly 6 out of 10 adults—went to church.

Question. How do you interpret that statistic, Senator WILEY?

Answer. I think that the meaning is very clear. More and more Americans are recognizing that material answers do not provide the solution to our basic problems of living in this complex age—our problems of human relations. Some men's lust for wealth, their lust for power, lust for property—these are not the real keys to happiness or to peace of mind.

So, as more and more people come to understand this fact, as they come to understand the real laws of living and loving, the laws of giving and receiving, the divine law, they give of themselves to God. They turn to prayer.

Question. What else may be said about church attendance figures, Senator WILEY?

Answer. Just this. We are all naturally delighted that more and more Americans are finding inspiration and guidance in houses of worship. But, of course, we can't judge this churchgoing trend simply on the basis of big statistics. We will judge it on the inner quality of church attendance—the quality in your heart and mine, as we truly become filled with the presence of the all-knowing, all-seeing, all-powerful Creator.

As you know, just a little more than 90 million Americans list themselves as belonging to some church. That is the highest such total in our history.

If all of these Americans—if you and I—become true spreaders of the Gospel the good news of happy, fruitful, peaceful, harmonious living, then ours will be a happy country indeed. We will each find fulfillment. We will not be agitated, but will be calm, cool, and collected—the three C's—no matter what crisis may ever come.

HAPPY AMERICA AT EASTERTIME

Question. As you look about America on the Easter scene, Senator, how does the national picture look to you?

Answer. It looks excellent indeed. By almost every standard our country is enjoying more blessings of peace than ever before in our history.

Sixty-five million Americans are employed today, including 1.1 million Wisconsinites, over and above our Badger people employed in farming.

Our total national production of goods and services now approaches $400 billion. Our national income is $320 billion.

Income moreover, is fortunately better distributed among all Americans than ever before in our history. That means a better break for the little fellow in the lower income brackets.

Americans today own 250 million life insurance policies. They have $235 billion in liquid savings. Last year, Americans bought 7 million radios, 7 million television sets, 3½ million washing machines, a million air conditioners.

Today, 25 million of us own our own homes.

And 15 million of us have more than $30 billion invested for our later years in pension and retirement trust funds.

And I could go on and on with other impressive facts and figures that spell good news for the United States of America.

OUR MOST PRECIOUS ASSETS

Question. And you feel, Senator, that even more important than all these material assets is our spiritual wealth.

Answer. Of course. We could have all these possessions, all this wealth, and a lot more besides, and still possibly not be happy, unless—I emphasize, unless—we had a true respect for the real value of life's greatest blessings—our home, our mate, our family, our fine country, our God.

OUTLOOK FOR PEACE BRIGHTER

Question. And what about the problem of peace, Senator WILEY—peace which is so sacred, especially at Eastertime. What is the outlook for peace?

Answer. I believe that the prospects for peace are getting better all the time. That doesn't mean that world communism is not still on the march. On the contrary, atheistic, aggressive communism still seeks to conquer the world—by subversion, spying, sabotage, revolution.

Question. But you apparently feel that Red Russia itself is subject to stresses and strains from within.

Answer. Absolutely. There is vast ferment inside Russia. The terrible, longstanding lies about Dictator Joseph Stalin have now been completely debunked. He is being shown up for what he was—a ruthless murderer. The iron dictatorship is giving way slowly to some new forms.

Meanwhile, the people of Russia, the enslaved people of East Germany, of Poland, the Baltic States, of the Balkans—hunger for freedom.

But communism remains a deadly menace, and we must be strong, on our guard, and vigilant.

SOME NEGATIVE FACTORS ON UNITED STATES SCENE

Question. Senator WILEY, you've mentioned the positive side, the affirmative side of America's assets and of the outlook for peace. Now, as you look around, on the American scene, itself, what do you find are some of the factors which seem too contrary to the Easter spirit—factors which we should, in the Easter spirit, try to alter?

Answer. I can list several such negative factors which all of us ought to seek to change: First, there is the matter of some disharmony in our land. I refer to occasional prejudice and bigotry, to tension and hatred, between some groups, between regions—North and South—between races and religions. Such harmful conditions are, of course, contrary to the universal teachings of the Master—who taught love and understanding among all men. "Love thy brother as thyself" He taught.

Second, there is the awful matter of crime in our country. Two million crimes are committed every year—crimes against human beings and crimes against property.

Then, there is the matter of juvenile delinquency—a million American youngsters getting into trouble with the law.

Surely, we as a civilized, Christian Nation can achieve a better record than that. Surely, we can each raise our children—through the combined influence of home, church, and school, so that our youngsters abide by the law, and so that they live worthwhile lives.

Question. Any other negative factors?

Answer. Yes, there is the matter of conflict—occasional bitter conflict between labor and management. We see, for example, the recent awful Westinghouse strike in which everybody proved to be the loser. That strike lasted 156 days—the worst in American history. It crippled a great corporation; it cost the union a fortune. It destroyed millions of dollars of workers' pay envelopes. There were irreparable losses in communities. There was unhappiness in innumerable families.

Surely, men of good will, men of reason, in labor and management, could somehow have avoided or minimized such a terrific toll. What I am saying is simply that labor and management have a responsibility to themselves and to the American public, to try to work out things better in a spirit of harmony and brotherhood and good will.

As one man put it, "Let us not try to follow your way, or my way, but God's way."

SUMMARY

Question. I know, Senator WILEY, that our listeners have been enjoying your comments on both the practical and spiritual phases of the meaning of Eastertime. Thus far, you have commented upon the great blessings enjoyed by the American people. You have mentioned the bright prospects of preserving the peace, particularly now that the Soviet Union is ridden with strife and stress. You have pointed out the encouraging factors of America's prosperity; prosperity which covers virtually all groups of America, but which, as you have pointed out on many other occasions, does not extend as yet to American farming, as it should and will.

And then you have mentioned some of the continuing problems on the American scene—problems of discord, between some groups, of crime in our midst, and juvenile delinquency. But throughout, you have stressed the spiritual aspect of the American way of life.

LO, I AM WITH YOU ALWAYS

Answer. And I would like to reemphasize the importance of that spiritual aspect. You will remember, Jesus said, "Lo, I am with you always, even unto the end of the world."

Perhaps some of us do not realize the full significance of these words.

What the Master was saying was this, not the physical Jesus is present, but the spiritual truths He taught are available now and always to the earnest seeker.

He had told us to claim our heritage: "Be ye perfect, even as your Father in heaven is perfect."

This, He indicated, is not to be accomplished by blind faith, but by following in His steps—by understanding, by sound works and deeds.

He had told us to reach out and tap the source of all power. "I of mine own self can do nothing. It is the Father who worketh with Me," He had said.

Bear in mind that man, to a lesser extent had reached out and harnessed the mighty power of electricity or of the atom. But there is an infinitely greater power, a healing power, available to us all.

By following in the steps of the Man of Galilee, by fulfilling His teachings, the holy spirit will fill us with the light of inspiration, giving us continued guidance and direction.

Question. And you feel that this is a fact to be grasped throughout one's entire life and every hour of the day?

Answer. Of course. The divine law is not something to be practiced 1 day a week. Rather, it should be fulfilled throughout all our days and lives.

There is absolutely no place where we cannot follow in the Wayshower's steps—in our own home; certainly, of course, in our church; in our schoolroom; as we walk the outdoor paths of nature; in our lodge, our women's clubs, our veterans' post, as we bargain at the labor-management conference table.

Yes, those of us who are privileged to serve you in the halls of the United States Congress likewise have the heavy obligation to follow in His steps.

This, then, is the message of Eastertime. It is a message which will bring peace, which will bring harmony, which will bring fulfillment for all.

Question. I know, Senator WILEY, that your listeners have enjoyed your inspiring message today on the true meaning of Easter.

Answer. I have certainly enjoyed being with you. It would be a pleasure to get the benefit of your reactions to this broadcast.

And now may I wish for you and yours an Eastertime rich with blessings.

This is your senior Senator, ALEC WILEY, signing off from the Nation's Capital.

He Envisioned a Great Industrial Center Here

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. CANFIELD. Mr. Speaker, Monday, March 19, 1956, was a great day for the city of Paterson, N. J., for it marked the issuance of the commemorative stamp honoring Alexander Hamilton, its founder.

The Paterson Morning Call carried the following most interesting article by Dorene Angeles:

HE ENVISIONED A GREAT INDUSTRIAL CENTER HERE

The first issue of the Alexander Hamilton stamp today in Paterson is significant of the vital role played by the first Secretary of the Treasury in the founding of the city. It was in Hamilton's astute mind that Paterson as an industrial city had her birth, and in formulating the charter of the Society for the Establishment of Useful Manufactures, he wrote her birth certificate.

Hamilton firmly believed that the new Republic, in order to maintain her dearly won independence, would find is indispensable to develop her own means of providing the necessities and comforts of life, independent of the mother country.

STARTED S. U. M.

He saw in the Passaic Falls, surrounded by vast virgin forests, the possibility of a great industrial future.

In promoting his idea for the establishment of a manufacturing center, Hamilton shrewdly hinted that the society's works would be located in one of three States: New York, Pennsylvania, or New Jersey. It was not until the New Jersey Legislature had passed upon the charter for the S. U. M. that the final decision upon the Passaic Falls as the site for the enterprise was made public. By this clever strategy, New Jersey legislators, each of whom wanted the society located in his own county, were led to support the charter, and capitalists in New York and Philadelphia were led to invest.

Hamilton's correspondence, however, leaves no doubt that he had the Passaic Falls pinpointed as the future manufacturing center of America.

BACKED BY PATERSON

In Gov. William Paterson, Hamilton found a sympathetic supporter of his plan. Paterson was born in Ireland in 1743, arriving in this country 2 years later. He went to college at Trenton and studied law in the office of Richard Stockton, signer of the Declaration of Independence. He was elected to the Provincial Congress in 1775, where he was chosen secretary. He became attorney general of New Jersey and was elected Governor in 1790. Paterson must have been human enough to wish the success of so impressive a project bearing his own name.

With the backing of the governor, the legislature in 1891 adopted the proposed charter, granting the S. U. M. almost unlimited power. Free of taxes, the enterprise was to be self-governing insofar as its mandates were compatible with the laws of the State and the Constitution of the United States.

PICK CITY SITE

The board of directors, after inspecting various other sites, agreed that the town of Paterson should be located "on the Passaic River between the residence of Isaac Governeur near the town of Newark and Chatham Bridge." A rather vague statement, but understood by the participants.

On July 4, 1792, the directors came to Paterson, where they met General Schuyler and Abraham Godwin at Godwin's home. With these two men as guides, the delegation proceeded with unabated energy. The first day they bought 700 acres surrounding the falls, "paying therefor the sum of 3,293 pounds, 8 shillings, and 3 pence." Losing no time, on July 5 they resolved to build at once, "a mill for spinning cotton, a print works for cotton goods, calicoes, another mill for spinning and also for weaving." They brought up the subject of housing and on the following day decided that "the number of houses for workmen should be 50, that each house should be 24 by 18 feet in size, with cellar and garret," and that these houses together with a quarter of an acre of land each, should be rented for $12.50 a year each, or sold for $250 to any workman who would agree to pay that sum within 20 years. Equal bargains were offered for superintendents. The immediate erection of a small sawmill was agreed upon.

PLANS TOWN

To carry out this ambitious project, the services of Maj. Pierre L'Enfant, a French engineer who had come to this country with Lafayette's army, were engaged. He fell upon a gradiose plan to lay out Paterson on the pattern he later used in Washington, D. C., with the central point to be a small elevation between the present Main, Grand, and Ward Streets, sloping down almost to the present site of the Erie Railroad. From this hill, afterward known as Colt's Hill, large numbers of avenues would run to distant points of the proposed city.

Newspaper publicity spoke of the plans with high praise and land in the area skyrocketed in value.

Major L'Enfant's elaborate plans for an elevated raceway of solid masonry, to run from above the falls to the present site of Passaic proved his undoing; the directors replaced him with Peter Colt, who was described as "a man with no big ideas, but with a great deal of commonsense." Colt assembled a crew of men with picks and shovels and built a raceway just about the way people built them in those days, leaving the fancy trimmings to his predecessor who was successful in using them later in the Nation's Capital City.

BUILT BULL MILL

Impatient to begin manufactures before the raceway could be completed, the board of directors commissioned Colt to build a small plant which would use oxen for the motive power. It was named Bull Mill, the first cotton mill in Paterson, and the second in the United States.

The depression of 1792 put the newly formed corporation to a severe test. William Duer, governor of the society and a kinsman of Hamilton by marriage, was imprisoned for indebtedness, along with other members of the board. The imprisonment of Duer, who was described by Madison as "the prince of speculators," was a serious blow to Hamilton, who had recommended him for the governorship.

Hamilton's loyalty to the enterprise, however, remained unswerving, and it was through his support and prestige that the association weathered the depression.

PASSES THROUGH CRISIS

The lengths to which he went to bring the society through the crisis are illustrated in his letter to the president of the Bank of New York, requesting a loan on the society's behalf: "To you my dear sir, I will not scruple to say, in confidence, that the Bank of New York shall suffer no diminution of its pecuniary facilities from any accommodation it may afford to the society in question."

With Duer in jail, the company was without active management. Hamilton ignored adverse criticism to keep the company in operation. The first factory was completely in 1794 and the printing of calico goods was introduced. Although an impressive list of proposed manufactures had been introduced as the objective of the society, the principal products from then until 1839 were woolens and canvas.

The factory struggled through the economic depression until 1796, when it closed its doors. It was destroyed by fire in 1807. Although the first venture of the SUM had met with disappointment, the spark had been ignited, and independent manufacturers took up the torch, with the SUM developing and leasing needed water power.

LYON OF AMERICA

A poineer in the establishment of manufacturing, Paterson become prominent in the manufacture of cotton and flax, locomotives, and silks, ultimately earning the name "The Lyon of America."

Paterson's contribution to transportation has been considerable. It was here that the first locomotive in America was built. In 1859 the Southern Railway of Chile ordered from Rogers Works a freight and passenger locomotive to test the comparative merits of English and American locomotives. The American engines proved themselves superior to the English locomotives, winning for America international distinction.

Paterson has kept pace with modern advancements in industry, pioneering in many fields. The Whirlwind J-5 engine, with which Lindberg's famous plane, "The Spirit of St. Louis," was powered, was designed and built in Paterson by the Wright Aeronautical Corp.

GREAT INDUSTRIAL CITY

Today a city of more than 140,000, located in the center of the greatest industrial area in the world, Paterson is one of the chief manufacturing centers in the United States.

Only 17 miles from New York City, connected by highways and railroads and within a 20-mile radius of all trunk lines running into the port of New York, Paterson attracts immigrants representing almost every culture of the world.

The special qualities of the water from the Passiac River have made Paterson a center of the dyeing industry. Natural resources of traprock have furnished paving stone for streets.

Address by Mr. L. C. Groat at the Annual Illinois Congressional Dinner Given by the Illinois Electric Cooperatives

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following speech by Mr. L. C. Groat, manager of the Spoon River Electric Cooperative, Inc., at the annual Illinois congressional dinner given by the Illinois electric cooperatives on March 26:

We are particularly honored this year to have with us our elected Representatives from the great State of Illinois.

The report of the Hoover Commission on the Rural Electrification Administration and the rural electric cooperatives has caused us some concern. We are all farm people. We have little knowledge of political science or of proper methods of protecting our interests on the national scene. We feel sure that you people, as the elected representatives of the people of Illinois, are vitally interested in the welfare of that great and important segment of the population of Illinois—the farmer, and that if we can present to you factual information concerning the effect on the Rural Electrification Administration and on the local electric cooperatives of the enactment of the legislation to implement the recommendations of the Hoover Commission with regard to REA and the cooperatives, then you will protect our interests. With this thought in mind, we will attempt this evening to stick closely to facts, and to provide you with concrete information on this subject.

As Americans interested in reducing waste in Government, we feel that the overall work of the Hoover Commission is commendable, and that many of its recommendations, when enacted into law, will serve the Nation well, but it is not surprising that in an undertaking as vast as that assigned to the Hoover Commission, some mistaken conclusions have been drawn.

Because popular opinion seems to interpret all recommendations made by the Hoover Commission as being in the best interests of the public, we are fearful that Congress may approve proposed legislation which will wreck the rural-electrification program. Though only a minor part of the Hoover Commission's investigation, REA and the rural electric cooperatives are a major part of the lives and hopes of millions of farm people in our State and throughout the Nation.

H. R. 7343, 7357, 7359, 8239, 8242, and 8243 have been introduced in the House, and two bills have been introduced in the Senate, that would, among other things, require REA to fix its rate of interest and fees or charges to do the following: (1) Pay all of the operating expenses (now about $8 million per year) on the Rural Electrification Administration; and (2) pay the Treasury interest. In this connection, the legislation would require REA to pay the highest rate of interest the Treasury pays, and require that the rate of interest be set by the Secretary of the Treasury. This legislation would also make REA subject to the Government Corporation Control Act.

This proposed legislation sounds innocent enough until it is analyzed in the light of the Hoover Commission's recommendations which it is supposed to implement. Because these recommendations are based on misunderstandings, implementing them by legisla-

tion will make the rural electrification program unworkable and bring ruin to many cooperatives. In addition, implementing the recommendations, supposedly designed to save the Government money will actually increase the expense to the Government and also will impair the ability of most cooperatives to repay their debt to the Government.

In an analysis of the Hoover Commission's recommendations last May, Ancher Nelsen, Administrator of REA, had this to say:

"We believe that if the Hoover Commission's recommendations were to be adopted, REA would be unable to accomplish the objectives in rural electrification and rural telephony which have been established by the Congress.

"The Commission's recommendations would result in termination of the rural telephone loans program, with less than half of the Nation's farms having telephones and slight prospect for alleviating the situation.

"Further progress in rural electrification through REA loans—connection of unserved farms and system improvements to serve expanding loads—would be drastically curtailed under the Commission's recommendations.

"Borrowers in both programs would be unable to meet the loan requirements."

The erroneous conclusions drawn by the Hoover Commission in regard to REA were stated as follows in its report to the Congress:

1. The financial setup of the cooperatives does not make adequate provision for such rates for power or for telephone service to enable them adequately to build up reserves, and provide for extensions or replacements.

2. Under this method of financing, the Government has subsidized the sale of electric power to the members of the cooperative associations at considerably less than its economic cost, the subsidies being provided in the following ways:

(a) The charging of interest at 2 percent per annum which is about 1 percentage point less than the interest which the Treasury has to pay on long-term issues to provide the money.

(b) The granting of the 5-year moratorium period with a delayed payment of interest which results in an effective rate of return of even less than 2 percent.

(c) Granting exemption from all Federal taxes. (In some States these bodies are exempt from all or some local taxes.)

(d) Providing the administrative expenses which in the past 5 years, have averaged about $7,750,000 from Federal funds annually.

3. In view of the great advance made in farm electrification, it is our belief that the time has arrived for the reorganization of the Rural Electrification Administration into a self-supporting institution, securing its own finance from private sources in a manner similar to that of the other agencies discussed previously. Moreover, the operations of Rural Electrification should be made subject to the Government Corporation Control Act in order to secure the advantages of more efficient organization under that act.

Based on this type of fallacious reasoning, the Commission then made the following recommendations which the aforementioned proposed legislation seeks to implement:

Recommendation No. 36: REA be reorganized on a self-supporting basis; (b) secure its financing from private sources, and (c) be made subject to the Government Corporation Control Act.

While the intent of this recommendation may be commendable, it has been clearly pointed out by the REA Administrator that it would be unworkable, and a little later in the program, members of this panel will show in more detail some of the reasons why. Briefly, however, to carry out such a recommendation would mean that REA would have to double or triple its interest rates, plus adding to each loan a service charge to cover administrative expenses. The interest rate on loans would have to not only cover the cost of REA's borrowings from the Treasury at the highest rate the Treasury pays for money, but also the cost of servicing $3½ billion which has already been loaned.

Under these conditions, few cooperatives could afford to borrow from REA, nor could REA prove loans feasible when they had to carry greatly increased charges. Moreover, it is unlikely that most cooperatives could borrow elsewhere. Also, the fact that REA holds a 100 percent mortgage on all cooperative's facilities surely would deter private lenders.

Without a source of credit, it would be only a matter of a few years before cooperatives went out of business. Lines could not be expanded, electricity would have to be rationed, service would deteriorate, electric rates would increase, and cooperatives would have to refuse service to "unprofitable" areas. Wholesale rates would certainly go up. The feasibility of generation and transmision loans would be out of the question, leaving power supplies free to charge cooperatives any rate they cared to.

Could the Commission have been aware of the problems of REA and the cooperatives and have recommended such crippling changes? We think not, and we believe that the recommendations were made without full information on the part of the committee and the Commission. The telephone program could not hope to survive under such conditions.

Besides spelling eventual doom to most of the electric cooperatives in the country, and nearly all the telephone cooperatives, the effects of such recommendations enacted into law would jeopardize the billions of dollars that the Government has loaned to cooperatives. Hundreds of cooperatives would be unable to meet their repayment schedule. In addition, the number of loans REA could expect to make would be few. Consequently, the agency would have to operate at a deficit which would have to be made up by Government appropriation. We contend, and will show, that at present REA is self-supporting, that the 2 percent interest rate paid most of its expenses including the cost of the money to the Treasury. Furthermore, we think it is unfair that new loans by REA should be expected to carry the burden of servicing old loans. This, we consider, would be a breach of faith as well as a breach of contract.

According to Administrator Nelsen, the 2 percent interest from the inception of REA to June 30, 1955, was sufficient to cover the cost of money to the Treasury during this period, and to produce a profit of $48,985,226. As for the $7¾ million annual administrative expenses which Congress appropriates for REA, it is one of the best investments the Government has ever made. Compared to the billions given to domestic and foreign enterprises by our Government, the $7¾ million pales to insignificance, especially when you consider what the REA program has meant to the life and happiness of the farmer and to the economy of the Nation. We say that this small investment has paid billions in dividends to the country and its people.

As to the recommendations that REA be made a corporation, we see no good reason for this since it would require that REA keep records both as an agency and as a corporation and thus increase its expenses.

As to recommendation No. 43, which directs the Secretary of the Treasury to fix the rate of interest REA must pay the Treasury, we feel that it gives to one individual too much power, and that this power could be abused to the serious detriment of rural electric cooperatives. We feel that in a matter such as this, which vitally affects the welfare of millions of citizens, our duly elected representatives, not one individual, should set the interest rate.

Now, I want to call on members of this panel to clarify some of the misconceptions about cooperative management which the Hoover Commission report contains. I might say that the members of the panel whom you see before you represent over 150 years of experience in the electric cooperative business. Most are real dirt farmers who are actually engaged in the business of producing foods and fiber from the prairies of Illinois. They are men who have been chosen to act as members of the various boards of directors, and by such boards, to hold the office of president of the cooperative. Others of the panel are employed by the cooperative boards of directors for the management of these organizations in accordance with the policies fixed by these boards. I doubt that in any place in our country, or in the world, could a group be chosen who would be closer to the actual day-to-day operations and problems of the rural electric cooperatives.

Short discussions on the following:

1. Adequate Reserves, Carl Edwards, president, Coles-Moultrie Electric Cooperative.

2. Five-year Moratorium, Floyd Ruble, manager, Illinois Valley Electric Cooperative, Inc.

3. Effect of Higher Interest Rate on Our Cooperative, H. G. Downey, manager, Tri-County Electric Cooperative, Inc.

4. Effect of Higher Interest Rate on Generation and Transmission Loans, Everett Read, member of board of directors of Jo-Carroll Electric Cooperative, Inc.

5. Has REA Lost Money on 2 Percent Interest? Fred Harms, vice president, Rural Electric Convenience Cooperative, directors of NRECA.

6. Is Administrative Expense of REA Justified? Joseph H. Heimann, manager, Clinton County Electric Cooperative.

7. Effect on the Farmer, Robert Wagner, president, Western Illinois Electric Cooperative.

We have heard much factual information on the effect of enactment into law of the Hoover Commission's recommendations. I would like at this time to call on Mr. A. E. Becker, manager of the Association of Illinois Electric Cooperatives, which association represents a total of 131,295 members of rural electric cooperatives in the State of Illinois, who will summarize the facts presented and give us any additional comments.

Greek Independence Day

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Wilkes-Barre Times Leader Evening News which calls attention to the historical fact that modern Greece had its beginning, after much struggle and strife, 135 years ago last Sunday, March 25.

Mr. Speaker, I would like to take this opportunity to pay my respects to the outstanding record that the people of Greek origin have established throughout the years in this Nation in the fields of business, the arts, and in science. Their contributions have been great and this country is the richer because of their enterprising spirit and dedication

to the high ideals upon which this Nation has flourished.

The editorial follows:

The history of Greece is one of struggle. This applies to modern as well as ancient Greece.

Modern Greece had its beginning 135 years ago tomorrow when a church banner was raised above the monastery of Abhai Lavra, the signal for the launching of the Greek revolution against the Ottoman Empire. With assistance from the United States, Greece emerged victorious after 8 years.

In 1940, Mussolini launched an attack on Greece and again America responded with aid in the form of food, clothing and medical supplies. During the Nazi occupation that followed, the Greeks carried on in deadly guerrilla warfare against heavy odds, earning for themselves the plaudits of the world, until the triumph of American arms liberated Europe.

In recent years, Greece has been a target of the Communists and in recent months there has been the added problem of Cyprus. This brave people will not accept anything less than freedom and honor, no matter what sacrifices are involved. Of that, the world may be certain on the basis of a record of valor that needs no enhancement here.

The people of America and Greece have been friends for more than a century, for they have so much in common—a love of liberty. Their fellow countrymen share the concern of Americans of Greek extraction on this milestone.

Multiple Purpose Project Nearly $70 Million Ahead of Schedule in Repayment to Federal Government

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to the following excerpt from the March 1956 issue of the Log, published by the Inland Empire Waterways Association, an organization which includes business and community leaders interested in regionwide development of the overall resources of the Columbia River system in the Pacific Northwest:

An impressive record of repayment to the Federal Government of the initial investment of public funds in multiple-purpose projects in the Pacific Northwest is spelled out in a recent report from Bonneville Power Administration.

To date, the Federal investment chargeable to power in the BPA transmission system and Bonneville, Grand Coulee, Hungry Horse, Albeni Falls, McNary, Lookout Point, and Detroit-Big Cliff Dams has amounted to $1,368,795,000. The total percentage of this investment that has been paid back to date—with interest—has reached 17.11 percent. Total cash receipts to the United States Treasury for sale of power, return of operation and maintenance expenses, and interest are $390,040,000.

The Congress set repayment of projects at 50 years. At present, repayment is $67,771,000 ahead of schedule.

Only two dams, Bonneville and Grand Coulee, have been operating for any length of time. The others have been returning their investment for only a couple of years. Bonneville Dam has repaid 38.44 percent to the Federal Government; Grand Coulee has returned 26.54 percent, and the Bonneville transmission system 24.75 percent.

These figures present the best possible argument that the Government's investment of public funds in Pacific Northwest projects is a high-grade one. In addition to low-cost power, benefits to navigation and irrigation accrue to all citizens, as do such immeasurable advantages as recreation.

The record is clear. Every dollar the Pacific Northwest is receiving for construction of multiple-purpose projects involving power generation will be repaid with interest. The money that has been invested and will continue to be invested is a sound expenditure of public funds.

Rectifying the Farm Bills

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of March 26, 1956:

RECTIFYING THE FARM BILLS

As the conferees begin today to reconcile the widely different Senate and House farm bills, they have a clear-cut choice to make. They can send the President a bill he will have to veto and thus transfer the agricultural issue to the 1956 political campaigns. Or they can write a bill that will have a good chance of approval at the White House, leaving the unresolved issues for possible decision at the polls. It should be obvious to everyone that the first course would use the plight of the farmer as a political football. The second course seems to offer the only hope of increasing governmental aid to the Nation's food producers this year.

Fortunately, Senator ELLENDER, chairman of the Senate-House conference, seems disposed to seek an acceptable compromise. He singled out the dual parity provision as one that may be stricken in an effort to make the bill palatable to the President. But this is only one of the reactionary devices written into the Senate bill. Still worse is the set-aside provision under which the Senate tried to raise support prices by pretending that price-depressing surpluses are not really surpluses. Even this provision is probably less damaging to the interests of the farmer than the return to fixed price supports at 90 percent of parity for 3 years, as called for by the House. With such backward-looking devices in both bills, the conferees will admittedly have a difficult time writing a sound farm relief measure, but they ought to go as far as they can in that direction.

What is needed is not a mere compromise of political differences, but the adherence to sound agricultural policy. Recent history has amply demonstrated that excessive fixed price supports encourage surplus production and cause the prices of farm commodities to decline while costs of production continue to rise. It is incredibly shortsighted to revert to this discredited policy merely because it still finds favor among some farmers. These price-fixing formulas have no proper place in the soil-bank legislation before the conferees. They are riders which, along with many other incompatible amendments, have made a crazy patchwork of the farm bill.

If the conferees are interested in helping the farmer, they will go the limit in eliminating or softening these objectionable appendages. Their task is to write a simplified bill that can be signed into law and administered satisfactorily instead of being consigned to the rubbish heap. This task should be completed with all possible speed so that farmers will be able to participate in the soil-bank plan and to obtain its benefits this year.

A Change in Our Electoral System

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. GRANT. Mr. Speaker, with permission of the House, I attach hereto a letter received from Hon. Lea Harris, of Montgomery, Ala., and a newspaper article headed "Proposal To Hit Legislature," from the March 13 issue of the Alabama Labor News.

It is interesting to note that this is a new approach to the problem of a change in our electoral system.

The letter and article follow:

MONTGOMERY, ALA., *March 12, 1956.*

Hon. GEORGE GRANT,
Member of Congress,
Washington, D. C.

DEAR SIR: The other afternoon while working on a law case involving a constitutional problem, I turned to that section of the Constitution involving presidential electors to see if our wise founders had left a way open to easily change our absurd electoral system that now causes the vote of the sizable minority to be cast against the candidate they voted for. Logically speaking, our present system is ridiculously undemocratic and causes more political tension and pressure in our land than any one thing. I have a simple answer and devised a mathematical formula so that a single State could use for this presidential election, without changing any Federal or State constitution or without ratification of any other State. It is as follows: The Federal Constitution prescribes that the States must have electors, but it does not prescribe how the States may elect them, but leaves this to the discretion of the individual States.

Article 2, section 1, clause 2 of our Constitution states as follows: "Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative or person holding an office of trust or profit under the United States shall be appointed."

A single State could very easily cause political parties within the State to nominate their slate of electoral candidates by rank or priority from one to the number of electoral votes they have (Alabama has 11 electoral votes). If these candidates are nominated by convention, the convention will determine the priority or if by a party State executive committee, then by the committee, if nominated by party vote then the candidate -receiving the most votes would be the ranking or No. 1 on through 11 (if a tie; then by alphabetical order).

In event the certifying officer of the party fails to designate to the secretary of state the ranking or priority of the candidates, then the secretary of state will designate the ranking of the candidates according to alphabetical order. To determine which

candidates for presidential elector would be elected in the general election, the secretary of state will divide the number of presidential electors to which the State is entitled (at present 11 electors) into the total number of votes cast in the general election, thereby obtaining a number which is termed the elector quotient. The elector quotient will then be divided into the number of popular votes cast for each party to designate how many electoral votes each party will receive. The secretary of state will declare elected the ranking number of party candidates for presidential elector to which each party is entitled.

For determining the electoral votes, a major portion or part of the elector quotient will be considered as a whole elector vote and minor fractions of the elector quotient will be discarded.

Illustration: Now Alabama having 11 electoral votes, and assuming only 11,000 voted in the general election; if 8,000 voted Democratic and 3,000 voted Republican; then the first 8 ranking or priority Democratic electors and the first 3 ranking Republican electors would be elected, thus dividing Alabama electoral vote fairly, according to the popular vote.

Using more realistic figures—should 140,000 vote Republican and 210,000 Democratic. Add these two figures together, making a total of 350,000 votes. Divide the total vote by the number of electors of each State (11 for Alabama) to obtain an "elector quotient," by this illustration the elector quotient figure would be 31,818. This would amount to 6 plus $\frac{19,002}{31,818}$ or 7 electoral votes for Democrats and 4 plus $\frac{12,728}{31,818}$ or 4 electoral votes for Republicans.

In other words, 31818 voters could actually determine whether 1 elector would be cast for one or the other presidential candidate. In order to place this plan into immediate effect, all that is necessary is a simple majority of the State legislature of the State concerned. I am sending copies of this letter to governors of all States and many men in public life, newspapers, and national magazines, hoping some will take up the fight to change the present unfair and ridiculous situation the electoral system has placed us in, which was never intended by our thoughtful forefathers. The power to change rests with the State legislature so if they did not like the effects after this plan was enacted, they could always change back. Incidentally, this is one State authority the Federal courts have not attempted to deny them. One prime reason for the passage of this bill is to reduce the political power of the hidden Communist forces within radical organizations in the big cities up North. One State's adoption may cause many others to follow, including the big pivotal States.

Very sincerely,

LEA HARRIS.

PROPOSAL TO HIT LEGISLATURE—NEW ELECTORAL CHANGE PROPOSED

The State legislature is to receive a new and original electoral proposal that would immediately make Alabama a doubtful State in the coming presidential election. The new proposal was originated by Lea Harris, a Montgomery attorney. Legislators, asked about their views had varied comments from delight at having the prospect of ending the in-the-bag one-party control of Alabama and the South to thoughtful consideration. This plan, if adopted, would make Alabama a doubtful State. The Lea Harris electoral plan pointed out that the Federal Constitution directed that electors be appointed but left entirely within the State the discretion or manner in which States may elect their own electors. The State control is the key to the Lea Harris electoral plan.

In brief the State would require the political parties to nominate their candidates for presidential electors by priority or rank, 1 through 11. These candidates would be elected according to the proportion of the popular vote within a State. In order to put this plan into effect, it would only normally take a simple majority of the legislature as the State was given the authority by the Federal Constitution to direct how the electors would be appointed or elected. This plan would be placed into effect immediately for the coming presidential election if the Legislature of Alabama sees fit.

Mr. Harris says he is immediately sending his idea to all 48 State governors for prompt action if they see fit. Mr. Harris emphasized that he proposed this plan for the welfare of the Nation and to ease the political tension caused by the present electoral system and not for the benefit of either party.

He further states his plan is original and apparently has never before been proposed by any State, but many Federal electoral changes have been proposed before. This plan would go into effect upon passing of the Alabama Legislature, not requiring any other States to ratify or change in the State or Federal Constitution. The legislature has full authority to change the nature of electing the electors and if this plan does not prove to be a success, the legislature could amend or change back to the present way.

The question was asked Mr. Lea Harris if he thought a Democratic legislature would adopt such a plan and he gave the following reasons why he thought so:

The bigwigs of each political party have set their eyes on being elected to the Presidency of our Nation, basing their politics and conventions on the South being a one-party affair. Some politicians in both parties, some by ignoring, others by using the solid South, are hoping to obtain the Presidency, by getting a few western votes and some of the big city radical machine support. Should Alabama adopt my plan all the calculations would of necessity immediately go out the window. Most political pollsters concede that Ike would carry New York State and some of the other big States. Because of this, the Democrats would be hard pressed if they did not get sizable minority support. Many of the big Northern States, including New York, may promptly follow suit. It is his belief that if Alabama leads the way, many other States may immediately adopt his plan.

Other reasons Mr. Harris gave were:

1. Financial: Alabama and other one-party Southern States have severally suffered financially because it is a one-party State. For instance, the present administration has cut cotton acreage in Alabama by 50 percent while at the same time expanding wheat acreage in doubtful Western States, this obviously done for political reasons. Franklin D. Roosevelt's administration gave higher relief pay to northern workers than to southern workers and gave more per capita public works' projects to doubtful States than the one-party Southern States. The prolonged freight-rate differential was another effect of the one party. If Alabama would become a doubtful State, we would immediately receive greater governmental benefits and projects, and this would be a big economical shot in the arm. We pay our hard tax dollars into the Federal Treasury in Washington and the doubtful States receive the lions share of benefits with Alabama and the other Southern States taking the leavings. Can any legislator, regardless of party, vote to deny rightful financial benefits to his State and county?

2. Politics: Should Alabama be a doubtful State, the national political hopefuls in Alabama would be much more influenced in national party circles instead of being in-the-bag boys. Should Alabama be the only Southern State to adopt my plan; then if either party would see fit to place a southerner on the national ticket, they would almost naturally turn to a man from Alabama, being a doubtful or biparty State. By this plan Alabama may thus furnish many of its sons into the national political arena. In all respects to Senator JOHN SPARKMAN, he probably would not have received the vice presidency had it not been for the Dixiecrat movement in 1948.

3. Moderation: Should Alabama become an immediate doubtful State, the radicals up North would find that they would drive away electoral votes from their own party and they would very quickly see that their championship of the radical causes would be unpopular. No cause has ever been popular that drove away votes. If several of the Southern States enact this plan, it would be amazing to see how quickly these radicals would moderate their beliefs.

4. Americanism: American democracy has always believed in giving the other fellow the right to speak and vote his views. Although we do not agree with our political opposition we must not deny them the privilege of voting for their candidate. This is our American way of life. Our electoral college is absurd and ridiculous in the fact that it completely distorts the intent of many of the votes. A large minority has their vote cast against the man that they vote for. Obviously there is nothing democratic about this. In the last presidential election in New York State, millions of Democratic voters voted for Stevenson and their vote by means of the absurd electoral college system were cast against the man they voted for. Tens of thousands of Democrats in Texas voted for Stevenson and here again, their vote was cast against the man they voted for. In Alabama, about 140,000 citizens voted for Eisenhower and these citizens had their vote cast against Ike, the man they voted for. There is nothing fair or politically moral or democratic about this process.

THE PROPOSED BILL

"Be it enacted by the State of Alabama, All political parties on the State ballot will nominate or appoint their candidates for the officers of presidential elector by rank or priority. The party may designate the priority either by party convention, State party executive committee, or by party vote. If by party vote, those party candidates receiving the highest popular vote will be ranked first and in the order of their popular vote. In case of a tie between any two or more; then the candidate will receive ranking by alphabetical order. In event the certifying officer of the party fails to designate the candidates for presidential elector by priority; then the secretary of state will designate the candidates by priority according to alphabetical order.

"To determine which candidate for presidential elector would be elected in the general election, the Secretary of State will divide the number of presidential electors to which the State is entitled (at present 11 electors) into the total number of votes cast in the general election thereby obtaining a number which is termed the 'elector quotient.' The elector quotient will then be divided into the number of popular votes cast for each party to designate how many electoral votes each party will receive. The secretary of state will declare elected the ranking number of party candidates for elector to which each party is entitled. For determining the elector votes, a major portion or part of the elector quotient will be considered as a whole electoral vote and minor fractions of the electoral quotient will be discarded.

"By way of illustration Alabama now having 11 electoral votes and assuming 11,000 votes were cast in the general election—7,000 being cast for the Democratic Party and 4,000 for the Republican Party; then the first 7 ranking or priority candidates of the

Democratic Party would be declared elected and the first 4 ranking Republican candidates would be declared elected.

"Another illustration, should 140,000 voters vote for the Republican Party and 210,000 vote for the Democratic Party, the 140,000 plus 210,000 would be equal to 350,000 for a total vote cast. This figure would be divided by 11 to obtain the electoral quotient figure which would be 31,818. This elector quotient figure would be divided into the 140,000 which would be equivalent to 4 plus 12,728–31,818 or 4 electoral votes for the Republicans. Similarly 31,818 divided into 210,000 would be equivalent to 6 plus 19,092–21,818 which would be equal to 7 electoral votes for the Democrats."

Interposition Against Centralized Despotism—Broadcast by Dean Clarence E. Manion

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 28, 1956

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Interposition Against Centralized Despotism," broadcast by Dean Clarence E. Manion on March 25, 1956.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

INTERPOSITION AGAINST CENTRALIZED DESPOTISM

(By Dean Clarence E. Manion)

There is a new political issue in the current presidential campaign that is burning brighter by the minute. It is called interposition.

The word doesnt' mean much to the average voter now, but in the coming months interposition may easily mean the difference between the success or failure of somebody's ambition to be President of the United States.

Suppose we try to take interposition out of the hot fire of the desegregation controversy and examine its components in some nice cool, purely hypothetical situation.

Let us start with the fact that the people of the State of Nevada have legalized gambling within the confines of that sovereign commonwealth. In Nevada, the various devices employed in this thrilling game of chance, or devilishly evil enterprise—depending upon your point of view—are all legally authorized, subject to State taxes which provide a large portion of the necessary State revenues.

Under the 10th article of the Federal Bill of Rights, Nevada has clearly reserved the exclusive power to authorize this gambling business. For this reason, the Nevada gambling laws are universally accepted as unassailable on constitutional grounds.

Attracted by these permissive statutes, a galaxy of multi-million-dollar hotels and gambling emporia have been located inside of Nevada. Thus, the personal and State property rights in the Nevada gambling enterprise are deeply and profitably vested.

Nevertheless, let us assume that the moral sensibilities of many American citizens are seriously shocked by what they call this open exhibition of legalized immorality. Some of these good people organized a national association for the protection of Americans against gamblers.

In the name of some person who has lost money at the gambling tables in Las Vegas, the association brings a suit in Federal court to recover the plaintiff's money losses from the proprietor of the involved gambling establishment.

Let us suppose now that, ultimately, and in defiance of long-standing legal precedents, the Supreme Court of the United States decides that the Nevada gambling statutes violate the 14th amendment to the Federal Constitution.

The Court decision declares that the gambling statutes deprive losing players of their money "without due process of law." The general enforcement of this arbitrary judicial decree would strip millions of dollars from the tax revenues of Nevada, and deprive great private investments of their established income values.

Naturally, the people and government of Nevada would be outraged by what they regard as a prejudiced misinterpretation of the Constitution by the Supreme Court.

Whatever one may think about the propriety of legalized gambling, he must admit that this startling judicial invasion of a time-honored State right would be an understandable cause of excited resentment in Nevada.

The reservation of States rights in the Constitution is no guaranty that the States' rights and powers will always be exercised in conformity with the moral standards of people in other parts of the country. Reserved State authority carries with it the constitutional responsibility to exercise the power for good or bad.

One can defend the right to free speech without defending every word that is spoken in the exercise of that right. In like manner, one may stanchly defend the constitutional right of the State to permit gambling within its borders, even though he firmly believes that gambling is morally wrong.

As it is with gambling in Nevada, so it is with segregation in Virginia, Alabama, or Mississippi. Under the Constitution as it is now written, segregation has been established by various State laws for 90 years. Sixty years ago, the United States Supreme Court declared that segregatiton laws were constitutional exercises of reserved State powers. (*Plessy* v. *Ferguson*, 163 U. S. 537.)

In 1954, the Supreme Court reversed that decision. (*Brown* v. *Board of Education*, 74 Supreme Court 686.) Many years ago, the late Chief Justice Hughes observed that the Constitution is what the judges say it is. For practical purposes, that is so, but the assertion will not make the Southern Segregationists feel any better about this judicial repeal of a long-standing constitutional State right.

SHOULD HAVE SEEN HANDWRITING ON WALL

Proper vigilance would have enabled these States Righters to see what was coming. In the last 20 years, the Supreme Court has reversed more established constitutional constructions than were changed by that Court in all the preceding years of its history. Most of these reversals have been at the expense of constitutional States rights.

If some of the Senators who are now complaining about the desegregation decision had questioned present Supreme Court Justices about their respect for the 10th amendment when their appointments were before the Senate for confirmation, the present constitutional crisis might have been avoided.

But that is water over the dam. What can the States do about this or any other Federal invasion of their long-standing constitutional prerogatives?

The current answer revives the historical practice of interposition. By resolution of its legislature, Nevada could attempt to put its sovereignty between the holders of its gambling licenses and the execution of a Federal court decree.

In the historical tradition, the same legislative resolution would appeal to Nevada's sister States to join in a defense of their common constitutional rights.

Southern States are now resorting to such interposition to prevent execution of the Supreme Court's desegregation order within their respective jurisdictions.

The theory of interposition is this: The Supreme Court has no constitutional authority to adjudicate disputes between a sovereign State and the Federal Government. That is the interpositionist contention.

Unwittingly, perhaps, but nevertheless surely, President Eisenhower outlined the basis of the interposition argument during the 1952 presidential campaign. Here is what he said (speaking at Des Moines, Iowa, 1952):

"The Federal Government did not create the States of this Republic. The States created the Federal Government. The creation should not supersede the creator. For if the States lose their meaning, our entire system of government loses its meaning and the next step is the rise of the centralized national state, in which the seeds of autocracy can take root and grow."

Interpositionists have always contended that if any branch of the Federal Government, including the Supreme Court, is allowed to strip the States of their constitutionally reserved powers, then the creation would be superseding the creator with all the dire results that President Eisenhower predicted.

Interposition was first—and successfully—asserted by the State of Georgia against a decision rendered by the Supreme Court in 1793 (*Chisholm* v. *Georgia*, 21 Dall. 419). The result was the adoption of the 11th amendment to the Constitution, which established the very State right that the Georgia interposition had contended for.

In 1798, Jefferson and Madison prepared resolutions for the legislatures of Kentucky and Virginia, which declared that when the Federal Government exceeded its constitutional authority, it was the duty of the States to interpose their authority.

Later, in a convention called by the Massachusetts Legislature at Hartford, Conn. (December 15, 1814), delegates from Delaware, New York, and New England put it this way:

"In case of deliberate, dangerous, and palpable infractions of the Constitution, affecting the sovereignty of a State and the liberties of the people, it is not only the right but the duty of such State to interpose its authority for their protection."

In 1859, the Wisconsin Legislature asserted the right of interposition and put the sovereignty of Wisconsin between its citizens and Federal enforcement of the congressional fugitive-slave laws.

ALSO INTERPOSITION BY FEDERAL GOVERNMENT

How one looks at interposition often depends upon whose ox is being gored. For instance, back in 1913, Congress passed a Federal game law to protect wild geese and ducks. State and Federal courts promptly declared that the congressional act was an unconstitutional violation of reserved States rights. Undaunted, the Secretary of State proceeded to negotiate a treaty with Canada establishing a mutual international obligation to protect these same birds.

Then, pursuant to the treaty, Congress repassed the game law that the courts had said it couldn't pass pursuant to the Constitution.

For the Supreme Court, Justice Holmes then decided (*Missouri* v. *Holland* (252 U. S. 416)) that the treaty gave Congress the very power which the Constitution had denied to Congress. Holmes held that, under the treaty, the previously unconstitutional game law was now fully enforceable, States rights to the contrary notwithstanding. Here was interposition by the Federal Government

against the constitutionally valid game laws of the States.

But the end was not yet. On the night of November 16, 1933, President Franklin D. Roosevelt and Maxim Litvinov, of Soviet Russia, resorted to the interposition of a private international executive agreement against the valid statutes and approved court decisions of the State of New York.

The result of this interposition, as determined by Justice Douglas for the Supreme Court of the United States (*U. S.* v. *Pink*, 315 U. S. 203), was to change the ownership of property, contrary to the unquestioned constitutional laws of New York, States rights to the contrary notwithstanding.

To cure these judicial emasculations of the 10th article of the Bill of Rights by treaties and secret executive agreements, the friends of constitutional government have been attempting to interpose the curative safeguards of what is called the Bricker amendment.

In the sustained, but frequently discouraging rear-guard action now being fought against the steady advance of ever more and more centralized international socialism, the underlying critical issue is the fate of constitutional States rights.

Whether it is gambling in Nevada, segregation in South Carolina, education in California, or the right to work in Kansas, the basic challenge to American liberty is the continuous, contemptuous disregard of the 10th amendment by the Congress, the Executive and the Supreme Court.

If it took the emotionally charged desegregation decision to stir the States righters into effective remedial action, then that decision may well turn out to be a constitutional blessing in disguise.

Importance of Vocational Education

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, March 28, 1956

Mr. NEUBERGER. Mr. President, a recent letter I received from Mr. Jack E. Brookins of the Department of Vocational Education in Salem, Oreg., is of more than passing interest. Mr. Brookins' letter should be of interest to anyone concerned with the problems of our complex society. This letter clearly reveals the characteristic loyalty of our teachers to their profession. There is reason for optimism when the leaders directing the future of American education think as clearly and as purposefully as is evidenced in this letter. I am encouraged by the deep sincerity and the devotion to duty I find among teachers.

Recently I had breakfast with a delegation of eight Oregon schoolmen, Mr. President. I learned a great deal from them. They are facing the problems and responsibilities of their position with courage and constructive effort. However, my optimism wanes somewhat when I realize that the effectiveness of our educational leaders is being restricted and confined by inaction at the legislative level.

I would like to add that Mr. Brookins is a member of an excellent staff assembled by Mr. Oscar Paulsen, director of vocational education in Oregon. Mr. Paulsen's department has established an enviable reputation throughout the 48 States. Great credit must go to Mr. Paulsen for choosing a vigorous, energetic staff. His department has developed a program that sets a pattern followed by many of the other States.

Mr. President, I ask unanimous consent to have the letter from Jack E. Brookins inserted in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Hon. RICHARD L. NEUBERGER,
The United States Senate,
Senate Office Building,
Washington, D. C.

DEAR SENATOR NEUBERGER: I want to talk to you for a few minutes about the importance of vocational education appropriations during the coming 2d session of the 84th Congress.

However, before I do, it is only fair to tell you I am a "professional" vocational educator, employed as assistant State supervisor of trade and industrial education by the State division of vocational education. My job, of course, colors my opinions, but my plea is also one of the interested and concerned citizen.

During the past 2 years (fiscal 1955 and 1956) National Congress has seen fit to increase George-Barden vocational education appropriations $7,826,739. For this we are thankful and grateful—it has helped. I'm asking you to support a further increase of $2,800,000 to the maximum of $29,300,000 authorized under the George-Barden Act for 1957.

My reasons for this request are numerous, I'll try to give you a few.

As each Senator and Representative returns to Washington he is concerned with national security—so am I. A look at the National Manpower Council's report, A Policy for Skilled Manpower, the book Soviet Professional Manpower by the National Research Council, at Secretary Benson's "low-income farmer report," and at Earl H. Voss' piece in the Washington Sunday Star, September 25, 1955, headlined "Officials Fear Nation Is in Peril of Losing Science Race to Reds," and his article of November 27, titled, "Educators' Meeting Puts Spotlight on Progress of Soviet," are indicative of some of my reasons. We too are concerned with national security—we are concerned with the training of technical and skilled manpower this country needs so desperately. We are concerned with the wise and prudent production, processing, distribution, and consumption of our natural and human resources.

We need engineers and scientists—but vocational education cannot train them, this is a job for higher education. We can, however, train the skilled and technical manpower who help them and materialize their ideas.

A year or two ago I heard a representative of the American Society for Metals say, "There is not as bad a shortage of engineers as you might think, but there is a very great shortage of engineering." His point was simply that some engineers are wasting their time doing the work of technicians. I have observed some isolated examples of this—there is some truth in what the man said. Our fine school at Klamath Falls, Oregon Technical Institute, is turning out some technicians but they cannot do the whole job—there is room, and need, for more.

The report, Automation and Technological Change, of the Subcommittee on Economic Stabilization of the Joint Committee on the Economic Report, touches on this problem in item IX, page 7. The hearings before the committee contain continual direct and indirect references to problems of training and retaining of skilled and technical workers—for instance, the testimony of James B. Carey (p. 222) and Dr. Brunetti (p. 385). Dr. Brunetti's description of the General Mills cooperative training program with the Minneapolis Vocational School is an excellent example of what can be done. The statement of Dr. M. D. Mobley on the last page of the printed hearings ably presents the case for vocational education.

Consider for a moment our great lumber and woodpulp industries. As they continue into their programs of woodwaste utilization their need for technical workers advances in a geometric ratio—we haven't been able to do much for them so far. Such a program takes money—and teachers. As of this date, all but a very few dollars of our appropriation this year are obligated. At the end of the year we will have grown over last year, but we could be giving more service.

Everyday we receive requests from local communities to assist the schools, industry, and business with training programs and problems. I am frustrated (and my wife and children sometimes suffer) when we cannot do the things that need to be done.

You will have legislation before you concerning practical-nurse training. Oregon needs practical nurses, at least 150 each year to compensate for normal turnover. You know better than I that we need to train more of them. It will not be done without your help and the financial backing of the National Congress.

Local school districts are hard pressed to meet their obligations from grades 1 to 12. Admittedly, our programs of vocational education are, in a sense, extras—but needed ones. They are programs of national significance. Reflect upon the high mobility of the labor force when you consider the George-Barden appropriation. Much of the security and well-being of America is inseparably tied to the skills, technical and scientific knowledge, and production and distribution know-how of our people.

We have a backlog of requests to assist industry in management and supervisory training. Ninety percent of persons employed in manufacturing in our State work in plants that employ less than 100 people. They cannot afford full-time training directors or training programs.

What causes small business to fail? A lot of things, of course, but consider: Two small firms start in business; they manufacture or distribute the same product, have equal capital, plant, similar location, and working force; one fails and the other succeeds. Why? Poor management practices could be the reason. We can help the small-business man, the farmer, and the homemaker. The failure of a business hurts all of us—socially, psychologically, and economically.

Almost every week I read another prediction that the gross national product of America will continue to rise—it will reach such and such an astronomical figure in 1975. You know there is really only one way left to increase the GNP—all these predictions are predicated on the same basic assumption, that production units per man-hour will continue to rise. How will this be accomplished? Divine providence will probably not enter in, neither will a fairy godmother with a magic wand. Technological advances—automation—and improved distribution methods will help, but these are really tools, they are effects which have more basic causes. These causes lie in our trained scientific, technical, and skilled manpower—our human resources. I sincerely believe that we in vocational education can help in providing them—but we must be given the opportunity.

Honestly, if I were capable, I could write a book on this theme. I live my work and work at my job because I love it—because I know it is important and that it makes a contribution to our State and country. I will take no more of your time except to ask you to consider seriously my request that the George-Barden Act appropriation be increased to the full amount authorized during fiscal year 1957.

Sincerely,

JACK E. BROOKINS.

The Agricultural Program

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Wednesday, March 28, 1956

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the following editorials dealing with the farm bill recently passed by the Senate: From the Minneapolis Star of March 20, 1956, an editorial entitled "Hodgepodge Farm Bill"; an editorial entitled "Rigid-Flexible Bill," from the Minneapolis Tribune of March 21, 1956; an editorial entitled "Trifling With Parity" published in the St. Paul Pioneer Press of March 19, 1956; and an article entitled "Seen Nuth'n Yet," written by Alfred D. Stedman and published in the St. Paul Pioneer Press of March 25, 1956.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Minneapolis Star of March 20, 1956]

HODGEPODGE FARM BILL

If the farm bill goes to the White House in the hodgepodge form passed by the Senate it is hard to see how the President can sign it. For it attempts by subterfuge—not recognizing that a big share of the surplus exists and changing parity formulas—to bring back the high-support plan which the Senate had defeated in earlier consideration and which the administration has opposed consistently. If there is no enactment in time to affect this year's crop the Nation may blame those who have played the most politics with the bill.

[From the Minneapolis Tribune of March 21, 1956]

RIGID-FLEXIBLE BILL

Should the farm bill passed by the Senate reach President Eisenhower in its present form he will have about as much justification for vetoing it as he would have had with mandatory 90 percent of parity supports intact.

As Senator AIKEN, Republican, of Vermont, remarked, there is enough objectionable material in it to justify 3 or 4 vetoes. It's an election-year package authorities close to $2 billion of new benefits to farmers, but which would do little to curb overproduction or expand markets.

With a soil bank to make payments for taking cropland out of production and only minor descents from incentive price support levels, farmers are offered the opportunity to eat their cake and have it, too.

The Democratic leadership, with the help of Midwest Republicans, managed to nullify earlier rejection of high, rigid supports, by changing the rules of the price-support game. By clinging to dual parity the Senate majority in effect said parity is a concept which can be altered from time to time to produce support levels desired by particular commodity groups. The same desire to obtain a particular result apparently prompted the decision to tinker with the mechanism intended to give flexibility to the variable support program.

As farmers are well aware, under the flexible system, support levels were to be lowered for commodities in surplus and adjusted upward for those in short supply. Under present law 500 million bushels of wheat are not to be considered by the Secretary of Agriculture as part of the wheat surplus. In the case of cotton, 4 million bales are similarly exempted. The Senate, in its wisdom, has now decreed that 750 million bushels of surplus wheat and 7.5 million bales of surplus cotton don't exist for purposes of calculating support levels. In addition 250 million bushels of corn are set aside as nonexistent.

Effect of these manipulations is that Secretary Benson would be required to support wheat at 85 percent of parity this year instead of 76 percent; corn at 87 percent instead of 81; and cotton at 90 percent instead of 86 to 87 percent.

Space does not permit discussion of other contradictory provisions of the Senate bill. We hope, however, that Senate-House conferees give some thought to the effect the Senate's tampering with parity and the price-support mechanism may have on the nonfarming population. Most city people—who now hold the balance of political power in this country—accept on faith assurances that the parity formula is a suitable yardstick for measuring the fairness of prices farmers receive. If they come to believe it is not the consequences to farmers could be disastrous.

[From the St. Paul Pioneer Press of March 19, 1956]

TRIFLING WITH PARITY

To millions of Americans, parity is the prize puzzler of the Federal farm price programs. They don't know what it means. And their bafflement is no help to their manifestly growing skepticism of Government pegging of farm prices above the market. Now they read that a majority of Senators including 10 Republicans from the wheat States, has overturned the Eisenhower-Benson administration on modernizing the legal definition of parity.

Did the Senators consider the effects of their vote on public opinion in this critical stage for farm price programs? No doubt they wanted to serve the best interests of farmers. They voted to retain the definition that would mean a higher parity for some products. The higher the better, they seemed to think.

But parity is a vital standard in farm price programs. It is a ruler for measuring parity, or equality, of farm prices with the general price levels. And having an honest measuring stick, worthy of public confidence, would seem therefore a keystone in any farm price program that is to keep on serving farmers very long.

Now the United States Senate has voted to keep a measuring stick which is more than 40 years old. It has voted that the parity price of four products shall be the same as it was in 1910–14, in terms of their buying power in exchange for things or services that farmers buy. These products are wheat, corn, cotton, and peanuts. It has voted that for these four, the parity price shall be the 1910–14 price multiplied by the 283 percent that general price levels have risen since then.

Is this an honest standard? In that 1910–14 base period, there wasn't a grain combine or a mechanical corn picker in this region. Not one farm in 6,000 had a tractor. The job of plowing and planting and harvesting and hauling to town was done with horsepower, that today has all but vanished. And the revolution has moved fastest for field production that's most fully mechanized. How trustworthy is a definition of parity which disregards that?

No mortal can prove that the "modernized" parity is perfect. It, too, uses the 1910–14 buying power of farm products in its measure of parity prices. But it has a saving factor of realism in recognizing that the revolution has moved faster for the mechanized field crops than for dairy or other products that still require relatively more hand labor. Thus the new parity is modified to reflect the price relationships of the most recent decade. That's why it would lower the price support level 10 cents a bushel for wheat, 7 cents for corn and some for cotton and peanuts.

The question comes down to a choice of values. On one side is a definition of parity that can bid for public confidence. On the other is a definition that forfeits some of that claim but gains a dime or so in price supports. Oh, yes, a dime a bushel means $100 million on the wheat crop. But suppose that trifling with parity should undermine public trust and threaten continuance of the whole price-support program. Then such trifling wouldn't come near being worth the risk.

[From the St. Paul Pioneer Press of March 25, 1956]

SEEN NUTH'N YET

(By Alfred D. Stedman)

Maybe, in the glow of victory for the generous farm promises of ESTES KEFAUVER and the farm bloc in the Senate soil-bank bill, it isn't tactful to say so of a bill that avows surplus curbs. But as to farm surpluses, maybe this country "ain't seen nuthin' yet."

Sure, drought may intervene again with curbs that do cut crops. But even that is a gambling chance. East of the Mississippi and in its Northern and Western areas, the country is wet. Snow ranges up to 30 inches in the lake region, 50 inches in Maine and 350 inches in western Washington. Again the Corn Belt and the Great Plains will have to depend on getting rains in the growing season. But, drought or no drought, the United States has been adding to farm surpluses that, year by year, have weighed down harder on farm prices and farm income.

The question is wether the week's events in the Senate and in Minnesota mean change for the better.

On the victors in both arenas rests the burden of proof of any such good augury. The test is the Senate bill and the votes thereon, including Senator KEFAUVER'S.

The Senate voted to isolate more wheat, corn, and cotton in set-aside reserves. Thus, by the wave of a wand, it said that, in figuring price props, so much more of the surplus isn't there. This didn't get up to Mr. KEFAUVER'S level of 100 percent of parity. But along with other means, it did boost Federal props from the Benson flexible-support level by 32 cents to $2.13 a bushel for wheat, 12 cents to $1.52 for corn, and some for cotton and peanuts.

What, in the long run, will the higher supports do to the Senate soil plan's aim of reducing surpluses? Like all its forerunners, the soil plan's method of control is the taking of land out of crop production. But where is the proof that this will work in the face of the Senate's higher incentives to produce more of the surplus crops?

Farmers aren't deaf or dumb or blind to what modern farming methods can do. They know how to offset acreage cuts by taking out the poorer land and fertilizing the rest. They raised more corn on 80 million acres last year than they used to raise on 95 million. They raised more wheat on 47 million

acres than on 78 million in 1951, a rust year. They cut cotton acreage 40 percent and got a huge crop. So where are facts to show that even big soil bank rentals would reduce surpluses very sharply?

To score even moderate reduction, large transfers to the soil bank of crop lands are vital. To get them, the Senate by a two-vote margin required farmers to put in a minimum part in order to qualify for Federal price supports. But wheat state Senators and Senator KEFAUVER didn't like this. Now protests are coming from heavy KEFAUVER districts. How good are this safeguard's chances to stay in the bill? And if it goes out, what will be left of surplus control?

Generous old Doc Senate wants to cure surpluses with sugar pills that keep folks sweet until election. But what if the sugar treatment doesn't take? Soon farm folks will be rolling up sleeves for action: The Minnesotans who broke all corn records last year despite drought, the Mississippi boy who raised 304 bushels on one acre, the grain farmers who have produced the biggest wheat supply ever known. Fertilizers will pour on, seed will be sown, fields will turn from green to gold, and combines and pickers will be working. Farmers will then see that surpluses didn't shrink when the Senate wand waved, but are there still with new crops being piled on top. Surpluses? Brother, maybe you "ain't seen nuthin' yet." Won't that be tough for the hard-hit patients of Sugar Doc Senate? Yes, for them the day of reckoning may be closer than Doc thinks.

Teaching Life Split Between Home and School

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 28, 1956

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Teaching Life Split Between Home, School," written by Jean Sharley, and published in the Detroit Free Press of March 22, 1956.

The article outlines the philosophy of one of Detroit's outstanding educators, Miss Florence Kuhn, assistant superintendent of the Detroit public schools. It was my privilege to work with Miss Kuhn during my service as a member of the Dertoit board of education.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON TOP IN HER JOB—TEACHING LIFE SPLIT BETWEEN HOME, SCHOOL

(By Jean Sharley)

The girl: Florence Kuhn.

The job: Assistant superintendent, Detroit Public Schools.

The place: 1354 Broadway, Detroit.

It was in the cards from the beginning for Florence to be a teacher, and a good one.

When she was 10, her fifth-grade teacher spotted her potential and told her she should enter the field. Later, another teacher, Rose Phillips, who later became Mrs. I. Himelhoch, said that by the time she was principal, Florence would be a teacher on her staff. That's the way it worked out, at Maybee School, where Florence began teaching first grade in January 1919, under Miss Phillips.

Via her schools—Nichols, Hosmer, Duffield, Trombly, Law, Wayne and Arthur, Williams, Hamilton, Richard and Herman—Florence rose from the first-grade post to principal, and in July 1947, to her present spot in the little red brick building on Broadway.

On the spot where Florence's father once ran the family grocery store, there is rising, by coincidence, another elementary school.

A charming, handsome woman, who would love to spend her winters in Florida fishing and her summers up North fishing, Miss Kuhn sits in one of the board of education's busiest offices, under a picture of a little boy fishing, and plots the course of elementary schoolteachers and of 1,200 substitute teachers.

Action in her office sometimes reaches tornado force, as on a recent Friday morning when between 7:30 a. m. and 9 a. m., 321 classrooms reported in sans teacher, and 321 substitutes were routed in by opening bell.

Miss Kuhn, who took her bachelor of arts degree at Detroit City College, and her master's at Wayne University, especially enjoys welcoming new teachers into the Detroit system, which she regards as one of the best in the country.

"We have a turnover of 500 teachers every September," she says. "I am happy to report that now that salaries have been raised, more young men are entering teaching. We're not breeding old maids. In fact, we're even having marriages between our teachers.

"First year teachers with a B. A. receive $4,150 for 10 months, those with an M. A. $4,400. Salaries rise over a 9-step schedule to $6,550 and $6,800 for 10 months.

"There is not such a scarcity that we are forced to accept all applicants. We choose carefully. Newcomers are expected to have a sympathetic understanding of each child as an individual and a grasp of his potential capabilities.

"They should have an appreciation of the work-a-day world in which Detroit children live. A genuine awareness of new developments and ideas. And a philosophy of life with a code of ethics children will respect.

"We choose teachers who have a scholarship of B or better. Four years' training is a minimum, with a B. A. Each new teacher takes a psychology test and meets a personnel committee. If she loves children, has a feeling for them—that's it."

Miss Kuhn, who should know, says that administrative promotions are made within the system. Teachers, on their own initiative, can request promotions via a questionnaire and a battery of tests. Elementary assistant principal, secondary assistant principal, department head or attendance center supervisor and counselor are promotion posts.

Five of the assistant or deputy superintendents under Superintendent of Schools Arthur Dondineau are men. The sixth is Miss Kuhn, who works with a staff of eight.

Though she deals primarily with teachers, parental complaints do reach her office and are channeled to the administrative supervisor of any of the 8 districts which in turn cover 25 to 30 schools in the city.

About spanking, Miss Kuhn is decisive.

"I always maintained order in my classrooms," she said. "This problem of the teacher touching a child has snowballed out of proportion. No teacher enjoys disciplining a youngster. I've known cases where a teacher took a child by the shoulder and led him to his seat to make him sit down. By the time the child went home for lunch, he'd worked the incident into a broken arm to impress his mother.

"Teaching is like love and friendship. It has to be 50–50, between the school and the home. That's the only way."

One Hundred Seventh Anniversary of Utah National Guard

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, March 28, 1956

Mr. BENNETT. Mr. President, this year marks the 107th anniversary of the founding of the Utah National Guard. The National Guard was organized within a year after the founding of the State. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Salt Lake Tribune of March 22, 1956, entitled "Utah National Guard's Outstanding Job."

Mr. MARTIN of Pennsylvania. Mr. President, will the Senator yield?

Mr. BENNETT. I am happy to yield.

Mr. MARTIN of Pennsylvania. I have just noted the purpose of the Senator's request. I should like to state that when I, as a young man, served in the Philippine Islands, our regiment from western Pennsylvania was supported in practically all of its engagements by what we called the Utah battery. It was a magnificent organization, and it has carried on its traditions to the honor of the great State of Utah and the Nation.

Mr. BENNETT. The Senator from Utah appreciates the remarks of his colleague from Pennsylvania.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request of the Senator from Utah?

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UTAH NATIONAL GUARD'S OUTSTANDING JOB

The Utah National Guard has been doing an outstanding job of military buildup, training and armory construction in the past few years. Under the able leadership of Brig. Gen. Max E. Rich, adjutant general, guard strength has more than doubled since 1954.

Today the Army Guard has 4,260 members out of an authorized strength of 6,169 and the Air Guard has 937 members out of an authorized strength of 978. The Air Guard ranks third highest in the Nation in relative strength and the Army Guard fourth highest.

The wide acceptance of guard service by young men in Utah attests the excellence of the training program, which includes not only military development at 48 training assemblies and 2 weeks of summer camp each year, but also considerable attention to character guidance, citizen responsibility, and special training for advancement to noncommissioned or commissioned officer status.

Much attention has recently been focused on the program of National Guard armory construction being carried on in Utah. Work started on a new $358,000 structure at Fort Douglas just this week and Thursday ground will be broken for a new armory at Tooele. Five new units have already been built and 10 more are in prospect.

This program means a great deal to Utah, not only in providing adequate quarters for many of the 56 Army Guard units in the State, but in making available useful structures for a variety of community purposes. The newer National Guard armories are becoming more and more valuable community centers. It is the policy of General Rich

to make armories as much as possible available for public use. For instance, all of the newer armories have meeting rooms and full kitchen facilities so they can be used for public affairs, banquets and so on. Some have basketball courts. Plans are well advanced for cooperating with school boards in several cities so the armories can be used during the day as classrooms and for physical education programs.

This kind of multiple use is excellent. It makes every dollar expended on armories do double duty. In fact every dollar is already stretched to the utmost because the guard builds these armories on such a practical and economical basis as to get maximum construction at lowest cost. Armories built since the present program started in 1953 have cost less than $10 a square foot. The Salt Lake City armory will cost $8.40 a square foot, very low as building costs on such structures go generally.

Exclusive of sites, this armory construction represents an expenditure of something like $4 million, with the Federal Government putting up approximately three-fourths of the cost. The balance of construction cost and the site comes from the State and local communities.

Utah profits greatly from this armory-building program. The policy of multiple use in the community particularly deserves commendation. That multiple-use idea will reach its maximum expression if, as is now contemplated, a Salt Lake City civic center is built at Fort Douglas on a cooperative basis, with the Utah National Guard providing at least a quarter of a million dollars as well as a site to the project.

Does a Cabinet Officer Have the Power of Veto?

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 28, 1956

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Bureaucrats Assume the Right to Veto an Act of Congress," published in the Saturday Evening Post of March 24, 1956:

BUREAUCRATS ASSUME THE RIGHT TO VETO AN ACT OF CONGRESS

Any schoolboy knows that only the President can veto an act of Congress. Even then, he has been taught, Congress can pass a law over the President's disapproval, by a two-thirds majority. Congress has the sole power to make laws.

But now it appears that attorneys for bureaus not only write many of our laws but also exercise the veto.

Recently a United States Senator complained loudly that "Congress is never quite sure what kind of a law it has passed until it has been interpreted by attorneys for the bureau charged with its administration."

But the most clear-cut case of veto we've heard about recently involves the United States Artillery Center and School at Fort Sill, near Lawton, Okla.

Because of the greatly increased range of our new 280-mm. cannon—the one that will fire atomic shells too—and the need for training gun crews in its operation, the Department of Defense asked Congress for more land for its artillery range at Fort Sill. The land needed included private property of ranchers and farmers. But a large share of it is Government-owned, as part of the Wichita Mountains Wildlife Refuge, operated by the Department of the Interior.

There were objections of course, from both interests. But Congress decided that the Nation's taxpayers had a huge investment in Fort Sill which could be best protected by granting the extension. The President signed the authorization.

Then Congress was called upon to appropriate funds for the purchase of private lands and to pay the costs of legal work in transferring land from the Department of the Interior to the Department of Defense.

There were more hearings before two different congressional committees. There was a full-dress debate in the Senate, as the battlers for nature and wildlife contended with military interests and the interests of taxpayers in the artillery-school investment.

But the appropriation bill also was passed and signed by the President.

Now, to the amazement of the military, Secretary of the Interior McKay has refused to transfer the property to the Defense Department.

His position, undoubtedly suggested by his own bureau attorneys, has been that Congress "authorized," but did not make mandatory, such a transfer. And, besides, he's had thousands of letters from nature lovers.

Without regard to whether or not the Army needs the additional range or whether or not an unspoiled bit of America will be spoiled, the interesting question here is: Does a Cabinet officer have the power of veto? Bureaucracy has come further than we realize when the real lawmakers of this country turn out to be officials who never have to face a hostile voter or run for reelection.

The Supreme Court and Integration

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 28, 1956

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article entitled "Gradual in the Frame of History: II" written by Arthur Krock, and published in the New York Times of March 27, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—GRADUAL IN THE FRAME OF HISTORY: II

(By Arthur Krock)

WASHINGTON, March 26.—The slow pace, often checked and sometimes reversed by the Federal judiciary, of the steps by which the American Negro has moved toward political equality was measured in this space last week on the yardstick of history. The subjects of the following are (1) the forms of public school segregation not held unconstitutional by the Supreme Court decision of 1954; and (2) the deep emotional basis of the Southern revolt against the form of segregation outlawed by that decision.

1. The rulings of the Supreme Court on issues already adjudicated, or presented in new postures, cannot be assumed, whether or not the personnel of the court majority has changed. But some lawyers who have closely studied the unanimous opinion of 1954, delivered by Chief Justice Warren, have concluded that (a) it does not ban public grade and high school segregation by sexes; and (b) its prohibition does not extend to voluntary racial segregation on the part of pupils if its free-will character can be factually established.

It is clear, however, that an unorganized, voluntary separation of Negro from Caucasian children would be an impossible result in many school districts that include members of both races. Therefore, as former Senator Hiram Bingham of Connecticut suggested, segregation by sexes may be the way by which southern opponents of the 1954 decision might attain the principal basis of their resistance and still preserve the public school system in a number of the States.

THE DEEP SOURCE OF RESISTANCE

This, however, has been criticized on two grounds. It would constitute compliance with the principle of the decision. The Supreme Court conceivably might outlaw it on its 1954 reasoning that (since its motive would be obvious) this arrangement also would "generate a feeling of inferiority [among Negroes] * * * in many ways unlikely ever to be undone," and thus violate the "equal protection" clause of the 14th amendment.

2. Nevertheless, the suggestion of separation by sexes goes to the heart of the controversy. This deep, underlying issue has not been given weight in many surveys of southern feeling, and often has not been mentioned at all. But it is the true explanation of resistance to the Supreme Court decision among a great majority of white southerners whose attitude cannot be dismissed as the "cruel white supremacy" doctrine founded in the institution of African slavery.

FEAR OF INTERBREEDING

These southerners oppose, and fear with the deepest emotions of which human beings are capable, amalgamation of the Caucasian and African races. Though certain of their ancestors were responsible for the infusion of white blood in the race enchained by slavery, this has only intensified their conviction that the anthropological consequence of this interbreeding is the lowering of both racial strains. Apprehension that steady expansion of this interbreeding would be the result of propinquity in mixed schools of adolescents is the basic cause of the southern resistance. And it is as fundamental in the tolerant State of Virginia as in the most intolerant areas of Mississippi.

The emotion evoked in the South by the Supreme Court decision cannot be evaluated in terms of the future of the races in the United States unless this condition is fully comprehended elsewhere. Because of this emotion and its source, only Federal force (of a character the Eisenhower administration clearly will never employ) could bring even an outward form of compliance with the decision in some parts of the South in the next decade at least, if in the foreseeable future. When the National Association for the Advancement of Colored People says it opposes "gradual" because there are communities where "gradual means never," it is being wholly realistic.

OTHER STATE LAWS

The Supreme Court cited sociologists, physiologists, and psychiatrists as "modern authority giving ample support" to its 1954 ruling that racial segregation—public education in this instance—embeds an almost ineradicable feeling of inferiority among Negroes. That principle could be expanded to invalidate State laws against intermarriage in cases now pending, and this is another reason for the present mood of the South.

The bulk of the major parties and the Federal Government are committed to require gradual compliance, but this is a compara-

tive term which means different things to different people. For example, a common impression is that slavery was abolished after Appomattox without difficulty. Actually slavery was made unconstitutional not by a Supreme Court decision with this effect but by a constitutional amendment submitted, after the House once declined to approve it, in January 1865. Even then only 23 States of the required 25 ratified, Kentucky and Delaware rejecting, and the amendment became effective only through the action provisional governments, put and held in office by the Union Army, in disenfranchised States of the beaten Confederacy.

Perversions of Literature

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a sermon delivered on Sunday, March 11, 1956, at St. Matthew's Cathedral in Washington, D. C., by Msgr. John J. Cartwright, rector of the Cathedral. Monsignor Cartwright's address appeared in the Catholic Standard of Friday, March 16, 1956:

PERVERSIONS OF LITERATURE

(By Msgr. John K. Cartwright)

One day last summer a most impressive address was given to the American people by our former President, Mr. Herbert Hoover. In the course of it he said:

"In the cultural field we could point out that with only about 6 percent of the world's population we have more youths in our institutions of higher learning than all the rest of the world put together * * * more libraries and more printed serious works than all the other 94 percent of the people of the earth."

Now no one could challenge the general truth of this remark. And no one with a brain would deny that in this there is a great good. I for one remember with gratitude the public library which furnished my boyhood with hundreds of happy hours. I have often wondered how a born booklover could have lived in places and times where books were scarce or nonexistent. There can be no question that universal literacy and the massive availability of books are one of the country's wonderful benefits.

Yet we are given pause by the kind of books that are being produced in ever greater volume. For there has come to be a positively terrifying output of books that are saturating the minds of readers with ideas, theories, pictures, suggestions, and dreams which are poisonous both to the Christian conscience and to the American spirit.

There are two tendencies which have an evil and a growing strength: Preoccupation with indecency, and savage and subversive criticism of American society. These tendencies are at present in the full flood of triumph. They are separate in idea. But they are associated in fact and are in many cases developed in the same individual writers. To both of these tendencies I invite your Christian and American disapproval.

First, the preoccupation with indecency. This means with every form of indecency: Crime, cruelty, physical filth, the symptoms of disease, the details of insanity, all forms of the morbid and the ugly. More especially it means sexual indecency. We see books whose pages are drenched with sordidness not only being printed and sold and read but praised by the critic chorus in the best known papers, crowned by national committees, and receiving every form of homage known to our publicity promoters.

WIN AWARDS

These books are praised for many great literary qualities, some of which they may occasionally possess. But more than this they are actually praised for being dirty. There has always been a certain amount of scurrility in literature. It used to be connived at or even perhaps excused. But hitherto it was never the custom to praise indecency as such.

Now there is for pornography a whole philosophy of encouraging platitudes. A conviction is being hammered into people's heads that filth, instead of being attacked, should be encouraged, that curiosity about cruelty, or about the things of lust, is normal and healthy, that, whether in reading or in life, the efforts of people to repress their sensual appetities are futile in the first place, in the second hypocritical, and in the third a form of eccentricity on its way to insanity.

Whole histories of literature abound in the idea that the central meaning of life is sexual, and that literary greatness is apportioned according to the greater or less degree in the writer of sexual energy, sexual experience, sexual shamelessness and the like.

Now everyone knows that evil in all its forms exist in life. Literature which is concerned with life must in some way be concerned with evil. Everyone knows that not all books are written for children, and that there is a mature way of dealing with sins, including the sexual. Everyone knows that cruelty and disease and the like need to be faced under proper circumstances. With regard to sex in particular, we all know that it is not in itself evil but only in its abuse (and for this knowledge we are not indebted to dirty writers).

BRUTAL INSULT

Every well-instructed Chirstian knows that sex, having been created by God, is in itself good and is capable of beauty and even holiness. But everyone, who is not intimidated by the mass opinion of the literary, can clearly see that sex, as viewed in hundreds of modern novels, is neither holy nor beautiful nor good, that it is displayed here with no regard for the fact that, when released from restraint of reason and conscience and social sanction, the sexual urge is the wildest and most outrageous cause of all disorder, and that, when separated from conscience and loyalty and idealism and religion, it becomes a brutal insult to the name of love.

So much for pornography and brutality. The second tendency is a savage and wholesale criticism of American institutions and society. This criticism is in part inspired by communism. It certainly favors the spread of communism. It is generously applauded by Communists, who never make any mistake as to who their friends are.

There can be no doubt that the picture of American society commonly presented in American fiction is given in terms of disdain, hostility, or contempt. Business is dreary and pointless, success meaningless, patriotism a form of vulgarity, churchgoing stupid, culture senseless unless perverted into a form of propaganda for the socialist paradise.

The young man or woman who learns his opinion from many of the leading opinion-makers will soon learn to despise his country except insofar as he can help to make it over by destroying whatever has made it great. What America could or should be or may be or will be—you can talk about that. But praise your country for what it has been and is, utter the simple truth that the poorest of us ought to thank God for being here—say this and you are a reactionary whom the public will never read because the journals of the best opinion will never praise you.

WORK OF DESTRUCTION

I do not say that all these writers are Communists. Some of them are: conscious ones. Some more are half-conscious ones. Many are unconscious allies of something that their conscious mind would repudiate. They are not spreading the marxian gospel. But they are like "vicious and ignorant children picking the mortar out of the foundations of society." Their busy work of destruction goes on against religion, against patriotism, against the family. And when the stones are all down we know who will come in to rebuild them.

The currents of degradation and of subversion go on together, and go on more widely and deeply than ever. They are not the same but they have a twinlike alliance. Unless there is some reaction—not in law and censorship, but in strong and indignant public opinion—the very idea of citizenship and of freedom will be lost to mankind. For both rely on decency and both demand confidence in the given instructions of a free society.

In recent months this reaction has begun to appear. We are hearing, not from the pulpit alone but from men of wide and varied experience and seasoned judgment, thoughts that the public greatly needs to consider.

One example is Mr. Herbert Hoover, our former President, surely a man of wide experience of the world and entitled to the credit of understanding our country's institutions. In a speech on his 80th birthday last August, he pointed out that "during the last score of years our American way of life has been deluged with criticism."

He goes on to say that this criticism comes from many sources, among them the "totalitarian liberals." These people "believe that creeping collectivism can be adopted without destroying the safeguards of freemen. It comes bitterly and daily from the Communists, at home and abroad, who would overthrow our American system. And it even comes from free nations whom we have tried to help."

Another man surely entitled to the credit of having wide experience of the world is GEORGE MEANEY, president of the AFL-CIO. Mr. Meany has made many, many utterances that show him to be a pioneer in uncovering this attack upon our free institutions which for years has been going on almost unhindered.

In an admirable speech before the National Religious and Labor Foundations in New York some weeks ago, he said: "Too many people in the free world fail to see the real nature of communism as the mortal foe of everything that we hold dear, of every moral and spiritual value. Too many in the free world are still prisoners of the illusion that communism is, historically speaking, a progressive system—extreme liberalism temporarily making bad mistakes. Too many in the free world seem to have lost their capacity for moral indignation against the most brutal inhumanities when they are perpetrated by Communists. It is painful, but we must face the cruel facts of life."

So if the church asks you continually to be on your guard against the sapping and mining of the soul's deadly enemy, do not think it the concern only of the church. It is your duty as Christian men and women of free America to keep safe by keeping your heads clear. This you can do by refusing to accept the anti-anti-Communist and anti-anti-decency maxims, by hating what is hateful, and spurning what is indecent, by speaking out your mind in spite of the sometimes overwhelming voices of savagery and de-

struction, and by saying clearly what you clearly see under whatever masks and disguises.

Do not doubt that in high ideals and in loyalty you are not only serving God, but maintaining the high traditions of human society and the quintessential nucleus of freedom.

The note I would leave with you is given by St. Paul in the Epistle to the Philippians: "Rejoice in the Lord always; again I say, rejoice. For the rest, bretheren, whatever things are true, whatever honorable, whatever just, whatever holy, whatever lovable, whatever of good repute, if there be any virtue, if anything worthy of praise, think upon these things. And what you have learned and received and heard and seen in me, these things practice. And the God of peace will be with you."

Address by Gen. Randolph McCall Pate, USMC, Commandant of the Marine Corps, to the Livingston-Wise Post, Veterans of Foreign Wars, Newberry, S. C., Thursday, March 22, 1956

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. DORN of South Carolina. Mr. Speaker, Gen. Randolph McCall Pate, Commandant of the United States Marine Corps, is the highest ranking American officer ever born on the soil of South Carolina. The State of South Carolina is proud of his splendid service to America and to the free world. He is doing a superb job as the commander of that splendid fighting machine, the United States Marines.

Last week he made his first visit to South Carolina since becoming Commandant of the United States Marine Corps. At Newberry, he made a timely address that is worthy of the consideration of every Member of this Congress:

In thinking over my remarks for tonight, I thought it might be useful to depart a bit from the usual type of address which I might normally give to a group of veterans and their friends. As a matter of fact, I'm not going to make an address at all. On the contrary, I'd like simply to talk with you for a few minutes about some of the basic and fundamental problems of our country. In this I don't propose to discuss the armed services and their roles in any detail. I'm not even going to talk very much about the Marine Corps.

This may seem surprising for a marine. Our pride of service is such that it has come to be expected that any marine will talk almost exclusively about the Marine Corps on any occasion. However, if you will reflect on what the corps is and what it represents, then my approach will not seem so unusual.

Like the Army, Navy, and Air Force, the Marine Corps exists for no other reason than to serve the Nation. All the services reflect a basic requirement of the Nation. Together they represent one element of our national defense structure. But only one element. There are others equally or more important, as I will tell you.

THE THREAT

This great country of ours is in trouble—deep, serious trouble. We have been in trouble for a very long time—I expect that we will be for a long time to come. The threat is detailed and complex. It has its roots in international communism which is bent on our destruction and elimination as a free people. I genuinely believe that this threat is more comprehensive and more serious than any this Nation has faced in its long history.

In describing it as comprehensive, I am attempting to emphasize that it is far more than the threat of armed conflict. I might go so far as to say that the threat of armed conflict is possibly the lesser of the evil. At least it is tangible, we know reasonably well how to measure it, we believe we know how to combat it. But the more insidious threat lies in the battle for men's minds. If we ever in fact lose this, we will have been defeated as conclusively as if 50 of our cities had disappeared in a theromonuclear holocust. As incredible as it may seem, we could lose the battle for freedom without firing a shot, without dropping a bomb. This can happen. I am not so pessimistic as to believe or predict that it will. But the very possibility that we may causes me deep and continuing concern.

This is what I mean by a fundamental problem—a problem far more basic than the number of Marines the budget will provide next year or whether the Air Force or the Army will control the ICBM (Intercontinental Ballistic Missile).

COMMUNISM

To understand the nature of our problem we must review some of the basic facts of international communism. Its avowed purpose is world domination. It has always been. There has never been the slightest change or deviation in spite of the periodic outbursts about coexistence and friendship that come from the advocates of this faith whenever this seems to serve their ends.

They could never accept a peaceful coexistence with us on an indefinite basis, because they fear us. Their fear is not that we will meet and defeat them in battle as much as it is the sure knowledge on the part of their leaders that we have a superior product. Whatever they are, they are not stupid. They know they cannot hope to indefinitely keep half the people of the world enslaved in the bonds of communism while we lead the other half in the pursuits of free men—in a society based fundamentally on the dignity of man.

To accomplish their ends, these people have a wide variety of tools. They utilize aggression, subversion, intimidation, oppression, war by proxy, and finally armed conflict. Of all these, armed conflict actually suits their purposes least well. This is because in armed conflict they face the possibility of outright defeat, which could be disastrous. The others are more useful because they are never settled on a black or white basis and even a defeat can be claimed as a victory.

These are men of infinite patience—they can wait a long time for the results they seek. This is in contrast to our desire to see tangible results quickly and clearly. We want things to happen right away. They are content to achieve their ultimate goal 50 years—or 3 generations hence.

Finally, we must constantly remember that we are dealing with men of no honor and no integrity. They are not concerned with public opinion—they manufacture it as the occasion requires. They answer to no moral code whatsoever. Anything which serves their long-term goal is useful to them.

All of this adds up to an enemy of awesome dimensions. It is a sobering thought.

WHAT DO WE DO?

If this is the threat—what do we do about it? I have no pat solution—no panacea. Just the threat is complex, I feel that our ultimate solution will also be composed of many elements. Some of our best minds are worrying about it now. And things are being done. But this is not a task solely for the Joint Chiefs of Staff, the President, or for the Congress alone. It is the whole American people who are threatened—it is the whole American people who must strive for the answer.

SOME GUIDEPOSTS

I offer you no blueprint for peace and security. But I do suggest that you give some thought to these things which I believe will be among the ingredients of our ultimate success:

1. Recognize the threat: I have talked about this in some detail. I would add only that we should do this in a reasonable, sensible manner. We must face facts squarely. There is cause for deep and genuine concern but no excuse for dismay or fear. We cannot rid ourselves of trouble by ignoring it and hoping it will go away. Neither can we by hastily conceived action born of fright or despair. Let the first measure of our depth of character be in the calm, deliberate, and thoughtful manner in which we face our problems.

2. Let's recognize what we have. Let's each of us find out what we mean by our way of life. Let's stop taking our freedom for granted. The fact that this country has known it for 180 years doesn't mean that we will always have it. We are the most fortunate people on the face of the earth, yet how often do we stop to count our blessings?

3. We must fight complacency. There is no time for it. We must alert ourselves, our communities, our States, and our Nation. We must know what freedom is—recognize it as our most priceless heritage—and be able to explain and demonstrate these convictions to others.

4. We must be willing to work for freedom—to defend it against all threats and at whatever cost. This may even demand our lives. But this price is no higher than it has been in the past. Freedom is not free. Ours was bought by the bloodshed and toil of American patriots. The same high price may be asked in the future.

5. Let's see that patriotism is the strongest force in our land. In recent years I have heard a lot about different "isms" and not nearly enough about patriotism.

6. Finally, I suggest to you that this is a time for our return to fundamentals. We should look to the source of our real strength—the family, community, schools, churches, and government—and seek to strengthen them and to restore them to their proper places of importance.

I recognize that there is nothing new in most of this—it has been said many times. But I trust you will not dismiss this as another statement of generalities.

As you must now know, I feel very strongly about this. I am haunted by the fear that, as Americans, we may let our greatest possession slip through our fingers like running sand.

I particularly wanted to say this to an audience such as you represent. The real strength of America does not lie in its great strategic Air Force, its vast fleets or its ever-ready Marines. These are necessary external symbols of our strength. But the real strength is here with Americans such as are gathered in this hall in Newberry—and similar groups in Maine, California, and Kansas. This is where the great heart of America beats strong and where it cannot falter.

This is the kind of thing in which an organization such as the Veterans of Foreign Wars can lead the way. You are a manifestation of community spirit. And what I talk about is a reawakening of individual and community spirit. It must start with the individual and spread to the community and its institutions. This is not a question of passing another law or appropriating another $10 billion. Surely if our freedom could be bought with dollars alone, we should have long since have had an insurance policy which would have made

us positively and permanently immune to external threat. We cannot buy freedom—we cannot hire someone to do this for us. Each of us has an obligation we cannot escape. No amount of dollars and no amount of laws can help us unless we, individually and collectively, are prepared to do our part of the task. Freedom is everybody's business—a job for all Americans.

I do not think that any power on earth can take away our liberty but it is possible for us to give it away by default. We can become so preoccupied with our individual problems—our own affairs—that this priceless liberty will slip away.

With all this, I am not discouraged or pessimistic. I face the future with concern because I see the trouble—much of it. But also I face it with great confidence. I have complete faith in the character, integrity, and determination of our people. This has made America the greatest country on earth. It has made us free—I know it will keep us free.

Barcelona Harbor, Westfield, N. Y.

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. REED. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting the statement I made this morning in behalf of the Barcelona Harbor project, before the Subcommittee on Public Works of the Committee on Appropriations of the House of Representatives:

STATEMENT OF REPRESENTATIVE DANIEL A. REED, OF NEW YORK, BEFORE THE SUBCOMMITTEE ON PUBLIC WORKS OF THE COMMITTEE ON APPROPRIATIONS OF THE HOUSE OF REPRESENTATIVES, WEDNESDAY, MARCH 28, 1956

Mr. Chairman, I sincerely thank you and the members of your subcommittee for this opportunity to appear before you in behalf of the Barcelona Harbor project in my congressional district.

I am here to urge an appropriation for improvement of Barcelona Harbor, Westfield, N. Y.

On February 21, 1956, the President communicated with the Speaker of the House of Representatives and proposed supplemental appropriations for the fiscal year 1957 for various projects, one of which is the Barcelona Harbor. The Director of the Bureau of the Budget recommended to the President that the sum of $2,260,000 be used to initiate construction of 4 authorized projects. Of that amount I believe the Army engineers have recommended that $250,000 be allocated for improvement of the Barcelona Harbor for the fiscal year 1957.

The Rivers and Harbors Act, approved March 2, 1945, adopted a project for improvement of Barcelona Harbor, N. Y., in accordance with the report contained in House Document 446, 78th Congress, providing for an entrance channel 10 feet deep with a harbor basin 8 feet deep, with breakwater protection.

The harbor is one of the authorized projects for construction of harbors of refuge on the coast of the Great Lakes for light draft vessels.

In 1945 the estimated cost of the breakwaters and dredging was $303,000, with annual maintenance estimated at $2,000, provided that local interests contribute $7,500 in cash toward the cost of the protective structures and dredging.

The local conditions were met several years ago. In July 1949, a $60,000 bond issue, needed to obtain the then estimated $791,600 in Federal aid for extensive improvements to Barcelona Harbor, was approved by the citizens of Westfield, N. Y., by a vote of 534 to 30. This was the first time in the history of Westfield that the town citizenry had been called upon to participate in a referendum authorizing a bond issue. The $60,000 bond issue was needed to contribute the necessary $7,500 in cash as well as to provide without cost to the United States, all lands, easements, and rights-of-way necessary for the construction of the project, including suitable spoil-disposal areas when and as required.

Assurances of local cooperation as required by law were furnished by the town of Westfield and approved by the Assistant Secretary of the Army on December 20, 1949.

In 1950 the estimated cost of the project had risen to $830,600 of which $15,600 had been allocated and expended for advanced planning of the project.

Now the estimate of the cost of construction is closer to a million dollars.

When this work is completed Barcelona Harbor will again be a harbor of refuge. Completion of this work will also mean the return of the million-dollar fishing industry to Westfield, N. Y.

Most of the fleet of 28 fishing boats formerly anchored at Barcelona Harbor in Westfield, because of the splendid fishing, were forced to move to Erie, Pa., and other places, after Barcelona Harbor became filled with sand.

Let me tell you something about Barcelona Harbor.

Barcelona Harbor was made a port of entry 125 years ago in 1831, when the Barcelona Co. laid out the area as a city on Lake Erie.

The Federal Government needed a lighthouse to protect the lake-borne commerce. Judge Trumbull B. Campbell built a beautiful stone lighthouse without cost to the Federal Government.

Judge Campbell constructed a wooden pipeline more than a mile in length to convey natural gas to furnish light to the lighthouse, at no expense to Federal Government.

A wharf was built by E. T. Foote to take care of the lively traffic by water which developed, and this wharf was built at no cost to the Federal Government.

In 1847, the increase in business was so great a larger wharf was built, costing $20,000, at no cost to the Federal Government.

Other than planning money resulting from authorization of improvement of the harbor in 1945, the United States has failed to appropriate a cent to preserve this harbor since 1838.

The citizens of Westfield have constantly done their part to maintain this harbor. They financed a large warehouse for freight inside the bar suitable for small steamers and sailing vessels, which continued to carry on a thriving waterborne trade, some of it with Canada.

Even as early as 1831 the *Western Peacock* steamboat was built by a company principally of Westfield people, the thriving village which this improvement at Barcelona Harbor will serve. This steamboat transported passengers between Buffalo and Erie.

Notwithstanding the failure of the Government to appropriate money for the harbor, the traffic to and from Barcelona held up for quite a number of years.

I cannot stress too strongly the importance to Westfield, N. Y., and its environs of the fishing industry which has been driven out of the Barcelona Harbor, because of the neglect of the Government in making the necessary improvements in the past, which improvements have now been authorized and for which I am asking you to act favorably upon the recommendations of the President and Director of the Bureau of the Budget.

A large fleet of tugs once operated out of Barcelona Harbor to the fishing grounds which lie between Barcelona and Canada. Now that these tugs cannot enter Barcelona they and their crews have been driven, together with their families, to the city of Erie, Pa., and to Buffalo, N. Y., and some even to Canada.

According to the State of New York Conservation Department, the bulk of the fish produced from New York waters of Lake Erie are taken out of two ports, Dunkirk and Barcelona. Approximately one-half of the total poundage would be taken out of Barcelona.

Barcelona has important advantages as a fishing port because it is closer to the best fishing grounds of certain times of the year, for instance the early spring fishing for whitefish and the late fall fishing for blue pike and ciscoes.

Fish production from the New York State waters of Lake Erie for 1948 was almost a million pounds and in 1946 it was 2¼ million pounds.

This harbor is needed not only to restore the fishing industry, which is a source of food and employment, but it is greatly needed as a harbor of refuge.

The storms that sweep Lake Erie are hard to describe. Spring and fall blizzards sweep through this area and within a few minutes Lake Erie can be transformed from a state of calm into roaring waves of mountainous size, in which only the strongest boats can survive.

Barcelona Harbor greatly needs improvement so that it can be a place of refuge. Moreover, when a fleet of tugs can enter and occupy the harbor they can serve as reserve ships to help save small boats caught in violent storms.

My brother was master of one of the largest ships on Lake Erie, and during his lifetime he commanded a ship 600 feet long. He encountered many of these severe storms and on one occasion on Lake Erie the smoke stack of this great ship almost dipped water, and his huge ship barely escaped capsizing.

You can readily see that the small craft which are increasing by the hundreds each year on Lake Erie need a nearby port to escape the hazards of these sudden and violent storms.

I believe that a community which has for years sought to hold its business of a great fishing industry and provide safety for its sailors through its own efforts and contributions should receive help from the Government.

The last major appropriation for Barcelona Harbor was under the River and Harbor Act of July 7, 1838, 118 years ago, in the amount of $35,466.

Barcelona Harbor is essential as a harbor of refuge. This harbor, once a thriving fishing port, should be restored. Fishing tugs with their nets and cold-storage facilities have been forced, by the filling in of this harbor with sand and silt, to either cease business or to move to other ports.

No more heroic men than those who operate the fishing tugs can be found when ships, either large or small, are in distress. When the work on this harbor is completed and they are once again able to locate there they will again be available to go to the rescue of persons and ships in distress.

I want to restore this harbor of refuge, and have these wonderful fishing tugs operate out of and in this historic port. There are several industries, especially small boatbuilding concerns, anxious to locate adjacent to this harbor when this project shall have been completed.

With completion of the improvements on the harbor, Westfield, N. Y. will again become

a thriving commercial, industrial center of activity. Local hotels will find a lucrative business when small ships can use Barcelona Harbor. There will be ingoing and outgoing package freight, and excursion boats will operate from Barcelona to Erie, Cleveland, Dunkirk, Buffalo, and also to Canadian ports.

This improvement of the harbor will make it one of the popular ports for many of the hundreds of thousands of small craft in use on the Great Lakes.

When completed, Barcelona Harbor will again be a harbor of refuge and the million-dollar fishing industry will return and this will mean a rise in employment in the Westfield, N. Y. area.

Because some of the industries in my district have moved to the South, thus causing unemployment in some sections of the 43d district of New York which I represent, I am most anxious that the fishing industry be returned to Westfield.

I have been trying for many years to get an appropriation for this project and I sincerely hope you will act favorably upon the President's proposal and the budget director's recommendation concerning this project.

Discover How Armaments Can Be Controlled

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Boston Daily Globe, Boston, Mass., Tuesday, March 27, 1956, which should be highly commended for the following straightforward article:

A TEST OF ARMS CONTROL

Let's have a rehearsal. That in essence is the proposal presented by the United States at the London meeting of the U. N. Disarmament Subcommittee.

Let's set off a test area in Russia and another in the United States. Each should be from 140 to 170 miles square, and should contain installations of military importance, but nothing especially secret. If the tryout is to be effective, nevertheless, each should contain a port, an airport, a railroad terminal, and perhaps shipyards and docks.

Then let representatives of the five atomic powers—the United States, Russia, Great Britain, France, and Canada—study and test the effectiveness of international armament inspection in these areas.

Let us find out whether the ground survey proposed by Soviet Prime Minister Bulganin would be effective. Let us see whether the additional air view asked by President Eisenhower would lead to undue prying into the affairs of the nations whose territory was under observation. Maybe we could hit on a system, acceptable to everybody, which would protect all nations against a sneak attack.

This proposal, which presents the question of international inspection in a new, sharper, more concrete way, should better this country's position before world opinion. The United States has insisted, and rightly, that its security be effectively protected by international guaranties against an atomic Pearl Harbor before it reduced its armaments.

But it has suffered in the eyes of neutrals because, until recently, it has refused to accept even a ceiling on weapons before effective inspection has been established.

The Russians, meanwhile, have made beguiling disarmament proposals, which lacked effective inspection. Of course, they have done this for propaganda purposes, but it should be remembered that they approach the matter of armament limitation from the viewpoint of their security, as we do from ours.

The czar's government used to make similar proposals because his country's slow mobilization put it at a disadvantage against Germany. The Communists have done the same thing, because the Red Army is the largest in Europe.

By offering to establish first a ceiling on weapons—and now a reduction of Armed Forces to 2,500,000—simultaneously with an effective inspection system, Mr. Eisenhower recently has improved the American position before world opinion. But it would be disastrous to think of arms limitation solely in terms of a cold war propaganda contest.

For the price of failure to attain agreement is likely to be too horrible to contemplate, and the time remaining may well be short. This quiet period in international relations provides an opportunity to achieve results, but it cannot last forever.

Some students of armaments have been talking for years of a "point of no return"—a time when so many nuclear weapons will have been created that it will be technically impossible for any international inspection system to keep track of them.

The suggestion recently has been made that this will be reached in the foreseeable future, when the big powers go into mass production of intercontinental missiles.

The "point of no return" theory adds to the importance of the latest American proposal, which would seek to discover by practical tests how armaments can be controlled.

UNCLE DUDLEY.

Wichita Mountains Wildlife Refuge in Peril

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. O'HARA of Illinois. Mr. Speaker, conservation for the protection of our natural resources and parks and forest refuges are part of a traditional national policy. There is now pending before the House Committee on Merchant Marine and Fisheries H. R. 9665, which would turn over to the Army for an artillery range 10,000 acres of the Wichita Wildlife Refuge in Oklahoma. In opposition to this proposal I have received many letters from my constituents, among whom are Mrs. Margaret Morse Nice, one of America's great ornithologists, and Raymond Mostek, vice president of the Illinois Audubon Society, and others, nature lovers and scientists, who wish to preserve an area steeped in American tradition and rich in irreplaceable resources.

I am extending my remarks to include an article by Mrs. Nice in Nature magazine of June-July 1955, as follows:

WICHITA MOUNTAINS WILDLIFE REFUGE IN PERIL

(By Margaret Morse Nice)

It was with the hope of finding the rock sparrow and rock and canyon wrens—that my husband and I started up the slope in Elk Mountain in Wichita Mountains National Wildlife Refuge, Okla., on the morning of April 12, 1955. Between the great granite boulders strewn down the mountainside, little flowers were blooming—a miniature blue violet, a midget cress, and a tiny bright pink verbena, as well as beds of spring beauty. A cardinal sang lustily by the clear tumbling brook, tufted tits called, and the lovely lay of the mourning dove floated down from above us. Butterflies flitted from flower to flower. Turkey vultures sailed overhead. A deer looked down at us, then vanished.

All at once we heard a nasal pur-pur-pur, loud and shrill, then a chatter something like the rattle of a knigfisher. Presently, under the shadow of a boulder, we noticed a rock sparrow, a bird found only in wild, rocky places in western Oklahoma and Texas, and in Mexico. A series of grating, varied and strange speechifyings came from a rock wren. After a few vehement phrases from the top of a boulder he would quickly pop into a crevice. In striking contrast to these two birds, with their harsh and curious volcalizations, were the wild and lovely notes of the canyon wren, which found their perfect setting in the rugged beauty of these Wichita canyons.

We should have been completely happy, that morning on Elk Mountain, but a great fear oppressed us. We knew that the unique Wichita Mountains Wildlife Refuge is gravely threatened. The United States Army wants an important part of it for an artillery and guided-missile center.

Twelve days later we returned, this time to meet with the Oklahoma Orinthological Society, a group of 300 people keenly interested in nature. All the trees now had leaves of shimmering green. Again we camped at Sunset Pool at the base of Elk Mountain, there to hear the strange calls of chuck-will's-widows, and the melodious songs of the summer tanager. Crested flycatchers whooped and hollered and red-bellied woodpeckers loudly complained.

Again we climbed the slope of the mountain. Here was majesty, and here was peace. Three deer sprang up a few yards away. A cottontail scampered off. Different flowers greeted us.

It was in the Wichitas that we first camped, 35 years ago, when we undertook the study of the birds of Oklahoma. Many times in the following years we camped in the Wichitas, always finding new delights, new treasurers—among them, painted buntings, black-capped vireos, nesting red-tailed hawks, and brilliant summer flowers.

The Wichita Mountains were the ancestral home of the Wichita Indians. Generals McCellan, Winfield Scott, and Phil Sheridan of Civil War fame fought here against bands of Kiowas and Comanches. Quanah Parker, last chief of the Comanches, lived in these mountains. He is buried just south of the refuge, and a lake bears his name.

In 1905 an area approximately 9 miles wide by 15 miles long, comprising 59,099 acres, was set aside by Theodore Roosevelt as a national forest. Thirty years later it was transferred to the Fish and Wildlife Service. At the time of the forest's establishment grave fears were felt for the future of the buffalo. Congress appropriated $15,000 for an 8,000-acre enclosure, and, in 1907, 15 buffaloes, donated by the American Bison Society, were turned loose in their new home. They throve and multiplied. The rest of the preserve was badly overgrazed by domestic cattle, until their exclusion in 1937. Under wise care and moderate grazing the prairie grasses are now

flourishing; indeed, the refuge is the largest area of natural bluestem range left in the United States.

This April, Ernest Greenwalt, refuge manager, drove us over the preserve and told us many things. Buffaloes were met here and there all over the pastures, usually in bands, occasionally an old bull by himself. A few brownish-red calves were frisking about, waving their little tails, while one was trying its best to roll over. The herd now numbers about a thousand.

The other most conspicuous animal on the refuge is the Texas longhorn. Some are solid white, black, red, or yellowish, while others are spotted in a variety of patterns. They are descendants of the Spanish cattle brought to Mexico in 1521 by Gregario de Villabolos. Coronado brought them north while searching for the fabulous Seven Cities of Cibola.

By the 1920's, because of mixture of blood with English and Brahman cattle, longhorns had all but disappeared. Two Forest Service men examined more than 30,000 cattle on a 5000-mile trip in order to find the 20 cows, 4 calves, 3 bulls and 3 steers that started the Wichita herd in 1927. There are now 350 of them, including 80 steers with horns more than 7 feet long. This is the largest herd in existence.

By 1875 the native elk had been exterminated in the Wichitas. The present herd of 200 are from 17 animals brought from Jackson Hole, Wyo. They keep largely to the hills and mountains. The native white-tailed deer, most abundant of the large mammals, number about 1,300. A few antelopes were introduced in 1938, but the habitat apparently does not suit them too well. At present there are 21 on the refuge.

Another persecuted mammal, now unfortunately rare, has found a refuge in the Wichitas—the prairie dog. They sit on their mounds in their town on both sides of the scenic highway; bark and flirt their tails, and run and pop into and out of their holes.

Wild turkeys strut and gobble in the groves, flying into the great post oaks to roost at dusk. Migrating ducks are common on the many lakes, mallards being particularly abundant when the acorn crop is heavy. Some winters robins form large roosts in the red cedar groves. Golden and bald eagles winter, and turkey vultures nest in the rugged mountains.

The Wichita Refuge constitutes by far the finest natural area in Oklahoma, and for hundreds of miles in all directions. People come from Oklahoma and Texas, and from far away, to camp, swim, fish, and enjoy Nature. It is the site of many outdoor gatherings. Girl and Boy Scouts run summer camps at Camp Boulder. Ten to fifteen thousand visitors may visit the area on the 4th of July and Labor Day. From thirty-two to fifty thousand spectators gather each year for the impressive Easter pageant at the foot of Mount Scott. During 1954, nearly 800,000 people visited the refuge.

Fascinating as is the splendid larger wildlife, to many it is the ancient, jumbled, fantastically weathered mountains, their cedars, blackjacks and large-toothed maples, their little flowers, their rock sparrows and rock and canyon wrens, that make the whole refuge priceless. And it is the finest of these mountains that the Army wants to take over and destroy.

The Artillery School at Fort Sill wants $2,320,000 to purchase 20,320 acres of privately owned land south of the refuge. This comprises homes and ranches, as well as Carterville Park, a popular amusement center in picturesque setting visited by 600,000 annually.

The Army also covets one-sixth of the refuge itself—10,700 acres along its south side, to be obtained by paper transfer. They describe this as "wasteland." It is the best part of the Wichita Mountains. The Army would take beautiful Postoak and Treasure Lakes, Quanah and Bat Cave Mountains, Charons Garden, Twin Rocks and Elk Mountain, Mount Lincoln and Phantom Hill. They would also take superb Eagle Mountain with the spectacular Narrows along Cache Creek and the best camp—Camp Boulder. In short, not only would the Army take away the main entrance, it would acquire the loviest, most superb parts of the refuge.

Two years ago the Army tried to buy blocks of land south and north of the refuge, the northern tract a huge area of 99,360 acres that include Saddle Mountain. This was a pincers movement designed to swallow the refuge. This attempt was defeated by an outraged citizenry.

The future plans of the military can be guessed. Eventually they want the whole refuge. Yet there is too little water in the region to provide a safe basis for the great expansion envisioned. Moreover, with the rapid advances in military devices, the whole refuge and surrounding countryside would almost certainly soon be too insignificant in size to meet the requirements. So the wilderness would be destroyed to no purpose.

The Artillery School at Fort Sill needs room to fire the newest weapons and guided missiles. The sensible suggestion has been made that for these tests the personnel involved could be flown to desert areas already owned by the Government in other States. There the damage would be small in comparison to that planned in the Wichita Mountains Wildlife Refuge.

The fundamental question involved is: Are our national parks, monuments, and wildlife refuges to be kept inviolate for their higher purposes, and for the happiness of all the people and for our descendants? Or are they going to be exploited by commercial and military interests? Is our own Army, our own Congress going to desecrate these God-given glories of our country?

The Agricultural Trade Development and Assistance Act of 1954

EXTENSION OF REMARKS
OF
HON. ROBERT D. HARRISON
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. HARRISON of Nebraska. Mr. Speaker, it is evident to the point of being self-evident that the greatest single obstruction to rise in farm prices is the surplus that has accumulated in excess of reasonable carryover and that reduction of the surplus to manageable volume is essential to price improvement and cutting the tremendous cost of storage.

We began the major assault on that problem 2 years ago when the bill introduced by Senator SCHOEPPEL in the Senate and by me in the House of Representatives was approved on July 10, 1954, and became the Agricultural Trade Development and Assistance Act of 1954. This act has been described as the most significant agricultural legislation in the last 25 years.

On March 14, 1956, the Secretary of Agriculture reported that agreements totaling $1.2 billion have been signed for export sale of surplus United States agricultural commodities under title I of this act. The full text of the Secretary's announcement follows:

WASHINGTON, *March 14, 1956.*

Secretary of Agriculture Ezra Taft Benson today announced that agreements totaling $1.2 billion have been signed for export sale of surplus United States agricultural commodities, under title I of Public Law 480, the Agricultural Trade Development and Assistance Act of 1954.

This law provides for sale of commodities to friendly foreign countries for their currencies, thereby helping meet convertibility and dollar-shortage problems and facilitate export of farm surpluses.

"This represents excellent progress," Secretary Benson said. "The program was set up by the Congress for 3 years, ending June 30, 1957. The goal of $1.5 billion in export commitments was to be reached as rapidly as possible. We are pleased to be able to report that as of today, not only are actual agreements signed that total $1.2 billion but also negotiations are under way that should lead to commitments for the remainder of the allotted $1.5 billion in the near future.

"The program is having timely and helpful effect. It has given strength to our foreign and domestic markets at a time when such strength has been needed.

"Thanks in big part to the program, our agricultural exports have been able not only to hold their own in the face of increased world competition but, on a volume basis, have increased 16 percent during the past 2 years. And these gains appear to be continuing."

The $1.2 billion of title I commitments since the fall of 1954 is based on Commodity Credit Corporation value of commodities. It represents well over $900 million export value of commodities. The mark was attained this week with the signing of agreements with Chile, Korea, and Turkey.

A total of 50 agreements have been made with the following 25 countries:

Latin America (6): Argentina, Brazil, Chile, Colombia, Ecuador, Peru.

Western Europe (10): Austria, Finland, France, Germany, Greece, Italy, Spain, Turkey, United Kingdom, Yugoslavia.

Far East (7): Burma, Indonesia, Iran, Japan, Korea, Pakistan, Thailand.

Middle East (2): Egypt, Israel.

It is estimated that title I agricultural exports during the current fiscal year will total from $500 million to $550 million. This would represent about one-sixth of expected total farm exports.

During the 6 months, July through December 1955, title I exports totaled about $217 million. Commitments made prior to that time have largely been carried out, except for cotton, and here it is expected that the recently announced export sales program for all upland cotton should substantially increase exports after August 1.

Commodity highlights:

Rice: Export commitments recently made or in process will virtually wipe out Government holdings of surplus milled rice resulting from 1953 and 1954 crops. Programs announced a few days ago will result in the movement of almost as much rice as the total United States rice exports in fiscal year 1955. These programs include 7,800,000 bags of rice for Indonesia and Pakistan under title I, as well as an additional 1,320,000 bags programed for Pakistan under title II of Public Law 480, administered by the International Cooperation Administration.

Wheat: The program has helped maintain United States wheat exports, despite increased foreign competition. An estimated 40 percent of all United States wheat exports are now moving as a result of title I arrangements. To date, more than 120 million bushels of wheat have been programed. Through January, 64 million bushels had been exported.

Livestock products: Yugoslavia has purchased nearly 88 million pounds of lard under the program, which has helped bolster

the domestic lard market. Israel is beginning procurement of 40 million pounds of beef, recently arranged for. Programs recently signed with Spain and Korea include 28 million pounds of pork products. An agreement has been made with West Germany that includes 3 million pounds of poultry.

Vegetable oils: Since July 1955, title I agreements have included about 700 million pounds of vegetable oils. This programing has been a major factor in strengthening markets for soybeans and cottonseed.

Tobacco: Largely due to title I sales, exports of United States tobacco in 1955 exceeded the previous year by about 15 percent. Agreements with Korea and Burma represent the opening of new markets for United States tobacco. Under an arrangement with the United Kingdom, it is making an equivalent value of housing available to the United States Air Force in return for $15 million of United States tobacco.

Cotton: From July through December 1955 title I exports of 307,000 bales accounted for 40 percent of total United States cotton exports. A total of 1⅓ million bales has been programed under title I, with nearly half of this due to agreements signed during the past 6 weeks.

Fruits and vegetables: Within the last few weeks 2 program agreements have been signed providing for the sale of fruit and 1 for the sale of potatoes.

Approximate quantities of commodities included in title I agreements, Public Law 480

Commodity	Quantity	Market value	CCC cost
	Thousands	*Millions*	*Millions*
Wheat ---- bushels	120,908	$208.0	$406.8
Feed grains ---- do	45,418	55.4	86.9

Middle East Crisis

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. DIGGS. Mr. Speaker, one of the prime foreign policy issues facing our Government today continues to be that of Arab-Israel relations. We have recognized the independent State of Israel. On April 15, Israel will celebrate the eighth anniversary of her independence. The United States, as a leader of the free world, without question has a responsibility to fulfill in the Middle East crisis. As our Nation has advisedly pursued a course of seeking the peace while maintaining necessary armed strength, so must we arouse ourselves to the need for maintaining a balance of power between the Arab States and Israel by offsetting the preponderance of power which the former enjoy as a result of arms assistance from Communist sources.

Under unanimous consent, Mr. Speaker, I include in the RECORD the following article from the March 16, 1956 edition of the Jewish News. The danger which persist with respect to Arab-Israel relations continues to alarm the public and the public press, but, seemingly, no impression is made upon our State Department as to the urgency for a firm stand on this question.

THE ANTI-ISRAEL GAME MUST END

Within a month, on April 15, Israel will celebrate the eighth anniversary of her independence. There are prophets of doom who predict violence for that occasion. There are analysts of political conditions in the world who believe there will be a war; that Israel has never been so dangerously menaced; that the arming of the Arab States by Russia, the encirclement of Israel, the overwhelming odds against the Jewish State, may spell the doom of the reborn Eretz Israel.

We hold a different view. We believe sincerely that the second week in April will be an occasion for genuine celebrations by Israelis, their kinsmen, and their friends; that it will be a time for saluting the brave men and women who, in spite of mounting difficulties, are holding fast to life and refuse to gratify the wishes of those who seek Israel's destruction.

Actually, this faith stems from historic experience. This is not the first time in the life of our people that enemies have ganged up in an organized effort to destroy Jewry or a segment of it. Those who are acquainted with the records of Torquemada, Pobedonostsev, Chmielnicki, Hitler, and all the Hamans of all the ages; those who are aware of the continuing anti-Semitic trends in several movements that thrive even in this great land, even in this enlightened age—those who know their history are surely prepared for the kind of attack that is in evidence today against Israel.

For it is not Israel the State alone that these people seek to destroy. It is Israel the people they are after. This becomes undeniably evident when we hear the hate appeals that are monitored over Arabic language radio stations and when we read the threats to all Israel in the Arabic press. This is what we hear from America's anti-Semites. This is the message that is implied in the anti-Israel movement in this country. Unfortunately, such an attack on all Israel has received the tacit endorsement of many statesmen in many lands. In such attacks are imbedded the immorality of present-day international politics.

It is the misfortune of the embattled Israelis—the isolated group of true democrats who are surrounded by 45 million sufferers from a medieval feudal system—that Secretary of State Dulles is the partisan in the present crisis, while expressing lipservice to impartiality. Nasser Tells All was the subject of an editorial in the New York Post in which an Arab endorsement of the State Department's policies is exposed in all its sinister colors. We wonder whether State Department officials blushed when they read this portion of the Post editorial:

"Secretary Dulles has often affirmed the impartiality of the Eisenhower administration in the deepening Arab-Israel conflict. But the form of America's so-called neutrality is apparently satisfactory to Egyptian Prime Minister Nasser. In an interview with a Herald Tribune correspondent, Nasser has 'clearly and frankly expressed his hope that President Eisenhower will be reelected.'

"Nasser's pronouncement is as revealing as it is indiscreet. If Israel's Ben-Gurion were to proclaim his support for a United States presidential candidate, there would be an instant outcry from the American Friends of the Middle East and all the other front organizations of the Arab propaganda machine. Charges of Israeli "meddling" in United States domestic politics would flood our press.

"Nesser's readiness to issue so tactless a declaration dramatizes the extent to which the Arab chieftains have been emboldened by Washington's rebuffs to Israel."

It is more than a pity; it is a tragedy that the statesmen of the world are blundering so shamefully in their approach to the Middle East problem.

Overnight, as a result of its having been booted out of Jordan, British politicians have changed their tunes. Instead of accusing Israel of acting the role of an aggressor, they now say that the Arabs represent the threatening element in that area. The about-face is in itself an admission by the British of having played a shocking game of power politics which has boomeranged, which has proved to be unwise, which may hurt Great Britain more than Israel.

Our own Government has unwisely supported British policies. Our State Department's spokesmen have resorted to lip service in assuring Israel of friendship, while arming Israel's enemies with weapons for the destruction of Medinat Israel. We call it unwise, because the jittery people who fear the loss of airbases and oil supplies are not aware of the values of American relationships to the peoples involved; they do not realize that no other country on earth can compete with what the United States has to offer—in friendship in monetary recompense for goods received. We doubt whether any Arab country would sacrifice America's friendship for Russia's promises. But the blackmail tactics of Arab potentates, who keep their peoples in serfdom, has worked wonders in pressuring our State Department into an anti-Israel position. Some American politicians are writing unpleasant chapters into our history. We pray that the evils accompanying their yielding to unsavory pressures intended to destroy a small people should be erased from our records, even if they cannot be erased from our memories.

There is a basic principle, an incontrovertible truth, that is being overlooked in the discussions of the Middle Eastern situation. It is the reality of Israel's existence. In an article in the 20th Century Magazine, Mary Stocks, while expressing a sense of disturbance over the existence of an Arab refugee problem, while she stated that she does not find it difficult to understand the hatred Arabs feel towards the Jews, nevertheless declared:

"What is less understandable and wholly regrettable is the attitude of those English and American friends of Jordan who are giving devoted service to the cause of Arab social welfare, but withholding one thing necessary to Arab salvation, namely, a sympathetic intellectual leadership in facing the horrid truth that Israel has came to stay, that there can be no return to the abandoned acres, and that there is a cause for the existence of a Jewish national home."

This is the truth that is being ignored, either deliberately or blindly, by men who call themselves statesmen, by politicians who pose as diplomats. Else, they would have to recognize the injustice inherent in an attempt to call a small people of 1,700,000, occupying 8,000 square miles of land, encircled by 45 million people living in an area of 3 million square miles, as being the aggressor.

How can we possibly view spokesmen for governments, who encourage suspicion of a small people fighting for its life and asking only for the right to protect itself, as being anything other than endorsers of genocide?

This is our accusation of those who are placing obstacles in the path of Israel's fight for existence. We challenge them to disprove it. We demand of them that they end their unfortunate anti-Israel game before it is too late. The peace of the world is involved, and those who will make it difficult for Israel to defend herself, thereby bringing the Middle East nearer to war, are bringing the entire world nearer to war.

Exports of Iron and Steel Scrap

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. McCORMACK. Mr. Speaker, I have been very much concerned in the past 3 years with the tremendous increase in the exports of iron and steel scrap. I have also found it very difficult to obtain any kind of official and reliable information as to the exports abroad of iron and steel scrap. As everyone knows, this is a very important activity to watch because we all remember that before World War II Japan, in particular, was buying iron and steel scrap in large quantities in the United States.

I have tried to obtain information from the proper departments of Government as to whether or not any of this iron or steel scrap was being resold to the Soviet Union, or anyone in the Communist-controlled countries, and the information I have received is that so far as is known, none has been resold to such countries. However, I have my doubts.

A staff member of mine has made a very careful check of the exports from the United States of iron and steel scrap during the years 1953, 1954, and 1955, as well as to the quantity shipped to the different countries abroad. The assimilation of this information required tremendous research work. It is based upon the figures of the releases from time to time by the Department of Commerce.

I enclose in my remarks a table showing the exports during the years 1953, 1954, and 1955, as well as the amounts exported to different countries. The amazing fact is in 1953 there was exported from the United States 307,673 short tons; in 1954, 1,507,310 short tons; and in 1955, 5,047,942 short tons. In other words, in a 2-year period, an increase of about 1,600 percent. I enclose in my extension of remarks the table showing the amounts exported, and to the countries that the iron and steel scrap has been exported during the calendar years 1953, 1954, and 1955, together with a copy of a letter that I have sent to Hon. Gordon Gray, Assistant Secretary of Defense.

Exports, iron and steel scrap, by countries and classes, calendar years 1953–55

[Short tons]

Country	1953	1954	1955
Samples	3,966	7,360	10,890

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
OFFICE OF THE MAJORITY LEADER,
Washington, D. C., March 27, 1956.

Hon. GORDON GRAY,
Assistant Secretary of Defense, International Security Affairs, The Pentagon, Washington, D. C.

DEAR MR. GRAY: During the past 2 years I have been greatly disturbed by the enormous quantities of ferrous scrap that has been exported from the Port of Boston and from other ports in the United States.

Attached is a table showing the tonnages exported as revealed by statistics issued by the Department of Commerce.

You will note that the tonnages for the past 3 calendar years have been as follows:

	Short tons
Calendar year 1953	307,673
Calendar year 1954	1,507,310
Calendar year 1955	5,047,942

It will be seen that the 1954 exports were 5 times those of 1953 and the 1955 shipments were 3 times plus those of 1954 and more than 15 times those of 1953. The 1955 exports make over 50,000 freight car loads of 100 tons each. In analyzing shipments by destinations in 1955, it is found that 25 rate in this order:

Italy	1,084,582
United Kingdom	1,015,549
Japan	715,823
West Germany	691,891
Canada	413,403
Mexico	276,776
France	246,372
Belgium/Luxembourg	185,989
Spain	110,600
Argentina	107,876
Austria	79,521
Netherlands	42,233
Sweden	25,363
Yugoslavia	17,161
Finland	13,022
Taiwan	7,840
India	1,163
Iran	914
Hong Kong	561
Salvador	114
Brazil	99
Chile	54
Union of South Africa	50
Israel	50
Jamaica	24

It seems to me that the shipments to some countries are so large and unprecedented that we should be certain we are not reenacting the mistake made prior to Pearl Harbor.

Since your position is, I assume, to insure security in matters such as this and I find there may be divided responsibility as between the Department of State (including ICA), Commerce, and Defense, I would appreciate a prompt answer from you on these questions:

1. Are you convinced that there is no diversion or transshipment of this material to unfriendly countries?
2. Have you checked to insure that this material is being used for domestic purposes in the country of destination?
3. Do you consider that present export laws and regulations are adequate to protect our vital security interests in this matter?
4. Have you found cases of violations of export laws or regulations as regards these materials?
5. Do you have any recommendations with respect to amending our laws or policies regarding the export of ferrous scrap?
6. Are you convinced that responsibility over the export of scrap is sufficiently fixed as to insure adequate security? If so, where does the primary responsibility lie?

I am sure you agree that shipments of the magnitude involved in 1955 have portents worthy of review.

Very sincerely yours,
JOHN W. McCORMACK.

Address by Deputy Under Secretary of State Robert Murphy Before George Washington University Alumni Association, March 24, 1956

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. HAYS of Arkansas. Mr. Speaker, on March 24, the alumni of George Washington University honored one of its graduates, the Deputy Under Secretary of State, Hon. Robert Murphy, and his address on that occasion was a timely and penetrating analysis of foreign policy problems. Under leave to extend my remarks I include his statement, as follows:

ADDRESS BY DEPUTY UNDER SECRETARY ROBERT MURPHY BEFORE THE GEORGE WASHINGTON UNIVERSITY ALUMNI LUNCHEON, NATIONAL PRESS CLUB, WASHINGTON, D. C., MARCH 24, 1956

President Marvin, members of the board of trustees, members of the faculty, and fellow alumni, it is for me a distinct pleasure to be with you at this annual alumni luncheon. It is a pleasure not only because you have honored me by asking me to say a few words, but because I am happy to meet with my fellow alumni of George Washington. After spending so many years abroad, the chance to get together with old friends is one of the great rewards of a tour at home.

Meeting with you brings happy souvenirs of law school days, now many years ago. Our law school then boasted an enrollment of about 700 students and we occupied the 5th and 6th floors of the Masonic Temple Building at the corner of New York Avenue and 13th Street. We were very proud of our law

faculty of those days. It was made up of able and kindly men for whom we had great respect. By no stretch of the imagination could the law school be called a frivolous place: we burned vast quantities of midnight oil to keep pace with what seemed insatiable professors. Our dean was Merton Ferson who taught real property, contracts, and agency, and then of course there was his successor, Dean Van Vleck, then secretary of the law school, who initiated us into the mysteries of torts. From the then president of the univerisity, Dr. William Collier, and others of the stamp of Admiral Stockton and Professor Hill, throughout the faculty was replete with talent. Professors Clephane, Brandenburg, Peter and Earnest were names to conjure with. Prof. Charles Collier, who I was happy to note is active in the faculty of law today, had our affection as teacher of common law actions, constitutional law, and corporations.

In those days I used to hope the time might come when I could stand before a meeting like this one, and tell my old professors a thing or two about the places I had been and all the wisdom I had gained. I can even remember thinking of the fine words I would say.

Well here I am today, but perhaps it is just as well for me that I do not have to stand before their judgment. The fine words do not seem quite as facile as I once thought they would be. It is true that I have moved about the world a bit, but as for wisdom, I would gladly exchange the little I have now for all the wisdom I thought I had then.

I wish it had been possible for another alumnus of George Washington to have been with us today. I refer to a fellow graduate of the law school, John Foster Dulles, our distinguished Secretary of State. He just returned this week from a long and successful trip to South Asia and the Far East. I know that he would want me to convey to all of you his greetings and good wishes.

And in making the connection between the Department of State and George Washington alumni, I would be remiss if I failed to mention Wilbur J. Carr, really the father of our present day American Foreign Service. He received his LL.M. from George Washington in 1899. As one of your distinguished alumni, Wilbur Carr devoted a lifetime of his great talents to the development of a service which has profited his nation throughout the international crises which have marked our day.

An impressive number of our colleagues in the Department of State have received their education at George Washington University, and this fact, I think, is a true indication of the value of having good universities in this community. The part this university plays more than bears out the wisdom of the first President of our country in sponsoring the idea of a university located in the Capital of the Nation.

Of course George Washington's wish was not for a university devoted exclusively to the training of civil servants, important as that is. His desire also was for a university providing "education in all branches of polite literature: in arts and sciences * * *."

The 14 colleges, schools and divisions of the university have fulfilled his wish more completely than he might have dreamed. The graduates of these schools and disciplines, whether or not they go into the Government, contribute richly to the life and wealth of our area and Nation.

We sometimes fail to appreciate the contribution made by our system of higher education, not only to the internal needs and culture of our country but to our understanding of foreign affairs. The strength of our society depends in large part on the intelligence and training of our people, on the mixing of technical and professional skills and on the ability of all our people to analyze and comprehend the economic, political, and social forces at work in the world today.

We not only rely on technical training and on scientific skills for the enrichment of our society. The liberal arts, the inquiring mind, the well-rounded individual are perhaps of more fundamental significance in our kind of country. The Founding Fathers who drew up the charter for our Nation reflected in high degree this attitude of inquiry, this wide variety of skills, intelligence, and experience. Our higher education today is devoted to the idea of the well-rounded man.

By comparison we note that the Soviet system does not have this breadth of purpose. It is producing technicians, engineers, and men of science in growing, if not disturbing, abundance. The broad intellectual needs of a developed and well-blanced society are seemingly neglected and even repressed in the Soviet Union. In this way it accomplishes the purpose of the state to progress rapidly in technical and economic fields. This one-sidedness in Soviet education and training represents a certain danger to the free world. It results in almost complete acceptance of dogmas and of opinions handed down from above usually without question and without understanding.

We have witnessed a further startling example of this one-sidedness at the recent 20th Congress of the Communist Party of the Soviet Union at Moscow. This relates to the Stalin story about which we are still lacking factual information. The news of this apparent development has leaked to the outside world in a peculiar fashion. We still do not possess the text of the speech said to have been made by Khrushchev at the party congress meeting in February, but it is reported that Khrushchev delivered a lengthy denunciation of his former master. As a result of that speech Joseph Stalin apparently has now become an outcast, a pariah, where but a few short years ago he was the demigod, the physical and spiritual ruler of all the Russians. If reports are accurate this rewriting of history the 200 million people of the Soviet Union may be reluctantly forced to accept, is a spectacle we have seen before and one that makes us cherish more dearly than ever our system of free inquiry and broad education.

The 20th Congress of the Communist Party was in many respects a valuable performance for us to watch, even though we do not as yet know the entire story or understand its implications. During the 3 years and 4 months since the 19th Communist Party Congress, many changes had occurred on the Soviet scene. The most important, of course, was the death of Stalin in 1953, ending a 29-year rule and paving the way for a new phase in Soviet history. In this same period collective leadership in top party organs, or perhaps more accurately collective dictatorship, a form of oligarchy, became the guiding principle of the Government. At the same time, Khrushchev succeeded in moving to the forefornt of the ruling group.

The purge of Beria brought the police under firmer party control. The armed forces received a greater share of prestige and recognition. Agriculture remained a weak point and became the target for sustained special attention. A new stress on consumers' goods was short-lived as the regime reaffirmed the priority of heavy industry.

The first Soviet thermonuclear test explosion; the appearance of new long-range bombers and supersonic fighters; the development of guided missiles; the modernization and reequipment of ground forces, the continued emphasis on new naval construction—all testified to the further increase of Soviet military power since 1952.

In foreign affairs, the Soviets moved toward new international relationships, which gave them more flexibility, whether or not they reflected any fundamental change in Communist strategy.

This new posture was most dramatically expressed at the summit meeting last summer in Geneva. The Soviets sought to create an image of the U. S. S. R. as a peace-loving power by a number of diplomatic gestures and by offering to remove a few barriers to communication with the non-Communist world. The wars in Korea and Indochina were ended, an Austrian Treaty was signed, relations with West Germany were established. The U. S. S. R. warmed up its approach to Yugoslavia and to a number of non-Communist countries stretching from the Arctic to the Indian Ocean. They employed new means—arms, credits, machines, and technicians—in a new political offensive against less developed non-Communist countries.

Against this background, more than 1,400 delegates to the 20th Communist Party Congress, as well as delegates from 55 foreign Communist parties, assembled in the great hall of the Kremlin in February.

The highlight and main innovation of the 20th congress was the first formal public criticism of Stalin by his successors. In the nearly 3 years since his death, Stalin's stature had been progressively reduced by withholding adulation from him and concentrating it on Lenin, but previous to the congress, there had been no official public criticism.

The cirticism of Stalin centered on methods of rule, but it also involved policy decisions. Caustic references were made to one-man decision-making, leader-worship, overcentralization, mistakes in economic policies, ossified conduct of foreign relations, distortions of ideology, propaganda in Soviet history, unhealthy developments in Soviet law, and aribitrariness in law enforcement.

A second important result of the conference was to put the official stamp of approval on the present organization of rule as well as on recent policies. The emphasis on collectivity in leadership plus the criticism of one-man rule may have been designed to make it more difficult for any Soviet leader to set himself apart from the other members of the ruling clique. Nevertheless, it may be significant that the new central committee expanded the party presidium to include members with ties to Khrushchev. In addition, it enlarged the party secretariat, which is directed by Khrushchev and tied that body and the presidium even more closely together through overlapping of membership.

In the field of foreign affairs, the Soviet rulers claimed success for their new policies and promised that they would be pursued even more vigorously. Their basic premise they defined as peaceful coexistence as the only alternative to the most destructive war in history.

Their apparent plan is to cultivate friendly relations with most countries, including the major Western Powers, but not at the cost of concessions. They apparently will make special efforts in less developed areas and among foreign Socialist groups.

Their immediate aim was made clear: to undermine western defense efforts and further to extend Soviet influence.

Their ultimate goal was expressed by speaker after speaker with even greater optimism than in the past, saying: "The ideas of communism will triumph without war."

The Soviet rulers gave a number of reasons for their confidence. They cited growing Soviet military power as a deterrent to Western aggression. They depicted increasing Soviet economic strength as a symbol of the success of communism. They lumped into a zone of peace the neutral countries, which together with the Sino-Soviet bloc they consider as proof that a majority of mankind is moving toward so-called peace and socialism.

The speeches at the Communist Congress showed awareness of the contradiction between coexistence and continuing Communist-capitalist conflict. Unwilling to discard either, the Soviet leaders sought to appear both respectable and revolutionary by adjusting their ideological garb. The doctrine of the inevitability of war was modified to stress the preventability of war. The doctrine of the necessity of the violent overthrow of capitalism was shaded to sanction a nonviolent parliamentary seizure of power. These adjustments were intended to reassure non-Communists of the seriousness of Soviet ideas on coexistence, and to make clear to Communists that coexistence means neither relaxation nor reformism. Coexistence, it was stressed, is a state-to-state concept, which involves no reconciliation with bourgeois ideas.

Within the U. S. S. R. the priority of heavy industry and the maintenance of a high level of armaments continue to demand sacrifices from the population, since the threat of war is assumed still to exist. Outside the U. S. S. R., the Soviet speakers declared, Soviet efforts to improve relations with foreign governments are not to be interpreted by local Communists as undercutting their efforts to come to power. A period of coexistence, they maintain, will still provide changes for revolution.

As we see it, these were the highlights of the Soviet Congress. These are the features which the Communist leaders themselves thought most significant about the Soviet Union. Now we might try to look at the world scene more objectively.

Several important elements in combination have been instrumental in bringing about the changes in Soviet policy and strategy dramatized by the 20th Communist Congress. The death of Stalin opened the door for new leaders to try out new ideas and to get out from under Stalin's deadweight. Very real increases in Soviet industrial capacity have given them both greater confidence in their power of control and the ability to expand their economic operations. The development and testing of thermonuclear weapons in the hands of both sides perhaps has persuaded some that the prospect of another world war is more remote. Finally, and this is most significant, we must bear in mind that if the Soviets have in fact shifted to new methods and new points of attack, it is because the strength and firmness of the free nations frustrated their old methods of intimidation and aggression.

The primary aim of the Soviets from 1945 until rather recently was to take over Western Europe through dividing and weakening it by subversion and threats. Europe is the site of the world's most highly developed industrial plant outside the United States. The combined industrial capacity of Western Europe and the United States is greater by a ration of 7 to 2 than the capacity of the Communist empire. Control of Western Europe, however, would give the Communists a lead of 5 to 4. In population, in geography, in military power, and in political economic and cultural leadership, Western Europe was and is the most valuable prize to the Communist imperialists.

To meet their challenge, we and our allies in Europe built our military capacity to a point where it was sufficient to deter an attack. Our foreign aid at first prevented economic collapse, and has now produced record prosperity. The North Atlantic Treaty provided a warning system against any Communist attempt to move against the European nations one by one.

The joining of a rearmed and prosperous Germany with a unified and strong NATO was the signal that the 10-year Soviet effort to weaken, divide, and conquer the richest prize in the world had failed. The problem now is to retain that unity and strength.

In addition to their efforts at conquest in Europe, the Communists also attempted, by violence, threats, and subversion, to forward their aggressive aims in the Far East.

In Korea 3 years ago the Communists were made to understand that if they failed to reach an agreement for an early cease-fire, they would run the risk of retaliation massive enough to cost them far more than war could gain. Today Korea is at peace.

In the Formosa Strait a year ago, the Chinese Communists were aggressively pressing their claims to the offshore islands of Quemoy and Matsu and to Formosa. The President sought and obtained from Congress the overwhelming assurance that the might of this country would be used if necessary to guard the peace. War has not broken out in the Formosa Strait.

It is said that a good general forces his opponent to meet him on ground that is favorable to him. The Soviets are now appealing to colonial and former colonial peoples who are searching for economic strength and political prestige. As a former colony which won its own freedom, and has helped other nations to achieve theirs, the United States can make a strong case for our system against the new colonialism of the Communist empire. We are challenged, in effect, to live up to our own heritage. I believe we are meeting that challenge.

The Soviets are now imitating our efforts to help other countries build economic strength. Our efforts in this field have enjoyed much success during the past 10 years. There is no ground upon which we are better equipped by experience and productive capacity to pit our efforts against theirs. Our 160 million people, working in freedom, produce over three times as much as do the 220 million of the Soviet Union, working in servitude. Again we are meeting the challenge and I am confident we will succeed. It is an expensive and trying experience for our Nation because our competitors' tactics involve deceptive practices. The Stalinist open military aggression is supplanted by political and economic subversion cloaked in language of peace and friendly cooperation. We have known how to deal with military aggression. We are even better equipped to deal with the present form of competition.

We are on the high ground in this crucial contest with the Communist world. Our reserves, military, economic, and political, are vast. Our methods have been tested and proven through 10 years of postwar competition.

As President Eisenhower has said, "The sum of our international efforts should be this: the waging of peace, with as much resourcefulness, with as great a sense of dedication and urgency as we have ever mustered in defense of our country in time of war. In this effort, our weapon is not force. Our weapons are the principles and ideas embodied in our historic traditions, applied with the same vigor that in the past made America a living promise of freedom for all mankind."

Those party bosses who oppose us, by contrast, are on the low ground, on the quicksands and broken terrain of Soviet colonialism in all its brutality, bad faith and oppression. Neither materially nor morally can they match our potential. We enjoy the support of our people in our efforts. I should doubt that the Communist leadership is entirely confident of support of the masses. We do not intend that they shall outwit or outdistance us in this crucial test.

We will hope and work for the day when conflict of any kind may cease—when all may join in peaceful efforts toward peaceful ends, when Russia itself will be governed by men who put the welfare of the Russian people above world conquest. But as long as there is to be conflict, we are on the high ground, and if we have faith in ourselves and our system, if we are brave, resourceful, and patient, we will win through. I know that we here today, as graduates of a university with a proud record in our Nation's history, will play a vital part in this epic struggle.

Statement by Secretary of Agriculture Ezra Taft Benson Submitted to the House Committee on Agriculture

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the statement made by Secretary of Agriculture Ezra Taft Benson on H. R. 12 to the House Committee on Agriculture on Tuesday, March 27, 1956:

Mr. Chairman and members of the committee, in response to your request of March 16 I am glad to review for you the President's recommendations in general and the pending agricultural bill, H. R. 12, as it was passed by the Senate a week ago. It is my earnest hope that when the bill comes before the House and Senate for final action we will have a measure that will truly serve the best interests of American agriculture. This is the hope of the great majority of people who are genuinely concerned with the well-being of those who live on our Nation's farms. But time is running short. Already it is so late that it would be difficult to put the soil bank fully into operation so as to help farmers this year. There remains much to be done to shape the bill into the kind of legislation now required to deal effectively with agriculture's difficult problems. That is the challenge which confronts the House and Senate conferees as they work on the bill, already too long delayed.

We in the Department of Agriculture want to assist Congress in every way possible in speedily developing and implementing legislation which is sorely needed by farmers now. It is getting late. Many 1956 crops have already been planted or soon will be planted. It is imperative that Congress act quickly.

Remedial farm legislation has been placed high on this administration's priority list. You will recall that on January 9 President Eisenhower sent his farm program message to Congress. It made specific recommendations for raising agricultural income and advancing the security of our farm families. Then on January 12, my staff and I appeared before the Senate Committee on Agriculture and Forestry to discuss the President's recommendations in detail. In its deliberations the Senate committee freely called upon Department staff members for help, and all of us were glad to provide this assistance. Legislation was introduced in the House of Representatives embodying practically all of the President's recommendations shortly thereafter. Representative HOPE introduced H. R. 8543, and Representative HILL introduced H. R. 8544 on January 17. Then on February 10, nearly a month after the President's message, the Senate committee reported out its bill S. 3183. You will recall that I appeared before your committee on February 21, and members of my staff appeared on

February 22 and 23 to discuss with you the farm situation and the need for legislative action. On February 27 in response to your request we submitted the legislative languange that would put the President's recommendations into effect. This later appeared as a committee print. In addition, you are familiar with the general subject from the Senate debate on S. 3183 which is now embodied in H. R. 12.

In making recommendations, we feel that there are certain fundamentals which must be fully recognized if we are to have a sound agricultural program. Among these are:

1. A Government warehouse is not a market.

2. Large stocks of commodities in Government hands depress prices.

3. Emphasis on outlets for the surplus and preventing the buildup of new surpluses must go hand in hand.

4. In the best interests of farmers we must reduce rather than increase Government regulations and controls.

Since the end of the shooting war in Korea we have seen how farm income has been falling off while our agricultural surpluses were piling up. This took place in spite of the very programs that we have had in operation to support farm income. Thus it is now clearly apparent that a sound program for farmers must have in it the means to take off their backs the price depressing surpluses which are dragging down farm income. This drag on farm income is at the rate of $2 billion per year. The program transmitted to Congress by the President is designed to improve farm income and help relieve this surplus situation. It will help primarily through the soil bank—the acreage reserve and the conservation reserve programs.

The question has been raised as to whether the Department of Agriculture had authority to operate the soil bank program as proposed by the President without any new legislation. This has been carefully reviewed by our legal staff and the answer is that there are definite legal reasons for the necessity of new legislation. In order that there may be no misunderstanding, I wish to make clear that if Congress had provided the authority this soil bank program would be in operation right now. This program is of such importance and means so much to the welfare of agriculture that each day's delay in granting the needed legislative authorization is costing our farmers badly needed income.

I should like to review briefly our major recommendations which are covered in the draft of a bill which we submitted a month ago in accordance with your request. These recommendations are:

First is the soil bank which consists of two parts—the acreage reserve and the conservation reserve.

Acreage reserve program: This recommended program would authorize the Secretary to compensate producers for reducing their 1956, 1957, 1958, and 1959 crops of wheat, cotton and rice below their respective acreage allotments. It should be noted that there is special legislation with respect to these commodities such as minimum acreage allotments which prevent the adjustment of supply to normal levels. As a result of these minimum provisions in the law the 1956 acreage allotment for wheat is 36 million acres more than needed to adjust supplies to normal; cotton is 11 million acres above, and rice is 700,000 acres in excess. The acreage reserve program will help compensate for this needed adjustment, and assist in getting supplies back to normal levels.

In adjusting to their allotments, producers of these three commodities diverted a substantial part of the acreage taken out of production into feed grains. As a result, the 1954 and 1955 production of oats, barley, and grain sorghums increased about 800 million bushels, corn equivalent by weight. This led to the substitution of other feed grains for corn, a build-up of the corn carryover, and unrealistically low allotments for corn. The law prescribes the manner of establishing corn acreage allotments.

Against this background of minimum allotments for other basics and reduced corn acreage allotments resulting from the diverted acreage problem, it is only fair to provide for corn an acreage reserve program with payment for adjustments from the 1953–55 average acreage. Corn does not have these minimum allotment provisions. Corn producers cannot shift into production of basics covered by marketing quotas. Corn producers have been hurt by the feed grain production on acres diverted from other basics. This recommended program is just simple justice. A realistic corn acreage reserve program as proposed will bolster feed grain and livestock prices. This will be a great step forward. It is basic and constructive for the feed-livestock economy, out of which comes 5 out of every 8 dollars of farm receipts.

This acreage reserve program has been budgeted at $750 million, for the first year.

Conservation reserve program: With this program we hope to shift millions of acres from cropland to forage, trees or water storage. This is a long-range adjustment program designed to eliminate from cropping the less productive lands and some of the diverted acres. Payments would be made for establishment of suitable cover and annual rental payments would be made for a specified number of years. Thus, there would be income from these acres and reduced feed grain supplies would be translated into higher market prices for grains and livestock. This program has been budgeted at $350 million for the first year.

Another factor in a sound agricultural economy is the availability of adequate credit to farmers at all times. The importance of this was emphasized by the President in his farm message and we have made the following recommendations to bring about the desired credit situation for our farmers:

1. Authorize real estate loans to owner-operatory of family type farms for refinancing of debts.

2. Authorize real estate and operating loans under titles I and II of the Bankhead Act on less than adequate farms where satisfactory off-farm income is to be available.

3. Increase the aggregate amount of insured loans for a fiscal year from $100 million to $125 million.

4. Eliminate the present limitation on insured loans of not exceeding 90 percent of the fair and reasonable value of the farm, thereby placing the insured loans and direct loans under title I on the same basis.

5. Eliminate the requirement that loans may not be made in excess of the average value of efficient family-type farm management units in the county, thereby making it possible to serve any family-type farm operator who is otherwise eligible for credit services under the act.

6. Provide that, not to exceed 10 percent of the annual appropriation for operating loans under title II may be used for loans in excess of $10,000 but in no event in excess of $20,000.

7. Permit in justifiable cases, due to causes beyond the borrower's control, outstanding loans to be renewed or extended for a period not to exceed 10 years and also authorize the agency to make further loans in such case during the 10-year period.

8. Extend and revise the authority under the statute for the compromise, adjustment and reduction of debts for loans being serviced by the agency.

In addition to these recommendations, we made suggestions for further improving our greatly expanded surplus disposal operations, strengthening commodity programs, considering dollar limits on price supports, and carrying out a rural development program.

Now let us turn to the agricultural bill that was passed by the Senate Monday of last week and which you requested me to discuss at this time. It is appropriate that we examine together the various features of the pending legislation (H. R. 12) as it now stands and analyze as best we can its total impact upon American agriculture.

The bill as passed by the Senate has some good features but it also carries a number of provisions which would work to the disadvantage of farmers and tend to defeat the purposes of the soil bank.

The proposed soil bank, with both its acreage reserve and conservation reserve, would move definitely in the direction of reducing agricultural surpluses which are seriously depressing farm income. While some modifications in legislative language may be necessary, this section of the bill is generally good. It will permit a massive assault on the most important factor depressing farm income, the surplus. Together with our stepped up surplus disposal operations farm prices and incomes will be strengthened in the market place.

Some of the other constructive features of the bill as passed by the Senate are:

1. The long needed adjustment in the grade and staple length for parity and supports for upland cotton.

2. Authorization for the Commodity Credit Corporation to pay the cost of processing commodities donated under section 416 into a form suitable for home or institutional use.

3. The provision for a Surplus Disposal Administrator.

4. The exemption from marketing quota penalties of wheat grown and used on the farm where produced.

5. Assistance to the States in tree planting and reforestation.

Now I should like to review some of the provisions of H. R. 12, as it passed the Senate, which we believe are economically unsound and contrary to the best interests of our farmers and our agriculture in general.

I. Increased set-aside: Last minute amendments to the bill which would statistically isolate vast surpluses of corn, cotton and wheat in an effort to boost support price levels would have the effect of aggravating still further the surplus problem.

This device can only move us away from a permanent solution for the farm problem. It merely perpetuates the very system that got us into our present trouble in the first place.

Changing the name or calling a surplus a "set aside" does not wish it out of existence nor does it remove the depressing effect on market prices. Every student of markets recognize and takes into consideration the existence of the burdensome supplies that have resulted from high rigid price supports. For, what one Congress does can be changed by the next. The physical existence remains.

For example, let us take a look at the 1955 corn situation. Market prices have been 40–50 cents under support—$1.58 per bushel (87 percent of parity). Does anyone honestly think that the market price would rise just because the Secretary waved a magic wand and placed a label on 250 million bushels marked "set aside"? Changing the lines on the thermometer does not change the patient's temperature.

Moreover, in the case of cotton, the increase in the set-aside provided for in the bill would curtail CCC's ability to export or otherwise sell any upland cotton. The reason for this is that CCC now owns 6¾ million bales whereas the mandatory minimum set-aside is proposed to be fixed under the bill at 7½ million bales. This would be a serious blow to cotton growers.

You may ask me why I oppose this increase in the set-aside, when the set-aside idea

was originally proposed by the administration in the Agricultural Act of 1954.

The differences are these:

We proposed the set-aside as a gradual means of moving to a flexible program; this bill apparently contemplates their use as a means of avoiding such a move.

We proposed to and have in fact been reducing the set-aside; the bill apparently considers them as a more or less permanent way of life.

II. Double standard parity: Prior to the adoption of the new parity definition which became effective in 1950, parity prices were sharply criticized because they retained the same pattern of price relationships that existed in 1910–14. One of the major reasons for adopting the new parity formula was to bring and to keep the pattern of price relationships more nearly up to date.

To avoid sharp adjustments in the parity prices of individual commodities, the law provided that the decline in the parity price of any commodity could not exceed 5 percent of the old parity price. This provision was effective for nonbasic commodities beginning in 1950. The Agricultural Act of 1954 provided for a similar transition provision to become effective on basic commodities in 1956.

The effect of continuing the use of old or new parity, whichever is higher, for basic commodities is acceptance of the new parity formula when it results in a higher parity price and rejection when it results in a lower parity price. This provides more generous treatment for basic commodities than for the nonbasics.

Making the parity price the result of whichever of two alternative calculations gives the higher answer raises serious questions about the whole parity concept. If the new parity formula is an improvement over the old formula, it should be accepted for all commodities. If it is not an improvement, it should be rejected for all commodities.

If modernized parity is right for rice, soybeans, hogs, apples, lemons, potatoes, and 150 other commodities, why isn't it right for wheat, corn, cotton, and peanuts? If it is right for commodities covering 80 percent of the gross receipts, why is it wrong for the other 20 percent?

The shift proposed in the bill would boost parity prices, mainly for peanuts, wheat, and corn. To the extent that we artifically raise prices we will stimulate over production, reduce consumption, increase stocks, and lower free market prices.

This dual approach destroys the very usefulness of the parity concept itself. It abandons parity as a principle. It places in the hands of enemies of all price support a potent weapon which they would not hesitate to use.

III. Higher dairy price supports: The dairy business in 1955 was much improved over 1954. Not everything is as we would like it, true enough. But real progress is being made, production and consumption are coming into better balance. During the past year:

	Percent
Number of milk cows decreased	1
Consumption of milk increased	5
Per capita consumption of butter increased	2
Milk prices increased	1
Feed prices declined	7
Farm income from the sale of milk increased	2

Stocks of CCC-owned butter, which stood at 466 million pounds in 1954, are now virtually all committed. We are out of butter. I hasten to add that we have substantial stocks of cheese, and that our low inventory of dairy products has been achieved through sales at less than cost and through a sizable donation program. Realized cost of the dairy program in the last year of record was $440 million.

Government purchases have dropped. In the marketing year 1953–54, dairy products in the equivalent of 11 billion pounds of milk were acquired. In 1954–55 the figure was 5.7 billion pounds in 1955–56 purchases of surplus-dairy products will be the equivalent of about 5 billion pounds of milk.

The dairy industry has greatly increased its promotional expenditures designed to increase milk consumption, and there is excellent cooperation all along the line. These efforts are paying off in increased sales of dairy products and expanded consumption.

Now comes this bill with a provision that turns us back toward the dark days of 1953 and 1954.

An arbitrary period of time is taken by selecting a high-base period. It does violence to the parity concept as normally considered. It will freeze forever a parity equivalent relationship which existed for a short time 7 years ago and which is already badly out of date.

It will discourage the dairy industry from its valiant effort to promote consumption of dairy products. Why try to sell milk in the commercial market when Uncle Sam stands ready to pay more than the trade will pay?

The results of enacting this provision might seem advantageous on the surface, but underneath dairymen will recognize the same old siren song that led their ship onto the rocks before.

IV. Domestic parity plan for wheat: We have spent considerable time reviewing the pros and cons of this part of the legislation. As I indicated in a meeting with representatives of wheat producers, I stood ready to reexamine the proposed plan with its new features. Just yesterday, this whole subject was reviewed for the fourth time, by the National Agricultural Advisory Commission. The Commission, which has had a changing composition during the past 3 years, turned down the domestic parity plan decisively in each instance. There is serious question whether this proposal will accomplish the objectives its sponsors seek.

Our analysis indicates that:

1. It will hurt the small wheat grower. Under the present program any farmer can produce up to 15 acres of wheat without marketing quota penalties. Any farmer may do this even though he exceeds his acreage allotment. Therefore, these small wheat producers are in a position to obtain substantial benefits from the operation of the present price-support program since they can sell all their production in a market protected by the price-support level.

Contrast this with the effects on the producer under the domestic parity plan. If a farmer has no allotment he will be forced to sell all his production at a feed price which will be very substantially less than the current support price.

Let us take the example of a farmer in the commercial wheat area with a 3-acre allotment and a 25-bushel yield. Under the present program he can produce 15 acres of wheat without penalty. This would give him a production of 375 bushels which he can sell at close to the support level, $1.81 per bushel.

This same farmer under the domestic parity scheme would receive the domestic parity level on 37 bushels, and the balance of 338 bushels would have to be sold at a price comparable to feed price, $1.40 per bushel. Thus the small farmer would lose in income about $100 from what he otherwise would receive with the present program in effect.

The proposed certificate plan for wheat would be costly indeed to the small wheat grower. It should be remembered that almost two-thirds of the wheat farms in the United States have allotments of 15 acres or less. In some States this runs above 90 percent. Here are the figures for certain States: Ohio, 82 percent of the wheat growers produce less than 15 acres. In Indiana, it is 80 percent; Michigan, 85 percent; New York, 84 percent; Kansas, 24 percent; North Dakota, 4 percent; Washington, 37 percent; and Oregon, 59 percent.

2. Small farmers will be disenfranchised. Under the present marketing quota program any farmer in the commercial wheat area who intends to harvest more than 15 acres of wheat is eligible to vote. All wheat producers outside the commercial area are not subject to the quotas. They do not vote because they are not subject to quotas.

Under the proposed certificate plan, all wheat producers—large and small, no matter where located—would be directly affected by the plan. And yet, not all these producers—only those in the commercial area who intend to harvest more than 15 acres of wheat—would be eligible to vote. This would be only about 35 percent of all the farmers who grow wheat.

This means that all the small farmers who now have the opportunity to plant up to 15 acres of wheat without marketing quota penalties will not be in a position to vote in the referendum on the certificate plan even though it directly affects every one of them.

Thus, on a plan that so seriously affects the welfare of about two-thirds of the wheat farmers in the United States their voice will not be heard. This legislation definitely disenfranchises the small wheat producer. In this connection it should also be noted that feed-grain producers who will be adversely affected by this legislation would not be eligible to vote unless they had wheat allotments of more than 15 acres.

3. The proposed certificate plan for wheat will result in lower prices for other feed grains. Feed grain prices would drop by at least 2 percent. CCC would acquire the equivalent in other feed grains of about 50 percent of the additional wheat fed. Thus to the diverted acre problem is added the feed wheat problem for the cash grain producer.

4. Exports would not increase under the certificate proposal. We probably would still have price-support loans at above the world free market level for wheat. Therefore, CCC would still acquire wheat under the support program and we would need all the present Government programs such as Public Law 480, barter, ICA, IWA, and others to maintain the current level of exports. There would be no advantage for us to engage in a price war since importing countries would probably go on a hand-to-mouth basis anyhow.

5. It should be well understood that with a certificate plan there would be need for even more controls. Under the proposal allotments and price-support operations would continue to be authorized. The only additional feature is the domestic market certificate.

6. The cost of present farm programs is borne by taxation, according to income. Under this plan, the cost is borne according to consumption.

7. There would be demands from other commodity groups for price fixing of the domestically consumed portion of their crop.

8. The proposal permits one segment of our population to vote a program on themselves without others, who may be adversely affected, having opportunity to participate in the referendum.

V. Certificate plan for rice: It is generally recognized that our rice industry is now confronted with very serious surplus supply and production problems. The acreage has been reduced from 2.6 million in 1954 to 1.6 million acres in 1956. We in the Department of Agriculture, and I am confident that the Members of the House and Senate, want to see legislation enacted which is best for the long-time interest of our rice producers and the American people. The bill as passed by the Senate contains a provision for a certificate plan for rice. I am sure that if this provision did not meet the long-time interest of our rice producers and the American people,

its sponsors would not want this legislation in the pending bill.

How would this proposed certificate plan for rice operate?

I. Producers would receive marketing certificates. The total amount of such certificates would equal the estimated consumption of rice in the primary market. Please note that under this proposal the primary market includes the United States possessions and Cuba. By means of these certificates, each producer would be allotted shares of the primary market based on a proportion of his normal production from his allotted acreage. The value of these certificates per hundredweight of rice would equal 35 percent of parity in 1956 and probably 40 percent of parity after 1956.

2. Processors would be required to purchase certificates for all rough rice milled.

3. A support price of 55 percent of parity would be made available for 1956, and probably 50 percent of parity in other years.

The separation of the primary market (which includes exports to Cuba) from the export market, as provided by the bill as passed by the Senate, would have serious economic, administrative, and international impacts. While I am sure that this type of legislation would not be without some advantages, it seems to me that on balance the disadvantages far outweigh the advantages.

Let us examine some of the disadvantages of this type of legislation.

1. Tremendous problems of enforcement would be encountered. One of the serious problems would be to prevent purchases for the secondary export market from finding their way into domestic consumption and exports to Cuba. Certainly this bill does not permit us to control imports into Cuba. If Cuban millers should so desire they could purchase rough rice in the United States at a very low price and mill this rice in Cuba. Thus, what many proponents of this legislation consider as a part of a primary market could be taken from the American producers in the form of sales at secondary market prices. Also, the American mills could lose the business of milling rice.

Let us examine another loophole in this proposal which depends so strongly on including Cuba in the primary market. Let us assume for a minute that a domestic mill has milled rice and has exported it to the Bahamas. The domestic miller would receive a refund for the milled rice exported. The purchaser in the Bahamas could then without even unloading the vessel transship the rice into Cuba. If the Cuban market is maintained at a high level, this United States-produced rice would move into Cuba at a profit to the transshipper, unless Cuban licensing and restrictions could prevent this.

Altogether, it seems to me that there are too many loopholes. Without the unilateral inclusion of Cuba in this program it cannot succeed.

2. Section 380 (c) relating to the establishment of the rice primary market quota requires the Secretary to make this determination at least 7 months prior to the start of the marketing season. While the experts tell me it is not too difficult to estimate the domestic requirements, the estimate of exports to Cuba so far in advance, especially when we are selling to Cuba at much above competitive levels, would be extremely difficult.

This increases the chance for error, a factor which is present even on estimates made just prior to the start of the marketing season. Also, there is no provision for adjusting the primary marketing quota upward once the determination is made.

3. The announcement of such a program could result in a virtual cessation of exports to non-Cuban areas after passage of the bill until August 1, 1956, unless a provision is made for a special subsidy since anyone who could defer purchases would do so in order to obtain rice at a lower market price.

4. The requirement of section 380 (h) that CCC make refund payments to owners of rough rice on July 31, 1956, equal to 35 percent of parity as of August 1, 1956, would result in windfalls to such processors for this reason:

(a) The support price in 1955 averaged only 86 percent of parity and on January 1, 1956, the farm price averaged 82 percent of parity. A refund of 35 percent of parity would result in a net price of 47 percent of parity, as against a new support for 1956 of 55 percent of parity. This procedure could provide an 8-percent windfall.

5. This type of program appears to be in violation of article I of the General Agreement on Tariffs and Trade. It violates the principle of the most-favored-nation clause. It is, in effect, a United States tax on Cuban consumers. Certainly Cuba would prefer to collect its own taxes rather than turn them over to the United States rice producer.

6. The higher we force Cuban prices the greater their incentive to increase production. The certificate plan would put United States rice at a disadvantage in the Cuban market, where it now enjoys a preference. We stand to lose the Cuban market.

In summary, I would like to point out that the rice certificate plan in the bill provides for more rather than less Government controls than are provided under the present program. The certificate plan would still retain acreage allotments, loans, and penalize farmers for overplanting. The new complication would be in the form of processing certificates. The impact on international relations should not be overlooked. We would probably be accused of dumping, and countries would retaliate by price competition or discrimination against the imports of American agricultural and manufactured products. For the above reasons it seems to me that the certificate plan for rice included in the pending bill is not in the best interest of rice producers and the American people.

VI. Compulsory price supports on feed grains: This provision will make thousands of farmers ineligible for 1956 price support. In areas such as the heavy grain sorghum area of Texas which expanded markedly in 1954 and 1955, limiting the acreage to the 3-year average may require farmers to cut back sharply if they are to be eligible for price support.

In addition, and most important of all, it sets up a system of price support relationships which defies logic. It goes on the theory that distance from a market has no effect on price. It discards all previous concepts of price relationships for the feed grains.

Adjoining farms would have price supports that differed as much as 25 percent from one another, where previously there had been no differences. Discretionary supports, which have been in effect up to now, have worked well. The provision in the Senate bill would move oats, barley, and sorghum into the group of problem commodities. They would move into Government warehouses and not into consumption. And a Government warehouse is not a market.

Also it would add a whole series of new Government controls on feed grain producers.

VII. Processor's certification on prices paid producer: This provision requires the Secretary, when conducting any support or surplus removal program through purchases, to obtain a certification from the processor that the producer was paid not less than the support price or, in the absence of a support price, a fair price determined and publicly announced by the Secretary.

This provision is impossible of administration. It would be ineffective and tend to defeat its purpose. It would cause widespread dissatisfaction among producers.

Processed products purchased by the Department in many cases are processed from milk, live animals, fruits and vegetables received from many producers. Prices paid to individual producers vary substantially by seasons, location, quality, age, class, or variety, as well as hauling and other services performed. It generally would be impracticable to make equitable adjustments for these factors in support prices or in fair prices required to be named. Also in many cases the commodities sold by farmers move through several hands before they are processed and sold to the Government.

Also, it would deny the direct benefits of support to those farmers whose only outlets are processors who could not or would not certify that they had paid the specified prices and who would sell their processed products in the commercial market instead of to the Government. The provision could result in lower prices to those farmers and cause widespread dissatisfaction among such farmers.

There are other provisions in both the Senate and House versions of H. R. 12 which are subject to question. For example, it will be extremely difficult in view of the requirements for annual appropriations to make long-term contracts under the conservation reserve program.

The Department of Agriculture will be happy to provide additional information if requested by the conferees. We shall be glad to provide an item by item summary of our position and the major reasons therefor. Our interest is that a sound bill be hammered out in conference, that this be done speedily and that the bill be quickly passed by both Houses in such shape that it can be signed by the President.

Asking for a Veto

EXTENSION OF REMARKS

OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. SEELY-BROWN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial in the New York Times of Wednesday, March 28, 1956:

ASKING FOR A VETO

The conference committee that has been seeking to reconcile the Senate and House versions of a farm bill voted yesterday to adopt 2 provisions (1 from each of the 2 bills) that, if endorsed by the 2 Houses, would seem to add up to a gratuitous invitation to a veto from the White House.

These 2 provisions are: (1) restoration of rigid mandatory 90 percent supports for the so-called basic commodities, and (2) a return to the dual or 2-pronged system for determining the parity on a given commodity.

Both of these proposals strike at key provisions in the administration's farm program. The first would mean abandonment of the concept of flexible price supports—that is, supports which could be raised when a given commodity was in short supply, thus encouraging increased production, or lowered in times of oversupply, for the purpose of damping down production. It is no secret that the administration regards flexible supports as the very heart of its long-term program for restoring a balance between demand and supply in agricultural produce. It may

be argued that the conference committee has proposed the reintroduction for only 1 year of 90 percent price supports. This, of course, will deceive no one who is familiar with the general strategy of the high-support group in Congress or with the history of farm legislation since 1948.

As for the question of parity, a carefully devised system of modernized parities for individual commodities was included in the 1948 farm legislation, but when the 1949 law emerged it contained what Murray A. Benedict, in his Twentieth Century Study of American Agriculture has described as "the purely political and wholly unwarranted provision" that the producer of any of the basic commodities could, for the next 4 years, decide which parity formula he wished to use—in short, the one that happened to result in the high price for his product at the time. The present administration reintroduced the new parity concept in its legislation of 1954.

Thus the conference committee has chosen a policy of "no compromise" on the thoroughly bad bill now before it, placing in serious jeopardy the prospect for any acceptable legislation in time to be of assistance to the farmers this year.

Neosho Flood Funds

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD I include an editorial from the Parsons Sun, Parsons, Kans., entitled "Neosho Flood Funds," on the date of March 19, 1956:

NEOSHO FLOOD FUNDS

Congress will receive a request this week from the Neosho Valley for an appropriation that would permit an immediate start on flood control work after the new fiscal year arrives July 1.

The Bureau of the Budget has recommended only $50,000 for the Neosho Dam near Burlington, that money for completion of plans for the project.

The Neosho-Cottonwood Flood Control Association will request $1 milion for planning and start of construction of the dam, first of a series projected for the Neosho and its tributaries.

Certainly there is no division of opinion in the valley on the subject. It wants the dams built, and as soon as possible.

The disastrous flood of 1951 still is a fresh memory in the minds of all residents of the Neosho Valley. The subsequent drought with its water shortages, still not ended, supplies another reason for an early beginning of actual dam construction.

The dams on the Neosho and tributary streams will serve two purposes. Flood control is one, water conservation the other. They are of equal importance, as the flood to drought sequence of the last 5 years illustrates.

The Neosho is the prime source of water supply for most cities along its course. When the Neosho is low, as has been the case frequently in recent years, the very existence of those cities is jeopardized. They have no alternate sources of water.

It goes without saying that future development of the valley area is tied closely to the water supply. Without an adequate and dependable supply, industrial potential is severely limited. With it, new and sizable industry can be attracted to bolster the economy of the region.

The flood-control benefits of the Neosho projects are equally desirable. The Neosho in normal years is a pesky stream that overflows frequently, causing untold losses to farms and some cities located close to the river. The upstream dams would reduce those losses and give a stability to the Neosho never known by past or present generations.

The valley will look to Congress and to its Kansas Members for action to bring the dam projects to the construction stage. It has been patient for many years and believes now its turn for Federal help on flood control has been reached.

Impact of the Central Valley Project, Calif., on Our National Economy

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IT THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. ENGLE. Mr. Speaker, on many occasions I have pointed out that, in my opinion, the relatively small Federal expenditures in our reclamation program constitute the Nation's wisest investment. Not only are the moneys returned to the Federal Treasury but new areas are developed and new wealth is created which strengthen materially the economy of the project area and the Nation.

Much information has been made available on the tangible effects of reclamation developments; however, very little has been said or published on the intangible effects—such as the impact of these developments on the local and national economy. In order to obtain more specific information along these lines, I requested the Commissioner of Reclamation to select a few representative projects and furnish the Interior and Insular Affairs Committee information indicating the contributions which these projects are making to the maintenance of our present high economic level. Several of these project studies have been completed and furnished to the committee.

One of these studies relates to the Central Valley project in California. The report which gives the results of this study shows the tremendous impact of this project on the economy of the Central Valley and the Nation, with particular reference to the year 1953. I believe my colleagues will be interested in the results of the study and I should like to call to their attention just a few of the significant facts brought out in the report.

First, however, I should point out that although the initial features of the Central Valley project have been completed for some years, the area which will ultimately be served is not yet fully developed. In 1953, the year which is the basis for the facts and figures developed in this study, the initial features were supplying only 52 percent of the water they will ultimately serve in the valley. Keeping this in mind, the significant facts which I wish to call to the attention of my colleagues follow:

First. The project, in 1953, provided over a million and a half acre-feet of water to irrigate almost 720,000 acres of land.

Second. Cash farm income received from crops, livestock and their products, in 1953, was $152 million.

Third. This production provided employment for an estimated maximum of 39,500 workers on project farms and associated processing, packing and transportation activities and about 50,000 persons engaged in serving them in local communities of the project area.

Fourth. The combined purchasing power from wages of the employees on the farms and in collateral industries benefiting from the project, in 1953, reached an estimated $55 million and an additional $35 million of net income received by project farmers swelled the 1-year total to $90 million.

Fifth. It is estimated that this income received by the project beneficiaries provided a market, among other things, for $40 million in automobiles, $10 million in farm implements, $25 million for gasoline, $13 million for apparel and $15 million in furniture, household equipment and home appliances. The railroads hauled 21,800 carloads of agricultural commodities attributable to project water to the rest of the Nation and 12,000 carloads of merchandise from the rest of the Nation to the farmers and others benefiting from the project for which they received an estimated $20 million in revenues.

Sixth. Project farmers and their employees paid, in 1953, an estimated $7,300,000 in Federal personal income taxes, or three times the amount they paid for water. They also paid over $1,806,000 in State retail sales and personal income taxes and paid $2 million more in property taxes to the counties than they would have paid without the project.

Seventh. About 500,000 acres of irrigated land, which would have reverted to dry-farmed land or native pasture without project water, retained a market value of $212,750,000 more than the value of these lands would have been without project water, and over $60 million have been added to the value of dry land that has been irrigated with project water since 1944.

Eighth. Over $400 million was spent to plan and construct the project by the end of 1953. Of this, $150 million went for contractors' payrolls which was largely spent in the towns where construction took place and, therefore, benefited local merchants and their national suppliers. About $280 million was spent for materials and equipment by the Federal Government and the contractors. Of the Federal Government's expenditures for cement, generators, turbines, pumps, and other materials, over $43,300,000 was spent, for the most part, in the Middle Atlantic and Great Lakes regions. Over two-thirds of the contractors' expenditures for machinery and equipment and other materials, or about $100 million, was spent in these regions and other Eastern and Southern States.

These expenditures provided employment for thousands of factory, mine, and mill workers all over the Nation.

Ninth. Three new towns near Shasta Dam and one at Friant Dam in Fresno County were born and are still thriving as a result of the project.

Mr. Speaker, those who are interested in the complete study may obtain a copy from the House Interior and Insular Affairs Committee.

Guaranteeing Civil Rights

EXTENSION OF REMARKS
OF
HON. WILLIAM T. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. GRANAHAN. Mr. Speaker, in the 10 years since I first came to the Congress I have been pleased to see—and to help bring about—a remarkable improvement in the status of civil rights. As we look back on these 10 years we cannot avoid being deeply impressed by how much that has happened to remove inequities and inequalities and to bring about a more healthy society in our democracy. During that time we have seen some of our own cities and States do exactly what we have maintained should be done nationally—and that is set up fair-employment practices and antidiscrimination agencies. And, nationally, the courts have been instrumental in bringing about some far-reaching changes in the American scene.

But this progress has not always been steady. There have been ups and downs. There have been periods of retrogression. It is my feeling we are in such a period right now. The tensions which have been building up in some areas, stimulated by those who refuse to conform to the law or who seek to delay the application of the law, have already led to some serious and even tragic consequences.

I am not taking the position here in the House that these issues are easily solved or can be met merely by words. But there is a need for speaking out on this subject, to demonstrate that those who oppose progress in civil rights are not in truth the voice of the American people or of the Congress.

Also, however, there is a need for action. Action has been too long delayed. That is why I have proceeded to introduce bills to assure greater adherence to and protection for the civil rights of the American people of whatever color or creed.

The greatest ally we have in the fight for full civil rights is that great instrument which was drafted in my city of Philadelphia, the Constitution of the United States. As has been said, the Constitution is colorblind. It applies equally to all. It is the rock of our freedom. It cannot be set aside by States acting on their own or by individuals who set up their own views or prejudices to be above the requirements and principles of the Constitution.

In this respect, the courts, as I said, have done a remarkable job in interpreting the Constitution in this field of civil rights. But the courts do not act in a vacuum. Cases must be brought. They must be fought up through the lower courts. They must present clearcut constitutional issues in order to reach the highest court for final determination.

I am deeply proud that in the years of the Franklin D. Roosevelt and Harry S. Truman administrations the Department of Justice of the United States was always in the forefront in bringing civil-rights cases up through the courts to the Supreme Court.

In the past few years some people seem to have closed their eyes to some of the most glaring incidents of violation of civil rights. The Till case is a good example. There have been others. We read that in some States spiritual successors of the days of the lynch mob and the fiery cross are now busily at work whipping up hatred for the Negro.

Let us not for a moment fool ourselves that achieving integration in the schools can be accomplished if this hatred is allowed to go on unchecked and unchallenged. The excesses of the few must be stopped by law and by order—and by decency.

There is a role here for the churches. There is a role here for local law and order, and for State law, and for national justice. There is much which has to be done. But fundamentally, we must see to it that the rabble rouser or the fanatic or the lawless mobster cannot defy the laws of this country or of God.

In other words, Mr. Speaker, while we need tolerance and moderation and understanding and all the other things which go with accomplishing social change smoothly and effectively, we also need the authority of law and the punishment—swift and sure—of those who flagrantly defy the law.

Let us enforce the laws we have to protect the individual. If local appointees and elected officials will not or cannot enforce those laws to protect the individual, then the States must step in; and if they fail, then the Federal Government must exercise its responsibilities under the Constitution to guarantee the rights of the individual.

If more laws are needed, let us pass them. I have introduced the so-called civil-rights package of proposed laws which are intended to nail down and make clear the responsibilities of the Federal Government in this field, but it seems to me that effective and active and vigorous enforcement of laws now on the books would go a long way toward resolving the issue.

How can it be that a boy can be kidnaped and murdered but no one is convicted of a crime, such as happened in the Till case? How does it happen that Negroes can be shot and killed in some areas but the person who wields the gun is found innocent of wrongdoing on the plea of self-defense against, for instance, an armed Negro?

Cases of this kind help to bring about a condition in which hate groups can flourish, because the haters develop a defiance of law and feel that they are immune from punishment in their mob activities against Negroes.

As one who has voted for and supported antilynch, antipoll tax, and FEPC bills, and who believes in their principles, I call upon this country to act now to end these terrible incidents by prompt and decisive policies to guarantee civil rights for all.

Conditions Behind the Iron Curtain Background to So-Called Anti-Stalinism

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. CRETELLA. Mr. Speaker, I have received from Dr. Lev E. Dobriansky, who is a professor of Soviet economics at the graduate school of Georgetown University and also national chairman of the Ukrainian Congress Committee of America, an illuminating address on "Conditions Behind the Iron Curtain" delivered by Mr. Wyroslav Prokop at the recent annual session of the All-American Conference to Combat Communism in Chicago, Ill. On the basis of my own experiences with its branch in New Haven, Conn., the Ukrainian Congress Committee of America is one of the most active anti-Communist groups in this country.

In this address Mr. Prokop, who is a member of the Supreme Ukrainian Liberation Council which, with headquarters in Munich, Germany, is the foreign representative body of the political underground resistance system in Ukraine, clearly describes the general political and economic conditions prevailing today in the vast colonial empire of Moscow. His calm analysis of the situation in the Soviet Union makes extremely worthwhile reading in the light of the current, so-called anti-Stalinist developments in the Russian Communist empire.

I commend the reading of this address by my colleagues and, therefore, request that it be printed in full text in the Appendix of the RECORD:

CONDITIONS BEHIND THE IRON CURTAIN

First of all permit me to declare that I consider it a great privilege to address you here on the subject of conditions behind the Iron Curtain, from this noted forum of an organization which merits credit for its fight against communism.

I fully realize that within the short time allotted me, I shall be unable to exhaust the rather broad theme of the present situation behind the Iron Curtain. What I wish to state, however, at the very outset is the fact that the nations enslaved by Russian communism and imperialism are at present conducting an uninterrupted struggle for complete national and social liberation, for dispersal of the Communist dictatorship and for the restoration of truly independent democratic states of all nations, Russian and non-Russian, of the U. S. S. R. and of the satellites.

Opinions are sometimes voiced in the West that this struggle must be productive of little effect if the Communist dictator-

ship is able to exist. My answer to this allegation is that one of the guarantors of the 38-year period of existence of the Communist dictatorship is also the free world itself which, over this entire period has not been capable of giving effective aid to the enslaved nations of the U. S. S. R. and to stand up in a united front against the Communist conspiracy of oppression.

Let us recall some facts of the past:

In 1917, after the revolution in Russia, numerous non-Russian peoples proclaimed their independence and engaged in warfare against Communist Moscow. Only some of them, like Poland and the Baltic States, succeeded in holding on to their independence for an extended period of time. Others, like Ukraine, Byelorussia, the Caucasian nations, and others succumber to the Bolshevism without receiving any kind of aid from the West. The Russian people lost their freedom as well.

In 1932–33 a great famine was ravaging the U. S. S. R., particularly Ukraine and the Caucasus. But what chances of resisting Moscow did the Ukrainian peasants have, if at that particular moment the eminent French leader Edouard Herriot proclaimed to the whole word that there was no famine in the U. S. S. R.?

In 1941 the nations of the Soviet Union who had been waiting for a change for 23 years faced the West again, this time in a German edition. But what happened? Millions of Soviet soldiers who surrendered on the front and were ready to march against Stalin were being liquidated in great masses in Hitler's death camps.

Then came the year 1945 and with it compulsory repatriation of Soviet war prisoners and laborers forcibly deported to Germany. During the same year several nations of East Central Europe were delivered into Soviet capitivity as satellites. Then came the turn for North Korea, China, and Indochina.

Nonetheless, during the first years of the postwar period a drawnout struggle of insurgence continued in Ukraine, in Poland, in Byelorussia, in the Baltic lands, in Slovakia, and in other countries. Even as late as 1950 fighters of the Ukrainian Insurgent Army (UPA) fought their way in raiding sorties from Ukraine to the West.

Stalin died in 1953 and the hopes of nations enslaved by the Communist dictatorship rose once more. In East Germany the workers rebelled. Disturbances started in Czechoslovakia, Poland, Ukraine, and in the concentration camps of Vorkuta, Norylsk, and Karaganda; but did the West utilize the confusion within the Soviet Union at that time? It did not. Instead of aid came the well-known proposals of Churchill to meet Malenkov at any price.

Finally came the summer of 1955 and the Geneva Conference with results now well known.

Is it therefore surprising that under such a policy of the West, the Soviet Union has not only an opportunity to exist and to enslave millions of people, but even to organize fresh aggressions against the free world?

We can thus draw a conclusion from what has been said above: One of the chief elements of the power of the Communist dictatorship is the heretofore existing inability of the free world to organize a united front against it.

And now let us pose a question: Are present conditions behind the Iron Curtain really such that the liberation struggle of enslaved nations stands no chance?

In order to answer this question I wish to state first of all that, contrary to estimates of others, I believe that the U. S. S. R. is in the midst of a crisis.

The first element of this crisis is man himself, man who thirsts for freedom of speech, religion, press and assembly, man who hates godless communism and the totalitarian imperialist system established under it, man who stands ready to fight it.

The second factor of the crisis within the U. S. S. R. is the permanent and unabated fear which the enslaved masses inspire in the Communist leaders. Only a superficial western observer who visited Moscow and Leningrad can tell the West that the peoples of the U. S. S. R. are satisfied and have no thought of rebellion. This is not the way the Kremlin looks at matters. When Stalin died in March 1953 and millions of Soviet citizens were waiting for the beginning of the end of Bolshevism, the Presidium of the Communist Party of the Soviet Union, in an official communique struck a note of panic and dispersal alleging that the enemy might utilize the existing conditions and rise against the regime. In this communique the Presidium promised the peoples of the U. S. S. R. an improvement in their material and cultural standard and guaranteed their rights as citizens. An amnesty was proclaimed in April 1953. Consumer goods of prime use were reduced in price at that time. The so-called voluntary loans to the State were reduced by more than half. Compulsory deliveries of products of garden plots were reduced. In August 1953 Malenkov mentioned an increase of food production. The Russian writer Ilya Ehrenburg and the Ukrainian writer Oleksander Korniychuk wrote works in which they subjected the most outstanding negative features of Soviet reality to severe criticism.

All these concessions are the result of the regime's fear of its own masses and of a desire to allay their general dissatisfaction.
